With this fact staring us in the face, we as citizens are forced to make choices: (1) Peg Government security prices and let prices of goods and services rise, or (2) peg Government security prices and hold down prices of goods and services by direct controls, or (3) let interest rates move freely and use monetary policy to combat inflation.

We in the Federal Reserve could not choose alternative number (1) because we believe the evils of inflation are much greater than any inconveniences of higher interest rates. We would not favor alternative number (2) in peacetime because direct controls are so contrary to the freedom we all like to exercise in our economic and political pursuits. In our view, the third choice is the only acceptable one. It is more important to have stable prices of goods and services than stable interest rates. This brings us to your third question:

Have Government securities, therefore, become a risk asset and not riskless as they have been in the past?

An obligation of the U.S. Government is probably the most riskless security you can

buy; you are certain of being paid 100 cents on the dollar when it matures. In this sense, Governments are just as riskless as ever.

But this doesn't mean you can always get par for Governments if you want to sell before maturity. Anyone who buys a marketable issue should realize that he can sell it only for what the market is willing to pay.²

So a marketable issue is not riskless in one sense—you are not guaranteed par if you want to sell before maturity. It never has been riskless in this sense, except when the Fed was supporting Government securities prices. Weighing alternatives, it seems to us in the best interests of the Nation not to encourage inflation by pegging Government security prices even though this may mean risks of market fluctuations. This leads to your last question:

Under such circumstances how can banks and other investors handle their Government bond portfolio?

We can't presume to tell you how to manage your portfolio. You know more about your situation than anyone else. But we do want to point out a fact of life: in a free market economy, any marketable security or other asset is likely to fluctuate in value. Many forgot this during the decade of pegs on Government security prices. Now that prices and yields are free to move, the investor must ask himself basic questions: How much income must I have? How much risk am I willing to undertake to get it? How much liquidity do I need? Can I get adequate liquidity by spacing maturities? How much short terms should I hold? Am I willing to commit myself, at the present yield, to holding a security until it matures, if necessary? etc. He must weigh risks of capital loss against the return on his investment and adjust his portfolio accordingly.

The answers will seldom be the same for any two investors. And they don't come easily—certainly not as easily as if Government security prices were pegged. In that situation the investor's job would be greatly simplified, for all Governments regardless of maturity would be equally liquid. But the Government probably would not pay you very high rates.

We realize that we have not solved your problem of managing your portfolio. And we realize that flexible interest rates make it harder for you to do so. But the thousands of investors whose lives become somewhat more complicated because of flexible interest rates help make for better lives for millions of people (including themselves) by contributing to a stable and growing economy. We can't hold everything stable and have a dynamic economy.

² The reason U.S. savings bonds are not marketable is to enable small investors to avoid the uncertainties of price fluctuations. If they need cash, they can redeem their savings bonds at a predetermined price regardless of the current level of securities prices.

Chronically Unemployed

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of

Thursday, July 30, 1959, regarding the plight of the so-called hard core unemployed who have been out of work 15 weeks or longer:

CHRONICALLY UNEMPLOYED

With U.S. employment getting back to the record highs it established before the recession, we find a sharper light focussing on the hard core unemployed who have been out of work 15 weeks or more.

Some 900,000 fall into this category, and of them nearly 550,000 have been without jobs more than half a year.

The people in the hard core group are not faceless. Most live in areas that have become more or less permanent pockets of depression—coal mining sections in Kentucky, West Virginia, Pennsylvania, once thriving textile producing communities in New England, and so on.

The bulk of the chronically unemployed in this hard core are unskilled workers, traditionally the last to be hired, usually left by the wayside in all but the great booms.

Congress has not yet been able to manage effective aid to distressed regions. But any program would seem limited in promise which did not contain plans for lifting these people out of their unskilled status.

In this increasingly mechanized age, to be unskilled may mean not only being unemployed but being unemployable.

Veterans' Pensions

EXTENSION OF REMARKS OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WHITENER. Mr. Speaker, the Gastonia Gazette, Gastonia, N.C., carried a very fine editorial on Thursday, August 6, 1959, regarding the non-service-connected veterans' pension bill passed recent in the House of Representatives.

The editor of the Gazette has helped clear up some of the misunderstanding surrounding the Teague bill. With the thought that my colleagues in the House might like to read the editorial, I, under unanimous consent, include it in the Appendix of the RECORD:

VETERANS' PENSIONS

In recent weeks a bill has passed the U.S. House which purports to correct flaws in the present pension system for veterans. And though the bill is admirably designed to place the pension system on an equitable basis, opposition is beginning to develop in some quarters of the country.

It is well recognized that veterans' organizations on Capitol Hill have developed into very strong pressure groups.

For example, one such organization, the World War I veterans, have been lobbying for an across-the-board pension of \$100 a month for men and women who served at least 90 days in the First World War. Though the hearts of these graying gentlemen may be in the right place, still under such a provision a World War I veteran could get \$100 per month if he served in the war even if he were a millionaire. Clearly pensions should be meted out with genuine need as the primary consideration.

The present bill, however, sponsored by OLIN E. TEAGUE, Democrat, from Texas, seeks to establish a level of need for all pensioned veterans and their dependents, regardless of

which war they were a part of, whether it be World War I or II or the Korean conflict.

Under the present law, a single veteran is eligible for a pension if his income from all other sources does not exceed \$1,400 per year and a married veteran with one or more dependents is eligible if his income does not exceed \$2,700.

The trouble with the old system is that a single man having an income of, say, \$1,400 (the limit) would get as much as the single man with \$100 outside income. The real difficulty is understanding why such an inequitable system has been permitted to linger on for so long.

A further problem with the present flat rate pension for single veterans is that under the present law a single veteran receives the full pension if his income from outside sources does not exceed \$1,400, but if he has only 1 cent over the income limit, he receives no pension. A veteran now gets all or nothing.

Married veterans, too, are subject to the all-or-nothing fallacy. Rate of pension is the same for all regardless of outside income or number of dependents.

The Teague bill very sensibly sets up a procedure whereby a level of need is established and pensions increase as outside income declines. With such a system the pension will be higher where the need is greater.

Furthermore, the Teague bill raises all income limits so that additional pensioners now barred by lower income limits will be brought onto the rolls. The bill would give widows and orphans of World War II and Korean veterans eligibility for pension on the same basis as widows of World War I veterans by eliminating the requirement that the veteran at time of death must have had some percent of service-connected disability.

Those opposing the bill have circulated rumors that the bill reduces non-service-connected pensions, but a close reading of the bill reveals no such provisions.

In reality, the Nation owes a vote of thanks to OLIN TEAGUE, chairman of the Committee on Veterans' Affairs, for supervising the fine job of draftsmanship.

Interested veterans will be glad to know that TEAGUE himself was quite a soldier. During World War II TEAGUE commanded the First Battalion, 314th Infantry, 79th Division. Although he was in actual combat for only 6 months, he was decorated 11 times, awarded the Silver Star with two clusters, Bronze Star with two clusters, Purple Heart with two clusters, Combat Infantryman's Badge, Army Commendation, French Croix de Guerre with Palm—among others.

This is not the kind of man to let veterans' affairs go without the closest and most devoted scrutiny. The Gazette is gratified that our own Congressman, BASIL L. WHITENER, himself a former member of the Veterans' Affairs Committee, has lent his support to the measure.

Our hope is that the bill will receive quick approval as it now goes to the Senate.

statements and statistics designed to sustain the claim that our immigration laws and our immigration policy discriminates against immigrants from Central and Southern Europe as well as from countries behind the Iron Curtain.

It appears highly appropriate to invite the attention of my colleagues to a set of statistics published by a reliable and impartial organization, the International Catholic Migration Commission, having its headquarters at Geneva, Switzerland.

The studies made by the ICMC indicate that since the end of World War II, the United States has received a total of 1,820,278 immigrants from Europe, and only 23 percent of that number were natives of Northern Europe, the allegedly "preferred" area. The balance of our intake of immigrants from Europe came from central, southern, and Eastern Europe. Under unanimous consent, I include the figures published by the ICMC:

Immigration from Europe to the United States from 1946 until 1958

	Total	Percent of the total
Northern Europe:		
United Kingdom.....	282,360	15
Ireland.....	75,957	4
Norway.....	29,974	1
Sweden.....	22,362	1
Denmark.....	18,085	1

Total, Europe.....	1,820,278	100

¹ 1946-55 only.

in the Nashville, Tenn., Morning Tennessean of May 31, 1959, entitled "Woodbine Gets Sewage Flood":

WOODBINE GETS SEWAGE FLOOD—SEPTIC TANK PROBLEMS PLAGUE AREA—BUSINESSMEN SORRY METRO BEATEN

(By Eugene Dietz)

Sewage flowed down streets in Woodbine's major business district last week. Ray Harrington, assistant sanitation engineer for the county health department, reported yesterday.

"Regrettably, that was nothing new," said Harrington. "Still worse, there is no hope for much change for the better in the future unless a sanitary sewer system is developed. Septic tanks just are not keeping sewage underground."

Other sections of Davidson County outside Nashville, especially in the heavily built-up areas where 190,000 persons live, are encountering similar problems daily, said Harrington.

OWNERS COOPERATE

The public health official said that the owners and operators of the affected establishments in Woodbine "are cooperating fully with the health department and at considerable expense to themselves," to correct the septic tanks problem the best they can without sewers.

He said that sewage was running into Lutie Street, directly behind some businesses fronting on Nolensville Road, which is the main shopping district of the suburban community south of Nashville.

Efforts are underway right now to correct that temporarily.

C. Vance Hickerson, owner of Hickerson's Restaurant and Motel and also owner of buildings in the 2500 block of Nolensville Road housing other businesses, told a reporter:

"I have spent an awful lot trying to keep sewage underground here. A month ago, I bought a house and lot for \$10,000 at 315 Lutie Street. That lot will be used as an overflow for the septic tanks which serve my restaurant, an insurance office, a dentist's office, and a barbershop.

"That \$10,000 for an overflow field is pretty expensive."

Hickerson, who said he was one of the citizens to vote for development of a single, city-type government when defeated in a referendum last June, commented:

"It is time for us to start on one-government. The sooner we get started the sooner we will have some relief. There is no answer to our septic tank problems except sewers."

The overflow, Hickerson said, will serve his restaurant, Garrett's Barber Shop, the Fuqua Insurance Agency and the offices of Dr. C. V. Collins, a dentist. They are in a building in the 2500 block, owned by Hickerson, who said he found the \$10,000 expenditure, plus other septic tank costs, necessary to protect his \$170,000 investment.

Another Woodbine businessman, Magistrate E. B. Garrett, operator of two drugstores, told a reporter he would give \$10,000 if the Woodbine buildings he rents to house his drugstores were attached to sewer lines.

"It would be worth that to me," said Garrett. "I am spending about \$1,500 a year at the two stores in septic tank costs."

"LIMITS"

"There is a limit to how far a man can go on this. We made a mistake in not putting Metro into operation last year."

Garrett said he supported Metro.

Hickerson said he thought a major reason Metro was defeated last year was that some people who had never experienced septic tank problems had the idea that it could not happen to them.

Some, he said, have since discovered that it could.

Immigration to the United States From Europe, 1946-48

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WALTER. Mr. Speaker, from time to time there appear in the CONGRESSIONAL RECORD highly misleading

Poison in Your Water—No. 152

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing

Both Garrett and Hickerson said their septic tank problems have been with them for years.

And, Harrington said, "Their cases are not exceptional." "I guess," Harrington told a reporter while driving down Nolensville Road "that we could stop at just about any place along here and find septic tank problems."

Farmer Khrushchev

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. COOLEY. Mr. Speaker, the Wall Street Journal this morning carries on its front page an article entitled "Farmer Khrushchev." This goes to the roots of one great superiority our free enterprise system holds over the communistic system. Under leave to extend my remarks, I am inserting this article in the RECORD, so that it might have the widest possible distribution.

The Russians may rival us in space probes and perhaps in some other achievements, but try as they may—and try they have for more than a quarter of a century—they simply cannot begin to match the productivity of America's farmers.

Mr. Speaker, the American free-enterprise system, in the beginning, was built upon a foundation of free and independent—and numerous—family operated farms.

Our continent was settled largely by people fleeing from the feudal estates, the baronial-operated farms, of Europe. Bigness did not produce efficiency and strength in a people under the feudal system, where the freedom and identity of the individual and the family were lost in the very size of the estates. In our own time we have the example now of the failure of collectivism on the farms of Russia, where the pride and productivity of family unit work and possession have been condemned and suppressed.

The article, "Farmer Khrushchev," should give to all of us a new appreciation of the farm families of America. We should thank God that they have made this a land of abundance and plenty, and we should resolve to protect and exalt the farm family as the continuing dominant unit in our agricultural economy and for its immeasurable contribution to our democratic society:

FARMER KHRUSHCHEV: HE HAD BETTER LUCK IN SPACE RACE THAN WITH MILK AND MEAT—RUSSIA'S HARVESTS GROW BUT STILL TRAIL U.S. OUTPUT—DISTRIBUTION IS A PROBLEM—TIPS ON HIS TRIP TO UNITED STATES?

(By Edmund K. Faltermayer)

KHARKOV, U.S.S.R.—"A rocket is not a cucumber," Nikita Khrushchev recently told a group of farmers.

Mr. K's terse aphorism carried a world of meaning for his Russian audience. For while the U.S.S.R. has awed the rest of the world by the way it has organized its scientific manpower for outer space probes and other breathtaking technological achieve-

ments, after more than 30 years of intensive economic planning it still hasn't been able to solve its farm problem.

Since Stalin's death in 1953, to be sure, sizable gains in agricultural production have been made. Grain, the backbone of the Russian diet, reached a record production rate last year of 139.4 million metric tons, compared with only 82.5 million tons in 1953. Sugar beets, potatoes, meat, eggs, and milk also are vastly more plentiful than they were in pre-Khrushchev.

NO SURPLUS PROBLEMS IN U.S.S.R.

However, unlike Ezra Taft Benson, whose problems are wrapped up in surpluses, Russian farm planners frantically center all their efforts on producing more. By Western standards the results are not particularly impressive. It takes about 45 million people—43 percent of the Russian labor force—to feed a total population of 209 million, while in the United States only 8.1 million farmers feed 175 million people. Moreover despite soil banks, acreage controls and other crop limiting schemes, the U.S. farmers grow about twice as much as their Russian counterparts. They fed more grain to livestock last year than the entire record Soviet harvest. And U.S. per capita meat consumption, at more than 150 pounds last year, was nearly double the 85-pound Russian average.

This gap between United States and Russian agriculture productivity is a matter of prime concern to Mr. Khrushchev, whose early career was spent in the wheat-producing Ukraine and who was called to Moscow in 1949 to take over reorganization of Russia's collective farm system. Significantly, well in advance of his visit to the United States next month, Mr. K already has made arrangements to visit Iowa, one of the Nation's top farm States, to observe United States farm techniques.

Particularly embarrassing to the ideologically minded Russians is the persistence of vestiges of individualism among the workers on Russia's state farms and collectives: An amazing 56 percent of the Soviet's dairy cows are still individually owned and provide more than half of the nation's milk production. The small private garden plots and poultry and livestock pens, operated in their leisure hours by farm workers, also account for a vital 40 percent of Russia's total meat supplies and a large portion of its fresh produce.

Even Russia's recent gains on the farm front can be attributed in no small part to the granting of more capitalist-style incentives to farmers. A year ago, for example, Mr. Khrushchev abolished one of the most hated institutions of the Stalin era, the system under which collective farms were required to deliver part of their grain and other crops to the state at exceedingly low prices. This "form of tribute," as Stalin himself called it, enabled the late dictator, by selling bread at a big markup, to obtain huge amounts of capital to pay for industrialization. Mr. K, in contrast, offered high enough grain prices that farmers willingly boosted deliveries to the state.

END OF THE TRACTOR STATIONS

Shortly before this, the present Soviet chief had done away with another unpopular institution, the more than 8,000 machine and tractor stations, and had permitted collective farms to acquire their own tractors and farm machinery for the first time. Nominally set up to do harvesting and other mechanized jobs for the farms in return for a share of their crops, the machine and tractor stations actually had been an instrument for Communist Party control over the peasantry.

For a look at the results, visit the 12,500 acre Bolshevik collective farm in the rich black earth country 40 miles west of Kharkov. In 1956, the last good harvest year before the price reform, the farm harvested 10,260 bushels of grain of all types, including

rye and corn. Last year, with higher prices as the incentive production mounted to 15,370 bushels.

"We're 730,000 rubles richer," exults the farm's director, ruddy-faced Nikolai Nerovny. He explains that in 1956 the farm got 120,000 rubles from the state for its grain while last year it received 850,000 rubles. (At the 10 rubels for \$1 tourist exchange rate, this was equivalent to \$85,000.)

Mr. Nerovny also is happy about the abolition of the machine and tractor stations units. "The tractor stations were all right in the early days," he says, "when the newly formed collective farms were too poor to own their own machinery." But, he adds, "as Comrade Khrushchev said, you can't have two nurses for one child." Under the old system, the tractor drivers from the machine and tractor stations were under their own agronomist—whose ideas on harvesting and cultivation often differed from those of the farm's own agronomist, often leading to intense disagreements. With the machine and tractor stations gone, Mr. Nerovny's farm now has, on its own, 16 tractors, 6 grain combines, 6 cornpickers and various other implements, most of them purchased from a machine and tractor station in the past year.

WORK BRIGADES

The Bolshevik farm takes in seven villages with a total population of 3,000. Each village is organized into a work brigade. These brigades till the 8,750 acres of the farm that is under cultivation; 1,250 acres are used for grazing and the rest of the area consists of forests and private garden plots. The farm, admittedly richer than average, has a prosperous look; alongside the dirt roads are many new brick bungalows and more modest whitewashed dwellings made from blocks of dried mud reinforced with straw—the traditional Ukrainian farmhouse, complete with thatched roof. We have our own brick factory right on the farm," Mr. Nerovny boasts. "Last year we turned out 500,000 bricks."

Since the mid-1930's when Stalin liquidated the holdings of the "kulaks," or more prosperous peasants, over 99 percent of the Soviet peasantry has been enrolled in two types of socialized farms. One is the so-called state farm or "sovkhoz," in which the land belongs to the state and peasants are paid straight cash wages, just as in a factory. The 5,900 state farms today comprise about 27 percent of the land under cultivation and have about 4 million workers.

The more predominant farms, however, and the ones that have given the regime the most trouble, are the so-called kolkhozes or collective farms. There are nearly 80,000 of these and they have about 41 million workers. Theoretically a "voluntary" cooperative, formed by all the peasants in a given village or group of villages, the collective farm belongs "in perpetuity" to all its members and not to the state. Pay, in the form of cash and produce, is determined by the collective itself at the end of the harvest season, and depends on the size of the crops.

FORTY-THOUSAND-ACRE FARMS

Smaller than the huge state farms, the collectives average about 5,000 acres under cultivation, not counting woods and pasture land. The state farms average a stupendous 20,000 acres. Many of them are in the virgin lands of central Asia where 90 million acres have been put in use in recent years, contributing markedly to Russia's increased grain production. Here, the size of the state farms run as high as 40,000 acres, or about 62 square miles.

The state farms supposedly represent a higher form of socialized agriculture and are supposed to set a standard of efficiency for the collective farms to emulate.

Despite all the post-Stalin reforms, it is clear there is no real intent on the part of

Mr. Khrushchev to retreat to some form of individual farming.

The government, for example, has given peasants on state farms a deadline of 2 to 3 years in which to give up their privately owned cows. It also is using "gentle persuasion" on peasants in the collectives to do likewise. So far, there is no national program to compel them to give up their privately raised pigs and poultry and the garden plots themselves.

However, it is no secret that this is part of the eventual scheme of things that government planners envision. In the model collective farm at Kalinovka, the village near Kursk where Mr. Khrushchev was born, the peasants already have "voluntarily" sold their cows and the size of the private gardens is to be reduced in the future from three-quarters of an acre to only three-eighths. And at the "Vladimir Ilich" collective, just west of Moscow, the deputy chairman, David Babilonok, says that "eventually the private plot will be cut down to just trees and a flower garden, so that it will be very pleasant to come home in the evening."

But the process will be a slow one. Even now peasants still get about a third of their total income from their individual gardens. An overnight takeover of these tiny household farms, on a national basis, would court open rebellion in the countryside and almost inevitably would precipitate a serious food shortage in the cities as well.

The government also is engaged in a gradual, concerted program to enlarge the size of the collective farms by mergers into what Khrushchev hopes will become eventually quasi-industrial, state-owned "agro-cities." Before the war there were 250,000 collective farms; now there are only a third as many. However, when the "agro-city" idea was first broached in 1951, it got a noticeably cool reception from the peasantry, mainly because the scheme involved their giving up their private garden plots.

Mr. K., of course, still has enough unsolved problems without tackling new ones arising out of ambitious "agro-city" ventures. For one thing, despite increased production, the grain problem has been solved, he says, "only in a relative sense, because the population of the cities is growing all the time and demand for grain is increasing." A bothersome headache is the continuing shortage of grain elevators. "Literally millions of bushels of last year's record crop," Mr. Khrushchev said, were lost because the grain had to be dumped on the ground "where it is pilfered by rats and birds and scattered by storms."

MISSING MILK

Distribution bottlenecks plague the Russian farm system at nearly every point. Because of a shortage of pasteurizing and refrigerating facilities, only 22.1 million tons, or 37 percent, of last year's record 57.8 million ton milk output actually found its way into the state trading system. In the United States, 85 percent of the milk produced is pasteurized and sold to city dwellers. In Russia, most of it is consumed right on the farm or bartered on the free or collective farm markets in nearby cities where peasants sell the produce from their private gardens. A shortage of canning and meat processing facilities causes similar scarcities of vegetables and meats in the state-organized store system.

Low crop yields are a perennial problem. Even in grain, its most advanced crop, Russia harvests at least a third less per acre than American farmers and two-thirds less than in Western European countries, where farming is very intensive. Soviet cows give only 58 percent as much milk per year as their American cousins. And there is a chronic shortage of fertilizer. Under the government's current 7-year plan, output of chemical fertilizers by 1965 is scheduled to rise to 35 million tons from last year's 12 million tons.

But even that won't be nearly enough, according to Western agricultural experts. Moreover, with its virgin lands program now nearly completed, from now on increases in Russian farm output will have to come almost entirely from higher yields.

Most of the virgin lands area, because of its location and climate, is unreliable for steady production year in, year out. Snow in some of the new wheat lands, in Siberia, came as early as August and the Soviets are lucky to get a good crop every other year. There is also some indication of the development of a "dust bowl." In 1954, when the plowing up of the lands began, the average wheat yield was 20 bushels an acre; last year, despite favorable weather, the per-acre average was only 15 bushels.

STAGNATION UNDER STALIN

Many of the Khrushchev agricultural reforms took place before Georgi M. Malenkov was deposed as premier early in 1955. The time was ripe for improvement, because agriculture had reached near-stagnation under Stalin. As Mr. K. disclosed in his famous "de-Stalinization" speech of February 1956, Stalin "never traveled anywhere" and "did not know the actual situation in the provinces. He knew the country and agriculture only from films. And these films dressed up and beautified the existing situation in agriculture * * * The last time he visited a village was in January 1928."

Almost immediately after Stalin's death, Soviet leaders revealed what Western observers already had deduced: Russian food production, per capita, was hardly any greater—and in some cases a good deal less—than in prerevolutionary 1913. Immediately measures were taken to boost peasant income. The cash payment per "labor day" work unit on collective farms was boosted from 1.4 rubles in 1952 to 3.8 rubles in 1956. Today, the "labor day" pay rate on Russian collectives is upwards of 5 rubles. Taxes on peasants' earnings from their private gardens also were reduced.

Also, the Government began pumping a lot more money into the agricultural system. Government investments, mostly for State farms and the machine and tractor stations, increased nearly 50 percent between 1951 and 1957.

A COMPLICATED SYSTEM

The present workday method of figuring wages, extremely complicated even for the peasants who use it, bears a marked resemblance to the differing pay levels found under capitalism. For weeding a field all day, a Russian farmer may get credit for only 1 workday unit while a milkmaid may be credited for 1.5 units for milking cows, and a tractor driver can earn as many as 6 workdays in a single day because his skilled services are more highly valued. The average peasant logs about 350 workdays a year, or about 240 actual days.

Despite a near tripling since 1952, yearly cash earnings of collective farmworkers are still extremely low, by Western standards, averaging less than \$250. Even when payments in produce and earnings from private garden plots are added in, the total probably doesn't come to more than \$400. These wage estimates do not include food the peasants produce and eat themselves.

However, there are indications that these cash payments already are becoming too high for the meager amount of consumer goods available in the villages and country towns, thus posing an inflationary threat.

Mr. Khrushchev recently blasted the "kulaklike mentality" of some of the richer collectives, which pay comparatively high wages to the farmers who then hoard the cash. The farms should be spending less on wages and more on new equipment and communal facilities, he said. One reason for abolishing the machine and tractor station

units and letting the collectives buy their own equipment may have been to soak up some of this excess cash that would otherwise have gone into wages.

A Century of Progress

EXTENSION OF REMARKS OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. GEORGE. Mr. Speaker, on Saturday, August 1, thousands of people watched a colorful parade organized and directed by Parade Marshal Walter L. Smith in celebrating 100 years of history in my home county of Wyandotte in the State of Kansas.

Because of congressional work in connection with the labor reform bill, which kept me in Washington, it was impossible for me to participate in this great, picturesque parade of pomp and pageantry.

During the centennial week, of which the parade was a part, hundreds of people visited the old Huron Indian Cemetery, the one and only historical site of any significance that remains intact within Kansas City, Wyandotte County, Kans.

Before becoming a Member of this body, a law was enacted authorizing the sale of this ancient burial ground. Since my arrival in Washington, my every effort has been directed toward the repeal or modification of this law and to the preservation of this Indian cemetery, so rich with history of days long past.

Today, Mr. Speaker, I am introducing a bill to have this burial ground of the Wyandots designated as the "Huron Indian National Historic Site" in a final effort to retain and preserve for Kansas City and Wyandotte County a little plot of ground which is so dear to the hearts of so many people in my community. It consists of less than 2 acres, is in the very heart of the business district, and is replete with Indian lore of times gone by.

If so designated and preserved for future students of history, this site will attract people from all over the world and will in itself be an education to them regarding the early beginnings of the real America. The Huron Indian burial ground of the Wyandot Nation is situated on Minnesota Avenue, the principal thoroughfare of Kansas City, Kans., and is just a few miles from the famous Truman Library on the east and even a shorter distance from the Agricultural Hall of Fame on the west.

Letters have been received, Mr. Speaker, from interested persons in every part of the country and from authors who are writing of the Wyandot Tribe and of the Huron Indian Cemetery. All urge that it be preserved for posterity, and it is often pointed out that its value cannot be measured in dollars.

As part of my remarks, Mr. Speaker, I include the editorial which appeared in the Kansas City Kansan, the leading

newspaper of my home city, on Tuesday, August 4, and I know that those who were among both the paraders and the spectators are praying that the Indian bones which have rested for so many years in Huron Cemetery will never be disturbed:

A CENTURY IN PASSING

Estimates are in wide variance as to the number of persons who viewed Saturday's mammoth centennial parade on Minnesota Avenue. Police thought there may have been 25,000 spectators. Walt Smith, the parade marshal, estimated that the number might have been around 80,000.

Persons who have had close contact with past events are inclined to doubt the claim that Saturday's was the largest number of persons ever assembled in the city. In 1936 when President Roosevelt campaigned here it was claimed that 50,000 persons lined the streets to see and hear him. His was a long route, however, extending from the Santa Fe railroad station in Argentine to Minnesota Avenue and return.

And there was the Pageant of Progress parade of 1934 which packed them in. Photos indicate there was a heavier concentration of spectators along lower Minnesota Avenue that day than there was last Saturday.

The weather undoubtedly cut attendance of the centennial parade. Standing or sitting 2 hours in the hot August sun was an ordeal that many thousands of persons preferred to avoid. The hot weather also was a test of endurance for some of the elderly and extremely young participants in the parade. But they stood up to it like hardy Kansans usually do.

But regardless of how many saw it, the parade was the best ever staged here. Long after the last sunbonnet has been put away in the attic and the last chin whiskers have fallen before the razor, vivid memories of the centennial parade will linger. In point of color and numbers taking part it was one of the most successful community events ever seen in Kansas City, Kans.

It was the longest and contained a most interesting and varied assortment of floats. It is not quite true that every organization in the metropolitan area which could walk or ride got into the parade. But there were more than 200 different units.

While there were many modern entrants in the main it kept the centennial spirit and the beginnings of Wyandotte County. Never before were citizens enabled to see in one roundup so many bushwhackers, sunbonnet belles, pioneers, trappers, suffragettes, prospectors and their mules, the town's first banker, direct descendants of the Wyandots, the Tiblow cabin where dogs had treed a coon, an early day schoolroom, the oldest churches, several town jails and marshals, old cars, a cavalcade of old fire engines their sirens going full blast.

Indeed, the only thing noticeably missing was the Shawnee Prophet. But there were two Lincolns.

Historical Euclid, Ohio

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mrs. BOLTON. Mr. Speaker, the city of Euclid, Ohio, which it is my honor

to represent, is observing the 150th anniversary of its founding as a community. The people of this great city on the shores of Lake Erie have justifiable pride in the tremendous growth and development that has made their community one of the largest suburbs in the metropolitan area known as Greater Cleveland. During the past 21 years, under the dynamic and progressive leadership of its mayor, Kenneth J. Sims, and his administration, Euclid has seen its greatest period of industrial, commercial and residential expansion. May the city of Euclid continue to grow and prosper along the well-chartered course it has set.

I include the following article compiled and written by Leonard B. Voorhees, chairman of the Historical Society of Euclid:

HISTORICAL EUCLID, OHIO

EARLY HISTORY OF INDIAN TRIBES AND SETTLERS

Long before Euclid became a community, the format of its history was being written by pioneering adventurers who believed in reaching beyond their grasp into the unknown. It began when King Charles II of England granted to Connecticut (through Governor Winthrop) the Northwest Territory. This was identified as a strip of land 60 miles wide along the south shore of Lake Erie and extending westward to the unexplored Pacific. About 3,600,000 acres were in what became the State of Ohio.

Early treaties with the various Indian tribes were made and broken from 1701 to 1796. For the most part these tribes—Eries, Ottawas, Chippewa, Seneca, and Wyandots—roamed this area without establishing permanent year-round villages. It was a land teeming with fish, buffalo, deer, turkey, and wildlife in abundance. The tribes relinquished their heritage slowly and with much bloodshed. In 1796 a final treaty was made with the Iroquois Nation to give all lands east of the Cuyahoga River to the white man. At this point the newly formed Connecticut Land Co. commissioned one of its directors, Gen. Moses Cleveland, to lay out and establish a capital of the "Western Reserve."

Early in the spring of that year, 1796, General Cleveland and 66 qualified surveyors and helpers journeyed westward to carry out his company's orders. At Conneaut Creek a camp was made and 41 men remained on that site while General Cleveland and the others proceeded west to the bank of the Cuyahoga River where a community site was laid out for settlement. The trip westward required 18 days to achieve and was blazed through an untracked wilderness. Paths of the red man and the buffalo were the major routes to follow. During this 3-week trip, the men at Conneaut Creek camp became dissatisfied and mutinied. They demanded considerations not specified in their agreement. General Cleveland, acting without written authority, laid out a township of 25 square miles and sold it to these men at \$1 per acre. Each man was granted lakefront property as well as a farm back in the rocky hills and plateaus.

LIST OF ORIGINAL SETTLERS: 1797, 1798, 1799

The following list is taken from the "Directors Account Book" of the Joshua Stow papers, dated September 1796. Land claims were allotted in relatively equal acreage beginning on the westerly boundary (approximately Colt Road, East 140th Street) and moving eastward following the Lake Erie shoreline and giving every man lakefront property. In addition, each man was al-

lotted a square of land as identified on the township map.

LAKEFRONT PLOT

1. Machintire.
2. George Proudfoot.
3. Francis Grey.
4. Samuel Farber.
5. Elysha Gunn.
6. Moses Warren.¹
7. R. Stoddard.
8. Amos Little.
9. Stephen Benton.
10. Amos Barber.
11. Samuel Hungerford.
12. William Hall.
13. Samuel Davenport.
14. Asa Mafan.
15. Amazi Atwater.
16. Joseph Tinker.
17. Michael Coffin.
18. Ayers.
19. Harris.
20. Norman Wallace.
21. Timothy Dunbar.
22. George.
23. Shadrapp Benham.
24. Samuel Agnew.
25. W. Sheppard.
26. David Beard.
27. John Durant.
28. Titus Munson.
29. Joseph Landon.
30. Job Stiles.
31. Charles Parker.
32. Ezekiel Marby.
33. Nathaniel Doan.
34. Amos Spafford.¹
35. Milton Hall.
36. Luket Hanchet.
37. James Hachet.
38. James Hamilton.
39. Seth Pease.¹
40. Rice.
41. Locke.

Seth Pease, Moses Warren, and Amos Spafford met the requirements of settling in the year each was responsible for with an accompanying quota of men. Their instructions included the building of a cabin and the sowing of 2 acres of wheat. One can scarcely visualize the backbreaking work necessary to clear 2 acres of land (87,120 square feet) of the huge trees and glacial rocks that were rooted deeply in the soil. Thus the new township became officially settled in 1797—1 year after the town of Cleveland was laid out and settled. In the early organizational proceedings the men involved named the township "Euclid" in honor of the Greek mathematician and patron saint of surveyors.

The original boundaries encompassed landmarks identified as "Gray's Hill," "The Salt Springs, etc., which later were changed to more permanent markings. Thus we find the western boundary beginning at approximately East 140th Street or Colt Road and the lake, proceeding directly south for 5 miles to what is now Cedar Road; eastward to the present Cuyahoga County line, and north from that point to the lake, a total in excess of 25 square miles. A significant part of what is now West Lake County and a part of Willoughby was included. The present county line boundary was established when Lake County was formed out of Geauga and a part of Cuyahoga Counties in the year 1840.

Among the first settlers was Joseph Burke, a native of Vermont and a drummer boy in the Revolutionary Army. His name is not listed as one of the original 41 men although he settled in 1798 by building a log cabin on the main road which had been opened from Cleveland to the Pennsylvania line.

Another early settler and probably one of the first permanent landholders was David

¹ Responsible for the first settlements.

Dille, who built a log cabin (1797) in the vicinity of Dille Road, presumably on the west bank of Euclid Creek. Some years later he built the first sawed lumber or clapboard house just west of the present cemetery on Euclid Avenue. Mr. Dille was actively engaged in border wars and was with the ill-fated Colonel Crawford when nearly all his command was massacred and he was burned at the stake near Upper Sandusky. After Mr. Dille settled in Euclid, accompanied at intervals by his 5 grown sons, there were 14 additional children born and raised within the township. David Dille lived the remainder of his life in Euclid and when he died no man could say he had not done his duty as a soldier, pioneer, and parent.

One industry which grew out of both opportunity and necessity was that of fishing. Early in the spring a group of the settlers would journey to Rocky River either by land or water (Lake Erie). Pike and pickerel were in abundance and the hardy pioneers would return with barrels of fish to be preserved for summer use. Curiously enough the people believed only ocean fish could be preserved in salt and fresh water fish would not keep. When inquiry of an old Indian was made, the Redman replied—"Uh, no salt; put him on pole—make little fire—smoke him heap."

William Coleman's commonsense taught him that any meat, fish, or fowl could be preserved with plain salt, of which he had acquired a supply in exchange for his watch before leaving the Keystone State. The experiment of salting fish proved most successful and was soon copied by the other settlers.

In 1805, one Jacob Coleman, an uncle of William and a soldier of the Revolution, who had also served several years in Col. Wm. A. Washington's celebrated "Regiment of Horse" moved into Euclid. John Ruple, better known as Deacon Ruple selected a large farm just east of Nine Mile Creek (near East Cleveland "Y" at Collamer Avenue) and remained there throughout his long and eventful life raising a large and respectable family.

(This entire area which is now in the cities of Cleveland and East Cleveland, was once a part of Euclid community. It was in the original Euclid Township until secession from township government began just prior to the Civil War.)

The forests and rocks harbored another pet creature—the rattlesnake. Although no rattlers are around now to prove the records, the old settlers "ment" on the great numbers of these reptiles found in the ravines and rocky gullies. Deacon John Ruple, whose word was never questioned, killed 38 of these reptiles and became quite ill from the odor of the poisonous varmint. Luther Dille had a similar experience while killing 43 which he found in a nesting den near Collamer Avenue. Shooting snakes with bow and arrow was a particularly favorite pastime of boys who delighted in showing off their skill as they held aloft a writhing reptile before female "admirers" and then dispatching it.

RELIGIOUS ACTIVITIES

All of the settlers' time was not occupied with work, hunting, or play; they brought with them a reverence for religion and for God. The first church built in Euclid Township, August 1807, was located in what is now East Cleveland. John Ruple was one of the first and most influential deacons. A just fear of their Creator and an inherent belief in right were the two principles which guided the settlers in their dealings with their fellowman. A man's word was his bond and any infractions were dealt with severely. Community responsibilities were assumed with a seriousness and determination to fulfill the law.

The trading of labor for usable materials was a common practice. In 1809 one Abraham Bishop of New York State came to

Euclid and built the first sawmill. It was located on the east branch of Euclid Creek on the site occupied later by Jonathan and Seth Pelton. It served the growing community for many years using for power the impounded waters of Euclid Creek. Much of the exchange was a verbal agreement and a man usually gave more of his labor than would normally be required. The mill owner prospered without much exchange of hard cash since hogs, chickens, livestock, produce, and labor were commodities valued by all. Many of the settlers could not read although they would "cipher" and total the amount in their heads. Measuring a bushel was by basket and not by weight. Thus we find each man dealing on the terms he could understand. Scales were for the fishermen.

When the War of 1812 broke out, many people in Euclid believed themselves to be in particular danger because of the armed British vessels on the lake and the possibility of Indian raids by land. A rumor spread that the British and Indians had combined in wiping out the white settlements. Several families hitched up their oxen, loaded their wagons, and headed east. They found the Chagrin River so swollen by floodwaters that crossing was impossible. William Coleman made two trips to Cleveland for news and found the threat was only Hull's forces in retreat after this surrender. The families returned slowly to their homes and land in Euclid. Again and again in their lives they found that what appeared to be a catastrophe turned out to be a blessing in disguise. Despite the war and its rumored threats, there were emigrants moving in from the Eastern States.

William Coleman was appointed the first Euclid postmaster in 1815. A territorial division is noted in the records with Euclid being a hamlet situated where Collamer now is and a smaller cluster of houses known as Euclid Creek identified as being near Chardon Road and Euclid Avenue where the old original creek flowed through the township. (The present creek bed is a dug one and not the original.)

No doubt the rapid growth convinced the rattlesnake that his era of influencing Euclid's history was at an end and he retreated to less populated parts. A stagecoach route was established between Cleveland and Buffalo and passed through Euclid on what is now Euclid Avenue, also known then as the Stage Road and the Buffalo Road. Two- and four-horse teams passed through Euclid daily each way and by 1830, it seemed the whole eastern world was migrating west. With the people came new ideas and one of these was building clapboard or sawed lumber houses to replace the log cabins. They were generally referred to as "frame houses." This made a marked improvement in the appearance of the community.

In 1840 a Capt. William Treat (also spelled "Trist") opened a shipyard at the mouth of Euclid Creek. Ships were built and launched Euclid Creek. Ships were built and launched. On one occasion the launching was made tragic by the crushing of a small boy between the chocks as the boat slipped down the rampway. Captain Treat would not allow the stopping of the boat to rescue the boy because of a superstition that any interruption in the actual launching of a boat would carry a sailing stigma or an ill-omen on the seas. Thus a small boy gave his life to preserve the strange tradition of boat launching and a sailor's ignorance.

Thus in a period of less than 50 years, we have passed through the highly interesting part of a township's life and growth, the era of its transmutation from an untracked wilderness into an agricultural community. The roots for growth were deeply embedded in the sticky Euclid clay soil and needed only time to evoke the buds of another and greater period of development. Change, the only constant factor in evolution, was begin-

ning to rear its industrial head. The balance of nature was broken; the generous home of the bear, deer, wolf, and deadly rattlesnake was being pushed aside by the advance of man.

In the far horizon were more deadly foes than those of nature. Man was allowing greed and avarice to elicit treason and slavery which were about to assail the country. Civil war with all its variations became a creeping cancer to the country's progress. Before hostilities broke out the States seemed to lunge forward, on a program of preparation. In Euclid alone, sufficient change was made to disguise the once peaceful township. The Lake Shore & Michigan Southern Railroad purchased the old C.P. & A. mentioned above and connected all branches to make a continuous run from Chicago to New York. Competing with lake shipping again proved the advantages of speed. Actually fresh oysters could reach Cleveland from Baltimore in a little over 24 hours. Ice and speed brought to the area a new appetite for the unusual. It enabled Euclid to ship its products to the eastern markets and give to them the rare treat of new produce. Both man and his products were on the move.

At last the rumbling of war was heard and Euclid gave of its young lifeblood along with thousands of others. Their quotas were filled and more. Some did not return and the militia law provided a stipend of subsistence for their families. The amount varied from \$2 to \$6 paid each month to 15 families—so recorded on June 27, 1863. Soldiers moved by rail and scarcely any could pass east or west without crossing a part of Ohio. Euclid saw far more than its share of men in uniform and the ravages of battle-torn regiments.

Following the war, new names and new events were recorded. Grapes became a prize commodity. Vineyards took the place of grain fields. Concord, Catawba, Niagaras, Delawares, and Martha grapes were greatly favored. Two major factors contributed to the grape-growing success: (1) Slatestone-clay soil produced a hardy good growth, (2) while the nearness of Lake Erie tempered the atmosphere and prevented damage by frost. Grapes were packed in 6- and 9-pound baskets and shipped west as far as Denver and east to the seaboard cities, particularly New York. Wine competed with the grape and enabled the grower to have a more stable year-round income. Euclid wines and Euclid grapes became nationally known because of the delicious and distinctive flavor drawn from the sticky clay soil. Thus again we find a blessing in disguise thrown at our feet.

Another prominent industry was developed in the stone quarries. About 1871, the McFarland brothers opened a quarry on the west side of Euclid Creek in an area known as Bluestone. Great slabs of stone were sawed out of the blocks dug from the quarry. The stone sawmill used gangs of steel blades with water and sand as a cutting agent. The slabs were squared for sidewalk use or made into coping for dressing out a stone wall or top of a building wall.

In 1873, East Euclid or Euclid Creek and later just Euclid, contained 1 church, a fine schoolhouse, 2 stores, hotel, steam basket factory, wagon shop, 2 blacksmith shops, and about 30 homes, all adjacent to the creek or Stop Ten, as it was known. Euclid built a commodious townhall of red brick and used it as only a growing community could in those postwar days. Wheat was still a common media of exchange, valued at about \$1 per bushel and used often in place of hard money. Even the minister of the Euclid Baptist Church was paid in wheat for his services.

Other churches were organized and are recorded here for the historical value. St. John's German Lutheran Church built in about 1852 with 12 families on the church

roster. About 2 miles northward was the growing community of Nottingham where a Presbyterian Church was organized and a frame building erected in 1870. There were only 12 or 13 members to sustain the church, but their zeal and enthusiasm was contagious. St. Paul's Catholic Church was organized in 1861 and an imposing frame building erected. Included in the church activities was a school for about 50 boys and girls with over 70 families enrolled from a large area including a part of old Collinwood.

SCHOOLS AND EDUCATION

The early records of Euclid Township gave little or no information except to record that a township meeting was held in the schoolhouse. The first mention of schools as a part of the community was made in 1828 when the entire township was divided into districts. It is noteworthy that with a rapidly increasing population of pioneering minded people there was a demand for the formal teaching of children. The first of these schools was known as a Blab School in which the loudest voiced pupil had every advantage. (Imagine what a boon that kind of school would have been to some of the grownups we know today.) Teachers were poorly trained and served on an itinerant basis, often boarding wherever the townspeople saw fit to provide.

Following the Civil War and the return of many volunteer soldiers to the area, the erection of "little red schoolhouses" progressed. Euclid Township had more than its share of these one-room, eight grades, teacher-janitor taught buildings. As late as 1900, there were 11 such buildings scattered strategically throughout the township. The list of districts is as follows:

1. Located on North Street (Chardon Road).
2. Located at corner of Babbitt and Lakeland (Noble).
3. Located at Lake Shore Boulevard and East 200th Street (Cut Road).
4. Located at corner Dille and St. Clair (Nottingham).
5. Located at Green Road and Euclid Avenue.
6. Located at Chardon Road and Richmond.
7. Located at corner Green and Mayfield Roads (South Euclid).
8. Located at Richmond Road and Mayfield Road.
9. Located at South Euclid.
10. Located at East 260th Street and Lake Shore Boulevard (Upson).
11. Located at Bluestone Road (Bluestone).

In 1868 a small class of six pupils was organized into a high-school unit. They attended on School Street (North Street) but no record is available on what happened to the group. There was only one teacher-principal-superintendent to assume all the responsibilities and no doubt little thought was given to the value of records.

A high school was erected in 1894, chartered in 1896 and graduated its first class in 1897. There were six in the graduating class who received diplomas: Oliver Callahan, Ella Honck, Will Houck, Libbie Pelton, Addison Verbsky, Loids Verbsky.

Will Houck was killed in the Spanish-American War, the others were alive in 1947 and several of them were present for recognition at Euclid Central High School on February 10, 1947.

FIFTY YEARS OF EDUCATION GROWTH, 1898-1947

Following the graduation of the class of six, the high-school course was extended by the superintendent, Everett L. Abbey, and his recently appointed assistant, A. Hawthorne Maves.

School census showed a total of 868 boys and girls eligible for school. The enrollment was only 45 in the high school. Superin-

tendent Abbey expressed a regret that more children did not avail themselves of the opportunity for a free education. Reports disclose that the average daily attendance was 418 in all districts. Absence and tardiness prevailed to a marked degree; in 1 year, 1897-98 there were 1,439 cases of tardiness. This was an average of about 3½ tardy marks per pupil and according to the superintendent, was 10 times more than necessary. However, walking was the chief means of transportation except for those who came some distance and they rode horseback or drove a horse and buggy. A tie-shed was used for the stabling of the horses. Parents were mostly indifferent to the educational needs of their offspring and frequently kept the children home to work or because the "cow was due to calve today." In 1899, Superintendent Abbey disclosed that there were 87 cases of whipping in 1 year; 5 of whom were girls. On this subject the superintendent states, "We are opposed to corporal punishment believing it should be banished to animals and slaves. The American boy, like the ancient Roman, should not be whipped. But so far, we are unable to avoid it altogether. It will be inflicted only as a last resort before sending to the reform farm."

In 1909 the first graduating class under the newly appointed Superintendent Joel O. Oldt had its commencement. Dr. Clement Martzoff, president of Ohio University, was engaged as the speaker. The class consisted of three girls and one boy—Juliette Harms, Emelie Harms, Leona Smith, and Carl Scheuring.

Many youth have since passed through the educational portals of Euclid's high schools—Central, Shore, and Euclid Senior High. Many were dropouts or early leavers and found satisfactory work in the tremendous growth of industry. Occasionally a class reunion brings together many of these graduates and quinquages. It is most inspiring to see and realize the progress these pupils of yesteryear have made of their lives and perhaps their opportunities. Among this large group numbering many thousands are some renowned individuals. They are to be found in the fields of science, medicine, law, industry, law enforcement, and in professional work of every kind.

Education has contributed not only to the youth within our community but to the collective community of Euclid and has been a bulwark in State and national defense and growth. It has proven the oft quoted axiom: "The future belongs to those who prepare for it."

TRANSPORTATION

Early means of travel going from Euclid to points east or west were frequently achieved by water. Originally the small canoe was used and later rowboats came into common use. The route led down Euclid Creek to the lake, and, if not too rough, canoe or rowboat carried the traveler to his destination. If the lake was dangerously rolling, the boat passenger took to the bank and "footed it" to his objective. This meant crossing small streams, climbing banks, and frequently cutting inland to the trail. Traveling Indians, roaming animals, and groups of wanderers had established this trail through constant use and years later the paths developed into accepted roads.

Increased use of the roads demanded that some means be found to make them passable in inclement weather. This led to plank roads being built, and since the builder usually assumed the cost, the road had toll gates at the limits of each builder's domain. State laws permitted the road owner to collect for travel over his section to help defray the expense of his investment. A toll gate was in use as late as 1903 and was operated by a Mr. Hazen who had only one arm. The gate was located just east of 212th Street, about half way to 214th Street. The

improved road ran west to the East Cleveland Y. and another section ran east to Wickliffe.

In the year 1881 the New York, Chicago & St. Louis (Nickel Plate) Railroad was built. Two tracks were laid and the train schedule was frequently referred to as triweekly—through 1 week and try to get back the next. Nevertheless, the coming of the railroad to Euclid was a milestone in the township's development.

The Nickel Plate was so nicknamed as a result of a pun by Edward L. Young, associate editor of the Norwalk, Ohio, Chronicle, who noticed that the initials NYCL could be pronounced "nickel." The process of finishing metals known as nickel plating was becoming popular at this time. Mr. Young coined the term "Nickel-plated railroad" and the pun caught the public fancy. It was reprinted in other papers, including New York and Chicago dailies.

Several years later, when the Vanderbilt interest purchased the railroad from its founders, Mr. Vanderbilt remarked: "It should be nickel-plated at the price we paid for it." The term has been commonly used for over half a century.

Earmarking of livestock was common as late as 1851 and records were kept on file in the township clerk's office. Some of the so-called brands were:

"Lewis Dille's do A crop off the left ear transfer to John West."

"Calvin Dille's do A swallo fork in the right ear and under bit in the left."

"Samuel Mollrath's do A crop off of the left ear and a slit in the end of same."

"Elihu Richmond's earmark is a square crop off the left and two half pennies out of the underside of the right ear."

"Robert Young's is a hole in each ear."

Lack of stockproof fences made this means of identification necessary.

National elections played a rather exciting roll in Euclid, especially in the year of 1860 when Abraham Lincoln ran on the newly organized Republican Party against Stephen A. Douglas on the Democratic ticket.

Official Euclid records disclose that the Lincoln-Hamilton team received 255 votes; Douglas-Johnson team received 104 votes; and the Breckenridge-Lone team received 7 votes.

GROWTH AND INCORPORATION AS A VILLAGE

Many factors enter into the growth of a community. Harbors and water transportation played a most important part during the 19th century. Had Euclid received the grant for the Ohio Canal, Cleveland would probably have been a suburb of Euclid. However, the harbor facilities and potentialities of the Cuyahoga River favored Cleveland's growth over any other port along the south shore of Lake Erie. But, some means of rapid transportation of coal to steel and a dispersal of the resultant products was needed. The railroad belts furnished this essential.

Euclid is still growing, largely because of the strategic location of railroad facilities coupled with the foresight of its leadership, both past and present. Between the two railroads is a manufacturer's paradise for development. Few communities are so ideally favored. Industry, both heavy and light, has found that Euclid is partial to industrial development. This means homes, schools, churches, and local government must meet the demands of growth.

The feeling of growing into a village resulted in more than the required 30 electors signing the petition "praying to incorporate the territory described in said petition into a village." Election was set for February 14, 1903, voted upon and tallied as follows:

For incorporation.....	130
Against incorporation.....	126

A true copy of the minutes—in part—of a meeting called by the president of the board of trustees, dated February 17, 1903, is recorded in the village council proceedings,

volume No. 3, pages 338 to 340. Thus Euclid became a village.

The first village election resulted in the following persons being elected to office:

Office	Citizens ticket	Votes	Peoples ticket	Votes
Mayor	H. S. Pickands	61	Charles Harms	48
Clerk	H. S. Dunlop	63	R. R. Vogt	37
Treasurer	J. W. Smith	67	R. A. Hunt	37
Marshal	Wm. Covert	66	Wm. Hazen	35
Council for 2 years	H. Avery	58	J. J. Carey	38
Do	Willard Frissell	57	J. J. Murphy	37
Do	J. W. Bentley	67	J. Lilly	45
Council for 1 year	J. F. Cavanaugh	58	John Marzel	37
Do	W. M. Cope	60	O. Welch	40
Do	A. D. Lowden	61	Albert Lock	35

However, the township also continued to remain as an electorate and elected officers on the same date to the following responsibilities: Trustee, Henry Faust; treasurer, Chas. A. Lamb; justice of the peace, C. F. Knuty; constable, F. B. Rogers. Assessors: Euclid precinct, John Davis; South Euclid precinct, H. L. DeVoe; North Euclid precinct, J. H. Husong; Nottingham precinct, C. H. Voorhees. Eleven road supervisors were also elected.

In November 1925, Charles R. Ely was elected mayor on a platform of improved economy and abolition of the fee system. He faced a delinquency in tax collection attributed to the poor judgment in allotment improvements of previous years. One of his first acts was to obtain council approval to abolish the costly fee system and to appoint full-time men to handle the engineering problems. Rigid economy in street improvements was enacted, and only those streets of reasonable usage were further improved.

Industrial expansion became the program for development soon after Mayor Ely was inaugurated. The land between the two railroads was looked upon as an ideal location. The council adopted a liberal policy to encourage prospective manufacturing companies. Among the first large plants to choose Euclid facilities was Chase Brass & Copper Co. Addressograph-Multigraph Co. followed in 1930 after considering some 30-odd cities as possible sites. The main offices and the new plant were built and the business moved to Euclid from Chicago. Addressograph-Multigraph brought many of its personnel to operate the huge organization. Other plants followed, and today Euclid has one of the largest industrial areas in Ohio.

During the early years of the depression, a delegation of Euclid citizens and Mayor Ely applied in person to the Reconstruction Finance Corporation in Washington for funds to finance a Euclid housing project. On October 3, 1933, a grant for housing expenditure of \$1 million was authorized by the Federal Government to be used in erecting individual homes. Government authorities claimed this was the first housing project approved by the Government.

In the summer of 1929, the old town hall caught fire and before sufficient equipment could arrive, this landmark was a roaring inferno and only at great risk were the original records rescued. The building loss was quite complete. The city government officials used the old hotel on Chardon Road as its headquarters. During this period plans were prepared for a new administration building or city hall, and under WPA authorization the new building was completed in 1938.

The population in 1920 was officially recorded as 3,303 and in 1930 increased about 400 percent to a total of 12,751. Since Eu-

clid is one of those communities built lengthwise rather than square, the problem of adequate transportation was imperative to the residents and factory workers. A municipal bus line was placed in operation in the year 1935.

Kenneth J. Sims was elected mayor in November 1937 and took office on January 1, 1938. The end of the depression was not in sight and the unusual demand for relief was a major issue in the first few months of his administration. However, by inspiring a cooperative attitude and enlisting the support of the schools, churches, American Legion, Kiwanis, and various other civic organizations, the problem was effectively met. People did not go hungry even though the luxuries of previous years were not permitted.

In 1942 the Thompson Products Co. purchased a site of 120 acres fronting on both East 222d Street and Euclid Avenue, on which was erected a \$13-million plant for the production of aircraft valves. This division of Thompson Products was christened Tapco. Government orders justified a further expansion through the finances of the Defense Plant Corporation and Tapco added facilities nearly equaling the original plant. The manpower schedule called for at least 7,000 workers. Other expansions included Cletrac, Cleve Aero, Cleveland Hobbing Machine, Euclid Electric, Euclid Case, and a large number of smaller industries of sufficient diversification to insure a rather steady employment demand.

The expansion of industry brought about an acute housing shortage for the defense plant workers. A survey was conducted by the Federal Works Agency and a defense housing program was deemed essential to national defense. Two units were recommended, 1 of 500 homes built on East 200th Street (known as Euclid Homes), and the second a unit of 800 homes built on property facing Babbitt Road and known as Lake Shore Village. The first unit was completed in 1942 and the second in 1943. Both were immediately filled to capacity and had a long waiting list of applications.

Growth of the city brought new demands on utilities as well as protection against fire, traffic hazards, and the need for added police facilities, together with school expansion.

In 1947 a Federal grant of \$50,000 was achieved through the untiring efforts of Congresswoman BOLTON whose vision for the community and influence in Washington, enabled the city of Euclid to avail itself of the provisions of Federal assistance. Euclid has thus met these demands in a manner which convinces people that Euclid city is a good place to live.

"On the strength of past achievements the future holds promise and fruition."

LEONARD B. VOORHEES.

Restoration of Freedom to Captive Nations

EXTENSION OF REMARKS OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. PUCINSKI. Mr. Speaker, I have today introduced a joint resolution which I hope will receive the approval of Congress before we adjourn this session.

This resolution calls for an affirmation by Congress that it is the intent of the Congress of the United States that the people of the captive nations of Europe be given a right to choose their own philosophy of government and their own rulers in a spirit of complete freedom.

I am enclosing an editorial which appeared in the Washington Star, commenting on the unprecedented reception given our Vice President by the people of Poland during his recent visit to that country.

The estimated 250,000 Poles who greeted the Vice President of the United States upon his arrival in Warsaw should demonstrate to the entire free world the very profound yearning and respect that these Polish people have for the United States and for the principles of freedom. This was not necessarily an expression for Mr. Nixon but, rather, it was the only way the Poles could demonstrate their admiration for America and their traditional hatred of communism.

As the Washington Star points out in its editorial of August 4—

Directly and indirectly, the people of Poland have said many eloquent things in the extraordinarily warm welcome they have accorded Vice President NIXON. In marked contrast to their lukewarm, if not sullen, reaction to Soviet Premier Khrushchev's recent visit, they have left no room for doubt that their heart belongs much more to the United States than to the U.S.S.R.

I firmly believe that the United States should now go on record, as categorically as we can, that we in this country and the people of the free world in general share with the people of the captive nations their longing for freedom.

The adoption of the resolution which I have proposed today would indeed be a heartening reassurance to these people that their great dedication to the principles of freedom, which they continue to maintain despite the fact that they have had to live under Communist rule forced upon them after World War II, is greatly respected by those of us fortunate enough to live in a free country.

I am one of those who views with great concern the pending visit of Soviet Premier Khrushchev to this country. I do not think that it will serve the purposes announced by those who have arranged this visit. However, since the Soviet Premier is going to be in this country, I

think that it is incumbent on the Members of Congress to make known to the President of the United States that when the Soviet Premier does come here, the President should firmly impress on him that this Nation must continue to view all Soviet foreign relations with suspicion so long as these captive nations are forcefully held in the Soviet orbit.

It should be made clear to Mr. Khrushchev that there is a true road to peace, and that road leads through the captive nations, which must be given an opportunity to choose their own government in free and unfettered elections supervised by the United Nations before tensions in Europe can be eased.

It should be made clear to Mr. Khrushchev that you cannot take the noble nations of central Europe and plunge them under communist rule against their will and expect lasting peace in Europe.

If the Soviet Premier sincerely wants peace, let him demonstrate it to the free world by releasing the captive nations from their forceful rule by Moscow and let these nations voluntarily pick their own form of government.

Mr. Speaker, the Washington Star editorial, which I mentioned earlier, follows. I believe that it eloquently speaks out for the cause of a free Poland and all the other nations now being held captive by the Communists:

[From the Washington Star, Aug. 4, 1959]
CATALYST IN POLAND

Directly and indirectly, the people of Poland have said many eloquent things in the extraordinarily warm welcome they have accorded Vice President Nixon. In marked contrast to their lukewarm, if not sullen, reaction to Soviet Premier Khrushchev's recent visit, they have left no room for doubt that their heart belongs much more to the United States than to the U.S.S.R.

This is a fact that may be stated quite objectively, without any desire to draw invidious comparisons. The Poles and the Russians, after all, have been at odds for centuries, often in the most bitter way—under the Czars as well as under the Communists. Mr. Khrushchev himself, who presumably okayed the Warsaw regime's decision to invite Mr. Nixon, is too good a student of history to have to be told about this, and we may assume that he has not been particularly surprised by what has happened—hurt perhaps, but not surprised.

The truth is, of course, that there is a unique affinity—historical and affectionate—between our country and the Poles. Since that long-ago time when men like Pulaski helped George Washington to achieve victory over the British in the American Revolution, great numbers of these people, over a period of generations, have emigrated to the United States and played an important part in building it to its present greatness. Small wonder, therefore, that Mr. Nixon has gone through a sort of triumphal march in Warsaw.

But the plaudits of the great Polish crowds have been addressed not simply to the Vice President, but to our entire country and to the free way of life it stands for. Mr. Nixon in that sense, by his presence over there, has been a kind of catalyst. Just the sight of him has been enough to move the people—hundreds of thousands of them—to cry "Bravo, America!" and to make clear that years of Communist control (somewhat less stringent than in most satellite lands) have not succeeded in eradicating their love of liberty and their pro-American views.

Knowing the Poles as they do, Mr. Khrushchev and his colleagues in the Kremlin probably have not been taken aback by all this. Yet, since the same sort of mood prevails in varying degrees throughout their satellite empire, they must sometimes wonder most seriously about the loyalty of that empire and their ability to hold on to it. This is one of the subjects that Mr. K. is likely to be challenged on repeatedly, and at great length, when he visits our country next month.

Unrestricted World Travel by the People, as Well as Heads of Government, Can Only Bring About Better Understanding Between People Everywhere

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. McDOWELL. Mr. Speaker, unrestricted world travel by the people, as well as heads of Government, can only bring about a better understanding between people everywhere in a world which has grown really quite small.

It is the people, and especially the young people, who can learn and who can profit from travel and from living for awhile, be it ever so brief, among other peoples and in other nations, for they will be tomorrow's leaders.

There can be no strangers in this world since there are no longer faraway places in these days of the jet transport.

The free world must welcome the opportunity which the Vice President has opened up for further development of exchanges of people and of cultural programs.

In his Moscow television speech, Vice President Nixon declared:

Both the exchange of persons and the cultural exchange programs should not only be continued but sharply expanded. The more Americans who visit and get to know firsthand the people of the Soviet Union and the more Soviets who do the same in the United States, the better understanding we shall have.

Both World War I and World War II grew out of basic miscalculations on the part of the leaders of Germany as to what the reaction of America and the free world would be. We cannot disarm, nor can we hope for peace until the leaders of the Soviet Union know America well enough to avoid similar miscalculations about our people and our iron purpose to maintain the freedoms which we consider essential.

The Eisenhower-Nixon policy of barnstorming exchanges between top Government leaders can be looked upon by the American people with approval if later developments do not indicate that it comes about only as a result of the failure of the Geneva Conference.

The gladhanding of top officials, however, can be misleading. We in the United States must remain firm as we calmly evaluate the newspaper headlines

reporting the outward actions and words of the candidates for national and world acclaim.

It is unfortunate that we cannot know what goes on behind the closed doors of secret diplomacy. There must be no more Pearl Harbors for the American people to regret.

It is interesting to note that a spontaneous movement to promote closer relations between teachers of the East and West has developed in Washington, D.C., at an assembly of the World Confederation of Organizations of the Teaching Profession.

The New York Times of August 6, 1959, reports that the move came when delegates from several European nations offered to set up programs to exchange information with Asian representatives.

Dr. William G. Carr, secretary-general of the confederation, hailed the plan for exchanges. Dr. Carr, who is also executive secretary of the National Education Association, said that foundation support would be sought to make the exchanges possible. The organizations represented at the meeting in the Nation's Capital represents some 3 million teachers throughout the world.

I have recently introduced a bill, H.R. 7533, to amend the International Cultural Exchange and Trade Fair Participation Act of 1956 to authorize the President to provide for participation by foreign governments and citizens of other countries in artistic and cultural activities in the United States.

This bill amends Public Law 860, 84th Congress. This legislation, first, would make the President's special international cultural exchange program a true two-way exchange program which it is not at present; second, provide for the inclusion of students of and teachers in educational institutions in the United States and abroad. The major if not whole emphasis of this program at present is on the professional. Van Cliburn was a product of the Juilliard School of Music; Jaime Laredo, who won first prize recently in the Queen Elisabeth of Belgium International Music Competition, was a graduate of the Curtis Institute, yet these and other great American artists have not been included in the President's special international program.

Another provision of this bill, H.R. 7533, would enlarge the present Advisory Committee on the Arts in the Department of State from 9 to 21 members. The 12 members of the Advisory Committee on the Arts first appointed under the provisions of H.R. 7533 must be appointed by the Secretary of State from among persons nominated by the following organizations: the Music Educators National Conference, the American Educational Theater Association, the College Art Association of America, the National Art Education Association, the National Council of the Arts in Education, the American National Theater and Academy, the National Music Council, the American Federation of Arts, the American Institute of Architects, the National Education Association, the American Council on Education, the American Council of Learned Societies, the Association of American Colleges,

This bill, H.R. 7533, also provides that the Commissioner of the U.S. Office of Education shall be Vice Chairman ex officio of the Advisory Committee on the Arts of the Department of State.

If this administration is really serious about expansion of the exchange of persons and the cultural exchange programs it will strongly support my bill, H.R. 7533, and similar legislation which is before the Congress at this time which has been introduced by the gentleman from New Jersey [Mr. THOMPSON] and Senator HUBERT H. HUMPHREY, coauthors of the Humphrey-Thompson Act, Public Law 860, 84th Congress.

I include the text of my bill, H.R. 7533, a New York Times article, and an article by Doris Fleeson which appeared in the Washington, D.C., Evening Star of August 4, 1959:

H.R. 7533

A bill to amend the International Cultural Exchange and Trade Fair Participation Act of 1956 to authorize the President to provide for participation by foreign governments and citizens of other countries in artistic and cultural activities in the United States, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 3 of the International Cultural Exchange and Trade Fair Participation Act of 1956 (22 U.S.C. 1992) is amended by inserting "(a)" immediately after "Sec. 3." and by adding at the end thereof the following new subsections:

"(b) The President is authorized to provide for participation by foreign governments and by citizens of other countries in activities in the United States similar to those provided for in subsection (a) of this section and section 12 of this Act, except that he shall not provide for the participation of industrial or trade exhibitors or exhibits in trade and industrial fairs in the United States under this subsection.

"(c) (1) Students of and teachers in, educational institutions in the United States who are sent abroad, either individually or in groups, under the provisions of this Act shall be selected through the Institute of International Education or a comparable organization which shall also arrange for their tours abroad and for their participation and presentations in festivals, competitions, and exhibitions abroad.

"(c) (2) Students of, and teachers in, educational institutions in foreign countries who are brought to the United States individually or in groups under the provisions of this Act shall be selected through an agency of the government of the country in which they reside, or through the Institute of International Education or a comparable foreign organization. The tours in the United States of such foreign students and teachers and their participation and presentation in festivals, competitions, and like exhibitions in the United States shall be arranged for by the Institute of International Education or a comparable organization."

(b) Paragraph (1) of subsection (a) (as designated by subsection (a) of this section) of section 3 of such Act is amended (1) by inserting "professional or nonprofessional" immediately before "creative", and (2) by inserting immediately after "groups" the following: "(including individuals or groups from educational institutions)".

Sec. 2. Section 2 of the International Cultural Exchange and Trade Fair Participation Act of 1956 is amended (1) by inserting "(1)" immediately after "nations by", (2) by inserting "including cultural develop-

ments and achievements of students and teachers in educational institutions in the United States)" immediately after "people of the United States", and (3) by striking out "throughout the world;" and inserting in lieu thereof the following: "throughout the world, and (2) facilitating the presentation in the United States of the artistic and cultural contributions and achievements of the peoples of foreign countries;"

Sec. 3. Section 5 of the International Cultural Exchange and Trade Fair Participation Act of 1956 is amended by adding at the end thereof the following new sentence: "Not less than 20 per centum of the funds appropriated pursuant to this section shall be expended to carry out the provisions of section 3(c)."

Sec. 4. (a) Subsection (a) of section 10 of the International Cultural Exchange and Trade Fair Participation Act of 1956 is amended (1) by striking out "from among its membership and nine other members appointed by the Secretary of State," and inserting in lieu thereof the following: "from among its membership, and a Vice Chairman ex officio who shall be the Commissioner of the United States Office of Education, and twenty-one other members appointed by the Secretary of State"; and (2) by inserting immediately before the period at the end thereof a comma and the following: "including national educational organizations in such fields".

(b) The twelve members of the Advisory Committee on the Arts first appointed to the offices created by the amendment made by clause (1) of subsection (a) of this section shall be appointed by the Secretary of State from among persons nominated by such organizations as the Music Educators National Conference, the American Educational Theater Associations, the College Art Association of America, the National Art Education Association, the National Council of the Arts in Education, the American National Theater and Academy, the National Music Council, the American Federation of Arts, the American Institute of Architects, the National Education Association, the American Council on Education, the American Council of Learned Societies, and the Association of American Colleges. The term of office of three of the members first appointed to such offices shall be one year, notwithstanding the provisions of section 10(d) of such Act.

Sec. 5. Title I of the Agricultural Trade Development and Assistance Act of 1954 is amended by inserting immediately after section 104 thereof the following new section:

"Sec. 104A. There is hereby authorized to be appropriated for the fiscal year beginning July 1, 1959, and for each succeeding fiscal year, from the foreign currencies which accrue under this title, not to exceed the equivalent of \$5,000,000 for financing the translation, production, and distribution of educational motion pictures and filmstrips abroad."

[From the New York Times, Aug. 6, 1959]

EDUCATORS PLAN WORLD EXCHANGE—OFFER OF ASIAN AND EUROPEAN DELEGATES INVOLVES BOTH TEACHERS AND PUPILS

(By Leonard Buder)

WASHINGTON, AUGUST 5.—A spontaneous movement to promote closer relations between teachers of the East and West developed here today at the annual assembly of the World Confederation of Organizations of the Teaching Profession.

The move came when delegates from several European nations offered to set up programs to exchange information with Asian representatives. The exchange, first, proposed by the Netherlands teachers' organization, would involve pupils as well as teachers.

Dr. William G. Carr, secretary-general of the confederation, halted the plan. Dr. Carr who is also executive secretary of the National Education Association of the United States, the host organization for the assembly, said that at first the program would be limited largely to an exchange of correspondence and educational materials.

However, he said that foundation grants might be obtained later to make it possible for teachers from eastern and western countries to visit each other.

The confederation's resolutions committee met today to draft its report. It is expected to present a resolution tomorrow calling for condemnation of their treatment of teachers. The assembly ends tomorrow.

A special report submitted earlier to the assembly asserted that East Germany forced its teachers to promote communism in and out of the classroom and to spy and inform on pupils and parents.

The only Communist country represented at the assembly is Yugoslavia.

About 700 delegates and observers from 74 countries are attending the assembly, which is the first in this country since the world organization was established in 1952. The confederation represents, through its member groups, more than 3 million teachers.

Sessions are being held at the Mayflower Hotel and the headquarters building of the National Education Association.

[From the Washington (D.C.) Evening Star, Aug. 4, 1959]

CHANGE OF DIRECTION ON VISITS: INVITATION TO KHRUSHCHEV IS CALLED EMOTIONALLY DIFFICULT FOR SOME IN UNITED STATES

(By Doris Fleeson)

It was difficult to tell at his hastily summoned press conference whether President Eisenhower was relaxed and happy over his decision "to melt a little bit of the ice that seems to freeze our relations with the Soviets."

He spoke pleasantly enough, though showing a slight trace of irritation over the fact that so important a command decision should have been "one of the worst kept secrets of our time." This may have been only a reversion to his military days when such abundant leakage about so delicate a subject would have been unthinkable.

Certainly the President has had the green light from most political intersections for his exchange of visits with Soviet Premier Khrushchev. There can be little question that the people, not only of the United States but of the world, will go a long way in the name of peace. The new generations feel in their bloodstream the nuclear threat as older men and women cannot.

With the diplomatic instinct which served him so well during the war and can almost be said to have made him President, Mr. Eisenhower will see the major Western allies before the Soviet exchange. It was a commonplace at Geneva that General De Gaulle is happy about practically nothing touching upon the Soviet Union and that Chancellor Adenauer of West Germany is not far behind him.

Yet with all the Eisenhower support at home, and his sound intention of touching his bases before the face-to-face encounters with Khrushchev begin, the new project is one of those enterprises of great pith and moment whose currents may turn awry. The President has been a part of some great decisions that now can be defended only as a good idea at the time, such as allowing the Russians to reach Berlin first in World War II.

He also saw, and later became a part of, Republican use of the Yalta Conference failures in order to win elections at home. It is a wry irony, freely commented on in Congress after the President's announcement, that a Republican administration

should now be heading toward conferences with the Soviet Premier, both here and in Russia, without even the excuse of a wartime alliance.

To make this possible, Stalin and Franklin Roosevelt had to die. Only Winston Churchill of the Yalta decision makers lives on, a stout champion of its validity in the context of its time. It could even be that John Foster Dulles would have had difficulty in adjusting to the present pace of East-West relations.

The Republican right wing is already showing some sensitivity to cloakroom jokes about Vice President Nixon's "courtship of the Russians." This is the spot where the President's moves may be sourly regarded, but it is out of power in Congress and generally throughout the country.

Entirely apart from political considerations, there will also be Americans who find the change of direction emotionally difficult. Yet it seems clear that another watershed of history is here and demanding exactly the kind of direction the President proposes to give it.

The President emphasized that the Khrushchev exchange was for a "personal visit" and had no connection with a later summit meeting. He specifically disavowed negotiation and emphasized he could not speak for the Western Powers, only for the United States.

Yet in the light of the President's powers over foreign policy—the powers of which every President is most jealous—the Nixon journey is tourism and the Congress can do very little. And for his part, Khrushchev has repeatedly indicated that he would like to do a lot of business with the President of the United States.

Survey Highlights Willingness To Pay the Price for Public Education

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ROOSEVELT. Mr. Speaker, no area of public concern is or should be greater than in that of public education. I believe parents—indeed the entire adult community—are willing to pay adequately for their children's education, including a tax increase, if that is necessary. I think this point is important to keep in mind when advocates of Federal aid to education claim that taxpayers are willing to assume further financial responsibility in the education of America's future citizens and leaders.

A survey, conducted in Culver City, Calif., a community within my district, bears out this contention. The survey, conducted by PAIR, Inc.—Predictive and Integrative Research, Inc.—likewise pinpoints that while there is a willingness on the part of parents—and the community in general—to assume their share of financial responsibility, including the payment of decent teachers' salaries, often the facts are not made known to them. This explains, for example, why in item 13 of the survey, the text of which follows, there is a large "Yes" vote on a willingness to vote for school bonds, but at the same time, "the realities of elections show that unless a cam-

paign is backed up by extensive preparation and adequate financing, it might fail."

Taken as a whole, this survey conducted in a typical American community offers illuminating data and presents the crucial areas in which obviously more attention must be given to achieve improved and necessary community understanding about the public school system and those who serve in this system. The concern is there—the need is to have better communication in and about all phases of public school problems and objectives.

The survey does highlight—and this is the point I wish to make—that the adult population is willing to pay the price for public education, if the facts are known.

The report on the survey follows:

REPORT ON SURVEY OF CULVER CITY EDUCATIONAL NEEDS

INTRODUCTION

PAIR, Inc., at the invitation of the Culver City Citizens for Public Schools, planned and supervised a survey of the community in regard to certain education issues. This is a report of the findings from this survey.

SAMPLE

The sample consisted of person-to-person interviews with 316 persons throughout Culver City. The sample was obtained from every precinct in the city on a random basis. Approximately 1 percent of the total Culver City population was contacted; this constitutes over 2 percent of the voters.

ITEM ANALYSIS

Item 1: Do you (or husband) work in Culver City? Yes, 30 percent. No, 70 percent.

This item reveals Culver City as essentially a residential community with more than two-thirds of its population employed out of the city. It is useful in providing socioeconomic baselines for further interpretation of the data, for, when this response is correlated with independent information concerning age grouping, we perceive that Culver City is primarily a community of middle and upper-middle class families, with the predominant age group that of the 30- to 40-year-old.

Other studies have proved that this age group considers education as the primary civic interest for them.

Item 2: Do you have children in Culver City schools? Yes, 65.7 percent. No, 34.3 percent.

This response further reinforces the observation made above that Culver City families are predominantly in the 30-40 age group.

Item 3: Are you able to take your vacations other than during the summer months? Yes, 55 percent. No, 45 percent.

This item has important significance for the future utilization of schools on a 12-month basis as a solution to ever-increasing financial problems. The fact that over one-half of the population now can take vacations any time of the year that they prefer, points to the feasibility of the 12 months school.

Item 4: Which of the following plans of organization do you prefer for our high schools? A. Three years of junior high school—followed by 3 years of senior high (or plan B). B. Two years of junior high school—followed by 4 years of senior high. Plan A, 51 percent. Plan B, 28 percent. Blank, 21 percent.

The response to this item would indicate that a majority of people would prefer retaining the present 3-3 plan. However, the large blank response indicates that many do not understand the pros and cons in-

volved and therefore it would seem wise for the board of education to engage in an extensive public education campaign before making any changes. If this is not done there is a danger of friction arising over any plan that might be chosen.

Item 5: Who is now on the board of education in Culver City? Seventy-eight and four-tenths percent could not name a single board of education member; 7.2 percent could name one member, 5.4 percent could name two members, 2.9 percent could name three members, 2.9 percent could name four members, 3.2 percent could name all five members. It is obvious from these statistics that members of the board of education are not well-known citizens. It perhaps suggests that public relations between the board and the community are weak.

Item 6: Do you think that the Culver City Board of Education is doing a good job? Yes, 74 percent. No, 6.5 percent. Blank, 19.5 percent.

Item 7: In what way?

Although 74 percent felt that the board was doing a good job, the vast majority could not state specifically in what way they were doing so. The responses of those who did answer item 7 seemed to cluster into the following categories which have been arranged according to frequency of response:

We like our schools.....	1
Good teaching methods.....	2
Culver City has the best schools.....	3
Have heard no bad reports on schools.....	4
Children's progress.....	5
Progressive-advanced school system.....	6

These responses indicate a subjective feeling of well-being in the schools which rebounds to the credit of the school board. It will be noticed, however, that three of the top four reasons given are not objective replies and the fourth (good teaching methods) indicates that the citizens do not understand the function of a board of education for the board does not establish the methods of teaching used—this is far removed from its domain.

On the negative side the responses were more specific usually having some relation to the individual's personal experience with the schools or the board. Some of these were: objections to split sessions; poor public relations; overcrowded classes; too conservative; low standards.

Another finding of significance is the fact that almost 20 percent of the population does not know enough about the board to voice an opinion either pro or con. This opens the question of whether the citizens really know how well the board is functioning and again points up the need for better public relations.

Item 8: Do you feel the superintendent of schools is doing a good job? Yes, 67 percent. No, 5.7 percent. Blank, 27.3 percent.

Item 9: In what way?

When asked specifically "in what way" the answers clustered as follows:

Good schools reflect a good superintendent.....	1
Heard good reports.....	2
The way the schools are run.....	3
High standards.....	3

Again we see evidence that the work of the superintendent, as that of the board of education, is not well understood in the community. The affirmative answers were almost entirely subjective in nature. This conclusion is supported by the large percentage of the population (27.3 percent) who were not sufficiently informed to voice an opinion either for or against.

On the negative side, as was to be expected, the responses were more specific. It is apparent that personal experience motivated individuals who reported: unpleasant experience; evasive; doesn't listen to parents, etc.

The implication of this item is that there is an obvious need for the superintendent to take steps to build an image of being the educational leader of the community at large. This implies an information program at the grassroots level with the people.

Item 10: Do you feel the teachers of Culver City are doing a good job? Yes, 85 percent. No, 6.5 percent. Blank, 8.5 percent.

Item 11: In what way? The specific responses to this item should prove extremely valuable to teachers for they contain both an enumeration of the teachers' strengths and guidelines for correcting weaknesses.

A rank ordering of the affirmative responses is as follows:

Individual attention given to students.....	1
Interest in the students.....	2
Good teaching methods.....	2
Children are learning.....	3
Heard schools are good.....	4
Parent-teacher relationships.....	5

The importance of good teacher-student relationships is quite apparent from these responses. Three of the first four items above are child centered and indicate that the community judges its teachers first and overwhelmingly foremost by their work with the child.

Furthermore, this item proves that the teachers constitute the most direct contact between the educational system and the community, for only 8.5 percent of the entire sample were unable to respond to the question: Are the teachers doing a good job? When this figure is compared to the 19.5 percent who could not commit themselves about the Board of Education and the 27.3 percent who did not know the work of the superintendent, this dramatically underscores the importance of the teachers in establishing a favorable reputation for the schools.

On the negative side are found certain comments which should alert the teachers to needs which are not now being met. Although few in number, again they were motivated by personal experience and should be given careful consideration: Lack of discipline; not enough basics being taught; poor reading techniques; expect too much of child.

Item 12: Are you in favor of reestablishing adult education in Culver City? Yes, 85 percent. No, 6.5 percent. Blank, 8.5 percent.

Evidently the community feels that an adult education program would be desirable.

Item 13: Are you willing to vote for school bonds to provide new buildings? Yes, 87 percent. No, 7.5 percent. Blank, 5.5 percent.

The large "yes" response may be misleading, for other studies, plus the realities of elections show that unless a campaign is backed up by extensive preparation and adequate financing, it might fail. (PAIR has found that unless the voter clearly understands an issue, he tends to vote "no" or leave it blank 60 percent of the time. A successful bond election requires a two-thirds affirmative vote.)

Item 14: Do you know what Culver City teachers salaries are? Yes, 23.5 percent. No, 74 percent. Blank, 2.5 percent.

Item 15: What is the average yearly salary paid to Culver City teachers? The average of all responses equaled \$4,970.

Item 16: What do you feel the yearly average of teachers salaries should be? The responses ranged from a low of \$4,000 to a high of \$24,000 a year. However, a salary range of from \$5,000 to \$9,000 was the median response. This range is consistent with the average income of Culver City residents and it implies that the citizens identify with teachers and are willing to pay them the same salary that they earn.

Item 17: Do you have as personal friends any teachers in Culver City? Yes, 29 percent. No, 68 percent. Blank, 3 percent.

This item was designed to determine to what extent the teachers are personally known in the community. It is interesting to note that 30 percent of the citizens count teachers among their personal friends. This strengthens the position of the teacher as a source of information about the schools.

Item 18: Are you in favor of providing increased counseling services in Culver City schools? Yes, 83 percent. No, 13.5 percent. Blank, 3.5 percent.

This figure is supported by nationwide studies which show that counseling and guidance programs are one of the chief concerns of parents.

Item 19: Are you willing to support a tax increase if needed? Yes, 86.5 percent. No, 12 percent. Blank, 1.5 percent.

This response looks favorable for raising needed revenues; however, the same limitations apply here as are noted in item 13 (Would you support a school bond?).

CONCLUSION

This survey does not purport to be an exhaustive examination of the Culver City School District and the educational needs of the community. It does hope to focus attention on a few crucial areas and to lay the groundwork for further factfinding activities. It is our belief that a thorough knowledge of the facts is essential before problem solving can begin.

Respectfully submitted,

PAIR, INC.,

FRANK J. BATES,

Director of Marketing Research.

courage, for they themselves are endowed with rare fortitude.

Although the people of Poland knew "Mr. America," as Mr. Nixon has been described in the European press, would arrive Sunday, they were not informed of the hour. But, that obviously did not stop them in their determination to extend to the distinguished visitor from the United States an unforgettable greeting.

After this turnout and the cries of love for America, there will be no question in the minds of Red leaders of where the Polish people stand in the struggle between the forces of freedom and slavery. There never was any question in the minds of Americans, but it was well to clarify the thinking of Moscow on this subject.

Poland has been through a frightful ordeal, but its ardor for liberty is undiminished. When the history of Poland is recalled, this is not surprising, for Poland has weathered crisis after crisis, one spanning more than a century. Never has its enemies succeeded in extinguishing the flames. The Reds will not accomplish what the Russian czars and Nazi Germany failed to do.

The fight for the liberation of Poland goes on at home and abroad. Let us hope the day will not be distant when Poland will be restored to its place in the family of nations as an independent country, not an enslaved satellite. With the spirit shown in Warsaw yesterday, the time may be sooner than many have thought possible. Nikita Khrushchev is sitting on a keg of dynamite in Poland and in other satellite lands. Perhaps this helps to account for his display of nerves periodically.

Poland Welcomes "Mr. America"

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Monday, August 3, 1959, which comments upon the welcome given to Vice President RICHARD NIXON by the people of Poland when Mr. Nixon was in Warsaw:

POLAND WELCOMES "MR. AMERICA"

The tumultuous welcome, given to Vice President Nixon by more than 250,000 Poles in Warsaw yesterday upon his arrival for a brief visit in Poland after his tour of the Soviet Union and conferences with its leaders, was notice to the world, particularly to the Kremlin, that the historic ties between the United States and Poland remain firm despite the dominating role Russia has played in the land of Pulaski and Kosciuszko since the end of the Second World War.

It is notice, too, that the love of freedom that burns so fiercely in every Polish heart has not diminished. The demonstration is one whose significance will not escape the Kremlin, for this was an outpouring of the people, not a reception stage-managed by a puppet regime.

Furthermore, it was a personal tribute to Mr. Nixon for the way he stood up to Nikita Khrushchev and letting the Red dictator and his lieutenants know the United States could not be pushed around. The Poles admire

Tribute to the Late Mrs. Mary T. Norton

SPEECH

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. KEOGH. Mr. Speaker, those of us who had been privileged to serve in this body with Mrs. Mary T. Norton were deeply saddened to learn of her death on August 2. Together with the hosts of her friends and admirers in many walks of life, we are conscious of a great loss and are reminded of her outstanding character and accomplishments. Of Mrs. Norton's many virtues, I believe that devotion was the keynote of her admirable character and the mainspring from which her great accomplishments stemmed.

In her public life devotion to God and to her country activated all her endeavors, as devotion to her family directed her private life.

As the first Democratic lady ever elected to the House of Representatives, Mrs. Norton was destined to a brilliant career lasting more than a quarter of a century, during which she did many important things for which she will long be remembered. The decision to terminate her service in the House was made, not by her constituents, but voluntarily by herself on the occasion of her 75th birthday.

Even before coming to the Congress, Mrs. Norton displayed in local affairs

those facets of her character that brought so much success to her efforts here. Her achievements in behalf of the children of New Jersey brought recognition when she was selected as president of the Day Nurseries Association of Jersey City in 1916.

It was as a Member of this House, however, that Mrs. Norton's abilities were given full scope, and here she achieved her greatest public successes. Because of her devotion to her duty as a Representative of all the people and to their causes, she was not deterred by any current unpopularity of those causes. For example, early in her great legislative career she courageously introduced a resolution to repeal the 18th amendment when such a move did not enjoy the tremendous public support it later gained. The ultimate success of repeal owed a good deal to Mary Norton.

One of her greatest achievements in behalf of the workingman was the enactment of the Federal Wage and Hour Act. Many legislators and workers today who share the universal recognition of the value of that legislation either have forgotten or never knew the controversy that attended its enactment.

Twice during her service in the House her colleagues honored her—on the occasion of her completion of 20 years' service in 1915 and again on her silver anniversary as a Member in 1950. Perhaps the one honor that she cherished above all others was her well-merited selection as the Outstanding Catholic Woman of the Year in 1947.

Her colleagues remaining in the House will miss her as will her sisters and her innumerable friends. Our heartfelt sympathy is extended particularly to her sisters, Mrs. Joseph B. McDonagh, of Greenwich, Conn., and Miss Anne Hopkins, of New York.

Resolution of the American Legion, Department of West Virginia

EXTENSION OF REMARKS OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MOORE. Mr. Speaker, I respectfully submit for the RECORD a resolution adopted by the Department of West Virginia, the American Legion, at the concluding session of their 41st annual department convention on Sunday, July 26, 1959, at Parkersburg, W. Va.

In this resolution, the American Legion urges a firmer and more positive stand on the part of our country to prevent the continued spread of communism. I am heartily in favor of this resolution and respectfully call the attention of my colleagues to it:

RESOLUTION OF THE AMERICAN LEGION, DEPARTMENT OF WEST VIRGINIA

The following resolution was adopted at the concluding session of the 41st annual department convention of the American Legion Department of West Virginia, on Sunday, July 26, 1959, in Parkersburg, W. Va.:

"Whereas the department convention of the American Legion of West Virginia, was addressed by Gen. Carlos P. Romulo in a most forthright and enlightening manner, tracing the history of the progression of the Communist plan, proclaimed by them, and made possible by the weakening of the United States of America from its rapid postwar demobilization, and impliedly augmented by subsequent lack of decision on a firm policy of resistance at crucial times and points; and

"Whereas he pointed to and enumerated the many countries and hundreds of millions of people who have been overrun and enslaved by Communist rule, while the free world stood by, lacking strength and the willingness to sacrifice, necessary to save those free people; and

"Whereas from the history and pattern of the Communist aggression, it has become clearly evident that unless a firm and sacrificial stand is now taken and backed by adequate strength and determined resistance to every effort to spread the Communist sphere of influence, it will be inevitable that the remaining free nations will be gradually engulfed by the Red flood; and

"Whereas the American Legion deplors the seeming lack of understanding of and indifference to the meaning and dangers, inherent in these facts, by the average citizen, and particularly by many of our public officers responsible for formulating and implementing our foreign policy and an adequate national defense: Now, therefore, be it

"Resolved by the American Legion, Department of West Virginia, in convention assembled, this 26th day of July, 1959, That with the guidance and under the everlasting supervision of Almighty God, that we call upon our representatives in the U.S. Senate and Congress to take a firm and audible stand on the issues involved in these alarming problems, to the end that a strong, vigorous foreign policy may be forthwith established, maintained and defended by every necessary implement of national defense and requisite cooperation with our allies; and

"That we call upon our public officers and representatives to discard all political expediency, and patriotically turn their undivided attention to problems inherent in saving our country, while there is yet time, from the fate of Rome and other great nations which fell because of indifference and weakness of their people and their leaders; and

"That we particularly call upon all members of the American Legion to fulfill the serious patriotic responsibility of bringing home to our people the truth of this situation and of aiding and stimulating our public officers in implementing of action required to meet this alarming necessity; and

"That this resolution be immediately released to the press and copies sent to the West Virginia representatives in the U.S. Senate and Congress and to Ambassador Romulo and the President of the United States. Also the Honorable Christian Herter, Secretary of State, the Honorable Neil McElroy, Secretary of Defense, and that it be forwarded for submission to the national convention at Minneapolis for action thereon, and a copy hereof be sent to each post in the Department of West Virginia."

I, Tommy E. Jones, do hereby certify that I am the duly elected, qualified and acting adjutant of the American Legion, Department of West Virginia, and that the above is a true and correct copy of the resolution adopted by the 41st annual department convention, at its concluding session, of the American Legion, Department of West Virginia, on Sunday, July 26, 1959, in Parkersburg, W. Va.

Given under my hand this 28th day of July, 1959, at Charleston, W. Va.

TOMMY E. JONES,
Department Adjutant.

Army Display Calls Tomorrow's Soldier Ultimate Weapon

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Jack Raymond, which appeared in the New York Times on Tuesday, August 4, 1959:

ARMY DISPLAY CALLS TOMORROW'S SOLDIER ULTIMATE WEAPON (By Jack Raymond)

WASHINGTON, August 3.—The Army exhibited its ultimate weapon today—a fighting soldier of the future. At the same time, the new chief of staff, Gen. Lyman L. Lemnitzer, forecast a "strategic nuclear disarmament of the United States and the Soviet Union."

General Lemnitzer said that nuclear missile deterrent power would always be needed. But realistically, he went on, other components would play the vital role in view of a big weapons standoff not too many years away.

General Lemnitzer spoke at the opening of a 3-day session of the Association of the U.S. Army at the Sheraton Park Hotel. In the lobby, guests were greeted by the "ultimate weapon—the soldier," dressed and equipped in futuristic fashion.

Billed as the "soldier of tomorrow," he was a rather awesome figure. He was covered from head to toe with material to protect him against smallarms fire and nuclear explosions.

From his helmet of plastic laminate protruded a tiny radio antenna, and within the helmet was a sending and receiving set. Attached to the helmet, ready for use, were goggles with infra-red lenses to enable him to see in the dark.

Another feature of the uniform was a "jump belt," with two exhaust pipes extending down the soldier's sides. The belt, with solid-fuel power attachments, which are controlled by squeezing a handle, gives the soldier rocket power for leaping as much as 30 feet, from cliffs and across streams.

His face was protected by a mask against nuclear effects. His equipment included two long, thin cylinders, like broomstick handles, containing explosive charges for digging foxholes.

All the equipment and uniform, exclusive of an M-14 rifle, weighed 24 pounds. An Army announcement expressed hope for a lighter rifle.

Not all the items of uniform and equipment exhibited by the soldier of the future have been received for the troops, although they have been tested by a manufacturer, said an Army spokesman.

GREEN CASH NEEDED, TOO

Gen. Bruce C. Clarke, head of the U.S. Army command, said bluntly, "we need the green light and the cash."

This, indirectly, was the theme of General Lemnitzer's speech, "Why We Need a Modern Army."

It was his first major speech since he succeeded Gen. Maxwell D. Taylor last month. General Taylor has said that he retired because of his frustrations in trying to modernize the Army.

General Lemnitzer, who was General Taylor's vice chief of staff, made it clear that he holds the same strategic views as his pred-

ecessor. However, he used fairly mild language today in outlining these views.

He reiterated what has become a favorite Army theme in these words:

"In the coming ICEM era, we can anticipate a day, not too many years away, when our missile retaliatory resources can and must be made so numerous and relatively invulnerable that no missile or other attack upon them, even by surprise, could possibly eradicate them all.

"This means that our response to the attacker would be absolutely so devastating to him—so clearly that it would be senseless for him to attack in the first place.

"When that times arrives, it could bring about, in a curious way, what some have characterized as the equivalent of strategic nuclear disarmament. We shall always want, as a vital component of our military power, the invulnerable missile deterrent needed to maintain this situation. With this in being, the situation will then mean, realistically, that the other components of our power will play the vital role in coping with the tactics and strategy of communism short of the threat of great nuclear war."

General Lemnitzer also reiterated another major Army theme while interpreting strategic needs. He stressed the importance of continuing a forward strategy. This would place United States and allied military forces as close up to a front line as possible, to halt an enemy before his attack could gain momentum.

"The alternative for us would be to withdraw within our own borders, adopting a so-called fortress America strategy which, by its exclusive defensive character, would be completely negative," the general went on. "Consequently, it would be doomed from the outset to ultimate failure."

Some 3,000 Army men, active, Reserve, or retired, attended the meeting and panel discussions. Also present were many representatives of defense manufacturers.

There were many exhibits in the lobby and in the exhibition hall of the latest types of Army equipment. Also displayed were some types that defense industrialists had perfected and wanted to demonstrate.

These included missiles, communications systems, light aircraft, and a variety of radar devices. The radar display included a new portable central system, now being used by the Army abroad, that can direct anti-aircraft missile fire automatically against enemy planes that swoop low over battlefields.

In addition to the exhibits some 65 defense companies had hospitality suites where their representatives entertained those they wanted to interest in their products.

An official said that there appeared to be far fewer such hospitality suites this year than in previous years at military service conventions. He speculated that the company officials were sensitive to recent publicity concerning munition lobbies.

Many of the officials of defense contractors are retired officers, it was pointed out. They are members of the association as well as company representatives.

They were said to be sensitive to intimations that might develop about their association with old friends in the service, although these retired officers might have no selling mission.

Recognizing Sea Power's Role

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks I submit for

the RECORD a tribute to the Congress which appeared on August 1 on the editorial page of the San Diego Union.

In a few short paragraphs it places in proper perspective the vital importance of sea power to the security of this Nation. Quite properly, I think, it commends this Congress for recognizing, in its action upon the Defense Appropriation Act for this year, the indispensable attributes of modern seapower. In providing the initial funds for construction of a nuclear powered carrier plus an appropriation for a Marine Corps of 200,000 the Congress has clearly recognized the Nation's need for the mobility and versatility which only seapower—the Navy-Marine Corps team—can bring to bear across the whole spectrum of modern war.

Very plainly, as the editorial points out, our action constitutes clear notice to any potential enemy as well as to our friends, that this Nation does not intend to, and will not, tie itself solely to defense forces capable of only two reactions—massive retaliation or ignominious surrender.

I commend this brief, but clearly reasoned endorsement of congressional belief in seapower to the attention of all Members of the Congress:

CONGRESS SERVES SECURITY—RECOGNIZING SEAPOWER'S ROLE

Congress has recognized the role of seapower today. A conference of House and Senate Members has agreed to funds for another nuclear attack carrier and to restore the Marine Corps to 200,000 men.

The United States is a maritime nation and tied to its major allies by open seas. Control of the seas, by which our allies can be helped and supplied, is essential to us and to them.

There has been much confusion on the requirements for the security of our country and for the support of our allies. It was Adm. Arleigh Burke, Chief of Naval Operations, who presented the case for seapower to Congress, in support of President Eisenhower's request for another attack carrier.

Admiral Burke's forceful presentation of the Navy's case confirms the wisdom of retaining him as Chief of Naval Operations.

Admiral Burke made the points that a basic strength in attack carriers will be essential to our security as far as we can see into the future; mobile bases on the high seas are less vulnerable than fixed bases ashore; 14 modern attack carriers are required for deployment in the Pacific and Atlantic-Mediterranean areas, and carriers are vital in anti-submarine warfare.

Mobility is the key to survival in the nuclear age.

Admiral Burke said the attack carrier striking force is indispensable for coping with limited war situations, and may be the country's only effective means of dealing with this type of action in many areas of the world. And "in the event of a nuclear general war, U.S. naval striking forces dispersed at sea may be the only U.S. forces which survive the initial onslaught with sufficient combat power and organized ability to tip the balance of power in our favor."

Congress sensibly and logically is turning back to assuring balanced forces, for defense and offense, and not staking the future of the United States on any single weapon or single weapons system.

The United States needs and must have massive missile power, on land and sea. But it also must have the ability to meet any kind of a military challenge, from a nuclear exchange down to a policing action. The move to raise the Marine Corps back up to 200,000

men would assure a ready landing force that is indispensable to mobile striking power.

There is one thing sure, as Congress seems to have recognized. To fall back onto this continent, with a capability only of massive retaliation, would be to surrender our allies in advance, and imprison us in the terrible dilemma of having to choose between doing nothing or an all-out nuclear war of annihilation.

To place the United States in such a position would be an act as devastating as any an enemy could wish.

No Khrushchev for Us

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FEIGHAN. Mr. Speaker, the editorial staff of the Cleveland News has long enjoyed a reputation for clarity and objective thinking. Under leave obtained, I insert an editorial which appeared in the Cleveland News August 4, titled "No Khrushchev for Us":

The President of the United States under pressure and unable to resist it further, has issued an invitation to the president of the Council of Ministers of the Union of Soviet Socialist Republics to be his guest. That would be Nikita Khrushchev. And Mr. Eisenhower, in turn, has accepted an invitation to visit Moscow later in the fall.

Here can be sighted politics and diplomacy at the highest level, but the propriety of U.S. action is already in controversy.

Cyrus Eaton, distinguished Clevelandier with vast property interests who has expressed sympathy for the Soviet position in respect to peace offensives, trade, and economic coexistence, has said he will invite the Soviet Premier to be his guest at his estate in Northfield, near Cleveland.

Criticism now obviously will not upset these state visits. Invitations have been issued, have been accepted. The deed has been done. Premier Khrushchev some time next month will be the guest of this Nation.

This is a political and propaganda triumph for the Soviet Premier that goes beyond anything he ever achieved, or perhaps ever expected to achieve. About all that is left is for him to tell the President of the United States to his face in the White House that his (Eisenhower's) grandchildren will be living under socialism.

Whether the Soviet Premier should be welcomed to Cleveland as a guest of this community is a matter that calls for thorough consideration. We are of the belief that he would not be wholeheartedly welcome here. If Mr. Eaton wants to entertain him, that is his personal business, and the responsibility is his.

Cleveland is a city with a background of love of liberty and hate for tyranny. Its cosmopolitan population is made up of all kinds of people, including thousands of descendants and kin of Hungarian, Czech, Rumanian, Russian, and Bulgarian patriots and refugees.

Among them there is no respect for Mr. Khrushchev or for what he or his rule stand for. Khrushchev is stained with the blood of Ukraine peasants, and more recently with the blood of Hungarian men and women whose rebellion was crushed with savage brutality.

Let us not invite Nikita Khrushchev to be a guest of Cleveland.

An invitation to the United States is a recognition for which Mr. Khrushchev long has been angling. This gives him a respectability and a world position that he has been seeking anxiously.

It has also been Kremlin theory that if Mr. Eisenhower and Mr. Khrushchev could get together by themselves, they could make a deal, perhaps a deal by which they could divide up the world—and then there would be peace, quiet, contentment, and prosperity.

Mr. Eisenhower, of course, has no such thought. He is committed to close association and communication with America's allies. Any agreements or arrangements will have to be on a four-power basis, which means inclusion of Britain, France, and all the NATO states.

An advantage of the exchange of Khrushchev-Eisenhower visits is that a showdown on Berlin is delayed. Maybe, flushed with victory and full of confidence, Khrushchev will condescend to grant some concessions. And perhaps the Soviet Premier will allow himself to be convinced of America's real strength, durability, and unity against the aggression that he and his cause represent.

Statement of Andrew J. Biemiller, Director, Department of Legislation, American Federation of Labor and Congress of Industrial Organizations, Before House Judiciary Committee on H.R. 73 and H.R. 575

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement made by Mr. Andrew J. Biemiller on the subject of congressional districting:

The American Federation of Labor and Congress of Industrial Organizations considers the subject dealt with in H.R. 73 and H.R. 575—congressional districting—to be of the greatest importance, for we recognize that the entire complexion of the House of Representatives depends directly upon the degree of fairness by which congressional districts are composed. Congressional district lines drawn solely on the basis of partisan political considerations must inevitably result in an unrepresentative House. District lines drawn with the idea of achieving fair and equal representation for all of the people will lead to a representative chamber. The members of the committee, in considering this legislation, must choose between these two alternatives.

The question of congressional districting concerns the AFL-CIO primarily because, as Americans, we are concerned over the fact that unequal representation of the people in Congress poses a threat to the basic concepts of American democracy. We are disturbed because the existing lack of equality in the populations of districts makes some Americans many times more powerful than other Americans in the election of Members to the House of Representatives. But in addition to the concern which we feel as Americans, we of the labor movement have a special concern in this problem—a concern stemming from the fact that a large part of our

membership resides in urban suburban areas of the Nation. It is precisely these areas—in almost every State—which are most severely underrepresented.

Urban and suburban underrepresentation is one of the most notorious and shameful facts in American political life today. It exists at the congressional level, and it exists—in a much more severe form—in almost every one of our State legislatures.

Because of urban underrepresentation—because a city vote is worth only a fraction of what a country vote is worth—the severe, pressing problems of urban and suburban America are being neglected. There should be little cause to wonder why so many of our legislative bodies seem so ill-equipped to deal with the complex problems which arise in our increasingly urban-suburban civilization. The answer is that our legislative bodies are so frequently dominated by rural legislators, who, in many cases, neither understand nor are particularly concerned with urban problems.

America is, today, an urban nation. A majority of the people of the Nation live in urban centers and their immediate environs. In such a nation, the rural domination of our legislative chambers is an anachronism deliberately maintained by those forces in society which have a vested interest in urban underrepresentation.

While, as previously noted, urban underrepresentation is most severe at the State level, it can be easily demonstrated that, in the drawing of congressional district lines, rural-dominated State legislatures have consistently drawn lines in such a way as to cause rural areas to be overrepresented, and urban areas to be under-represented.

The attached table illustrates this point. The table indicates that in every State except three, where there are both urban and nonurban districts (the exceptions being Arizona, Arkansas, and New Jersey), the urban congressional districts have larger populations than the nonurban districts. In many of the States the difference is very great. In 11 States—Alabama, Colorado, Connecticut, Florida, Georgia, Kansas, Kentucky, Oregon, Texas, Utah, and Washington—the gap is more than 100,000. In four other States—Indiana, Michigan, Oklahoma, and Tennessee, the gap is almost 100,000. In averaging the figures for the 33 States which have both urban and nonurban districts, one finds that nonurban Congressmen represent almost 63,000 fewer people than their urban colleagues from their own States.

A further indication of the underrepresentation of cities in the Federal House of Representatives is the fact that the 11 most populous congressional districts in the Nation are all located in cities and their environs: Dallas, Tex., Atlanta, Ga., Indianapolis, Ind., Birmingham, Ala., San Antonio, Tex., Columbus, Ohio, Dayton, Ohio, Detroit, Mich., Miami, Fla., Fairfield County, Conn. (an area containing both suburban communities and the city of Bridgeport), and Hartford, Conn.

In 13 of our States—Texas, South Dakota, Michigan, Florida, Georgia, Colorado, Ohio, Alabama, California, Indiana, Connecticut, Kansas, and Maryland, representation has become so unequal that the most populous congressional district in the State has a population more than twice as great as the least populous district. Indeed, in South Dakota the ratio is more than 3½ to 1.

In addition to districts of unequal population, the other evil with which both H.R. 73 and H.R. 575 attempt to deal—the gerrymandering of congressional district lines—is also one which finds its victims most frequently in urban areas, where the shifting of a district line by one or two city blocks frequently can predetermine the outcome of an election contest.

The AFL-CIO believes that the objectives of both H.R. 73 and H.R. 575—equal representation of all the people in the House of Representatives—is greatly to be desired, and we support the basic aims of both bills. It is our feeling, however, that the 10 percent variation permitted in H.R. 575 is more than ample to allow for special situations which make districts of exactly equal populations difficult to compose. We feel that H.R. 73 which allows a 20 percent difference from the average population of districts in a State would still permit far too great a variation, and would, therefore, not be nearly as effective as H.R. 575, in achieving the objective of fair representation.

However, it is our feeling that the enforcement provisions of H.R. 73 are preferable to those provided by H.R. 575. We believe, on the basis of past performance, that the Congress would be extremely reluctant to employ the power given to it under H.R. 575, to deny a seat to a representative elected from a district whose population varies from the State average by more than the statutory percentage limit. We feel, therefore, that it would be far more effective for the Congress specifically to grant to the Federal courts the power to enforce legislation of this nature.

This Nation was founded because our forefathers resented taxation without representation. Today, in America, we have taxation without fair representation—an evil only one step removed from the one which caused Colonial America to rise in righteous revolt.

On behalf of the majority of the American people—those who live in our cities and suburban areas—the AFL-CIO appeals to this committee, and through it, to the whole Congress, to enact legislation to do away with unfair congressional districting and to reassert the fundamental American principles of majority rule and political equality.

Average population of urban and nonurban congressional districts in each State, 1959

[In the following table, urban districts are those which are located wholly or partially within cities with populations of 100,000 or more]

State	Average population of urban districts	Average population of nonurban districts
Alabama	433,479	263,551
Alaska	(1)	—
Arizona	331,770	417,817
Arkansas	283,437	325,215
California	359,955	343,614
Colorado	415,789	303,100
Connecticut	422,165	318,621
Delaware	(1)	—
Florida	426,580	298,390
Georgia	454,241	369,512
Idaho	(2)	—
Illinois	348,965	347,966
Indiana	407,467	316,148
Iowa	350,784	324,327
Kansas	403,954	274,348
Kentucky	454,615	351,436
Louisiana	373,542	297,337
Maine	(1)	—
Maryland	337,257	331,825
Massachusetts	344,966	313,565
Michigan	408,488	310,386
Minnesota	354,596	312,820
Mississippi	(2)	—
Missouri	358,487	335,370
Montana	(2)	—
Nebraska	311,641	327,956
Nevada	(1)	—
New Hampshire	(2)	—
New Jersey	338,195	358,314
New Mexico	(1)	—
New York	352,791	324,471
North Carolina	360,318	336,510
North Dakota	(2)	—
Ohio	371,360	321,809
Oklahoma	438,069	341,553
Oregon	471,537	349,935

Footnotes at end of speech.

Average population of urban and nonurban congressional districts in each State, 1959—Continued

(In the following table, urban districts are those which are located wholly or partially within cities with populations of 100,000 or more)

State	Average population of urban districts	Average population of nonurban districts
Pennsylvania.....	353,249	347,033
Rhode Island.....	(1)
South Carolina.....	(2)
South Dakota.....	(2)
Tennessee.....	413,215	327,772
Texas.....	425,835	307,405
Utah.....	402,310	286,532
Vermont.....	(1)
Virginia.....	369,025	322,579
Washington.....	358,375	325,960
West Virginia.....	(2)
Wisconsin.....	435,524	330,421

³ Urban districts only.

Voice of the Midwest Farmer

EXTENSION OF REMARKS

OF

HON. STEVEN V. CARTER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CARTER. Mr. Speaker, on June 26 of this year a nationally known farm commentator appeared on his last 6:45 a.m. broadcast over radio station WHO in Des Moines, Iowa. For nearly 15 years Herb Plambeck's voice had traveled over the airwaves at that early morning hour. During that time he got to know the farmer well. He became intimately familiar with his many problems and through the literally thousands of letters he received was able to observe his struggle for survival during good times and bad. During his last morning program Mr. Plambeck talked about the farm subsidy. This was not a man voicing an opinion on a subject with which he was not familiar. Nor was it a man who allowed self-interest to color his remarks. This was a man whose thoughts came from his heart and which most assuredly reflect the feelings of the midwestern farmer. I commend the following script to the attention of the House membership and strongly urge that it be carefully read and considered. One does not have to read between the lines to see the disillusionment and frustration of the farmer—disillusionment and frustration caused by a Department of Agriculture which, while insisting it is helping him, has merely confused him by failure to act in his interests.

The above-mentioned follows:

WHO FARM HIGHLIGHTS

(By Herb Plambeck, WHO radio farm director)

Thank you, Bob Graham. Good morning, friends.

This is the last time you will hear me on these morning "Farm Highlights." Because according to present plans, this is my final program with you at this hour I'd like to make it one to remember.

My topic this morning is easily the toughest of the many from which I might have

chosen. Before we deal with it let me say I leave this broadcast hour with much reluctance. You listeners have been exceedingly kind. Our sponsor has been most considerate. The station has been eminently patient. However a realignment of some programs here in which WHO the sponsor and I are all agreed. Moreover, the change will give my able, and young associates—my boys—a golden opportunity, and one I am sure our listeners will appreciate.

Ordinarily, on a concluding broadcast of 12 or 15 years standing, the temptation is to reminisce. You can be sure the temptation applies this morning. Similarly, I would love to have stressed some favorite projects—soil and water conservation, work of good neighbors, June Dairy Month, 4-H and FFA programs, and a camp for Iowa's crippled children. All of these things would be enjoyable and easy to report compared to what I feel impelled to discuss—a question every American seems to be asking and every farmer must face.

I speak, of course, of the subsidy question, and I speak as an individual. In other words, I am absolving station WHO and our sponsors of any blame. Whatever the consequences, this matter must be dealt with. We are fast reaching the point where the misunderstanding between farm and city people will seriously injure both—and both have much to lose.

This topic is not new. You have heard references to it time and again on this and other WHO programs, and in many other ways. The impact of it, however, is rapidly becoming greater—and more dangerous. This was indelibly impressed on many of us the past few weeks when Life magazine, the Reader's Digest, and other widely read publications have gone all out headlining what they describe as the "Incredible farm scandal"—implying, in effect, that every rural resident is a parasite and a thief. It came forcibly to my attention at national meetings in the South and East last week. When I walked into a New York hotel, I was quickly advised that NBC wanted someone from the farm side to deal with this penetrating question. It was not an easy assignment. Since then there have been many more hours spent on this matter, talking it over with farmers, long distance calls, studying, researching bulletins, and reading letters from listeners.

Two things must be said before I go further. One is that I am not so conceited or misled as to feel I can, in a few minutes' time, answer all the questions posed by those keenly intelligent writers, broadcasters, and other accusers, who have tremendously powerful forces on their side. Yet, I feel emphatically that even a few feeble voices, such as yours and mine, must be raised or else we are, in effect, pleading guilty.

Secondly, for the record, I do not personally want, nor have I ever accepted, farm or other subsidies. In my own small farm operations, I accept no Government aids directly. Yet, I readily admit indirectly I have been affected, and so have you my friend, perhaps in more ways than you realize and the time may come, if marketplace values drop still further, where some form of Government help will be necessary to save even those of us who now are accepting any.

Most of us concerned with this program are interested in the family farm. To lose it could mean disaster, not only to farming as we know it but equally so to many segments of our great and thriving American economy as well.

Subsidies are one part of big government. Anyone who has seen total big government in action, as I have in Russia and Siberia, is gravely fearful of it. We pray this will never happen here. Yet there is no denying price supports and other Government aids have become an integral part of our economy here in this bastion of freedom. However,

the big publications, numerous broadcasters, some chamber of commerce leaders, many key Government officials, some farm spokesmen, and many others seem determined to make the American public believe subsidies go only to agriculture. This we bitterly resent. They would have America and the world believe farmers alone accept Government help. Nothing could be further from the truth. Nothing could be more unfair. Let me state a few facts, as I have them, and as I believe them to be true.

First, subsidies, to which Life magazine and a lot of the rest of us take strong dislike, are not limited to farm price support payments. Tariffs, as enacted by our First Congress back in 1789 to protect American business. Special postal rates for magazines are subsidies and this Nation's publishing industry has attained at least a part of its wealth and stature because magazine publishers seem quite willing to accept this subsidy. Cost plus is a subsidy; and when war materials were needed, no one in his right mind would have stopped the wheels to provide our troops with what they had to have. Depletion allowances on oil and mining industry taxes are gigantic subsidies, but we never hear about this as I tried to point out in the broadcast from New York; farm people resent being singled out, of being accused of being alone in taking Government handouts. Rarely do we hear about the part Government plays in other facets of our economy.

I don't recall Life, in its scathing denunciation of agriculture, saying much about the \$9 million or more it has received, in a single year, in the way of the postal rates subsidy. Nor does Reader's Digest say much about the \$5 million it has accepted. Seldom is something written about the \$38 million in annual subsidies estimated for just 14 of our major magazines, to say nothing of the hundreds of others.

I am not saying this is wrong. I like to read America's fine magazines as well as anyone else. I am glad millions of Americans can afford them. I know about the value of advertising, and how magazines and newspapers, along with radio and TV messages, help Mr. and Mrs. America to a higher standard of living. I recognize the educational value of all the publications. I write for some fine newspapers myself. Certainly I do not want to change all this.

But, speaking as an individual, it seems to me that if the magazines are going to condemn agriculture, as criminals, for accepting Government help, then the publishers who condemn us ought to have the decency to admit to the same crime.

Similarly, the businessman who condemns farm price supports is not in the best position to do so. Business reconversion payments, which is still another subsidy, over the past 20 years or so, have totaled \$43 billion or more.

The oil people and mining people alone have gotten \$23 billion.

Railroad presidents, airlines officials, families accepting housing or other help, military leaders, politicians, laborers, person after person who points to farm price supports as being shameful has every right to do so, provided he or she is equally willing to point the same finger at himself or herself for having not only similarly accepted Government help, but for having accepted 10 times as much in total as that which has gone to agriculture. The figures I have quoted are not mine. I have taken them from a U.S. Government bulletin, entitled "Government Subsidy Historical Review," printed in 1958.

I know two wrongs do not make a right, and that this sounds like the pot calling the kettle black; but I feel people who live in glass houses, even if they are on Times Square, have no right to criticize agriculture and to make whipping boys out of farm peo-

ple, when they themselves are also accepting Government help, provided by you and me—the taxpayer.

There is much more to be said. I haven't even touched on some other unfair accusations, such as charging school lunch programs, foreign aid programs, and much else against agriculture, when it really should be charged at least part, to the Health, Education, and Welfare Department, the State Department, and so forth.

And there's been no time to mention the subsidy to the American consumer, by way of the cheap food agriculture is providing in the marketplace. Cappers Farmer estimates this to be \$70 billion. No housewife seems to want to change that even if Government subsidies have helped guarantee the overabundance and the staggering surpluses that make America the best and most economically fed nation on earth.

Nor have I touched on the endless ramifications of a prosperous agriculture and what it means to feed manufacturers, food processors, machinery and auto makers, business, labor unions, and to the retailer, wholesaler, truck driver, store clerk, butchers, bakers, candlestick makers, and the millions of others who benefit from a farming populace that has money to spend.

For me to quote the benefits all America gets from a prosperous subsidized agriculture might give the impression I favor subsidies. As emphasized before, I personally dislike Government help. Like most everyone else, I treasure the freedom that has made America great. In no way do I favor trading liberty for subsidy. But let's be fair about it. If it's wrong for Agriculture to have accepted \$5 billion to \$10 billion in subsidies over the past 25 years, isn't it equally wrong for the rest of the economy to have taken \$50 billion or more in that same period?

As for you, and everyone else in America, you must make your own decision. It is not my place or purpose to condone or condemn Government aid but as one U.S. citizen, identified with an industry I believe to be basic, namely, agriculture, I ask by all that's fair and right and decent that our accusers tell the whole truth—truth that might hurt because the fact is of all the Government help that has been accepted the last 25 years agriculture has received only a small part of the total. Let's tell the whole story, fully and honestly, in the tradition that has made America—your land and mine—so great and so wonderful.

The United States and the Challenge of the Underdeveloped Areas of the World—Part I

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. FULTON. Mr. Speaker, as a Member of the Congress and of the Foreign Affairs Committee of the House of Representatives, I realize that much of the future lies in the underdeveloped areas of the world. The Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, made an excellent speech on this subject in Detroit, Mich., on May 1, 1959.

Under leave to extend my remarks, I am including this speech which con-

tains good material for the Congress and the people of the United States:

THE UNITED STATES AND THE CHALLENGE OF THE UNDERDEVELOPED AREAS OF THE WORLD

(Address by the Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, before the Wayne State University conference on the prospects for democracy in the underdeveloped areas, at the Institute of Arts, Detroit, Mich., Friday, May 1, 1959)

I can think of no city more appropriate for a discussion of the underdeveloped countries of the world than Detroit.

Your city is a major nerve center of the vast industrial, business, and financial complex of the Middle West. This one-time frontier trading post today has become the Nation's third largest industrial center. It is the world's biggest producer of export products, and the Detroit River carries more tonnage than any other river in the world.

These achievements are making an invaluable contribution to the advancement of the newly developing nations which are struggling to mobilize their own resources. The development of trade between nations, in which Detroit has played so important a part, is, to a large extent, responsible for the exchange of ideas and technical know-how between nations. This exchange has helped to make us great. And the export of our capital and technical know-how, whether it be through trade or foreign aid, is helping the newly developing countries, on whose friendship and cooperation we depend, to make their way. I am convinced that it is one of the most effective ways of helping pressures of communism.

them to resist the phony premises and harsh In the underdeveloped areas of the world live 1,300 million people who are striving to establish or maintain ways of life which successfully combine economic progress with human liberty. The continued survival of the United States as a free and independent democracy may well depend upon the success of their efforts. As this Nation could not long have survived half slave and half free, so would the failure of these peoples jeopardize our own liberty.

THE CHALLENGE OF NATIONALISM

Indeed, I would go so far as to say that the greatest challenge to free men in our time is the yearning of the peoples of Asia, Africa, and Latin America for a better way of life.

Since World War II, 22 new nations and a quarter of the population of the world—more than 700 million people—have emerged into independence and are fired with the spirit of nationalism. They are seeking economic progress, freedom, and democracy. Their average per capita annual income is only \$75.

They are not alone in this deplorable state. Add to them those peoples who gained independence earlier but whose economic status is little or no better. Add to this the further fact that population throughout the world is increasing at a fantastic rate. It may reach as much as 6 billion people by the year 2000. Most of these people will be born in the underdeveloped regions of the world.

We are witnessing a revolution in these poor but populous nations which is no less genuine than our own American Revolution. Peoples who had once been isolated from the main currents of modern western techniques and economic progress have now become alive to the possibility of progress. They know now that economic and social progress is the prevailing trend, rather than stagnation. Having the political independence for which they have striven, their hopes have been aroused for the alleviation of the poverty, disease, and ignorance which still overshadow their lives. They insistently de-

mand of their governments that these aroused expectations be fulfilled.

To many of these people the need for improvement in their lot is so imperative that they will choose progress through dictatorship if it seems to be the only way. No government can stand for long, unless it promises—and makes good on its promises—the progress its people seek.

THE ALTERNATIVES BEFORE THE UNDERDEVELOPED COUNTRIES

What choice, then, have the governments of the underdeveloped countries? They can pursue the path of authoritarianism: regiment labor, expropriate property, stifle initiative, reduce consumption, and build up their economy from the forced savings of their people. This is the way of communism. Alternatively these governments can pursue the path of freedom. This means that they must build up their capital, at the same time allowing for increased consumption and economic liberties. Since they have such limited resources, they can only achieve these goals with outside aid. That is the crucial element in the formula.

It is precisely here that the challenge of the underdeveloped areas squarely faces the United States and the other economically more advanced nations.

In 1820, Thomas Jefferson wrote: "In an infant country like ours, we must depend for improvements on the science of other countries, longer established, possessing better means, and more advanced than we are. To prohibit us from the benefit of foreign light is to consign us to long darkness." Our economic progress could not have been as rapid as it was—despite our vast wealth of natural resources—without the skills and capital which Europe furnished our young Republic in such great measure. Are we prepared to deny to others what proved so essential in our own development?

WHY U.S. ASSISTANCE

This is not a purely rhetorical question and should not be given an emotional response. There are many strong and valid reasons why we should help the underdeveloped areas with our skills and our capital. Let me recall some of these reasons.

First, we cannot continue to progress in the United States with much of the rest of the world standing still. Our needs for raw material and other imports, and for export markets make it absolutely essential that we assist stagnant economies to become dynamic. Moreover, history has demonstrated that advanced countries expand their trade with the countries whose economies they help to industrialize.

There is a Danish proverb which says that "you may light another's candle at your own without loss." In this case it seems to me, the net result of assisting other countries is to make our own economic candle power stronger and brighter.

Second, our national security clearly depends on a strong defense establishment and a vigorous and productive economy. We are rich in raw material resources but we are by no means self-sufficient. At present we import all of our natural rubber and tin, 85 percent of our bauxite and manganese and 64 percent of our tungsten. In fact, we have to obtain 10 percent of all the raw materials we use from overseas sources. Many of them come from the underdeveloped countries. Our own automobile industry, for example, depends on a wide range of raw materials—nickel from Canada, hides from Argentina, chrome from Rhodesia, mica from India, tin from Malaya, and tungsten from Bolivia.

Third, our entire economy depends on foreign trade to a far greater extent than most of us realize. Today our export trade amounts to about \$20 billion a year. Nearly 5 million of our people are employed in foreign trade.

I might also point out that foreign trade is equally important in keeping the free nations strong and united. The principal reason why some of them have not been absorbed into the economic bloc of international communism is their flourishing trade with the United States.

Fourth, foreign aid creates jobs right here in this country. Thus, the funds spent under the mutual security program in 1957 resulted in the employment of over a half million people in the United States.

These are but a few of the reasons why I have no patience with the glib label of "give-away program" as applied to our foreign aid activities. To me this phrase has a ring about as true as that of a lead nickle.

The great differences in the living standards of the economically advanced countries and the underdeveloped areas provide a fertile soil for envy, distrust and potential conflict. It is not good for our own national welfare that such great differences should exist. There is considerable discussion of the widening of this gap between the developed and underdeveloped countries because of the different rates of their economic progress. I am not, myself, so much concerned about the widening of the gap as I am about the rate of progress in the underdeveloped areas. I am concerned over the fact that this progress in many parts of the world is painfully slow. What is needed is a rate of progress which, even if it is less than that of the advanced countries, results in tangible benefits to human welfare and which can, in time, be quickened.

In this connection we must never forget that we are faced with a deep moral challenge. We cannot stand by with a clear conscience while hundreds of millions of our fellow men face daily their endless rounds of poverty, disease and ignorance. We must assist them in their struggle to clothe their aspirations with reality. We must meet this moral challenge. As Under Secretary for Economic Affairs, Douglas Dillon, said recently, "If we fail to respond adequately, we shall stand accused as a people who proclaim our satisfaction with the benefits of freedom but who are slothful in carrying the spirit of freedom to others around the world."

THE CHALLENGE OF SINO-SOVIET IMPERIALISM

The ideals of which this and other free nations were founded were those which our founders believed would ultimately achieve worldwide acceptance. Today over 1 billion people are now living and progressing under democratic institutions. This is a situation which the Sino-Soviet rulers have found intolerable.

They have challenged the free world on every front: military, political, and economic.

The challenge is the most formidable threat that freedom has known. In addition to its scientific and military capabilities, the U.S.S.R., in 40 years, although at a huge cost in human misery has grown from an agrarian nation to the second industrial nation in the world. It has utilized its increased economic power as a potent political weapon. In its dealings with the newly developing countries, the Soviets lose no opportunity to cite their own rapid economic growth as proof to these new nations of an easy shortcut to rapid industrialization. Many of these nations which are attempting to telescope centuries of change into less than one generation are looking for just that sort of shortcut. Therefore, the Soviet experience is not lost on them, particularly when it is followed up with offers of economic and technical assistance.

This Soviet economic offensive has ominous implications. Unhampered by the built-in checks and balances or the pressure of an effective public opinion in free democratic societies, the U.S.S.R. can use its economic

power to penetrate and subvert these new states. Already, they are attempting to do this on a carefully selected basis.

Since 1954, the Sino-Soviet bloc has conducted an intensive program of economic and military assistance as part of their campaign of subversion and penetration. Up to last year, these programs amounted to nearly \$2.4 billion, largely in credits. Of this amount, some \$782 million were for arms. In the last 6 months of 1958, approximately 4,000 Sino-Soviet technicians were sent to 17 underdeveloped nations, an increase of 65 percent over the same period in 1957.

In addition, some 2,900 technicians and students from the underdeveloped nations have gone to the Sino-Soviet bloc countries for study and training during the past few years. As in the case of Sino-Soviet credits, their technical assistance programs are concentrated in specially selected nations; about 85 percent of the technicians involved are at work in Egypt, Syria, India, Indonesia, and Afghanistan.

Though the Communist rulers speak of "the peaceful competition of socialism and capitalism," we may well ask whether their real motivation is not still the destruction of democracy—as it was with Lenin over 40 years ago. They speak of world capitalism, but they mean the destruction of liberty and democracy as well. They attempt to blacken our motives by referring to us as imperialists. In reality they are the forces of a new and vicious kind of imperialism. We are the forces of liberation: liberation of man from ignorance, disease, and poverty, and this under free and democratic institutions.

ANSWERS TO THE CHALLENGE: U.S. AID PROGRAMS

What is our answer to these challenges? By what means and to what extent are we helping the underdeveloped areas to raise their standards of living? There are, first of all, the activities of our people as private citizens, either as individuals or as groups. Every dollar of productive private investment in these areas helps produce additional income for them and is usually accompanied by an exchange of skills and knowledge as vital to them as is the capital itself. Then there are the many private institutions—the church organizations, the health groups, the charities, the universities, the foundations. Their number is large and their record of aid is impressive. In talking about what we do as a Government, we must never lose sight of the fact that our activities as private citizens are part of our first line of defense in the cause of freedom and progress.

The needs of the underdeveloped areas are, however, so great and so pressing that we have also organized to meet them as a government. The best known of our programs of assistance are those carried out under the mutual security program. President Eisenhower has called the mutual security program a powerful and indispensable tool in dealing with the realities of the second half of the 20th century. It is the main vehicle through which we, as a government, have extended military, economic, and technical assistance to the underdeveloped areas. As you know, the President has requested the Congress for \$3.9 billion to carry out this vital aspect of our foreign policy in the next fiscal year.

One may ask whether this massive amount of money is not ample to do the job. The answer is that, standing by itself, the mutual security program is not nearly enough. It has important supplements: both bilateral and multilateral. One supplement is the Export-Import Bank which, over the last 10 years, has made development loans to underdeveloped countries in excess of \$3 billion. Another important source of aid has been our program of surplus agricultural commodities. By the end of 1958, the United States had made over \$1 billion in devel-

opment loans and grants of local currency receipts from such sales. The availability of these commodities and the loan or grant of the sales proceeds has been of great help to the economic development of such countries as India, the world's most populous democratic nation.

Most of these programs that I have been discussing are carried out on a bilateral basis—between our Government and a foreign government—and they are essential instruments of our foreign economic policy. But we are simultaneously engaged in a variety of multilateral endeavors to help raise the living standards and preserve the freedom of the underdeveloped areas. The importance and variety of these multilateral programs is not always fully appreciated. I should like to spend some time on them with you.

Before turning to that question, however, we should recognize that there is still some misunderstanding in this country over the necessity for a foreign aid program. In spite of the lessons of the past few years, some critics still argue that unless foreign aid is terminated fairly soon, our country will face serious economic danger. These critics further contend that foreign aid inflates the national economy and that it encourages rather than holds back the spread of communism. Some even call for an end of the foreign-aid program.

This is not the time nor the place to refute these misleading arguments. They have been so grossly overstated as to reduce themselves to an absurdity. It appears to me, however, that if this kind of advice were to be followed, the United States would be taking a short cut to national suicide.

Such a shortsighted policy on our part would deprive the underdeveloped nations of the one chance they have to make that degree of progress which is so essential to their survival as free and independent nations.

It would throw them directly into the arms of communism even though it is clear they have a strong dislike for that kind of government.

What we need to do is to determine here and now as a nation that it is in our national interest to continue our foreign-aid programs at a substantial rate and over a fairly long period of time. Advance planning in this area is every whit as important as it is in the automobile industry where blueprints of new models are ordinarily drawn up several years in advance of their production.

Chicago and Cook County Building and Construction Trades Council's 50th Anniversary

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. PUCINSKI. Mr. Speaker, it gives me great pleasure today to call the attention of my colleagues to a speech delivered last Saturday by Mr. Earl J. McMahon, who is president of the Chicago and Cook County Building and Construction Trades Council.

Mr. McMahon spoke at the 50th anniversary dinner celebrating a half century of profound contributions by the building trades industry toward the spectacular growth of Chicago.

Mr. Speaker, I was indeed fortunate to be able to participate in this dinner and to hear from Mr. McMahon and other speakers of the tremendous contributions which the building trades unions have made in the growth of my city.

Mr. McMahon's remarks take on particular significance at this time when the Congress of the United States is debating legislation affecting the future of this Nation's labor-management relations.

We here in Congress have been bombarded from all sides by descriptions of only the shortcomings and abuses in the labor-management field. Few people have stopped to consider the great amount of good that organized labor has done not only for the city of Chicago and the Nation as a whole, but also for better understanding throughout the world.

It is indeed fitting that the president of the Chicago and Cook County Building and Construction Trades Council should call attention at this particular time to the great force for good and progress that his organization has been in raising the standard of living for all Americans.

This 50th anniversary banquet demonstrated how, in a relatively brief time, when you measure it in terms of world history, the leaders of the building trades movement have helped raise the position of millions of Americans to one of dignity and respect in contrast to the complete exploitation of the American worker 50 years ago.

There is no question in my mind that the legitimate trade movement of America has played one of the most significant roles in raising the standard of living in our country to the highest in the entire history of the world.

God grant that those who would today want to recklessly destroy the aims of honest trade unions ponder the remarks of Mr. McMahon.

Mr. Speaker, Mr. McMahon's remarks follow:

REMARKS DELIVERED BY EARL J. MCMAHON, PRESIDENT, CHICAGO AND COOK COUNTY BUILDING AND CONSTRUCTION TRADES COUNCIL AT 50TH ANNIVERSARY DINNER OF THIS ORGANIZATION'S EXISTENCE AT THE AMBASSADOR WEST HOTEL, AUGUST 8, 1959

Tonight you are assisting us in celebrating 50 years of existence as a building trades council, and I wish to extend a warm and cordial welcome to all, coupled with the thanks of the officers of the council and the thanks of our affiliated organizations.

There is some evidence that a building trades council existed in Chicago in 1883, and the records indicate that the first building trades council was organized in our city on November 22, 1890, and was incorporated under the laws of our State on March 14, 1892. It was formed for the same purpose then, as it is now. (To secure collective action on problems affecting the building tradesman.)

From the beginning, the history of the Chicago Building Trades Council is replete with strife, and the officers must have had many a sleepless night, but in spite of the difficulties within and without, the council prospered, and made great strides before any organized group of employers entered the field. In these early days meetings were held in the Briggs House during the years from 1893 to 1900.

From 1900 to 1909 more confusion existed, and during this period there were as many

as three building trades councils in our city, and all operating at the same time.

Early in 1909 some sanity returned to the leaders of the trades, and much of their personal ambitions were set aside, and a united building trades council was formed. A charter was applied for and received on August 7, 1909, and from this date our building trades council existed.

The new council functioned under many leaders, all of whom did a good job. Because of the evolution of materials, and their methods of application, and a desire for unity, the leaders of the trades realized they needed someone with initiative and daring to lead the council. After much persuasion, Patrick F. Sullivan agreed to assume this responsibility, and in the year of 1925 he was elected to the office of president.

The council progressed under the leadership of President Sullivan. Much of his success was due to the cooperation of the Builders Association and the Building Construction Employers Association, and the trades, because they knew he was a man who was working hard for the good of the tradesmen, as well as a fair deal for the employer.

In November of 1938 the department added the word construction to our title and we are now known as the Chicago and Cook County Building and Construction Trades Council.

From 1925 to 1958 our Chicago Building Trades Council passed from the days of confusion and doubt, to the present day of confidence and trust. We have the confidence of our employer groups, and the trust of our membership, with the result we are proud to state there has not been a major stoppage of work in 30 years. The foundation for this type of relationship was laid by that very capable leader who had to leave us for a better world.

International unions, recognizing the training of our Chicago officers in labor relations, are constantly raiding our official family to take over positions of trust in the offices of international unions. This is also true of other unions outside the building and construction field. Chicago is a good training ground for officers, and an exceptional training ground for apprentices.

The duties of officers of a building trades council are varied and definite. Our council is recognized as the official arm of the building trades department, and we are always in the position of a "buffer" between the labor union and the employer, the public and the labor union, the labor union and the other labor union, all of which sharpens your intellect, so you will know which way to jump. You must take an active part in legislation; sponsoring bills that are good for the people and condemning bills that are bad. You must protect the public against faulty construction. You must be ready to experiment with innovations in building construction, and have the courage to condemn innovations that are not proven sound.

You must be in a position to give service to other segments of our American labor movement, and in your spare time take an active part in local, State, and national civic affairs which strive for the common good of our American people.

These are a few of the reasons why it is necessary for building trades councils to exist. The complete history of our council is interesting, educational, and progressive. We have moved forward with the times, and in the years to come we have every intention to broaden our scope of operation, and with the continuous support of the leaders of our affiliated organizations, we will maintain our place in the sun.

We have a glorious tradition left us by our predecessors. A history of trials and tribulations, all of which were met with fortitude, and courage by the pioneers of our

council. We will have a full time job following their footsteps, and knowing my associates in the council, I am confident we will rise to greater heights in the years to come.

Pennsylvania Badly Needs Federal Assistance in Combating Chronic Unemployment

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. William L. Batt, Jr., secretary, Pennsylvania Department of Labor and Industry, and an editorial from a recent edition of the Harrisburg (Pa.) Patriot, concerning the urgent need for congressional passage, this session, of legislation to aid depressed areas in Pennsylvania and in many other areas throughout the Nation:

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF LABOR AND INDUSTRY,
Harrisburg, Pa., August 3, 1959.

HON. DANIEL J. FLOOD,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLOOD: The attached editorial from a recent Harrisburg Patriot in support of S. 722 will be of interest to you.

Your support for the House Banking and Currency Committee's version will be a great help to the community and State efforts to solve the chronic unemployment problem in Pennsylvania.

Yours very truly,

WILLIAM L. BATT, JR.,
Secretary.

HOUSE LOGJAM, ANOTHER LIKE VETO—A NEW DEPRESSED AREA BILL HAS TWO HURDLES TO CLEAR

"Our State and our communities have done a magnificent job through local industrial authorities. But the Federal Government has failed to assume its share of the responsibility in chronic area unemployment in the United States for far too long. It is our hope that this will end with the implementation of S. 722." (Governor Lawrence, addressing the Pennsylvania congressional delegation.)

The bill for which Pennsylvania's chief executive was arguing in Washington this week is aid-to-depressed-areas legislation, now bottled up in the House Rules Committee.

It would provide the long overdue Federal help to areas of chronic unemployment and would bolster self-help efforts by localities and State government. Pennsylvania, which has more of these depressed areas than any other State, is vitally concerned.

Commonwealth Congressmen of both parties should rally to the Governor's call for a practically unanimous front in moving this legislation out of the committee roadblock.

Senate bill 722, passed in March, calls for \$389 million, most of it in loans. A House committee already has trimmed the figure to \$251 million, bringing it closer to the \$275 million bill that President Eisenhower vetoed last year. There is no reason for the Rules Committee to keep the House from voting on it again. And there is every reason to believe the House would pass a depressed areas bill again.

What President Eisenhower will do to such a bill if it reaches his desk again is another story.

The administration's suggested program is \$53 million, a sum that is inadequate to meet the realistic needs of these areas. Even as staunch an Eisenhower supporter as Pennsylvania's Senator HUGH SCOTT has criticized his 1958 veto and urged at least a compromise \$200 million bill.

There are far more arguments in favor of this legislation than against it: It has nothing to do with fighting any temporary recession. It's always recession time in the hard-hit distressed areas.

It isn't really a giveaway, with more than three-quarters of the money going into revolving loan funds.

A concentrated effort at other governmental levels has helped, but the added economic boost of a Federal program seems to be the only way to shove the areas back into some semblance of prosperity.

No token program, such as the President advocates, can do the job.

A concerted effort by Pennsylvanians and representatives of other States with chronically depressed areas should assure passage of a reasonable program in the House. Then differences with the Senate bill can be ironed out.

This time, the President should review the reasons for his veto last September, listen to the bipartisan arguments in favor of the legislation and breathe new hope with his signature on the bill to areas that continue to dim the national picture of economic recovery.

Herter's Good Job

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. FULTON. Mr. Speaker, on Sunday, August 9, 1959, the Pittsburgh Press ran an editorial entitled "Herter's Good Job." Under leave to extend my remarks, I include this editorial so that my friends in the Congress and the good people of America may read it:

HERTER'S GOOD JOB

In all the excitement about the forthcoming exchange of Eisenhower-Khrushchev visits and Vice President Nixon's tour of Russia and Poland, there is danger that the man primarily responsible for the conduct of American foreign policy has been forgotten.

That man is, of course, Secretary of State Christian Herter—who succeeded the late John Foster Dulles last April.

It has been Mr. Herter's misfortune to have been out of the limelight in recent weeks. He has had to spend most of his time since mid-May at Geneva—at a frustrating foreign ministers' conference now superseded by the Nikita-Khrushchev talks.

After only a weekend at home, he will be off tomorrow to Santiago, Chile.

When he returns from that conference, Mr. Herter barely will have time to pick up his laundry and accompany President Eisenhower to Europe in advance of Khrushchev's arrival here.

The life of a Secretary of State in the middle 20th century is not a quiet one.

It is unfortunate that Mr. Herter has not been able yet to make more than a bare acquaintance with the American people in his new job.

Our people, however, should not forget that the patience and forbearance with which Mr. Herter sat through 9½ weeks of fruitless talks at Geneva are important aspects of the conduct of foreign policy—not so glamorous or exciting as other events, but just as necessary.

We welcome Mr. Herter home—even for only a few hours—and want him to know his difficult work in the cause of peace is not unrecognized, even though it makes few headlines.

Foreign Aid and Sound Dollar

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following article points out a great threat to the United States—a threat that this Congress can and should do something about:

[From the Commercial and Financial Chronicle]

TIME FOR U.S.A. TO HUSBAND ITS FINANCIAL STRENGTH

(By Paul Einzig)

(The United States no longer needs to support Western Europe financially and should, instead, concentrate on husbanding its own financial strength—for the sake of the free world's defense. To this Dr. Einzig explains why the dollar must not come under suspicion. He advises stopping financial aid and foreign investment beyond the immediate resources available for that purpose so as not to add to the gold outflow on that score. The London writer notes France's apparent ability to repeat the 1871 and 1926 remarkable recoveries, Western Germany's recuperation far beyond that predicted after the war, and the recovery in general of Western Europe.)

LONDON, ENGLAND.—The Economic Commission for Europe in Geneva paints in its latest bulletin an optimistic picture about the economic situation and prospects of Western Europe. A recovery from the recession of the last 2 years seems to be well on its way in most countries. There is now a higher rate of expansion in Britain and in Western Germany, and the Economic Commission expects this to react favorably on the economic situation of the smaller Western European countries.

News from France is also distinctly more favorable. It is reported from all sides that since the advent of General De Gaulle the French economy has greatly benefited by political stability. France is no longer the "sick man of Europe." Production is increasing, the balance of payments has improved, the gold reserve has increased. There are still weak spots in France's economic situation, but on the whole the picture is distinctly one of improvement and stability.

ECONOMIC MIRACLE IN FRANCE AND GERMANY

It is possible that we may witness a French economic miracle comparable with the Western German economic miracle staged in the early fifties. Today Germany has resumed her place among the leading countries, not because of the 12 divisions which she is going to contribute to the armed forces of NATO, but because she has succeeded in combining economic stability with economic expansion. It is the size of the Western German gold reserve and not the

size of the Western German armed forces that has secured power and prestige for that country far beyond anything that could reasonably be anticipated after its defeat in 1945.

The emergence of an economically and financially powerful France within the next year or two is well in the cards. The economic recuperative power of the French people surprised the world on more than one occasion. When in 1871 victorious Germany imposed on France a huge war indemnity it was expected to cripple France for generations. In fact, France paid off the indemnity in an amazingly short time. Again when in 1926 France was on the verge of economic chaos and collapse, political stability under Poincaré's government led to a complete recovery in 2 years, enabling France to accumulate a large gold and foreign exchange reserve which completely changed the international balance of power.

It would not be surprising if there occurred a repetition of history. As soon as recovery and stability in France is able to inspire confidence among French people there is bound to be a wholesale repatriation of French funds from the United States and other countries, and a wholesale dehoarding of gold. As during the years that followed Poincaré's measures, France will accumulate a very strong gold reserve and its influence in the international economic and political sphere will increase accordingly.

The recovery of Europe, if it is accompanied by a continued expansion in the United States, is bound to reverse the unfavorable trend that has been in operation in the raw material producing countries during the past 2 years. Between them the Western European countries represent a very considerable purchasing power that can have a decisive effect on the economies of underdeveloped countries. We have grown used to regard American demand for raw materials as the decisive factor in world economy, because it represents the demand by a single country. But if we regard Western Europe as an economic unit its combined demand is fully comparable with that of the United States.

It has also become a habit to regard Western Europe as being in need of American economic assistance. Beyond doubt in the absence of Marshall aid Europe would not have had its chance to recover to anything like the extent to which it has recovered. But that is now past history. Western Europe is now quite capable of standing on its own feet; more than that, she is in a position to join forces with the United States in assisting economically weaker countries of the free world.

EUROPE CAN PAY FOR ARMS

Europe is still in need of American military aid, but most Western European countries are now in a position to pay for the arms delivered by the United States. What is gratifying is that it is no longer in need for dollars that provides the main link between Western Europe and the United States. NATO has become an alliance between independent nations quite capable of supporting themselves, economically, even if they need the support of American military power.

The United States is thus relieved of the necessity of supporting Western Europe financially for the sake of the defense of the free world. It is indeed time for the United States to concentrate on the husbanding of its own financial strength. During the next 2 years the dollar is liable to come under pressure. The greatest service the United States could render to the free world would be the reinforcement of the defenses of the dollar. It is of the utmost importance from the point of view of the prestige and power of the United States that the dollar should not come under suspicion. Even though the United States is likely to lose

more gold between now and the presidential election next year, such inevitable losses should not be aggravated by an untimely generosity in respect of foreign financial aid or by foreign investment beyond the immediate resources available for that purpose without adding to the gold outflow.

SAVING U.S. STRENGTH

From the point of view of the countries which stand to benefit by American financial aid and by the export of American capital the maintenance of the strength of the dollar is of paramount importance. A temporary decline of dollar aid would be for them a smaller evil than a weakening of confidence in the dollar. Now that Europe is becoming stronger it should be able to carry a large and increasing proportion of the financial burdens of the free world, and it can afford to do without American support that was so essential in the past.

Ignoring Some Monetary Facts

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues an editorial which appeared in the New York Times on August 2, 1959, as follows:

IGNORING SOME MONETARY FACTS

When William McChesney Martin, Jr., Chairman of the Federal Reserve Board, appeared before the Joint Economic Committee of Congress, he found the Democratic members virtually united in criticizing one basic policy of the Reserve System. This was its so-called bills only policy, which means that in its conduct of open market operations it confines its purchases and sales of Government securities almost exclusively to those in the very short term category.

In short, they stood with Representative HENRY S. REUSS, Democrat, of Wisconsin. Representative REUSS is the author of an amendment to the administration's proposal for eliminating the prevailing ceiling of 4½ percent on the coupon rate for Government securities with maturities of 5 years or over. The Reuss amendment would establish it as the sense of Congress that the Federal Reserve, while cleaving to its principal mission of conducting a sound monetary policy, should, when appropriate, buy Government securities as an alternative to the technique of reducing the member banks' required minimum reserves. The basic objective, when one removes the frills from this suggestion, is the always politically popular one of achieving cheap money by increasing the money supply.

Since this is what the proposal boils down to, nonparticipants in this controversy may be excused for wondering about a strange omission on the part of Mr. REUSS and his supporters. We refer to the fact, so spectacularly ignored by Mr. REUSS and his fellow advocates of cheap money, that Congress passed and sent to the White House only a few days ago a bill that would liberalize drastically the amount of reserves that member banks are required to maintain under the present law. This would be achieved by permitting the banks to count their vault cash in the form of currency and coin in computing their reserves. It would provide

the banks with an estimated additional reserve of \$2,447 million (based on the figures as of the last week in June). This could permit a sevenfold expansion of bank credit, or roughly \$17 billion. Mr. REUSS and his colleagues seem to think that this legislation isn't worth mentioning. We doubt that many nonpolitically minded followers of this controversy would share their point of view.

Mine Challenge Must Be Met

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Saturday, August 1, 1959, concerning the serious flooding problem of the anthracite coal mines in Luzerne County, Pa.: **COMMUNITY CRISIS—MINE CHALLENGE MUST BE MET**

Harold B. Wickey, vice president of Glen Alden Corp., left no room for doubt in the minds of directors of the Greater Wilkes-Barre Chamber of Commerce at their monthly meeting in Hotel Sterling yesterday afternoon that a grave crisis faces the community, as well as the anthracite industry, in the flooding of mines in the wake of the Knox disaster. During the next week or 10 days, momentous decisions, affecting the lives of thousands of local residents, as well as the future of Wyoming Valley, will be made. The situation is expected to be clarified at a meeting of Governor Lawrence and his staff with representatives of local coal companies on the resumption of pumping if and when the financing of the project can be arranged.

What is at stake roughly is \$40 million being pumped into the local economy annually in the form of payrolls, supply purchases, taxes and miscellaneous expenditures, stemming from the employment of 7,500 men in Glen Alden operations. If Glen Alden mines are flooded, these jobs will be lost, with attendant repercussions in many spheres of activity. Mr. Wickey advised his audience that the threat is not being exaggerated and his company is not crying wolf.

Water always has been a major factor in local mining. Pumping has been costly, but so long as there was cooperation levels have been maintained in the pools in the Lackawanna and Wyoming Valleys. The Knox disaster precipitated a crisis for which the Glen Alden was not prepared, as its plans were based on developments that would follow the expiration of existing agreements a few years hence.

So long as the Pennsylvania and Lehigh Valley pumped their own water, there was no threat to Glen Alden which, of course, pumped its own. But when the Pennsylvania and Lehigh Valley withdrew after the Knox flooding swamped their operations, Glen Alden has been confronted with a threat to its existence, since in a matter of weeks or months reservoirs above Wilkes-Barre will be filled and they will overflow first to Hudson mines and then into the Glen Alden. Once the water reaches Glen Alden operations, it will be too late to act because of the limitation on pumping and the added expense.

Therefore, the problem in simple terms is to keep the water from the mines in the upper Wyoming Valley and possibly from the Lackawanna field below the levels where it

will endanger Glen Alden mines. The Glen Alden, as Mr. Wickey stated, is not afraid of water and is capable of taking care of its own, but it is not in a position to take care of the water in other operations. But with the cooperation of the State and Federal Governments, the companies involved and the community itself, he feels a practical solution is possible to protect the public interest as well as Glen Alden.

That sounds logical and fair. The important point is the obvious need for action, as the water is rising every minute of every day. Time is of the essence, for once the reservoirs are filled above Wilkes-Barre it will be too late.

The chamber of commerce, as a public agency, is properly concerned and is ready to lend a helping hand to stave off the greater disaster that impends. The solution is available—pumping. What choice is there but to act promptly, the stakes being what they are to all concerned—the country, the Commonwealth, the community, and the industry?

Tribute to Jule Styne in Recognition of His 25 Years as Top Producer and Composer

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ROOSEVELT. Mr. Speaker, a few weeks ago the Friars Club, along with leaders of show business, initiated a commemoration of the Jule Styne 25th anniversary in show business—a year-long commemoration of this noted composer's multiple contributions to the world of entertainment. I am grateful for the opportunity to bring to the notice of my colleagues some of the great accomplishments of Jule Styne and invite them to join with me in paying tribute to a man whose contributions to the American cultural scene are most deserving of such an honor.

Jule Styne's name looms large and strong in the annals of show business. His current noteworthy musical contribution, "Gypsy," starring Ethel Merman in the musical-biography of Gypsy Rose Lee, auspiciously launches Jule Styne's 25th anniversary in show business.

The genius which is Jule Styne will live long in the hearts and minds of people everywhere, for his art has made impact in all branches of show business—motion pictures, television, radio, recordings, ballet and the stage. He has achieved success as a producer as well.

The life story of the man who gave music to millions to sing and dance to is as dramatic and stirring as any of the shows he has produced or composed for. He was born in London, England, on December 31, 1905. His musical inclinations came to the fore at the age of 3, when, sitting with his parents in a music hall in London, he jumped to the stage from a box seat to join Sir Harry Lauder in singing "I Love a Lassie." As a child entertainer, he danced and sang at parties and small shows.

In 1913, Jule and his family came to America and settled in Chicago. He was 8 years old and rapidly becoming a fine classical pianist. Jule won a scholarship to the Chicago College of Music, where he won the Mozart Award. Later he appeared with many symphony orchestras as a child prodigy.

His interest in popular music was awakened when he found the kids in school clustered around a jazz pianist who played very badly, but who played what the kids liked. Jule went to a music store and bought some popular songs to learn. Not having the money to pay for them, he worked out a deal to play at the store on Saturdays to pay for the music. The store was owned by Jack Kapp, later to become one of the greats of the recording industry. Learning to play popular music was the turning point in his musical career.

He matriculated at Northwestern University, but soon had to drop out because of financial difficulties at home. Later taking a job making metal coat hangers, he almost lost a finger as a result of an accident on one of the machines. He could not play for a year, practically losing his musical technique. Turning to pop music, he formed an orchestra, a success shortly in Chicago, the orchestra then became in demand throughout the country. Such greats as Bix Beiderbeck and Benny Goodman played in his bands.

While in Florida with Arnold Johnson's band, he wrote his first song, a beautiful melody called "Sunday." That night, at the Hollywood Beach Hotel, where he was appearing, Al Jolson and Irving Caesar called him over after hearing the song and encouraged him to pursue the songwriting career.

He came to New York and became a coach for singers and a writer of special material. Jule wrote for Sophie Tucker and many of the other vaudeville greats of the time. Soon he became musical director for Harry Richman and made his first trip to Hollywood. There Darryl Zanuck hired him to coach at 20th Century-Fox Studios such stars as Tony Martin, Shirley Temple, Alice Faye, among others. After a year of this, he told Zanuck he wanted to be a song writer. Zanuck said "fine, but not here." He sent him to Republic Studios. Cy Feuer gave him a job there at a salary of \$150 a week, he had been making \$950 a week at 20th Century-Fox as a music coach. Determined to make it as a song writer, he teamed with Frank Loesser and soon he was on his way. Loesser and Jule went to Paramount where their first effort was the smash, "I Don't Want To Walk Without You Baby." When Frank Loesser went into the Army, Styne teamed up with Sammy Cahn, and in 9 years this great team wrote over 500 songs. Fifty of them were on the "Hit Parade," of which 20 songs achieved No. 1 status.

Jule Styne, looking to new fields to conquer, then turned to theater. His first show in 1947, "High Button Shoes," he did with Sammy Cahn. Later he teamed with Leo Robin to write "Gentlemen Prefer Blondes." In 1950, he wrote "Two on the Aisle," with Betty Comden and Adolph Green. Back in

Hollywood soon after, Zanuck hired him to do the score for a Betty Grable picture, "Meet Me After the Show."

He came back to Broadway after this film chore and won the drama critics' award with his revival of "Pal Joey." Following this, Jule produced "Hazel Flagg," "Will Success Spoil Rock Hunter," and brought Sammy Davis, Jr., to Broadway in "Mr. Wonderful."

Starting in 1943, Styne, along with various lyricists, was responsible for most of the Sinatra hits.

With Sammy Cahn, he wrote the memorable song, "Three Coins in a Fountain," title song of the 20th-Century Fox picture, and which won for the noted team the coveted Academy Award "Oscar."

Styne has many hobbies, most of which he works at. He is an excellent cook and delights in preparing unusual meals. An "80" golfer, he does not get a chance to play as often as he would like to. He is a fine rider and someday plans to have a horse breeding farm here in the East. Jule's vocation is writing songs and his avocation is producing shows. He gets a great deal of satisfaction in helping young performers, composers and lyricists.

Jule Styne has two sons, Stanley, 28, who is employed as a publicist at Columbia pictures and Norton, 18, who is a student at Syracuse University.

This is the brief life story of Jule Styne, who, currently at the peak of his career, maintains the same enthusiastic attitude toward show business he had during his struggling years. Success has not dimmed his ardor nor his talent. The world will have many more songs, music and shows from this man, truly one of the greats of all time in show business.

Over the past 25 years, this versatile and talented American—Jule Styne—has written hundreds of songs, many of them which will long remain a permanent part of the American culture. He has composed the musical scores for many great American musical shows which, too, have become a permanent part of Americana: "High Button Shoes," "Gentlemen Prefer Blondes," "Two on the Aisle," "Hazel Flagg," "Peter Pan," "Bells Are Ringing," "Say, Darling," "Gypsy."

He has written the musical scores for the following ballets: "Wallflower," "Side Show," "Cops and Robbers Ballet."

He has won many great honors for his accomplishments as a producer, including the Donaldson award and the New York critics' award for "Pal Joey." As a producer, Jule Styne gave to the American theatrical world the following noteworthy productions: "Say, Darling"; "First Impressions"; "Make a Wish"; "Pal Joey"; "In Any Language," coproduced with George Abbott; "Hazel Flagg"; "Will Success Spoil Rock Hunter?"; "Mr. Wonderful."

Among the many motion-picture scores Jule Styne composed are the following: "Anchors Aweigh," "Tonight and Every Night," "The Umpire's Daughter," "Two Guys From Texas," "It's a Great Feeling," "The Kid From Brooklyn," "It Happened in Brooklyn," "The West Point

Story," "Two Tickets to Broadway," "Don't Fence Me In," "Macao," "Pink Tights," "My Sister Eileen," "Living It Up."

Jule Styne's songs, which have brought happiness and great entertainment to peoples everywhere, include the following: "I Don't Want To Walk Without You, Baby"; "I Said No"; "Come Out, Come Out, Wherever You Are"; "I've Heard That Song Before"; "There Goes That Song Again"; "Saturday Night Is the Loneliest Night"; "I'll Walk Alone"; "Poor Little Rhode Island," official State song; "Three Coins in the Fountain"; "Five Minutes More"; "Let It Snow, Let It Snow"; "What Makes the Sunset"; "I begged Her"; "I Fall in Love Too Easily"; "The Charm of You"; "It's Been a Long, Long Time"; "Can't You Read Between the Lines"; "Every Day I Love You"; "Fiddle Dee Dee"; "It's a Great Feeling"; "Time After Time"; "I Believe You"; "You Love Me"; "Papa, Won't You Dance With Me"; "I Still Get Jealous"; "You're My Girl"; "Bye, Bye, Baby"; "Diamonds Are a Girl's Best Friend"; "The Closer You Are"; "The Worry Bird"; "That's the Tune"; "Baby, You'll Never Be Sorry"; "You Kill Me"; "Talk to Me Tomorrow"; "Ocean Breeze"; "Catch Our Act at the Met"; "There Never Was a Baby Like My Baby"; "Give a Little, Get a Little"; "Hold Me, Hold Me, Hold Me"; "Everlasting"; "So Far, So Good"; "If You Hadn't, but You Did"; "How Will He Know"; "How Do You Speak to an Angel"; "I Feel Like I'm Gonna Live Forever"; "Salome"; "Think How Many People Never Find Love"; "You're Gonna Dance With Me"; "Willie"; "Money Burns a Hole in My Pocket"; "A Little More Heart"; "My Wild Imagination"; "Every Street's a Boulevard in Old New York"; "Everybody Loves to Take a Bow"; "Laura De Maupassant"; "Captain Hooks Waltz"; "Distant Melody"; "Never, Never Land"; "Wendy"; "Just in Time"; "The Party's Over."

Jule Styne has been termed a virtual "Christopher Columbus" of show business—inasmuch as he has been responsible for discovering new talent. It has been a project close to his heart to reach out and search for young artists and give them their opportunity to make good in their chosen profession of show business. Jule Styne's great interest in finding new stars of the future and giving talent and opportunity has contributed many present-day stars to the entertainment world. The list of people he has helped in this way include Doris Day, Nanette Fabray, Carol Channing, Sheree North, Jayne Mansfield, Sandra Church, among others.

The lives of Americans throughout our land as well as the lives of people throughout the corners of the world have been enriched by the artistry and genius of Jule Styne. As an American, he has bought great credit to his country—the United States of America.

It is, therefore, fitting and proper for his fellow Americans to pay tribute to Jule Styne on the occasion of his 25th anniversary in show business. His accomplishments have been great—the position he holds in the hearts and minds of his fellow Americans is just as great.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. SAYLOR. Mr. Speaker, in the past several weeks I have received a great deal of mail from teachers in my district with respect to H.R. 22. I particularly welcome this correspondence at this time, when our great newspapers are devoting increasing space to the dangers of inflation, and when our people are becoming progressively more indignant at the wanton extravagance of the Federal Government.

H.R. 22 would add fuel to the raging fires of inflation by further destroying the value of the dollar under a smoke-screen of care and consideration for our schoolchildren and their teachers. I submit that, if the bureaucrats have any love at all for our youth and those who guide them scholastically, then they will take their greedy hands out of the Federal Treasury and make more tax money available to those who earn it. Our States and communities are finding it difficult to meet expenses for schools and all necessary services primarily because taxpayers are being victimized by a voracious bureaucracy that drains off so much income that there is little left for meeting local costs. Instead of proposing new schemes to expand Federal agencies and offices, Congress should dedicate itself to reducing expenditures in every way possible in order that embezzlement through inflation will be discontinued and the economy will be returned to a sound fiscal basis.

I have pointed out that interest alone on the national debt amounts annually to more than the total revenue collected from 20 million taxpayers each contributing the sum of \$400. Congress can make its greatest contribution to the economic stability of this Nation by trimming expenses wherever possible and applying such savings to reducing the national debt and cutting taxes. A 10 percent reduction in the debt, with a subsequent savings on interest, would make more than \$800 million available each year to taxpayers for building schools, increasing salaries of teachers, and for whatever other uses the citizenry would choose to make of it.

H.R. 22 would have a directly opposite effect. Further inflation would boost interest rates and lessen the buying power of everyone's dollar—the parent, the teacher, the butcher and the baker. Retired teachers and other pensioners would find means of subsistence even more elusive, what with their monthly checks having less and less value.

Mr. Speaker, we cannot afford to allow the Federal Government to exact tribute for another expensive activity that would add to our already excessive tax burdens. Furthermore, we cannot afford to allow the Federal Government to get a foot in the door of our local schools. Subsidization breeds control,

and anyone familiar with bureaucratic ambitions and operations recognizes that the threat of Federal management of our educational system is inherent in H.R. 22. The Federal Government has already usurped too much power and responsibility. We must be alert to any attempt—regardless of how innocuous it may appear—to nationalize our public school system.

H.R. 22 is inimical to the national welfare. As for its treatment of individual States, Pennsylvania taxpayers resent the provision that would require us to contribute millions of dollars to the schools of Texas and other States currently enjoying a far greater degree of economic prosperity. H.R. 22 would take a total of \$313,824,000 from Pennsylvania in the specified 4-year period. In return Pennsylvania would receive \$267,450,000. However, the State of Texas would pay in \$186,292,000 and take out \$270,450,000. Is there any justification for this inequitable arrangement? With this great flow of revenue siphoned out of Pennsylvania in return for the lesser contribution of the Federal Government, our State and our communities would find less and less money available to carry out our responsibilities to our schools and teachers.

Mr. Speaker, the whole philosophy of this program is so irrational that it should never come to the floor of this legislative body. Our major domestic responsibility at this time is to reduce Government expenditures and return this country to a safe fiscal status. Under the guise of aid to education, H.R. 22 is nothing more than a raid on education. It should be rejected by everyone who values our schools and respects our teaching profession.

San Diegan Cut Redtape for Nixon

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WILSON. Mr. Speaker, Vice President Nixon's recent trip to Russia uncovered the unusual talents of his press officer, Herbert G. Klein, a friend and constituent of mine from San Diego.

Herb has made many friends in the press through his intelligent handling of tough situations. He has the respect and admiration of all of us who are privileged to know him. For this reason, I include in the Appendix of the RECORD a recent Associated Press story detailing his activities:

[San Diego Evening Tribune, Aug. 3, 1959]

SAN DIEGAN CUTS REDTAPE FOR NIXON

WARSAW.—Herbert G. Klein, Vice President RICHARD M. NIXON's calm-under-fire press spokesman, says it takes "a pretty forceful approach" to deal with the Russians.

A resourceful San Diego newspaper editor-on-leave, Klein spearheaded an invasion of the Soviet Union by more than 70 U.S. newsmen accompanying Nixon.

A veteran of political campaigning in the United States with Nixon, he found himself in a country that is not used to such tactics or such an entourage of newspaper correspondents and photographers.

HE AIDS NEWSMEN

"It was difficult getting a meeting of minds," said Klein drily.

If his boss had tough going with Soviet Premier Nikita S. Khrushchev, Klein in a way had it even tougher.

He had to placate not only the Russians, but also harassed and rushed American newsmen and fighting bad telephone lines, inadequate cable communications, language misunderstandings and noncooperation from Russian bureaucrats. And a touchy political-international situation as well.

He did it mostly without raising his voice, remaining quietly calm even after days and nights without much sleep.

I TRY TO CURE ANGER

Klein, 41, is a wiry, soft-spoken blue-eyed dark blond with a slow-curling, humorous smile, and a ready joke. He says he's a generally calm personality: "I try not to get angry, and to make a point of not showing it when I am angry unless I have a reason for wanting it to show."

They're saying that Klein, editor of the San Diego Union, will be Nixon's Jim Hagerty if the Vice President makes it into the White House.

There's similarity in the way the two men handle themselves newswise, but Klein hasn't a sign of the raring Irish temper that sometimes takes hold of Hagerty, who is President Eisenhower's press secretary.

REPORTERS LIKE HIM

Klein's Russian mission has given him further stature among newsmen because he fought down-the-line for them with his Russian counterpart, Press Officer A. V. Popov.

He even went to Soviet First Deputy Premier Frol Kozlov for the lifting of a ban on films, to get newsmen into closed-off areas of Siberia, to ease censorship and to smooth a ruckus over television showing of the debate between Khrushchev and Nixon at the U.S. exhibit.

The Russians wanted to limit newsmen going into Siberia to just 12 of 100 accredited correspondents and photographers—United States and others. Klein talked the Russians into letting everyone go.

VICE PRESIDENT PERSUADES

When he thought it necessary, Klein got Nixon himself to bring pressure on the Russians to ease their requirement that they must look over films to see that no objectionable photos went out of the country.

Klein said dealing with the Russians was complicated by language difficulties and a different concept of the press—"its purposes and its rights."

He said it was a constant battle, but in the end he was "pleased with the way things went."

Klein and Nixon first met in 1946, when Klein, reporter for an Alhambra newspaper, was assigned to cover Nixon's campaign for Congress.

HE'S USC GRADUATE

He helped Nixon campaign for the Senate in 1948, and in 1952 worked on his first vice presidential campaign. He was assistant press secretary to Nixon in 1958, full-time press secretary for a time later that year, and came to Washington in June to take on the job again, possible through the 1960 election campaign.

Born in Los Angeles, Klein was graduated from the University of Southern California in 1940 in journalism.

He worked on several California newspapers until World War II, when he spent four years in the Navy, coming out as a lieutenant.

ant senior grade. He now holds the rank of commander in the Reserve.

BIG BREAK TOLD

After the war, he went back to work on the Alhambra Post-Advocate, a Copley paper with a circulation of 15,000.

His big break came when he was assigned to cover the atomic bomb tests at Bikini Atoll in the Pacific in 1946. From there he progressed to the San Diego Union, another Copley newspaper. He is married and has two daughters.

Labor Reform Issue

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Peoria Journal Star of August 7, 1959:

LABOR REFORM ISSUE

(By C. L. Dancey)

The bitter House fight looming over labor legislation, and President Eisenhower's decision to take to the airways on that issue clearly establish it as a major issue in 1960.

It is an issue on which many politicians are going to find themselves vulnerable, and labor's own reaction to it may have a tremendous effect on labor's future role in the United States.

It is a peculiar situation that faces the American people. For years the McClellan committee has been documenting sworn evidence, proving this series of abuses and demonstrating that they not only exist, but have been widely practiced in a vicious manner.

There is no argument about this. Even the opponents have been forced to admit it.

The AFL-CIO has itself, in the face of these evidences, established a written moral code for unions—and admitted the failure of their action to bring about observance of that code.

Now the President and a group of legislators simply propose, in effect, to put "teeth" into the things labor leaders have admitted are right and just.

However, all else has become academic in the face of an actual proposed law to do these things. An actual fact is not wanted by the labor bosses, and they oppose it.

They have no arguments but technicalities. The facts are too clear.

They are reduced to opposing it with naked political force rather than any persuasive arguments, and the grounds for their reasons are also a plea, not to justice, but to power for themselves. They do not want their power limited.

The appalling thing is that in these circumstances we have sworn representatives in our top elective offices in Congress who feel so enslaved by either the cash contributions or political potency of labor unions that they are ignoring the evidence, ignoring the facts, and ignoring their obligation to the people and so serve merely as representatives of the labor bosses.

This is going to be a hard record to defend nationally.

The American people have never liked stooges and never approved of political cowardice.

Organized labor itself needs to be less shortsighted. It needs to take a good look

at its true role in our free society—which is to protect individual freedoms, not override them.

A less shortsighted and arrogant view might reveal to labor leaders that many of the people they label "antilabor" and as enemies are trying far more sincerely to act in the best interests of organized labor than the political stooges whose watchword is: "Support the labor bosses, right or wrong."

After 30 years of great power, labor's desperate need for its own sake is a display of sound basic responsibility to the country, the system, and the general public that have bestowed on labor its privileged position under our laws.

Dancey in Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 16th article of a series by Editor Charles L. Dancey appearing in the Peoria Journal Star:

MATCHBOX WORDS JUST PROPAGANDA

(By Charles L. Dancey)

On the Don River—I boarded the river boat Yuri Krimov at Rostov to start a period of the most sheer pleasure and fun that I was to have in the Soviet Union.

It was a modest boat with a bridge, then the de luxe or first-class deck with a handful of tiny private cabins, then the second-class deck with a number of larger cabins each housing eight wide boards hinged to the wall as beds. They filled these cabins without regard to age or sex.

Also aboard were many, many deck passengers with no staterooms or bunks at all.

Not a soul aboard spoke English, and there were no silk-shirt Russians among them. There were a number of middle-management people in the first-class deck.

A little restaurant on the stern has three tables. Most people carry food, or pop off at villages to buy.

After a lonely first night in which everyone was wary of me, I began to make friends at breakfast. Once the ice was broken, it seemed they were all friendly. My first friends were Alexander Dmitri, Ivan and Leonid. After them came Lida and Alla. Then, all sorts of people.

The first rural village we passed was a scattering of unpainted houses around a large ruined building with a shattered dome. Along the dirt bank were a row of boats with high prows.

The river is not as wide as the Illinois in the Peoria area, but roughly comparable to the Illinois 20 miles north of Peoria, and it is a very slow, peaceful stream with steep banks and much tangled woods on the sides. Fishermen in their boats are common—also along the bank from time to time.

I saw a great many ferries, but not a single bridge along the Don River for 2 days of travel.

We played dominoes, and talked. All the usual questions about costs, and what things we have in the United States. They were curious about my cigarette lighter, nail clipper, foaming shaving cream, ball-point pen, and anything else I could think of to show them of my limited equipment.

We had endless conversations on capitalism, communism, methods, Germany, and war. Again the expression that there is good

and bad in every country, and all should change and improve. No Communist doctrine here to speak of as against "adjusting" management and incentive systems in Russia.

However, in one respect these people strongly supported Khrushchev. They want no united Germany.

They asked why the Communist Party is outlawed in the United States. I denied that it is, and said people are free to think and talk as they please so long as they depend on persuasion and the will of most of the people—but that when anyone tries to run things by force, we smack them down, and that advocacy of war on our own people rather than votes by the Communists caused us to put 50 of them in jail after lengthy, fair trials.

Another scrap of conversation: I was reading the writing on a Russian matchbox, and couldn't understand it all. I showed it to Alex, and told him I understood "this and this and this but not this."

With the usual combination of other words and sign language he conveyed the meaning of the word that had roadblocked me.

The whole business on the box was a boost for the 7-year plan, saying how much they have now and how much it will be increased in 7 years.

When we finished this business, Alex waved his hand at the matchbox message and said: "Propaganda."

Kaiser Producing Sheets of Gold-Colored Aluminum

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the Kaiser people have achieved another "first." It is not new for this progressive west coast organization to be the first in many fields but it is a source of pride to the people of Alameda County, Calif., where the Henry J. Kaiser started and where the home offices of the many Kaiser subsidiary companies are located in Oakland.

I salute Henry J. Kaiser and his sons, Edgar and Henry J., Jr., and the high echelon of the organization who direct its policies for not only being competent, efficient, and first-class industrialists but industrialists with a social outlook. Kaiser is concerned with the welfare of his employees and people in moderate circumstances as witness the Kaiser's great contribution to medicine in the form of the Permanente Hospital System.

Alameda County is proud of the Kaiser enterprise.

Under leave to extend my remarks I include the following article from the Daily Metal Reporter of August 8, 1959:

KAISER PRODUCING SHEETS OF GOLD-COLORED ALUMINUM

Nonfading gold-colored aluminum sheet, a development of Kaiser Aluminum & Chemical Corp., is now commercially available from the company as a standard product in a broad range of sizes and embossed finishes.

Designated "No. 80 Architectural Sheet," the product differs from other gold-colored

aluminum in that source of the color is inherent in the alloy itself, rather than achieved through the use of dyes or other coloring agents. In the Kaiser Aluminum process, the color is brought out by anodizing under readily controlled conditions using standard anodizing equipment and techniques.

The product has been under extensive development and testing for several years by the company's department of metallurgical research. As part of this program, it has been applied to selected buildings including the Kaiser Center which is nearing completion in Oakland, Calif., as world headquarters of Kaiser Aluminum and other Kaiser companies.

Opinion Polls a Poor Guideline in Seeking the White House

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an editorial which appeared August 6 in the Northern Virginia Sun. It contains some interesting comment in regard to the 1960 Presidential campaign.

Friends and intimate associates of New York Governor Rockefeller are giving newsmen at the Governors' Conference in Puerto Rico an informed idea of the Governor's political plans and strategy regarding the 1960 Republican convention.

What it boils down to is this: Mr. Rockefeller will seek the nomination if the public opinion polls show that he can win and Vice President Nixon cannot.

The test he will use, friends say, in guiding his candidacy is how he and Mr. Nixon stack up comparatively against such top Democrats as Adlai Stevenson and Senator JOHN KENNEDY.

This is a mighty poor standard by which to decide whether or not to seek the highest office in the Nation and perhaps the most important office in the world.

There appears to be no consideration here as to whether Governor Rockefeller feels he is more qualified for the job than Mr. Nixon or the other possible contenders for the nomination. Nor do ideological considerations appear to enter into Mr. Rockefeller's thinking, i.e., a difference of governmental philosophy or outlook between him and other contenders, such as appeared to exist, especially in foreign policy, between Senator Taft and General Eisenhower in 1952.

Rather than be guided by the contribution he might make to the national welfare, Mr. Rockefeller prefers to have his decision governed by the momentary opinions of only 2,000 to 4,000 persons, out of a total population of 175 million.

Even if this extremely small sample were considered representative, how valid or permanent are the results? The opinions they reflect are expressed in response to questions about a hypothetical political contest between men whose views and personalities may be only dimly known to the responders. At best, these opinions are based on surface impression of the two men, rather than on the basis of a campaign between them, in which the issues are debated.

Moreover, as the polls themselves point out, the ratings shift from month to month.

This could put Mr. Rockefeller in a peculiar position: what if he should lead Mr. Nixon in the polls one month, and tosses his hat into the ring, only to find in a subsequent poll that Mr. Nixon has regained the lead?

Finally, public opinion polls are, by their own admission, somewhat approximate at best. The Gallup organization says that "a survey which predicts an election within 5 percent is generally regarded as amazingly accurate." What if Mr. Rockefeller should make his decision on the basis of leading Mr. Nixon by, say, 2 percent? The admitted margin of error in the polls could well render meaningless the conclusion that Mr. Rockefeller is more popular than Mr. Nixon.

The sort of reasoning implicit in the reports of Mr. Rockefeller's strategy is not worthy of the fine name he bears or of the reputation he and his family have built for themselves. If he thinks he has a contribution to make by running for the Presidency, then he should run, regardless of what the polls say. For the national welfare should be the criterion of any man's candidacy for the White House.

H.R. 8575

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. BOWLES. Mr. Speaker, I appreciate this opportunity to express in greater detail my concern over one aspect of H.R. 8575 which was passed this afternoon. The Appropriations Committee's action in denying funds in this bill for new barracks at the naval submarine base in Groton, Conn., came as a shock and a surprise to all of us who have followed this situation closely.

Probably no single weapon in America's arsenal of defense is more promising and more vital to our position in the free world than the Polaris missile and the nuclear submarines which will carry it. This Congress has consistently recognized the value of the Polaris weapons system. Time and again we have cut through confusing and conflicting interservice rivalries to grant the highest priority to the Polaris concept. The Congress has shown the way to a reluctant Executive by increasing administration recommendations for Polaris authorizations and appropriations.

Mr. Speaker, the item deleted by the Appropriations Committee is the very heart of this program. It would have provided for the men who will give life to the Polaris program. Specifically, it would have provided housing for the hundreds of skilled submariners who will constitute the two crews of each Polaris submarine.

To eliminate this item, previously requested by the Navy and authorized by the Congress, simply does not make sense.

The Polaris program, as advanced as it is, cannot be put into operation without men. These men will be trained at the submarine school of the naval submarine base in Groton, the most advanced school of its type in the world. In May of this year the Navy announced

that it considered the training of Polaris crews of sufficient importance to assign two crews to each Polaris submarine instead of the usual one. One crew will be in training ashore at Groton while the other crew is at sea. This precedent-shattering move indicates the importance the Navy attaches to the Polaris program. Yet the committee action in deleting funds for housing for these men will seriously hamper the entire training program.

Mr. Speaker, when the authorization bill for this construction was before the Armed Services Committee earlier this year, there was no question as to the importance of this item. When the House passed the authorization bill there was no question as to its importance. Now, apparently, because of a feeling that the Navy might be able to use Government-owned land in the Groton area for this construction rather than acquire additional land, the entire item has been deleted. If the Appropriations Committee's action is ultimately sustained, we shall have seriously stalled one of the most important phases of our national defense.

It has been suggested, Mr. Speaker, that sectional rivalries for the site of the Polaris training school entered into the decision of the committee. I am sure this is untrue.

As every Navy man knows, Groton, Conn. is the submarine capital of the world. Officers and men from every one of our allies which maintains a submarine force have been trained there. It represents a concentration of facilities and know-how unduplicated anywhere on the globe.

The Navy, itself, has long since acknowledged the preeminence of the Groton base.

I am sure that the committee's action was well intended and in keeping with its traditional diligence in assuring American taxpayers with the maximum return on their tax dollar. Nevertheless, I am also sure that this action could only have resulted from a failure to realize the consequences to the vital Polaris program. I think it is essential that the full amount of \$2,269,000 be restored before H.R. 8575 reaches the President for approval. If not, we will have unwittingly struck a seriously damaging blow to our national defense.

Herbert Hoover

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. LIPSCOMB. Mr. Speaker, today, August 10, we are observing the birthday of a great American. Former President Herbert Hoover is 85 years old today. Mr. Hoover has given generously of his time and his vast energies and talents in service to his country in so many capacities, and has thoroughly earned the

countless plaudits that are being bestowed on him.

Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a poem honoring Mr. Hoover written by Mrs. Helen Fay Hanke, of Chehalis, Wash., which is an expression of the feeling of a grateful nation. The poem follows:

HERBERT HOOVER AT 85

Among the great, our beloved statesman stands
Among the great of these and many other lands;
So happily a tower of service and of wisdom still—

Devoted courage and undaunted will:
What matters greatness, did you say?
Oh, but we honor him today
With thankful hearts that he helped stay
The hand of those who would destroy
Our Constitution and our peoples' destiny
And falsely build without integrity.
We honor him that he dared fight for truth
As still he does to build a right for youth,
And honor him for all his years of toil
For tolerance and peace here and on foreign soil.

For humbleness of heart and virtue true
For faith to rise above the shadows that he knew.

And all his mighty power of mind to organize
Each situation as it may arise.
But few who rise to service, serve so long
With dedication that is like a song
Of hope for all a world in need,
A song of challenge to both hurt and greed.
Not all can pass to worthy sons so rich a heritage,

So wise a counsel in this troublous, perilous age,

We can but pray his vision may long inspire freemen.

God bless you, Mr. Hoover, as your birthday comes again.

—Helen Fay Hanke.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ALGER. Mr. Speaker, the following is my newsletter to constituents dated August 8, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

AUGUST 8, 1959.—The floor fight of the year in the House of Representatives is approaching: the subject—the controversial labor bill. Historically, the evolution of collective bargaining from countless local employer-employee agreements to nationwide and industrywide negotiations, from private settlement of differences of wages and working conditions to the mandate of Federal labor law, from a union resolution mailed to a legislator to all-out campaigning for and against lawmakers—all this and more will be a part of the debate. Unions have grown due to a recognition, by all, of workers' legitimate needs; but with that growth has come power and the not infrequent abuse of power. Growth often ended in monopoly, above and beyond reach of the Nation's laws—ended in cruel and greedy control of working people by dictatorial bosses. These facts and trends have been

pointed up over and over again, beyond all dispute, by the McClellan committee hearings.

So what did Congress do? Last year, a weak and therefore worthless Kennedy-Ives bill was passed by the Senate and killed by the House. Later, politicians used their support or rejection of this bill to explain their position on labor legislation. The public, more curious than aroused, listened and voted. Even more labor-supported candidates were elected to Congress. Now an indignant citizenry expects labor legislation to be passed which will correct the outrageous abuses pointed up by the McClellan committee. A somewhat stronger labor bill was passed by the Senate this year. The House Labor Committee, however, reported a watered-down version, which I will call the committee bill. Unsatisfied with this, some members of the committee set to work drafting a bipartisan substitute bill (Landrum-Griffin) with "teeth" in it. This bill meets several of President Eisenhower's earlier requests of Congress for corrective labor legislation. Now the question is, can enough votes be mustered in support of this substitute bill from the Republicans (total 153) and the Democrats (256) to make a majority of 219?

The differences between the committee and substitute bills can best be summarized in these five basic areas, none of which was adequately covered by the committee bill: (1) Rights of union members: The substitute bill restores the bill of rights to union members (free speech, secret vote, fair dues, etc.); (2) union finances: The substitute bill requires all unions to make financial reports (committee bill would exempt 70 percent of unions from this reporting), the lack of which has cost union members approximately \$10 million already in graft and corruption; (3) no man's land: Under present law many small unions and little businessmen with small troubles are denied access to the National Labor Relations Board and yet are prevented from seeking recourse to State courts or agencies. In this no man's land they can find no protection from racketeering elements; (4) blackmail picketing: The present unscrupulous use of picketing to (a) force recognition of a union which the employees themselves have rejected; or (b) force an employer to recognize one union while the law requires him to recognize another, would be barred by the substitute bill. Legitimate picketing would not be affected; (5) secondary boycotts (including hot cargo): Coercion by unions of other employees or firms, who are in no way involved in a labor dispute, in order to align them against a business with whom the union has a disagreement would be prevented by the substitute bill. Violence and racketeering are particularly prevalent in this field, but the committee bill is all but silent on the subject.

The substitute bill is not punitive nor in any way harmful to legitimate union leaders and members, but rather protective of both. In fact, this is a minimum bill. Anything less, such as the committee or Senate bills, would be worthless. The great danger is a whitewash of the abuses of monopolistic and dictatorial power. My own belief is that a measure such as H.R. 8003, which I introduced, placing unions under the same anti-trust sanctions applicable to everybody else, is necessary. (1) Restrictive trade practices, and (2) restraints of trade, forbidden by H.R. 8003, are areas only partially covered even by the substitute bill. Public pressure based on accurate understanding of the facts—facts that include: (a) The McClellan committee findings, and (b) the meanings of the various labor bills, and (c) the lobbying pressures on Congressmen—is necessary. As usual, the legislation that's passed will result from what the people want. It's up to John and Jane Doe now.

The adjournment date of Congress is still more uncertain, although it may be affected by Khrushchev's impending visit. Some Members of Congress, including me, do not welcome the thought of a speech to a joint session of Congress by the Communist boss.

Controversial pending legislation hangs in the balance. Some may be postponed to next year's session for action.

My True Security

EXTENSION OF REMARKS

OF

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. PIRNIE. Mr. Speaker, under leave to extend my remarks, I wish to submit the following essay by Miss Carol Osterhout, of Clinton, N.Y. Miss Osterhout was the New York State winner of the national My True Security contest sponsored by the U.S. Junior Chamber of Commerce.

The depth of thought expressed and its timely message for Americans are worthy of the attention of all Members of the House:

MY TRUE SECURITY

(By Carol Osterhout)

I am a teenager and like other teenagers have done some serious thinking. Some people may say, "Eat, drink, and be merry, for tomorrow you die," but I and thousands of others can't. Something within us compels us to look toward the future, to search for the truth. The ageless question formed on the lips of philosopher, scientist, and peasant echoes within our minds. What is life—what is security? I have searched for truth and found God, the absolute truth. And thus I have found my true security. This security, one of God's most precious gifts, lies within myself.

The human being is a marvelous creature, for is he not created in the image of God? This "Two-legged Joker, Man," has fashioned with his own two hands and mind our mighty Nation, studded with cities, towns, and prosperous farms. Our early pioneers came to a country blanketed with forests, streaked with rivers, a country in whose heart lay vast natural riches. They put this raw material through the fiery furnaces of sweat, blood, and tears, and the mighty United States of America emerged. The symphony orchestras, the great libraries, the planes soaring through the heavens at speeds greater than that of sound, turbines generating electricity to light giant cities and remote farmhouses, atomic and hydrogen bombs—these are the products of man's toil, or his initiative—these are proofs of his resourcefulness, his reliance on God and himself.

Early Americans did not have our ready-made securities, a social security program, the latest in insurance policies, a well-organized police force, or even a strong, centralized government to prevent injustice—yet they did have security. Tom Jones, the fur trapper, ever pushing back the frontier, leaving behind a trail of trading posts; John Smith, the small farmer, tilling the soil to provide for his family; Bob Brown, the merchant, struggling to set up his own business in this new, promised land—they all had the same security we have today—that confidence and freedom from fear that come from initiative and self-reliance—that come from just plain hard work.

It is a wondrous thought that every man has a particular job to do. And my task cannot be done by you, nor your work by me. God has endowed me with some special ability. It is my job to work hard, to develop to the fullest my potentialities. Only in this way am I true to myself. I am secure in the knowledge that I have something to give that is my own. Many people go through life leaning on friends, chasing after fame, grabbing for wealth. They have forgotten their most precious possession—theirself. Antonius has advised, "Look well into thyself; there is a source of strength which will always spring up if thou wilt always look there."

Yes, in a very real sense my world is what I make it. If I am content to be just another voice crying, "Look at this world—injustice, anxiety, tension—there is no security," then I shall have no security. However, if I look life squarely in the face, see a job to be done or a problem to be solved, and on my own initiative, relying on God and myself, do what I can in the situation, then I shall have my true security.

"The world stands out on either side
No wider than the heart is wide;
Above the world is stretched the sky,
No higher than the soul is high."

"Two-legged Joker, Man," Carl Sandburg;
"Good Morning America," citation from
poem by Edna St. Vincent Millay, "Renaissance."

New England Road Builders Association Requests Support of Legislation To Provide Additional Revenue for High- way Trust Fund

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter from the New England Road Builders Association, Boston, Mass., concerning the Federal highway program:

NEW ENGLAND ROAD BUILDERS
ASSOCIATION,

Boston, Mass., August 7, 1959.

Hon. THOMAS J. LANE,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR MR. LANE: On behalf of the New England Road Builders Association which represents more than 300 of the largest and most important roadbuilding contractors, material suppliers, and equipment dealers throughout New England, of whom more than 200 are located here in Massachusetts, we wish to express our deep concern regarding the present status of the Federal highway program and to request you to support new legislation to provide additional revenue for the highway trust fund so that construction of the Interstate System can be continued in accordance with the schedule previously authorized by Congress in the Federal Highway Act of 1956.

As you probably know, the uncertainty over continuation of the program has already caused more than 20 States, including 4 in our own area, to cancel all advertisements for bids and all future contract lettings until such time as the situation is clarified by new legislation. Connecticut has

canceled the award of contracts on more than \$20 million of work on which bids had already been received and has canceled the advertisement of bids on an additional \$5 million of new work. New York has canceled the receipt of bids on more than \$50 million of new work on which bids were scheduled to be received this month. New Hampshire and Maine have adopted the same policy. Our own Commonwealth will receive bids next week on several projects as scheduled but it is doubtful whether or not any additional work will be advertised thereafter.

From the foregoing facts I think it is apparent that a very real crisis confronts the roadbuilding industry, as few, if any, States are able to continue their construction programs without the assistance of Federal funds. The roadbuilding contractors and material suppliers whom we represent have invested tens of millions of dollars in new equipment and new plants within the past 3 years in order to increase their productivity and efficiency and make it possible to complete construction of the great new Federal highway system within the time limit established by Congress in the Highway Act of 1956.

Our members had every reason to believe that when Congress authorized this gigantic construction program in 1956, and authorized specific annual apportionments to carry it on until its conclusion, that sufficient funds would be provided by Congress to keep the program on schedule, as the act provided. Our members have no private business, no clients other than public agencies of the State and Federal Governments, and if the Federal highway program should be curtailed or cut back at this time many contractors would be ruined financially, forced into bankruptcy, and thousands of skilled construction workers, now employed at high wages, would lose their means of livelihood.

The curtailed program recommended by the House Committee on Ways and Means offers no solution to the problem as it involves a stretchout of the construction program for a period of 6 years, until 1965, and would reduce the apportionment of Federal funds for the next fiscal year, 1961 to less than one-fourth of the allocations during each of the past 2 years. For the six New England States combined, the allocation for fiscal 1961 would be only about \$39 million, as compared with \$161 million apportioned last year for fiscal 1960. Thereafter for a 6-year period, average annual apportionments would be nearly 40 percent below the allocations authorized by Congress in the act of 1956.

If the program recommended by the Ways and Means Committee should be approved, the construction of the Interstate Highway System, which has just gathered momentum, would be slowed to a walk, and many projects now scheduled for construction within the next year or two would necessarily be delayed for several years. There isn't any question but that the great new expressway systems being built throughout New England have met with public approval. A sufficient number have been built in our area so that the motoring public has had an opportunity to use them and learn their advantages—in safety, driving ease, lack of congestion, and absence of bottlenecks. The people like them and want them and, at least in this area, we believe they are willing to pay for them.

It is our understanding that the House Committee on Public Works has rejected the recommendation of the Ways and Means Committee for curtailment of the program by an unanimous vote and has recommended that construction of the Interstate System be continued at the rate originally established by Congress in the Highway Act of 1956, that is an annual apportionment of \$2.2 billion, and they have requested the

Ways and Means Committee to recommend a method of raising sufficient revenue to carry on the program at this level.

For all the reasons we have set forth herein we respectfully urge you to support the program proposed by the House Committee on Public Works, and to vote for any reasonable proposal which will raise sufficient additional revenue for the highway trust fund to permit the interstate construction program to be carried on at the original levels established by Congress in the Highway Act of 1956. In making this request we do not believe that our motives are selfish nor wholly self-serving. True, we do represent a legitimate industry with investments of millions of dollars which is wholly dependent upon continuation of this program and is confronted with financial disaster if it should be curtailed or terminated. Yet it should not be forgotten that a healthy, heavy construction industry is absolutely essential to our Nation's defense in time of war and if it is permitted to go down the drain at this time it would be extremely difficult to replace heavy construction machinery and restore its productivity in a time of national emergency.

We trust that you will be able to see some merit in our views on this subject and that you will give us your valued support by voting to carry on the Federal highway program at the levels previously established by Congress in the Highway Act of 1956 and to provide sufficient revenue to maintain it at such levels. We assure you that we shall deeply appreciate your assistance and your support. With sincere regards, we are

Respectfully yours,

NEW ENGLAND ROAD BUILDERS
ASSOCIATION.

WALTER J. REED,

President.

GORDON E. GAFFNEY,

Executive Secretary.

Jaycees Support Wilderness Bill

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. SAYLOR. Mr. Speaker, the U.S. Junior Chamber of Commerce, at its 39th annual convention in Buffalo, N.Y., June 15-18, adopted a resolution endorsing the wilderness bill and asking the Congress to enact legislation to preserve and give "appropriate recognition" to wilderness areas.

Favorable action on the resolution came upon recommendation of the national resolution committee that the statement in support of the wilderness measure be adopted. A representative of the Michigan delegation spoke in support of the resolution which had been recommended for consideration by the Jaycee National Conservation Committee. Some 8,000 delegates and their wives represented the 50 States and the District of Columbia at the convention.

The resolution committee recommended study and future action on proposals to limit applications of insecticides that destroy wildlife, strengthen the Federal Pollution Control Act, prevent drainage of wetland habitats through Federal subsidies, and protect fish and wildlife re-

sources threatened by dams licensed by the Federal Power Commission.

Earlier this year the national conservation committee of the Junior Chamber submitted and gained adoption by the national Jaycee board of directors of a long-range conservation-education project for use of its local groups. This program, which provides for demonstrations to point up critical conservation needs of each local community, was developed by the committee in cooperation with Federal, State, and private conservation agencies, including the National Association of Soil Conservation Districts, the U.S. Fish and Wildlife Service, the U.S. Forest Service, and the National Wildlife Federation.

Ben Butler of Progressive Farmer magazine, Birmingham, Ala., has served for the past year as chairman of the Jaycee national conservation committee. Fred Sturges of the Florida Game and Fresh Water Fish Commission, succeeds him as the newly appointed national chairman for the next year.

The resolution follows:

RESOLUTION—PRESERVATION OF WILDERNESS AREAS

Whereas the needs of the expanding U.S. population include recreational and educational opportunities of the type to be found only in wilderness areas; and

Whereas certain important wildlife species and ecological relationships can be preserved and used for recreational and scientific purposes only in wilderness-type habitat; and

Whereas properties already under Federal ownership and/or management contain appropriate areas in numbers adequate to satisfy anticipated public needs for wilderness resources in the foreseeable future: Now, therefore, be it

Resolved, That the U.S. Junior Chamber of Commerce, in convention assembled at Buffalo, N.Y., on June 17, 1959, does hereby endorse the basic provisions of S. 4028, as introduced in the 85th Congress and known as the wilderness bill, and petition the 86th Congress to adopt legislation to preserve wilderness areas and to give appropriate recognition, place, and stature to wilderness and associated resources in the total Federal natural resources program; and, be it further

Resolved, That the U.S. Junior Chamber of Commerce direct copies of this resolution to the President of the United States, all Members of Congress, and the Secretaries of the Departments of Interior and Agriculture.

Transfer of Nuclear Parts and Information

EXTENSION OF REMARKS OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert in the RECORD two articles which deal with the transfer of nuclear parts and information. Although all but one of the nuclear transfer agreements have gone into effect, the debate on the advisability of our action does not recede, but grows stronger. I hope that the President will reconsider the entire ques-

tion of nuclear armaments to the NATO nations. The writer of one of the letters is a great physicist, Herbert Jehle; the other is a distinguished columnist, Marquis Childs:

[From the Washington Post, Aug. 7, 1959]

SECRECY CURTAINS ATOMIC MANEUVERS (By Marquis Childs)

With virtually no debate in Congress and little discussion in the country, far-reaching agreements providing America's NATO allies with nuclear weapons know-how and equipment have been approved.

It would have taken a resolution by both Houses of Congress to reject the agreements submitted by the President. Among a minority there was a deep-seated fear that the agreements would freeze a pattern of nuclear armament throughout the NATO alliance. This would make it impossible in the event of a serious new effort at disarmament to try to work out a nuclear free zone in central Europe.

Only a few Members of the House expressed their doubts. The Joint Committee on Atomic Energy held secret hearings and approved the agreements. At the request of Senator HUBERT HUMPHREY, of Minnesota, the Senate Foreign Relations Committee also held a hearing behind closed doors. Despite HUMPHREY's urging, the testimony was not released even in censored form.

To observers who have watched the constricting coils of secrecy close around areas of great public concern this seemed another sign that fear and distrust had prevailed over frank discussion of the consequences of providing European allies with know-how and equipment for using nuclear weapons. The next step, it was feared, would be to amend the basic atomic energy act to give them the actual weapons. This cannot be done under present law.

With new members of the nuclear club—whether their card of admission was a gift from the United States or by forging their own initial weapon as France is doing—the problem of control of testing becomes much greater, if not impossible. The 9 months of effort to come to an agreement with the Russians at Geneva on the control of nuclear tests has also been shrouded in a secrecy blanket.

Powerful forces, principally within the Atomic Energy Commission, have sought to frustrate any agreement. The AEC is conducting a costly experiment in a Louisiana salt mine to prove that it will be possible to cheat on any agreement that covers underground as well as atmospheric testing. Eventually this experiment may provide for moving of a volume of earth equivalent to 5 to 7 football fields—a vast undertaking—to show that a 50-kiloton explosion could be smothered by a process known as decoupling.

A kind of underground debate has gone on within the Government itself over the merits and demerits of a comprehensive agreement as compared to one which would ban only atmospheric tests. Because it has far greater resources of money and influence, the AEC has tended to dominate this subterranean debate. Recently Chairman John McCone flew several Senators to Geneva to impress them and the public with the AEC viewpoint.

While the public is unaware of it, those in Government favoring an overall agreement on testing have been arguing their case, too. This reporter has seen a confidential memorandum which states that the Soviets at Geneva have been forced to make the vast majority of concessions both of minor and significant consequence in the efforts of both sides to reach common ground.

The memorandum points out that this was in part at least because the initial stand of

the Soviet Union was basically unrealistic and unreasonable. Yet it adds that the Soviet moves could properly be viewed as an indication of their willingness to reach a reasonable accord on the matter of halting tests. The memorandum, based on the most thorough official knowledge of the talks at Geneva, also points out that actually within the current negotiations they (the Soviets) have to date accepted every U.S. requirement concerning control with the single exception of considering new data on underground detection.

With the impending visit of Premier Khrushchev this analysis—the other and largely submerged side of the debate on testing—takes on special importance. When he sits down with President Eisenhower, Khrushchev will not be content to talk friendly generalities. He will want to bring up details of the Geneva discussions and it will be well for the President to be forewarned with not merely one but both sides of the argument.

[From the New York Times, Aug. 7, 1959]

TO LIMIT NUCLEAR FACTS—VOTE BY BOTH SENATE AND HOUSE ON TRANSFER AGREEMENTS PROPOSED

(The writer of the following letter is professor of theoretical physics at George Washington University.)

To the EDITOR OF THE NEW YORK TIMES:

On July 26 the transfer agreements for nuclear weapons systems with Germany and other NATO countries went into effect. This momentous step in the history of the nuclear arms race, providing for an irreversible spread of the nuclear weapons potential, passed Congress.

The opposing resolutions had been endorsed by Congressmen WILLIAM H. MEYER, EDITH GREEN, RANDOLPH S. HARMON, BYRON L. JOHNSON, GEORGE MCGOVERN, CLEM MILLER, ROY W. WIER, and LEONARD G. WOLF. It was only on the occasion of authorization of appropriations for such transfers that these Congressmen with CHARLES E. BENNETT and FRANK KOWALSKI succeeded in having the matter brought on the floor of the House. Out of 198 Congressmen, 61 objected to allocating funds for the transfer agreements.

The transfer of nuclear weapons systems will mean the nuclearization of the respective NATO armies. Nuclearized armies are useless without the possession of nuclear warheads. The wholesale transfer of nuclear weapons systems will therefore soon put the United States into the predicament of being cornered into surrendering nuclear warheads to these foreign military establishments, or seeing them make an extra effort to produce weapons-grade plutonium themselves, or even seeing them obtain it on a nuclear black market.

These transfer agreements make other countries doubt whether the United States is seriously trying to preserve peace, while at the same time a great many more military establishments are given a chance to start world war III. In fact, the transfer agreements play thus into the hands of the most suspicious and irreconcilable men in the Kremlin—and at the same time into the hands of the worst men in Bonn.

INTERNATIONAL ACCORD

These agreements actually amount to much more than a treaty. Nevertheless, neither in the House nor in the Senate was there debate and a vote. The fate of the United States and of the world hinges upon whether an international accord can be reached—under United Nations auspices and control, as repeatedly urged by W. Sterling Cole, U.S. Director General of the International Atomic Energy Association—an accord which has the effect of curbing the spread to more and more countries of the possession of nuclear weapons. The present transfers achieve the opposite.

Some Members of Congress have argued that it makes no difference whether some European countries develop their own nuclear weapons or whether we sell them to these countries. This argument touches an important point. It seems to the present writer that the cardinal issue of the nuclear age is the moral responsibility for the nuclear holocaust which threatens us all. Every country preparing nuclear weapons and, still more so, every country which spreads these weapons over the globe becomes guilty of the eventual nuclear avalanche whose actual start will be more or less a matter of accident—technical or diplomatic or by communication default.

The practical steps which should be taken now are, on the negative side, to see to it that the United States is not going to surrender in due time nuclear weapons to complete the weapons systems. If the administration is made aware of the fact that the American public will not stand for such a surrender, our administration might go slow in the actual transfer of nuclear weapons systems. So we may, for quite some time, be spared an irreversible conversion of NATO armies entirely dependent on nuclear weapons systems—plus nuclear weapons.

CONGRESSIONAL VOTE

On the positive side—and this seems to be most important in the long run—a revision of the July 1958 amendment of the Atomic Energy Act (Public Law 85-479) should be introduced. Facts of the type represented by transfer agreements of nuclear weapons systems (if they are made to be looked upon as not having the character of actual treaties) should at least fall under the category of executive agreements which become effective only if approved by affirmative votes of both Houses.

Furthermore, they should go through the Foreign Relations and Foreign Affairs Committees. The present veto provision with a time limit of only 60 days has proved an easy way by which the Joint Committee on Atomic Energy itself can bring such far-reaching agreements into effect, which is ill considered for an issue which implies basic foreign policy decisions.

It would be good if we would stop hanging our fate on straws of unrealistic policies of shortsighted expediency. Rather we should remember that the United States was founded by men whose conscience and concern for humanity gave new life to the Western world.

HERBERT JEHL.

WASHINGTON, July 31, 1959.

The House of Labor

EXTENSION OF REMARKS OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. SANTANGELO. Mr. Speaker, the disclosures by the McClellan committee in regard to union management and attendant corruption impel legislative action. We see the bad with the good, the debased with the sound and vital. Our job is to eliminate the bad without impairing the good.

Several bills have been introduced in the House which set forth programs for union reform. After the House Committee on Labor recommended a bill which carried out some of the basic re-

forms in the administration of labor and provided for rights of members and duties of union officials, two of the Members introduced a bill which was inspired by hate, is punitive in nature, and seeks to tear down the House of Labor in order to repair some corroded beams. This bill is known as the Landrum-Griffin bill. This bill sets up certain rights for union members, imposes duties upon union officers, limits powers of officials, and restricts the holding of office by disqualifying ex-Communists and ex-convicts from holding union office. This bill requires financial reporting of all unions, large and small alike, without regard to the burdens and the capacity to conform. Severe penalties are provided for false filing and incorrect filing. In addition, the bill goes beyond much-needed reforms for unions and seeks to amend the Taft-Hartley law by outlawing and banning "hot cargo" provisions between management and labor and outlawing organizational and recognition picketing. The latter two provisions are retaliatory in nature and have the effect of destroying the gains extracted by labor through sacrifice and struggle throughout the years.

The second bill is the Elliott bill, which has reform provisions, affects the majority of union organizations without burdening the small union organization and sets up prohibitions against "hot-cargo" provisions and organizational or recognition picketing under certain circumstances. A third labor bill is the so-called Shelley bill, which is designed to eliminate dishonesty in union management, contains the ban against secondary boycotting as contained in the Taft-Hartley law but deletes the provisions with respect to the ban on "hot-cargo" and organizational or recognition picketing. These bills are so lengthy and so detailed that people must rely in the main upon summaries of their provisions. Much heat is thrown off without much light or understanding. Clarification of the provisions is necessary for a proper understanding of the provisions of the various bills. One of the best articles, which I have seen, treating of the various provisions of these labor bills was published in the New York Times of Sunday, August 9, by Joseph A. Loftus. It clearly indicates that the crux of the labor bills, apart from the internal union reform, rests in the pickets and boycotts and that the measures in Congress point up the differences in approach. I believe interested readers would profit materially from reading a keen analysis by this feature writer, Joseph A. Loftus, of these labor bills. A copy of the article follows:

CRUX OF LABOR BILLS: PICKETS AND BOYCOTTS—TWO MEASURES IN CONGRESS POINT UP DIFFERENCES IN APPROACH

(By Joseph A. Loftus)

WASHINGTON, August 8.—The legislative struggle to curb power excesses spotlighted by the McClellan committee for 2 years has been reduced essentially to two bills now before the House.

That does not count the Shelley bill, which a small band of labor hundred percenters would like considered in the race. Experienced House Members, however, tend to rate the Shelley bill's chances with the snowball in August.

That leaves the Elliott bill and the Landrum-Griffin bill. There is nothing quite so meaningless, and so emotion packed as the labels that are being plastered on these bills. However, for purposes of identification and oversimplification, it can be reported that the conservatives think the Elliott bill is much too soft on the labor leaders, and the labor leaders think the Landrum-Griffin bill is outrageously hard on legitimate unionism.

NO MAN'S LAND

For purposes of further identification, the Elliott bill is the one that more closely resembles the Kennedy bill, which the Senate passed on April 25.

These simple distinctions may be worthless within a week, since the House may well take the Elliott bill and make it look tougher than its chief rival without changing its name. The House is not limited to two or three alternatives. The ground rules for the oratorical slugfest starting Tuesday provide for amendments unlimited.

Under the heading of oversimplification, it may also be reported that the real, hard, last-ditch differences between the two bills and their champions are boycotts and picketing and what to do about them.

President Eisenhower also attached high importance in his broadcast to a third issue—the so-called "no man's land," which is a catch phrase for labor relations problems that are not processed by either Federal or State agencies.

The curious thing about all three of these is that they are Taft-Hartley law matters. They figured in the McClellan committee disclosures of power abuses in a secondary way, but they were not the spectaculars that brought the committee its fame or aroused the public clamor for a law. The committee's 21-point indictment of James R. Hoffa this week contains no mention of these three points.

COMMITTEE SHOCKERS

The McClellan committee shockers dealt with violence, old-fashioned embezzlement and some plain and fancy forms of financial irresponsibility, all of them violations of State law. The next most outrageous practice shown by the rackets committee was a disregard of union members' democratic rights by autocratic union leaders. Some of these abuses were violent in form and therefore subject to local police powers. Other abuses were subject to the civil remedies of State courts.

If the States had enforced their own laws and applied their exclusive police powers competently and incorruptibly, the McClellan hearings might never have been held or, at most, they would have been gone and nearly forgotten by now.

It is now proposed, indeed virtually agreed, that the Federal Government shall undertake all these State functions. Remedies for all these abuses and many others are now prescribed in various forms and degrees in all the pending bills. They have been all but forgotten in the heat of the conflict over the three Taft-Hartley proposals.

All three issues—boycotts, picketing and Federal-State jurisdiction (no man's land) figure in the union-management power struggle. In this sense they are traveling as reform measures.

The boycott, in origin and practice for many years, was accepted by society as a civil rebellion against injustice.

SECONDARY BOYCOTT

Today's problem is a development, if not a corruption, of the old-fashioned consumer boycott. It is called a secondary boycott because, by definition, it involves a secondary employer, who is attacked, by strike or other economic pressures, as a way of punishing the primary employer. That is, if you can get one (secondary) employer to stop buying materials from another

(primary) employer, the primary employer may come to terms with you.

The secondary employer sometimes, but not always, is an innocent victim. President Eisenhower offered the simple example of the furniture factory whose employees voted not to have a union in the plant so the union pickets the stores that sell furniture made by that plant. This conceivably could force both the store and the factory out of business.

This practice is already outlawed by the Taft-Hartley Act, so much so that where it occurs the National Labor Relations Board must seek a court injunction.

A sophisticated union would not picket the store in a case like this. Union agents would go into the store and hint to the owner that he could avoid labor trouble by discontinuing the controversial line of furniture. This practice is legitimate under present interpretations of law. It is the loophole that the Landrum-Griffin bill would close.

In the President's example, he neglected to say whether the furniture factory management was neutral in the election, or whether it coerced its employees to vote against the union. It would be naive to assume that all managements are neutral on these matters.

Coercion of employees is an unfair practice under Taft-Hartley, but the coercion is not always easily proved and when you have the proof it may take 2 years or more to get a decision. In that period, the union's nucleus tends to evaporate. In these circumstances, union sometimes take shortcuts and put pressure on secondary employers.

EMPLOYER CAUGHT

The Landrum-Griffin bill would attempt to cut off all uses of the secondary boycott. The Elliott bill strikes only at the "hot cargo" version—the one commonly used by the Teamsters. Truckers who hold common carrier certificates from the Interstate Commerce Commission would be prohibited from agreeing with Teamsters to refuse to handle goods the Teamsters decide are "hot" because they come from, or are destined for, an unfair employer. The Landrum-Griffin adherents argue that this limited prohibition might be interpreted by the courts as congressional approval of all other kinds of boycotts.

The President's example of blackmail picketing—a phrase apparently coined by Secretary of Labor James P. Mitchell—dealt with a case where the union insisted on recognition by the employer without a showing of interest by the employees or any attempt by the union to persuade the employers to accept the union, other than to throw up a picket line.

The Landrum-Griffin bill would stop that picket line after 30 days unless the union actually petitioned for an election in that period. The petition, of course, would have to be accompanied by some evidence of employee interest. The Elliott bill apparently would not interfere here, but where an election had been held, the rejected union would be barred from picketing for 9 months.

COSTLY PROCESS

Where these problems involve small, local employers, the National Labor Relations Board refuses to process them because they would bog down the Board's machinery and be very costly. The States are not allowed to process these cases. Hence the "no man's land" label. The President would let the States take over these cases.

The objection to using the States is the great lack of uniformity that would emerge. These are the issues for debate in the House come Tuesday. A decision is expected by Friday.

All hands agree that the race is extremely close. The Elliott bill, supported by Speaker RAYBURN and his organization, appeared to

have had a slight advantage prior to the President's speech in behalf of the coalition bill. Now the issue is more in doubt. That speech may have made the difference. Democratic leaders, however, theorize hopefully that the speech may harden party lines. If that be so, the Rayburn forces will win.

Why I'm for the Shelley Bill, a Labor Reform, Antiracketeering Measure

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLYNN. Mr. Speaker, I speak out to call attention of the House to the fact that powerful lobbies, aided—I trust, unwittingly—by the President of the United States, are trying to stampede this body to legislate against the democratic rights of America's working men and women.

The "tough labor bill" under the guise of putting an end to abuse which all of us oppose, is a cynical attempt to take from union members some of the essential tools of democratic unions.

"Secondary boycott" has become an infamous phrase in the hysterical lobbying which inundates the Congress today; but what are the facts about secondary boycotts?

It is already illegal under the Taft-Hartley Act, section 8(b) (4) (A), for employees of one firm to strike or refuse to work to force their employer to stop doing business with some other employers.

But some employers and unions have signed agreements which, in effect, say that the employer will not insist that his employees work on goods which come from an employer who has a dispute with the union. Is this wrong?

Abuses of these "hot cargo" clauses have been one springboard from which the tough labor bill has been launched.

The tough bill pressure groups spew out scare words and cite examples of "extortion" or "blackmail picketing." But they do not stop at urging us to pass a law which outlaws these practices. The fact is the Shelley bill and the Elliott bill, as well as the Griffin-Landrum bill, specifically outlaw these practices and provide heavy criminal penalties for violators. The Landrum-Griffin bill, however, exploiting the deep concern of the American people about the abuses widely publicized by the McClellan committee, goes beyond the correction of abuses; it abridges basic rights of working people: The right to bargain freely, the right of a worker to refuse struck work, the right to peacefully picket a struck plant.

It seeks to limit legitimate collective bargaining agreements where no abuses have been cited.

In the needle trades industry, for example, union workers and employers commonly agree not to do business with sweatshop subcontractors. By outlawing such agreements, the Griffin-Landrum bill would deprive honest, clean democratic union people of this most

proper and time-tested device to improve working conditions in that industry.

It forcees strikebreaking by innocent workmen against their will.

The Supreme Court has said that employees of one firm may refuse to do work farmed out to them from a struck firm. Under the Landrum-Griffin bill, however, this right of workmen is removed except in cases where the second employer has a contract to perform the work for the first employer and the refusal is limited to services which would ordinarily be performed by the striking employees. This requirement bores a loophole in our labor law big enough for every strikebreaking employer to completely evade the intent of this section of the Taft-Hartley Act. The Griffin-Landrum bill, in this particular, is clearly an instrument to coerce workers to help employers break strikes in situations in which even the Taft-Hartley law now protects them from this degrading servitude. It legalizes collusion between employers to break strikes while outlawing the most fundamental human act in the democratic labor movement—the refusal to join the boss in punishment of other workmen.

It outlaws fundamental picket action in a primary labor dispute. The most vicious effect of the Griffin-Landrum section 705 will result from its elimination of concerted conduct from the concept of the secondary boycott. Under Taft-Hartley, what is outlawed is inducing concerted action by employees not to perform work. Under Griffin-Landrum if a striking worker appeals to a single other worker not to cross the picket line, he violates the law. Gentlemen, no Member of Congress can at once be devoted to the American system of collective bargaining and subscribe to this strike-breaking language.

I should like to call your attention to the fact that the Senate, in its consideration of the bill, earlier this session rejected a provision substantially the same as the one here proposed by Griffin-Landrum.

Griffin-Landrum outlaws union's free speech educational picketing.

On the ground that retailers of products from a struck firm were being restrained, a union could—under Landrum-Griffin—be deprived of its right to urge the public through newspaper ads, radio, and the mails, not to buy from a struck firm. Here again the remedy goes far beyond the correction of coercive practices and indeed goes so far as to take rights away from workers to the detriment of the institution of American industrial relations.

I believe that every friend of labor in this House, and there are many of us, who will take the time to look behind the scare words and the extreme example of the tough bill proponents—and read the bill—will recognize that this section deprives workers of rights. It does not protect them or the public from racketeering or collusion. It was not written here to punish crooks, but to hobble labor.

Landrum-Griffin will encourage collusion between corrupt management and union leaders.

Mr. Speaker, as I read section 705 of the so-called tough labor bill, I am appalled to find that the authors of the bill have become so reckless in their get labor binge that they have written an unmistakable invitation to the racketeer and the unscrupulous employer to join together to prevent honest unions from organizing.

Organizational picketing is prevented where the employer has lawfully recognized another labor organization or where a valid election has been held during the past year. What this means is that either by agreement or the device of a quickie election, the employer can influence the choice of a union for his employees, then for a 12-month period a legitimate union cannot legally picket to begin its organizing campaign even though it was not involved in the previous election. At the end of the 12-month period, without one day's time given to the intervening union to organize with this traditional technique, the employer and his union can be almost certain of continuing this relationship.

I say to the tough bill proponents on this one, your motives are showing. You are cooperating with management and labor crooks, you are outlawing the honest organizer and giving the green light to the most corrupt agent exposed by the McClellan committee—the union boss who will sell out the workers to sign a dues collecting contract with the boss.

Mr. Speaker, there are other ways in which the Griffin-Landrum bill exceeds the just demand of the American people for labor reform. I am not going to describe all of them, but any one of these punitive sections I have described should be enough to turn this Congress away from this measure. This bill—to the extent it goes beyond the Shelley bill—will not protect workers or their unions; it will steal from them their legitimate tools of organizational bargaining.

Unfortunately, moderates and liberals in the House, recognizing on one hand the clamor of the American public for labor reform and, on the other hand, the readymade position of labor's enemies to easily exploit this sentiment, have seen fit to bring out a bill which, although it is not nearly as punitive as the Landrum-Griffin bill, nevertheless, makes concessions to the enemies of labor in an attempt to appease and accommodate and, let us be honest, to legislate. I do not impugn the motives of the sponsors of the Elliott bill. I believe they are friends of labor who believe some sacrifice of honest labor's interests must be made as a price for sufficient support for passage of labor reform legislation in this session of Congress.

Tactically, these good colleagues may be right. I hope they are wrong. But, on principle, they cannot be right. It is a dishonor to the House to pass legislation nominally written to protect labor but which, in fact, is in part written to punish labor as a price for its support.

The Elliott bill is inequitably easy on employer reporting; it foolishly invites misuse of union membership lists and effects no democratic reform or other advantage for the list giveaway; it restricts organizational picketing and "hot cargo"

clauses, although not nearly as dangerously as does Landrum-Griffin, still unnecessarily. Without principled correction of the weaknesses or assurances that these failures can be taken care of in conference, the House should not support this bill.

The Shelley bill does not go to excess. It does the job of labor reform and does not do a job on labor.

I implore the House: Do not let the antilabor lobby din make you misread your mail. The American people want labor reform—there can be no argument about that. But the American people want strong unions—able to do the job workers built them to do. The American people are not hysterical on this issue. They write us to tell us to "get tough with the crooks"; and I agree we should do this. But they expect us to keep a level head, to make the law meet the abuses, to legislate for corrective action, not punitive action against the innocent democratic labor movement which these same American people embrace.

The need is for antiracketeering legislation. The Shelley bill is 69 pages of just that. Most provisions are the same as those proposed by the Senate committee and by last year's Kennedy-Ervin bill. It is an honest, unemotional bill, tough on crooks but respectful of the democratic American free labor movement, the same labor movement which has made such a significant contribution to the greatness of America and has, moreover, led the Congress in waging war against Communists, corruption, and racketeers by cleaning its own ranks by exposures and expulsions.

Associated Pennsylvania Constructors Petitions Congress To Continue Interstate Highway Program

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. A. E. O'Brien, executive secretary, Associated Pennsylvania Constructors, and a resolution adopted by the association on August 5, 1959, with regard to the interstate highway program:

ASSOCIATED PENNSYLVANIA CONSTRUCTORS,
Harrisburg, Pa., August 5, 1959.

HON. DANIEL J. FLOOD,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Some of our members in Luzerne County contacted me this morning requesting a resolution from our association be sent to you.

I understand you discussed this problem, as well as the resolution, with your good friend Attorney John Cotsack, of Hazleton.

We hope that this resolution will assist you in carrying out your desires, as well as those of our entire industry in Pennsylvania.

We also wish to extend our sincere thanks for your cooperation in our behalf. The continuation of this program is vitally important not only to Pennsylvanians but to the people of all the other States.

Very truly yours,

A. E. O'BRIEN,
Executive Secretary.

RESOLUTION

Whereas the Honorable DANIEL J. FLOOD, Congressman from Wilkes-Barre, Pa., earnestly supported the accelerated highway program passed in the 1956 session of the Congress; and

Whereas Congressman DANIEL J. FLOOD has continuously been an advocate of safe, adequate highways, both from a national standpoint and particularly for the State of Pennsylvania; and

Whereas Congressman FLOOD is vitally interested in the Keystone Shortway, which traverses the State east and west, and the Anthracite Expressway, which traverses the State north and south, intersecting in Luzerne County, these two interstate highways being the most important part of the new Interstate System in the Commonwealth of Pennsylvania; and

Whereas the continuation of the interstate program as established in the 1956 act is extremely vital to both individual and corporate taxpayers of the State of Pennsylvania; and

Whereas the highway-construction industry and all of its segments, both in the State of Pennsylvania and throughout the Nation, including contractors, material producers, equipment manufacturers, equipment distributors, banks and insurance companies, engineers, and highway departments, have geared themselves to do the job required under the 1956 act of Congress, involving tremendous amounts of money, equipment, and organization; and

Whereas Pennsylvania as the world's largest producer of steel and cement would be seriously affected by any reduction in the use of these products by reason of curtailed highway construction; and

Whereas it is vitally important to the national economy that the Interstate System be completed in accordance with the original schedule linking together the principal centers of population and industry; and

Whereas it has an importance to the overall economy which is of even greater magnitude than the direct benefits to highway users; and

Whereas in this period of prosperity and record personal income now is the time to provide an adequate highway transportation system; and

Whereas the National Safety Council estimates that a 1-year delay at this stage in the construction of the Interstate System would result in the loss of 5,700 lives, and it is further estimated that the 6-year stretch-out plan would mean a loss of 17,100 lives; and

Whereas the uncertainty with regard to the future Federal apportionments, along with the situation brought about by the 1960 Congress Appropriations Act, has led highway departments in 25 States to suspend all contract letting; and

Whereas the Pennsylvania Department of Highways is no exception and the Federal aid ABC and Interstate programs will be further delayed; Now, therefore, be it

Resolved by the Associated Pennsylvania Constructors on this 5th day of August 1959, That we petition Congress, through Congressman DANIEL J. FLOOD, to do everything in its power to continue the interstate highway program annual apportionments as established in the 1956 act of Congress; and be it further

Resolved, That Congress provide the necessary additional taxes, plus other moneys, to

replenish and sustain the highway trust fund with funds sufficient to carry out the program as established in the 1956 act.

ASSOCIATED PENNSYLVANIA
CONSTRUCTORS,
A. E. O'BRIEN,
Executive Secretary.

The Khrushchev Visit

EXTENSION OF REMARKS

OF

HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MOELLER. Mr. Speaker, I share with millions of my fellow Americans a feeling of profound disturbance over the press acclaim which has been given to the decision by President Eisenhower to invite Nikita Khrushchev to this country and to pay him a return visit later this year. I am more than disturbed, but I do not wish to be intemperate in addressing the Congress and so I will not reveal the full depth of my feelings when I think of this disgraceful affair.

I will try to be objective and to list dispassionately my reasons for opposing the plan to welcome the Soviet dictator as an honored guest of an American President. I do not say the guest of the American people, because in my heart I am convinced that the majority of Americans will not welcome him and that they wish wholeheartedly that he had never been asked to come here.

First, Khrushchev in his own person and as the representative of Communist terrorism comes to us with bloodstained hands and all of his smiles, his buffoonery, and his peasant charm will never cleanse them. The blood of Hungarians, of Poles, of Ukrainians, of Tibetans, of Germans, of the Baltic peoples, of Koreans, of Chinese, and of countless others will not wash away. Every American who looks upon him while he is here should take a good look at those hands and in his mind's eye picture them newly stained with our blood and that of our children, which is the avowed aim of his regime and of Khrushchev himself. This is the man we are asked to greet as a representative of a friendly people. Let any Russian peasant or Russian worker come and we would welcome them for they too have suffered, but let us not be asked to extend the hand of friendship to their tormentors. The blood will inevitably cling to us from such a handshake.

Second, this invitation and this visit are a sign of a craven yielding to blackmail and nothing more. When Khrushchev voiced his threats against the free people of Berlin and their American, French, and British protectors the citizens of this country did not quiver in fear. It appears, however, that in spite of the brave words voiced by our leaders at that time there was some quivering among them. How else can we explain this evidence of irresolution? It will certainly be as plain to Khrushchev as

it is to me and to any thinking American that when our President asked him to come here it was not because he was welcomed as a friend, but that it was to treat with him as a blackmailer who threatened our security. How much success do you think you would have in persuading a man with a loaded gun at your head to come to an agreement on your terms? Commonsense tells us that you must first disarm him or face him with an equally dangerous weapon before he will agree not to pull the trigger. This man is more dangerous than any common robber. Why have we invited him into our house instead of locking the doors against him until he is able to convince us that he has reformed?

Third, this invitation is an act of betrayal of the captive peoples of Europe and Asia. They will look on it as nothing less and I look on it as nothing less. As each of these nations has fallen under the domination of the conspiracy in the Kremlin, we have promised them that America would never desert them and that we would take every possible opportunity to help them regain their independence. Again, these were brave words but how much brave action has been taken in their support? I do not speak of military action, for none of us want to precipitate a war. But I do speak of morally strong, diplomatic, economic, and social action. I speak of imposing sanctions against every move which appears to perpetuate Communist domination over the once free peoples of Europe and over the Asiatic nations who have lost the opportunity given them by the Western World to chart their own futures. Instead of that kind of sanction our sweet talk to their Communist rulers can only be taken to mean that we are now sanctioning continued despotic rule over these peoples by their most bitter enemies.

Fourth, this unilateral action by our President and his advisers can only drive a further wedge between us and our Western allies and the democratic regimes which we support in other parts of the world. A face to face private talk between Khrushchev and the President, at the President's invitation, is something different from a multilateral conference in which our strongest friends have active participation. The press has made a great show of ex post facto approval by the governments of these countries in support of this social get together. However, what lies behind the scenes? We know that with the possible exception of Great Britain there was no great enthusiasm in Europe even for a so-called Big Four summit meeting unless and until the Soviet Union had clearly demonstrated a willingness to recede from its aggressive stance. What happened at Geneva was just the opposite of this. Then how can we justify to the friendly nations of Europe, to their leaders and their citizens, this sudden about-face action on our part? Certainly it will create serious apprehension among them at the very least. I sincerely hope that the President on his coming visits to them will be able to allay their fears. More important, I hope that when he faces

his unwelcome visitor in September he will not be taken in to the extent of agreeing on any action which will cause them further fear and lead to open distrust.

It is, of course, too late to retract this ill-timed gesture on the part of the President. I could wish that Mr. Khrushchev might be stricken with the same type of second thought which caused him to change his recent plan to visit the Scandinavian countries. However, this is too much to hope for in view of the great tactical victory he has achieved in being invited here. This being the case, I suggest that it is up to the American people to make clear to him just what our attitude to him and to his cohorts is, and just how strong is our determination to oppose his godless philosophy and his inhuman system at every turn. This is no time for egg throwing and insults, which show only an immature response to the great issues with which we are faced. The proper way to receive this man is in cold silence. I hope and pray that no great crowds will turn out to greet him with cheers and flag waving. I shudder at the thought that the streets of our Nation's Capital might be hung with the hammer and sickle as he is paraded before us. Let him see instead the Stars and Stripes of this great citadel of freedom. Let him see displayed at every hand the flags of the nations he and his kind have brought under the heel of the most despotic dictatorship in the history of mankind. Let him not see smiles of welcome but the stern faces of a people determined that freedom and democracy will triumph over brutality and oppression no matter what the cost.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Austin Girl Covers Press Talk by Ike

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. JOHNSON of Texas. Mr. President, for 6 weeks this summer, Representative HOMER THORNBERRY, of Texas, and I had the pleasure of having work in our offices six intelligent young high school students from Texas who had been awarded REA-sponsored Government in Action scholarships.

One of these, a young lady named Miss Jane Morton, who received the Peder-nales Electric Cooperative scholarship, attended a Presidential news conference during her visit to Washington; and she has written her impressions of it.

I ask unanimous consent that an article entitled, "Austin Girl Covers Press Talk by Ike," from the Austin American of August 7, 1959, appear in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AUSTIN GIRL COVERS PRESS TALK BY IKE (By Jane Morton)

WASHINGTON.—Today was the most exciting day of my 6 weeks in Washington. I went to the President's press conference.

At 9:30 this morning I was at the northwest entrance to the White House, fumbling around in my purse for my driver's license. I thought the guards weren't going to let me in. After about 5 minutes a list of press conference guests was delivered, and I was admitted to the White House grounds.

A policeman took me down the drive to a one-story wing set apart from the main building. I went in and was given an engraved card stating that the President had invited me to his press conference. Since I was an hour early, I waited in a reception room. Photographers and reporters were going in and out—once I saw Mr. Hagerty pass through the room.

A little before 10 I went across the street to the Executive Office Building. The conference was to be held in room 474. When I got there a line of reporters was outside the door. Just a few feet ahead of me I saw a short, redheaded lady. She was Sarah McClendon, a correspondent for the Austin American-Statesman.

Miss McClendon, who is actually Mrs. Sarah McClendon O'Brian, took charge and got me a seat next to her. We were sitting on the second row just about 6 feet from the President's desk. The room was very hot and full of people sitting on folding chairs. The television lights made it even hotter. There was not a very large room, but it was very ornate. Unfortunately, it was not air conditioned.

Before the President arrived, a man came around taking pictures with a movie camera. Miss McClendon and the other reporters

started scribbling very fast in their notebooks. The man with the camera took pictures of them writing.

When I inquired about this, Miss McClendon explained that shots of the reporters writing were dubbed into the film of the press conference, so it would appear they were taking down everything the President said just as fast as they could.

We waited for about 15 minutes, during which time Miss McClendon pointed out columnists and reporters: Frank Van Der Linden, of the Nashville Banner, whom the President has called the man with the red hair; Ed Koterba, United Features Syndicate; Jerry O'Leary, of the Washington Star, who has been writing Washington news for many years; Clark Mollenhoff, of the Des Moines Register and Tribune, who has often made the President mad; May Craig, of the Portland (Maine) Press Herald, who appears frequently on "Meet the Press." About 300 people were crowded inside the room.

At 10:31 there was a sudden hush and the President walked in, followed by Mr. Hagerty. A very bored looking Secret Service agent sat up front in a corner of the room. The President was sunburned; he looked much healthier in person (just 6 feet away) than in pictures. He stood throughout the conference.

Mr. Hagerty and an assistant sat behind him. During the conference every one of us—including the President—suffered from the heat, except Mr. Hagerty, who somehow managed to look cool and serene.

The press conference lasted for only half an hour: Miss McClendon said it was quite long enough. As a guest, I was not permitted to ask questions, but I don't think I could have got one in, anyhow. The moment the President finished answering one question, at least 10 reporters would jump up like jacks-in-the-box and say, "Mr. President."

I don't know how he chose between them, but the President would finally recognize one, who would give his name and paper, and then ask a question. Miss McClendon said later that one reporter tried for 2 years before he ever got recognized.

The President answered questions so easily and naturally and seemed like such an ordinary, middle-aged man, that every now and then I would have to poke myself mentally and say, "Jane, pay attention—it's the President."

Naturally, the President was pleased about the election of Republicans in Hawaii. He thought Nixon was doing a good job in Russia, and was displeased that Congress seemed determined to cut \$700 million from his foreign aid bill and \$68 million from his budget for the space program.

Miss McClendon, who treats reporting very matter of factly and isn't intimidated by anyone, asked the President to make an appeal to the voters to ask their Congressmen to vote for a strong labor bill, referring to the Griffin-Landrum bill, now before the Congress.

The President seemed a little irritated, explaining that he had already expressed approval of the bill, but he finally said, "I'm for it." He didn't want to make any comments on the steel strike, although he was very definitely against a provision of the TVA self-financing bill which would give Congress power to modify the TVA budget while permitting the President only the authority to make recommendations.

The President got mad at Mr. Mollenhoff when he made a reference in a question to the "administration's secrecy policy." The President said, "You start your question with an implied fact that is not a fact. You say the administration's secrecy policies. There has been no administration—." Mr. Mollenhoff got up to say, "But, sir * * *," and the President said, "Please sit down." Mr. Mollenhoff sat.

When Mr. Koterba asked him very earnestly, with a lot of sirs, about his plans after leaving the White House, the President grinned at him and said, "You sound just like a West Point plebe."

At 11 Mr. Sterling F. Green of the Associated Press said, "Thank you, Mr. President," and the President walked out. A moment later the room erupted as reporters jumped to their feet and dashed toward the exits.

Miss McClendon and I dashed, then rode across town to the Capitol where I sat in the Senate press gallery and tried to put down my impression of the press conference for a news story. When I told her I was very sorry that my idea of what the President had actually said was rather vague and my main impression was that of a very hot room, Miss McClendon said, "Don't worry, honey—we all feel that way."

Then we hurried to Speaker RAYBURN's office, because he usually holds a short, informal press conference at 12 o'clock. A group of reporters was gathered around his door.

I heard someone say, "The Speaker can say more in a few grunts than anyone else can talking." Mr. RAYBURN didn't hold his conference after all, and I missed the opportunity of judging for myself whether he was as articulate as all that.

New Directions for Textiles

EXTENSION OF REMARKS OF

HON. FRANK M. COFFIN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. COFFIN. Mr. Speaker, this morning the Cotton Subcommittee of the Committee on Agriculture opened hearings on H.R. 4033. The subcommittee encouraged discussion not merely on the legislation before it, but also on all present and future problems facing the cotton textile industry.

I took advantage of the opportunity to take a long look ahead at this industry. With the thought that my remarks may help stimulate a new vigor and new directions in our efforts, I am inserting at this point the testimony which I gave to the Cotton Subcommittee this morning:

Mr. Chairman, I would like to dwell for a few moments on what I think is the true significance of these hearings on the cotton textile industry. It lies not in the specific provisions of the legislation being discussed

today. Nor does it lie in the mere fact that the cotton textile industry is beset with grave problems, which can be clearly seen behind the current flurry of welcome activity in rebuilding inventories.

The deepest significance in these hearings, in my opinion, lies in the fact that in cotton textiles the United States faces its first postwar challenge to one of its traditional industries. I am not speaking of such temporary challenges as that which the influx of small cars has posed to the automobile industry. Nor am I speaking of potential threats posed by resurging European industry. I am referring to an existing, permanent capacity in cotton textiles, which will inevitably multiply itself in the next decade.

Not only do we face fierce competition from Japan, Hong Kong, England, Italy, and India, but we are on the verge of dramatic starts in this industry in scores of the countries taking their first steps toward industrialization. Moreover, the textile export potential of the six European countries forming the Common Market (European Economic Community) is estimated to undergo dramatic growth.

In short, we are feeling the first impact of world industrialization in cotton textiles. The real question lurking behind the statistics is: How should this challenge be met? The answer is critical today for cotton textiles, and it is vital for many other industries in the years ahead.

The time has come to shake off complacency, to be dissatisfied with temporary expedients, to take a long look ahead, to clarify feasible objectives, and to follow such policies, in business and in Government, as will help us achieve these objectives. This, I submit, should be the charter and the philosophy of the new Textile Advisory Committee.

These are the areas in which we should be doing basic factfinding, thinking, and policy formation:

INFORMATION: WORLD SUPPLY AND DEMAND

First, since our U.S. cotton textile industry does not operate in a vacuum, it is only the heart of commonsense to get a clear and detailed picture of the state of cotton textile manufacturing throughout the world, including projected trends over the next 10 to 15 years. This would place in perspective our own industry and its prospects. In other words, what do we face? This kind of information is essential to sound business decisions and sound government policy. The obtaining, analysis, and diffusion of this information can only be done by the Federal Government.

Equally important is a picture of the present and prospective markets for cotton textiles throughout the world. This is vital in order to help us analyze the potential threat to us of increasing world capacity. It is also important for us to be on the alert for new markets overseas for our own products. This kind of information should not be gathered only once, but should be kept up to date, and placed at the service of our industry. We ought also to know more about the cotton production and manufacturing capacity of Red China. We should not be afraid to explore the effect of expanded trade in food and fiber between ourselves and our allies and Red China. The importance of greater diversion of Japanese and Hong Kong cotton textile products to the Asian mainland is obvious.

The Textile Advisory Committee should imaginatively seek legitimate ways in which our Government apparatus can help spark a new, systematic, and aggressive exploitation of new world markets. For example, through cooperation between the Departments of Commerce and State, it could, from time to time, bring together design and sales experts in the industry and eco-

nomic attachés from our many diplomatic posts abroad to discuss market opportunities, style and design preferences, etc.

RESEARCH

Our second requirement—after we know more about present and probable world conditions of supply and demand—is to possess more knowledge about domestic supply and demand, and about the uses of textile products. The sixth recommendation of the Pastore report is pertinent and thought-provoking on this point:

"6. It is evident that the textile industry needs and wishes to have an expanded research program. The dilemma facing the industry has been how to finance the additional research that is needed in the face of dwindling earnings. We recommend that some proportion of customs duties collected on textile products entering the United States be used to finance research—especially basic research designed to find new end uses for textile products, and economic research which would aid the industry in planning its future production program. Some of this research could be conducted by existing Government agencies. But grants could also be made to universities and other research organizations capable of effectively assisting the textile industry. There is a need, for example, for sound projections of the future industrial and consumer demand for textile products; for a well-conceived and carefully executed program of market research and for an expanded program of basic research to develop new industrial and consumer uses for fibers and fabrics. The Textile Interagency Committee mentioned in our first recommendation could be assigned the responsibility of supervising the program of research activities suggested here."

Although basic textile research should be stepped up, there is also a need for utilizing the fruits of existing research. It seems to me worth some exploration to look into the extent to which there are useful but unused ideas which have been the subject of patent applications, both successful and unsuccessful. The Small Business Administration publishes a monthly bulletin of newly patented products in which small business firms might be interested. It would seem to me a wholly legitimate function for Government to help its "crisis industries" to the extent of improving the dissemination of useful ideas.

COSTS

The third major area of attention—and perhaps the most obvious—is that of costs of operation.

The cost of plant and equipment can be made less burdensome—in effect, can be reduced—by more realistic depreciation rates to reflect the customary three-shift operation. Again, I can do no better on this point than to quote the seventh recommendation of the Pastore report:

"7. Depreciation rates now contained in Bulletin F of the Internal Revenue Service are obsolete. These rates are based on the assumption that textile machinery is operated on an average of 2,000 hours per year. With three-shift operations, much textile equipment in this country is operated at 6,000 hours per year, and the useful life of such equipment is correspondingly shortened. The current, long-term depreciation rates are hampering investment in an industry which must step up its modernization program if it is to remain viable. We recommend that at the earliest opportunity the Internal Revenue Service publish a revised schedule of depreciation rates, taking into account current industry practices which would permit a more rapid writeoff of new equipment for tax purposes."

The most glaring, and most indefensible, shackle on the cotton textile industry is the present two-price system under which all overseas mills can purchase our cotton at a 34-percent discount, which is denied the domestic mills. The gap between prices of cotton to foreign and domestic mills has recently widened. I doubt that, in the long run, it is wise to give such a discount, merely to aid the movement of our cotton crop. Present legislation, passed last year, is intended, over a period of years, to remove the two-price system. In the meantime, so long as there is any differential, there is an acute injustice being committed every day to our cotton industry. Its very existence is justification for the kind of countervailing duty to compensate for the differential, as described in the 9th recommendation of the Pastore report, and for H.R. 4033 and S. 314.

The first order of business of the new Textile Committee should be to find ways and means to expedite termination of the two-price system, and interim methods of compensation to the industry.

Apart from plant, equipment, and materials, the third major item of cost is productivity. This, in the last analysis, depends greatly on the efficiency of equipment and method. Private and governmental research activities, of course, lead to this end, as well as more effective dissemination of existing knowledge. There will be, increasingly, another source of ideas and techniques tending to improve productivity. It is the techniques employed by other countries. Although much of textile production techniques may remain shielded by the cloak of trade secrets, much of it—as in this country—is commonly known and often published. Again, the Textile Committee would perform a valuable service if it could enlist the efforts of the State and Commerce Departments in the systematic collection and distribution of all relevant information.

TRADE POLICY

A sensitive administration of quotas by categories, fluctuating according to changing conditions, would seem to be increasingly necessary during the next 5 years, unless the industry's share of the domestic purchasing dollar greatly improves. Perhaps more useful than the quota itself is the certainty that it would be promptly applied to avoid a massive invasion of a category or drastic price disorder. That is, if a manufacturer in country X were to know that overemphasis by him in a particular line would predictably bring the imposition of a category quota, the possibility is that he would not make too heavy an investment in tooling up for a short-lived venture. Hence, it may be well for the Textile Committee to frame a statement of policy which, if adopted by the Executive, would serve notice on other countries that there would be no bonanzas for overconcentration on particular lines.

A modest but helpful achievement would be the faster processing of escape clause and peril point cases. There is some merit to certainty about such matters, whether a decision is favorable or not.

FOREIGN AID

The fourth recommendation of the Pastore report was restrained and reasonable. It did not call for purchase of all textile commodities in the United States. What it said was this:

"4. What we suggest is that careful study be made of the long-run consequences of further expansion of world textile capacity before additional grants be made to other countries to expand their own textile production for the international market. There

need be no fear of a lack of other investment outlets. And while the textile industry is attractive to underdeveloped countries because of the large number of jobs created per dollar of investment, there are numerous alternative investment opportunities which would provide new job opportunities and rising income in those countries."

As the result of two amendments to the Mutual Security Act which I sponsored last year, no development loan can be made without a consideration of the impact of the loan on our domestic economy. Moreover, studies must be made of the impact of our entire mutual security program on our economy. There have been, in Sudan, and Ethiopia, loans approved for the establishment of textile mills. In accordance with the new loan criterion, the possible impact on our economy was carefully considered. However, what was not considered was (1) whether, in the foreseeable future, the country in question could be a customer of the United States or any of our competitors; and (2) how such a country fitted into the worldwide picture I have mentioned before. That is, if India could be expected to supply Sudan in the next decade, or if Sudan eventually could be a cash customer of ours, or of India, or of Japan, then it is not far-sighted to assist such countries to enter the industry. Nor is it a favor to them.

It may therefore be appropriate for additional and very stringent criteria to be invoked whenever U.S. assistance for competition to our crisis industries is sought.

On the positive side, Public Law 480 should not be abandoned as a useful means of assisting the industry. Last year Congress added cotton textile products to the list of goods which could be sold overseas for local currency. In the case of textiles, local currency could be received as payment for only the raw material part of the cost. The remainder had to be paid in dollars. The Department of Agriculture, it is only fair to say, did not view this amendment with approval. It has never made serious efforts to make this provision helpful. It has not surveyed markets to see if a deal for part local currency, part dollars would appeal to a buyer.

It may well be that more careful and sympathetic exploration of the possibilities of Public Law 480 would be fruitful. For example, resort to Public Law 480 could be conditioned on a depressed condition in textiles. It could be viewed as a counter cyclical weapon.

STABILITY IN THE INDUSTRY

Recently the industry has experienced 2-year cycles of prosperity and depression. Let me quote from page 10 of the Pastore report:

"One factor contributing to the periodic variations in textile output is the poor state of knowledge in the industry about the inventory situations at a given time and its effects on future prices. This is due to the lack of reliable and timely statistical data on the general state of the market; i. e., the relationship between production and inventories or the flow of goods through the production and marketing pipelines. Some industry spokesmen testified that there is need for greater discipline within the industry, and suggested that improved statistical data would permit mill managements to gear production more closely to the current level of demand."

Not only could the Textile Committee initiate the collection and publication of this data, but it could itself, by virtue of its meetings and discussions, be a major stabilizing force, a source of discipline voluntarily acted upon by the industry. At least the effort seems well worth making. Naturally, all possible antitrust implications would have to be thoroughly studied.

Only in the context of a determination to take the long view and to help textiles survive and prosper in a new world of omnipresent competition does a bill such as H.R. 4033 or S. 314 make sense. Without attention to these other matters, the industry faces a future of the most vigorous competition, ill prepared to meet it. The export subsidy of H.R. 4033 would help slow down the rate at which the boat sinks.

Mr. Howard Troutman, vice president of the Bates Manufacturing Co., has described the current relationship between Uncle Sam and the textile industry as a fairweather partnership. I have attempted to describe a relationship between coach and player. There are certain things Uncle Sam can do to prepare the cotton textile industry for its toughest competition. It can help get and spread the facts of life today and tomorrow. It can help stimulate basic technical and economic research. It can dramatically lower costs of operation through realistic depreciation rates and abolition of the 34 percent discrimination against domestic plants in cotton pricing. It can more sensitively administer the safety valves of quotas, and escape clauses. It can help acquire and distribute information on foreign markets and foreign techniques. It can exercise restraint when asked to add to the world's textile capacity by loan or grant. It can, particularly in times of textile depression, distribute textile products under Public Law 480 to needy peoples. And it can aid the disciplining of the industry by the collection and analysis of production, sales, and inventories data.

No one of these things can be called a crutch. There are other industries and economic pursuits where much more in the nature of Government assistance is both asked and received.

Let these things be done, however, and watch our cotton textile industry enter the lists without despair. But, first, take the shackles off its feet.

Fraternal Order of Eagles Supports Youth Conservation Corps Bill

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. NEUBERGER. Mr. President, an excellent article explaining the proposed Youth Conservation Corps was published in the August-September 1959 issue of the Eagle magazine. Author of the article is the originator of the Youth Conservation Corps bill, the distinguished senior Senator from Minnesota [Mr. HUMPHREY]. As a cosponsor of Senator HUMPHREY's proposal, I heartily endorse the sentiments expressed in his article. When we consider the great gains for conservation made by the Civilian Conservation Corps under Franklin D. Roosevelt during the 1930's, we can realize that the Youth Conservation Corps in our own time faces a similar challenge and necessity.

It is appropriate that the periodical of the Fraternal Order of Eagles should publish this article by Senator HUMPHREY, because the Eagles have crusaded

for many other causes such as social security and jobs after 40. Mr. President, I ask unanimous consent that the article by Senator HUBERT H. HUMPHREY, entitled "Why Not a Youth Conservation Corps?" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY NOT A YOUTH CONSERVATION CORPS?

(By Senator HUBERT H. HUMPHREY)

Senator, these boys just have nothing to do. They live in the street, they are bored with life, and about the only thing they have to look forward to is the next "rumble."

The man who said this to me knows what he is talking about. He is the pastor of a large church who has studied the mounting problem of juvenile delinquency and has devoted a good part of his life to helping underprivileged youngsters. He has not gained insight into juvenile delinquency by merely reading newspapers, reports, and studies. He has been educated in this field by spending long and heartbreaking hours beside the desk sergeants, the juvenile court judges, and the superintendents of reform schools. He has learned firsthand of the awful waste of young minds and bodies, and he is frightened.

"Too often we take the easy course of punishment and confinement, and so compound the tragedy rather than to strive for solutions which deal with the root of the problem. We must find them something to be proud of, some work so that at the end of the day they can have a feeling of accomplishment—a feeling they have contributed something worthwhile and that they are needed," my friend said.

He was right, of course, and from that moment on I have been seeking means to aid these youngsters who are doomed to useless lives unless they can be shown the correct path.

No one knows better than myself that I do not have all of the answers, but after a good deal of thought and consultation with authorities in the field I do have a plan I think would be of invaluable assistance to these boys and, at the same time, be of lasting benefit to our country. It is a plan which would aid in halting not only the erosion of the moral fiber of our young people, but also the forces which are constantly eroding and destroying our forests and plains.

My plan, which I have laid before the Senate as a bill, calls for the establishment of a pilot Youth Conservation Corps of approximately 150,000 young men. They would be enrolled in units of 50 boys and assigned to Federal conservation agencies. Recruitment, overall budgetary control, responsibility for the maintenance of minimum standards for working hours, and health and educational programs would be vested in a director under the Department of Health, Education, and Welfare. Essentially, these are the provisions of the bill:

1. Young men who have reached their 16th birthday would be permitted to enroll in the program. They would receive food, lodging, clothing, transportation, and be paid on a scale identical to that of any Army private.

2. They would be put into on-the-job training situations throughout the conservation field, receiving vigorous work under careful supervision.

3. In addition to the training they would receive from professional conservation people, 20 percent of their time would be devoted to other vocational and academic training.

Our objectives, as was mentioned previously, are two fold. First, we want to help

these young men by giving them an opportunity to work on useful, constructive, and lasting projects. This, together with guidance and a chance to get some education which otherwise might not be available would be their therapy.

The Nation itself would benefit immeasurably, not only by regaining the usefulness of these young citizens, but we could do much to preserve our natural resources by taking steps to halt the destruction taking place in our vast public lands. Each year fires which could be prevented, floods that could be eradicated are laying waste to thousands upon thousands of acres of forest and fertile plains—all this at a time when the Forest Service predicts our future needs for lumber and wood products will be far greater than estimated yields.

No one who walks today through the green young forests—which in the early thirties were barren, burned-over tracts of waste—can fail to recognize the wonderful contribution made at that time by the boys who worked in the Civilian Conservation Corps. No one who visits our national parks can deny credit to the young men who, 25 years ago, did so much to beautify and preserve these areas which are now enjoyed by millions of Americans each year. The relatively small investment we made in the CCC has returned handsome dividends even though we were not aware of the many advanced methods of conservation now available.

The Youth Conservation Corps could do much more by utilizing modern scientific methods in checking duststorms, floods, and forest fires. These young men could make vast contributions to future generations by adding to our ability to produce the food, fiber, shelter, water, and recreational areas our ever-expanding population will demand. I am convinced that, if given this chance, thousands of the boys who now roam the streets—unemployed and with nothing but time on their hands—would welcome the opportunity to spend a year or two in the great outdoors.

I am happy to say that this proposal has been received with enthusiasm from persons in all walks of life.

It has been most gratifying, and I am determined to press forward in my efforts to acquaint as many people as possible with what I believe is the vast potential of this proposal. If we can do this, I am sure that support for the program will be widespread.

The opportunity is here—not only to solve the "just nothing to do" statement of my pastor friend, but to strengthen the moral and mental fiber of our troubled youth and to enhance our Nation's natural resources as well.

Letter in Support of Equal Pricing Bill

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter from Mr. Roy Clapper, a businessman from Lincoln, Ill. Mr. Clapper has written Mr. George Burger, vice president of the National Federation of Independent Business in support of my equal pricing bill, H.R. 2729, which is before the Interstate and Foreign Commerce Committee.

It is a pleasure to bring Mr. Clapper's views on this legislation to the attention of this body:

CLAPPER'S,

Lincoln, Ill., August 3, 1959.

Mr. GEORGE BURGER,
Vice President, National Federation of Independent Business, Washington Building,
Washington, D.C.

DEAR GEORGE: I have just finished reading your statement of July 21, 1959, regarding H.R. 2729. It leaves me breathless. It is a masterpiece. I wish every independent businessman in the United States were forced to read it or pay a \$1,000 fine, or go to jail for 2 months, or both.

To me, the passage of H.R. 2729 is as vital to the future of independent business, as each individual's heart is to him.

What can we do in the field to help move H.R. 2729 into law? I would like to have quite a few copies of the printed hearings.

Cordially yours,

ROY CLAPPER.

Appointment of Douglass Cater to the Chair of Journalism at Princeton University

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. JOHNSON of Texas. Mr. President, I wish to congratulate Princeton University. It has founded a new chair of journalism and public relations, and the first occupant of that chair will be one of the most distinguished and perceptive Washington commentators, Douglass Cater.

I have known Doug Cater for many years. In common with most of my colleagues, I have developed a high respect for his abilities and for his thoroughness.

It would have been difficult for Princeton University to have found a better man for this assignment.

I ask unanimous consent to have printed in the Appendix of the Record an article from the New York Times concerning Doug Cater's appointment.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the New York Times, Aug. 11, 1959]
PRINCETON OFFERS FIRST JOURNALISM—NEW COURSE TO START IN FALL—CAPITOL CORRESPONDENT TO CONDUCT SEMINARS

PRINCETON, N.J., August 10.—Princeton University will offer its first course in journalism and public relations in the coming academic year.

Following a 2-year study by a special faculty committee on how such a course could best be integrated into a liberal arts institution, the university has established a chair in journalism and public relations. It utilized bequests totaling half a million dollars.

The professorship honors Edwin F. Ferris, and his widow, M. E. Cornelia Ferris, former residents of Dunmore, Pa., whose estates left the funds for it. Mr. Ferris was an 1899 graduate of Princeton. He had served as

financial editor of the New York Herald and as business manager of the Scranton Truth.

OTHER SEMINARS PLANNED

Douglass Cater, 36-year-old Washington correspondent for the Reporter magazine and author of "The Fourth Branch of Government," will be the first incumbent of the chair.

He will serve during the first term of the coming academic year and conduct weekly seminars under the auspices of the Woodrow Wilson School of Public and International Affairs. Other journalists will conduct subsequent seminars on temporary appointments in the initial stages of the program. Eventually a permanent appointment will be made.

The three-member faculty committee that made the study consulted a number of practicing journalists who were familiar with Princeton to get their ideas. According to J. Douglas Brown, dean of the faculty, the seminars "will explore intensively the manner in which the modern-day journalist assists in the process of policy formation and execution in both the legislative and executive branches of the Government through the communication of information and the reflection of public opinion."

PRINCIPLES SET FORTH

The faculty committee outlined these basic principles for consideration in the new program of instruction:

"That the [journalism] profession needs, and needs desperately at this time, young men who have a sound training in liberal studies, with a specialty such as economics, politics, public affairs, or natural science;

"That such young men should also have been made aware, through their Princeton education, of the great current events in their historical perspective;

"That they should also have had training in the writing of compository prose which would emphasize the necessity for lucid definition and apt analogy and would enable them to engage and hold the interest of the public in abstruse subjects."

In its initial stages, the public-relations aspects of the Ferris program will supplement courses already in the curriculum, including those in the Wilson School as well as those in the departments of English, politics, and psychology.

The Labor Bills

EXTENSION OF REMARKS

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. GIAIMO. Mr. Speaker, today this body begins debate on one of the most controversial and emotionally charged problems that we have had to face thus far—the consideration of labor-management reform legislation.

It is perhaps the most important as well, not because of the fact that there exists flagrant abuse of power on the part of certain labor leaders; it is important because the type of labor-management reform legislation we pass will affect every person in these United States.

It is because of the widespread effect such legislation will have on the daily lives of all our citizens that we must avoid extremes in this field.

Labor-management reform proposals have been supercharged with emotion. Extremists, thinking only of their own areas of special interests, have promoted one proposal above another.

The principal purpose of this legislation is to eliminate the corruption, the racketeering, the gangsterism, the misuse of funds, the coercion, and all the evils that have been brought to public attention through congressional committees. Its principal purpose is not, nor should it be, to impede the growth and function of legitimate unions, or to destroy the rights the working man has gained over the past years in one sweeping, ill-considered, and hasty action.

A New York Times editorial in the edition of Saturday, August 8, 1959, expresses serious thought along these lines, and I should like to bring it to the attention of this body by inserting this editorial in full.

The editorial follows:

THE LABOR BILLS

There is hardly any field of legislation more difficult than that dealing with the regulation of labor unions. We have passed in about a quarter of a century from a stage in which it was deemed necessary to protect the basic rights of labor to a stage in which great labor organizations not only can bargain collectively through representatives of their own choosing, but command powers comparable with those of the greatest of our corporations and of our industrial organizations. In the situation which exists today we have to redefine the rights of the individual, whether the individual is a member or prospective member of a union, whether he is an employer or member of an employer's organization, or whether he is one of those ironically rare creatures who truly represent the general public.

The President on Thursday evening gave his support to the most drastic of the pending labor bills. He called the Landrum-Griffin measure "a good start toward a real reform bill containing many of the corrective provisions I have urged." To George Meany, AFL-CIO president, this same bill is unacceptable because, as Mr. Meany argued in his own radio speech, it penalizes legitimate practices of legitimate unions.

It would be folly for any layman to endorse any of the pending labor bills as 100 percent perfect. What we can do is to indicate objectives. These might be listed as follows: first, a requirement of financial integrity and open accounting on the part of union officials; second, honest and frequent elections to make certain that labor leaders, like political leaders, are held responsible to their constituents; third, that the bargaining processes be orderly and their results made public; fourth, that innocent parties be protected against secondary boycotting and against what the President calls black-mail picketing, or any other kind of unfair coercion; and, fifth, that labor be guaranteed against the intrusion of crooks and gangsters into its unions.

This is, as Mr. Meany said in his opening sentence, a critical moment in the history of American labor. It is also a critical moment in our society, for this is an issue of power in which the rights of the individual and the rights of the community are involved. We would not reduce organized labor to the relatively weak position it occupied 25 years ago. On the other hand, we must be sure that economic power is reasonably well balanced, and that it is wisely and humanely used—and this principle applies to the great employer groups as well as to the great labor groups.

We think the pending bills should be re-examined, and particularly that the provisions of the Landrum-Griffin bill ought to be put under the microscope to make sure that in penalizing the wrong practices of some labor leaders they do not interfere with any right and proper practices of the great majority of honest and conscientious labor leaders.

The South Is the Negro's Best Friend

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I wish to bring to the attention of the Senate an article appearing in the State, of Columbia, S.C., dated August 9, 1959, entitled "The South Is the Negro's Best Friend," written by Isaiah Hennie, a Negro teacher born in South Carolina and living in South Carolina.

Mr. President, this article can hardly be improved by my comment, other than to say it is one of the finest presentations of general conditions in the South regarding race relations and the opportunities of Negro citizens that I have ever read.

To quote from the author:

"The Negro's progress is virtually unlimited in the South."

I ask unanimous consent that this article together with the editor's note giving information concerning the author, be printed in the Appendix of the RECORD.

There being no objection, the article and editor's note were ordered to be printed in the RECORD, as follows:

[From the State, Columbia, S.C., Aug. 9, 1959]

THE SOUTH IS THE NEGRO'S BEST FRIEND

(By Isaiah Hennie)

There have been scores of books which have attempted to depict the plight of Southern Negroes. Some authors have scratched the surface, some probed deeply, while others have grossly exaggerated, yelping "wolf" when there was actually no "wolf." Notwithstanding the fact that everything has not been peaches and cream for Southern Afro-Americans, things are not as bleak as some might have you believe, not by a long shot.

Periodically, there might occur in isolated places minor flareups and misunderstandings between the races, but Southern Negroes are really living the good life. They aren't merely existing as are some of his fellow men in many of the large, metropolitan cities, where everything is hustle and bustle; where no one seems to have his neighbor's welfare at heart; where nobody seems to care when you're ill, broke, ill clad, poorly housed, destitute; in short, where no one gives a hoot about you.

WHITES ARE FRANK

There is but one major factor which has brought about such progress for Southern Negroes: Southern white people. Yes, you heard right. I said Southern whites. For they are the Negro's best friend. Better thinking whites are sympathetic, patient, and

possess a deep compassion for the less fortunate. Let us get the record straight now, once and for all: Southern white people do not pretend. If they don't like you, you'll soon know it. They don't put on a false face, as I've been told some do in the big cities; they don't smile at you as a ruse and get closer to stab you in the back, but are frank, right to the point. And that is no mean compliment, for nothing is as low as deception.

INCIDENTS

I should like to cite some incidents to substantiate my contention that the average right-thinking southerner has deep compassion for his fellow man, Negroes included.

Several years ago, in Anderson County, S.C., a group of Negro boys were swimming in a creek, when suddenly, one started drowning. The others yelled frantically for help, which attracted a white man, driving a furniture truck, who stopped, ran toward the bank. "Don't worry, son, I'll save you," the white man hollered, pulling off his clothing. Unfortunately, both went under; they drowned. I didn't learn whether the stricken boy grabbed the white man in a vital spot, while in his death throes, or whether the rescuer was stricken. But I do know that this was one of the most outstanding feats of heroism in the annals of human history. Tears streamed down my cheeks as I read of the tragedy, for I could well visualize a young man, about 30, just beginning to take his place in life, with a brilliant future before him, suddenly losing his life. But the manner in which he lost his life was more important. A national organization gave his family a posthumous citation for his vain effort.

In another remote section of South Carolina, a white couple raised a Negro boy, whose parents had died. His name was Willie; the couple developed a very keen interest in little Willie; there wasn't anything Willie wanted that they didn't try to get for him. Willie was treated as one of the family, and, when he reached school age, he was enrolled, and attended regularly. When about 12 Willie violated a school regulation, for which the principal punished him severely, leaving several welts on Willie.

When Mr. —, Willie's adopted father, learned of this, he made a beeline for the school. He was infuriated. He gave the principal such a scolding the latter beat a hasty retreat, that very day. The white family contended that they sent little Willie to school to become educated, not to be unmercifully manhandled by a hotheaded principal. It was the white family's desire to make a doctor of Willie. However, Willie became a little bored with school, and, after finishing high school, was married, to the family's dismay. They still loved little Willie though, for they bought him a fine six-room bungalow adjacent to theirs. They even set Willie up in a fine grocery business. Willie, now fully grown, with a family, is still embedded within the hearts of his white benefactors.

SOUTH MISREPRESENTED

No, you don't have to go afar to find white southerners who are kind, Christian-hearted, sincere in their undertakings. They are right around you, everywhere; you seldom read about them because the South's enemies aren't interested in this; but propaganda to the contrary, which would picture the South similar to one of Hitler's concentration camps, during World War II, as far as Negroes are concerned.

I worked in a cafe one summer as dishwasher. The chief cook was a buxom Negress named Carrie. The proprietors, native South Carolinians, were very fond of, and devoted to Carrie, calling her Big Mamma. She had nursed and practically raised all of their three children, Mary,

Charles, and James, who gave Carrie great respect, apparently more than they gave their own parents.

I recall a scolding Carrie gave Charlie one morning for his not making up his bed and cleaning the room. About a half-hour later, Carrie went upstairs to check the room. There was a look of anger on her oval face when she returned to the kitchen. Charlie was busy raiding the refrigerator in the pantry. To my utter surprise, I saw Carrie pull Charlie across her lap, slap him across his posterior anatomy about a dozen times. When she let him loose, Charlie went whimpering into the dining room, where his parents were eating breakfast.

"What's the matter, son?" the father inquired.

"Big Mamma spanked me," he whined, wiping his face. "I didn't make up the bed and clean my room on time."

"Well," the mother interjected, "you must remember to do as Big Mamma tells you; she's been taking care of you for all these years, and I know she wouldn't tell you anything wrong."

Charlie, a husky 17-year-old, made a hasty exit and made his bed.

Big Mamma was highly respected by these whites. What she said was usually gospel final. And, when she died, her employers took her passing as seriously as Big Mamma's immediate family.

WHITE HELPERS

Enroute from Orangeburg, S.C., last spring, I had car trouble. All of a sudden, the motor ran hot. I stopped at a service station, thinking the motor had developed trouble because of a crack in the motor, caused by the severe freeze the past winter.

"No wonder it's overheated, fellow," the attendant said. "The fan belt's broken. I'm sorry, but I don't carry them; but I'm sure you will find them at the next station, about 4 miles up the road."

I was amazed at the very keen interest this young white lad had shown; he didn't know me from Adam's house cat. But he seemed to have been reared in a Christian atmosphere. He even tried to get a man with a truck to push me to the other station, but to no avail.

Being very cautious, I finally made it to the station. The belt was available, all right; but there was no one to put it on. The only one on duty at the time, was a settled white lady, who said her colored attendant was off Wednesday afternoons. However, I waited, hoping someone would come along who'd help me. I didn't have to wait very long, for soon, three white men arrived. They bought cold drinks and cigarettes. The proprietress seemed to know one. She said: "Listen, Mr. Alford: This man bought a fan belt, but he can't put it on. I wonder if you'd put it on for him."

"Sure," he said. He finished his drink, lit a cigarette, rolled up his sleeves, then raised the hood. I could readily see that he knew something about an automobile. Five minutes later, the fan belt was on. I asked him what did I owe him, and he answered: "Not one dime," I'm glad I could help you."

"Oh, no sir," I replied, reaching into my shirt pocket. I pushed a dollar bill in his pocket, and just as quickly as it takes you to say one, two, three, he rammed it right back into my pocket.

"Like I said," the white fellow said, wiping his hands, "I'm glad I could be of help to you. I may be on the highway needing help some day; you never can tell, you know."

I've related this good deed any number of times to groups, classes, and fraternal gatherings. My contention is that you will find

kind, Christian-hearted, God-fearing people everywhere you may go, geographical barriers being not a determining factor.

PENNSYLVANIA VISITOR

I was recently in the company of a visitor from a large town in Pennsylvania, who was obsessed with all kinds of propaganda about our dear old South, lynching parties, laughing barrels for Negroes, and a myriad of other falsehoods which she'd heard about the South. Well, it was my duty and pleasure to straighten her out.

I began by giving her a nice lecture on the southern Negro's progress: Excellent schools, churches, clubs, colleges, and homes. I summed it up by taking her on a sight-seeing tour of Columbia, our capital city, showing the modern, spacious, well-designed homes of Negroes, many of which are equal to the best in northern elite districts.

My host was utterly surprised at what she'd seen. I told her that she'd only seen the surface; to observe more would have required much more time.

I emphasized that the South is the Negro's promised land. The Negro's destiny lies in the South, where his welfare is at heart, where he can pursue anything which he feels capable of undertaking, where there is virtually no limit to the heights to which he can ascend, the only prerequisite being thrift, honesty, courtesy, and minding one's own business.

PROSPEROUS NEGROES

That's is, in a nutshell. It is no hidden secret that some of the most prosperous farmers among Negroes are located in what is known as the Deep South. Look through any national Negro publication and more than likely you will read something about this or that Negro farmer who won such and such a prize for poultry or livestock. Moreover, scores of Negro farmers own their farms.

Financially, economically, and socially, the southern Negro is making tremendous progress, is vastly in the lead of his northern counterpart, for far too many Negroes in the North are merely existing, not living enthusiastically, as are southern Negroes. The overwhelming majority of northern Negroes have their noses to the grinding stone, so to speak; they are continually on the go, ripping and romping; it's work, work, and more work; but very high rent, groceries, and fuel, keep them on a treadmill. It's forever "tote that bale," "hue that stone," "root little pig, or die." There is lacking in the large northern cities that serenity, peacefulness, contentment, and vigor which southern Negroes daily enjoy.

TENSION RELIEVED

Another point, on which I should like to talk briefly, is to attempt to prove my assertion that our southern white friends have a warm, affectionate feeling toward Negroes. In a mill town in the Piedmont area of South Carolina, a series of racial disturbances occurred during the last war period. On successive Saturday nights, Negroes had been manhandled and roughed up severely by some white rowdies. Feeling was tense; there was much talk of mass retaliation by Negroes. The mill president, a very wealthy man, who'd risen from obscurity to become a millionaire, saw the urgent need for intervention.

The majority of whites and Negroes worked for him, which was very important. He went on the air at the local radio station, admonished that anyone caught molesting Negroes, or disturbing the peace, would be fired immediately. There were no more incidents, and soon everything returned to normalcy.

These are the kindly deeds which are done so frequently all over the South, about

which so many people never learn. To the stern critics of the South, I should like to remind them of an old adage: "There is so much bad in the best of us, and so much good in the worst of us, that it ill behooves any of us to talk about the rest of us."

Yes, there is so, so much bad in the so-called liberals, from points North; the bulk of them are false pretenders; maybe there are some who are not, but compared with the hypocritical type, they are like a lost ball in high weeds.

Our good southern white people are frank, nondeceitful, won't act as though they like you if they don't, which is so vitally important in our everyday relations.

IN CHICAGO

In Chicago, some 3 years ago, a Negro, a Korean veteran, moved into a predominantly white housing project. There was a tremendous protest from the whites, who resented the Negro's presence. Windows were broken, pickets patrolled the area; the Chicago Police Department had to dispatch over 300 police to prevent violence upon the Negro family. Police patrolled around the clock.

This is a vivid picture of the hypocrisy of the so-called liberals. This incident would not have occurred in the South. Conversely, I know of many neighborhoods, in our dear South, where whites and Negroes are neighbors. This is not said to condone this practice, but rather to show that conditions are not half as bad as they are pictured by some radicals, who try to picture the South as some uncivilized, backwoods place, where everyone is ignorant.

Over 90 percent of our Negro leaders and educators are southern Negroes. Two of the foremost, and most financially powerful Negro insurance companies—namely, the North Carolina Mutual, of Durham, and the Pilgrim, of Augusta, Ga., were organized and established in the South. I could go on and on, naming successful business organizations, and Negro individuals, who have reached the pinnacle of success right here in the South.

There are no barriers to prevent Negroes who are progressive and have insight from rising.

PROGRESS IN SOUTH

The Negro's progress is virtually unlimited in the South. I personally pity those who continually migrate northward, for most of these migrants eventually will end up in some slum area, some become wards of the welfare departments.

The mass exodus continually goes on uninterrupted, night and day, year in and year out, to giant industrial cities, which are already overcrowded, with housing facilities way below par; exorbitant rents, caused partly by the Negro's wanton disregard for property.

Unfortunately, my people have, generally, a tendency to deface property. And there would seem to be justification for steep house rent, when the occupants persist in destroying the property. I should know, for, as a teacher, I have to be ever on the alert, lest some teenager should carve a desk with a pocket knife.

EDITOR'S NOTE.—Isalah Hennie, a Negro, is teacher of history at John Ford High School in St. Matthews. He is a native of Columbia and a graduate of Booker T. Washington High School and Allen University. He lives at 1521 Harden Street in Columbia. His wife, Irene, teaches at Kirkwood Elementary School in Kershaw County. Hennie's avocation is song writing. Two of his songs have been published and played on national networks. "Leave It to Me" was recorded on Wings records (subsidiary of Mercury) by the Griffin brothers. "I Want To Be the Only One" was recorded under the Derrick label by Kip Anderson, a senior at Benedict College in Columbia.

Dancey in Russia

EXTENSION OF REMARKS
OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I wish to include the 17th and 18th articles of a series by Editor Charles L. Dancey appearing in the August 5 and 6 issues of the Peoria Journal Star respectively:

EVEN REDS ENJOY MARINE HYMN

(By Charles L. Dancey)

ON THE DON RIVER.—By the second day I became a privileged character of the "Yuri Krimov" steaming up the Don.

Among my new friends was Dmitri, who was a party member and who presented me with a little leather pocket book of rules for the Communist Party of the Soviet Union.

He also handed the officer of the watch a bottle of beer after which we two enjoyed the privilege of going up to the bridge whenever there was anything of interest to see.

At one point he remarked to me that he was an "official" of some kind—or perhaps the word was "officer"—(they are similar in Russian and both almost like their word for "waitress") and he added: "You don't have any friends in my kind of work."

He seemed like a fellow who needed a friend. I don't think anyone can propagandize human nature out of existence.

As we passed from the Don into the Volga canal (cameras strictly forbidden on deck from this point on) a group gathered in the bow with one young fellow playing his accordion, and they sang songs.

They would take turns entertaining, also. "Say something in English," they said. And then they would all lean over to hear the words they didn't understand.

Finally, "Sing an American song," they urged.

I looked out across the dark waters, at the huge statues ahead flanking the gates of the first lock into what they proudly call the sea that Stalin made, and sang one chorus of the Marine Hymn.

"Take off your glasses," they urged.

I took them off and pretended I could hardly see.

They laughed, and shouted jokingly, "Kraseev, tak kraseev" (So handsome.) and other joshing remarks. I turned to a huge portrait of Khrushchev reaching from the deck floor to the bridge deck above, still squinting without glasses and said: "Kto eo?" (Who's that?)

They roared with laughter, the picture was so huge and so close.

"Ah!" said I, slowly, "Eisenhower."

Reactions tell you a lot. They laughed twice as hard.

"Yuri Krimov" I tried. More laughter, cries of "Nyet!"

Finally, "Oh, Nikita—Nikita—what's his last name?"

And that closed out the "shutka" (joke) with gales of laughter. I didn't have the guts to say "Leon Trotsky?" And I can't help but feel that if it had been a picture of Stalin it wouldn't have been funny.

Finally, Lida, a teenager now working as an assistant librarian in Rostov (and a member of Komsomol, the Communist Youth organization—I know because she offered me her Komsomol pin) wrinkled up her forehead and asked: "Why are Negroes lynched in America?"

Dmitri swung angrily from the rail to her and said that same word that Alex had tossed out the day before, only Dmitri barked it at her: "Propaganda."

FLOWER BREAK STARTS DON DAY

(By Charles L. Dancey)

ON THE DON RIVER.—I got up at dawn (5 o'clock) in time to see Masha, the poor girl whose job is it to scrub decks in the early morning and clean up cabins later in the day, let out a squeal from the deck below and run from our boat across a barge and over onto the bank of the river.

There she was gathering wild flowers. She dashed back aboard with an armful as we pulled away again. From the upper deck I watched her arrange them into a large and a small bouquet.

Three hours later when I returned from breakfast, there was the large bouquet in the main salon—the small bouquet in my little cabin on the tiny desk there.

At that breakfast I remarked that I was hungry—just conversationally, and the waitress brought me an omelet that was tremendous, lapping all sides of the plate.

Most of my friends aboard now call me "Char-lee"—they simply cannot manage "Chuck" at all—and occasionally I find one of them using the familiar form of the word "you" instead of the more polite form "vwee" or "vash."

One of the men remarked flatly in conversation that "capitalism and communism are just words" and the question is how do we "get things done" in America.

Forty-two years of carefully controlled one-sided information has created a people here, judging by those on the boat with reasonable amount of education, who are ravenous in their curiosity—about books and movies that are modern and that they are not allowed to see.

One person told me I ought to go to Siberia where big things are being done.

"Your Government won't let me," I said.

"Oh!"

Another said I ought to go to Latvia and see the beautiful city of Riga.

"Your Government won't let me."

I overheard a mechanic from the boat crew speculating that I was not a real tourist but as near as I could make it out some sort of a spy or saboteur—and the others quickly talked him down.

Meanwhile, we climbed up through a series of locks into the manmade sea. "Stalin said build it, and it was built." Then started to climb back down to the Volga through another series of locks.

Again we sat up until after midnight talking.

At one point, I was talking to four fellows and they were talking pretty much about politics, and about Germany, too (one of them was a major of tanks who fought at Stalingrad) when a policeman in uniform came up and sat down very near by. (He may have boarded at one of the stops.)

One of the men gave a kind of a "jiggers, the cops," warning gesture and word, and another fellow looked up—I think it was Dmitri, and announced loudly what he thought about the nosey, blankety-blank police.

The uniformed officer got up in embarrassment and walked away.

As we approached Stalingrad, Ivan gave me his pocket pencil, and Lida and Alla came up and pressed on me a book by Turgenyev.

When the Intourist guide appeared at the dock, boarded, and approached, these friends quietly melted away.

They were the only people I felt I had really gotten to know and like, and I hated to see them go and to return to the forbidding miles ahead.

A Mess of Pottage

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. THURMOND. Mr. President, the question of Federal aid to education is the subject of a controversy which demands the attention of every citizen of this country. The dangerous effects of such a program must be judiciously considered by every person who believes in fiscal responsibility and is opposed to dictated conformity upon people of divergent views.

One of the outstanding educators of my State of South Carolina, Dr. James C. Kinard, has discussed the issue of Federal aid to education with rare prospect and objectivity. As a former president of Newberry College in Newberry, S.C., Dr. Kinard is eminently qualified to alert the citizenry to the dangers inherent in an extensive program of Federal doles and resultant Federal control. It is for this reason that I ask unanimous consent that the editorial of Dr. Kinard, appearing in the August 6, 1959, edition of the prominent Aiken Standard and Review of Aiken, S.C., be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Aiken (S.C.) Standard and Review, Aug. 6, 1959]

A MESS OF POTTAGE

(By Dr. James C. Kinard)

The National Education Association has won a well deserved position of prestige. Its membership is composed of administrators and teachers from the largest to the smallest schools. Steady pressure is constantly exerted to bring into the organization all who are engaged in the teaching profession.

It seems to be generally accepted that the primary purposes are to raise teacher salaries to adequate levels, to improve educational standards and to strengthen the physical facilities for the training of our youth. With such worthy objectives there can be no quarrel.

But there are open to serious question some plans now apparent being ardently advocated. Many thoughtful citizens are concerned over the emphasis being given toward securing Federal grants for public school education. They fear the inherent prospect of Government control over our schools.

The proponents of this program try to assure us that there will be no such danger. But actual experience with other activities subsidized by Federal funds shows that Washington is not in the habit of appropriating tax money without having a hand in regulating its expenditure. It stands to reason that those who are held responsible for such grants will feel under obligation to supervise the spending. As an indication of the present trend there is talk of a "national curriculum." This very clearly implies a standardized course of instruction for all schools and all pupils, regardless of local needs and adaptability. The whole process of education is doomed to farcical failure if we come to the point of attempting to

put diplomas on an artificial mechanistic basis like automobiles rolling off the assembly line.

In many communities today there are abandoned schools, once the centers of local pride and interest, which stand as pitiful monuments to the current effort to measure the genuine worth of education in terms of big numbers. Mass production in education will not automatically provide a better trained citizenship for tomorrow.

Let us not like Esau, sell our birthright for a mess of pottage, in this case the glamour of Federal money.

Khrushchev's Visit

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. DADDARIO. Mr. Speaker, I am somewhat concerned at the immense and massive security measures that are being forecast for the visit of Premier Khrushchev to the United States in September. I would hope that the conduct of this Nation of Americans will be formal and correct toward the visitor.

There are considerable risks in the President's invitation. Our national security policies are subject to reappraisal everywhere by our allies and the neutrals in the light of our behavior. The prospect of emotional reaction, either favorable or unfavorable, could upset the pattern of international relations without any gain for peace.

But, coming as he does upon the invitation of our President, the Premier is entitled to a chance to view this great country, its people and their accomplishments, without harassment or violence. I do not believe that the vast majority of the American people will look with favor on discourtesy and rudeness, even though they fully recognize the imperialistic and aggressive policies of Soviet communism.

The citizens of the United States are linked by bonds of family and principle to those who love freedom and justice on every continent, as the President himself said in proclaiming Captive Nations Week last month. The best way all Americans can show their strength and firmness in support of this change in our national policy is by meeting this guest with formal dignity and responsibility.

I would also like to call to the attention of the House, and request unanimous consent to do so, an editorial from the Hartford Courant called "Suddenly, the Summit," which I believe to be a fine, objective presentation of the issues herein.

SUDDENLY, THE SUMMIT

With President Eisenhower's announcement yesterday that Mr. Khrushchev is coming to this country, and extraordinary change in the cold war takes place. There have been springlike hints, but now suddenly it is real. We must welcome this change, with high hope. But we must be realistic about it. This exchange of visits, and all that goes with it in the way of the President's

visits to our allies abroad, may avoid world war III. But it cannot lessen the struggle between freedom and communism.

Last November 27 Mr. Khrushchev issued his famous ultimatum on Berlin. We soon became aware that a Soviet attempt to force us out of Berlin might set off world war III, even without anyone's intending it that way. The Geneva Conference, where Mr. Gromyko was unbending—plainly at Mr. Khrushchev's bidding—underlined the threat. Now all is smiles. Mr. Nixon, highest ranking in a whole stream of official and unofficial visitors to a once tightly sealed Russia, is allowed to speak our thoughts to the Soviet people uncensored. On top of that the impossible has happened. Mr. Khrushchev is coming here, and President Eisenhower is going to Russia.

What does it mean? It does not, and cannot, mean that the cold war is beginning to end. Mr. Khrushchev says he will bury us, and that our grandchildren will live under communism. Even without that, we should know enough by now to realize that Soviet Russia and communism will continue to threaten freedom and democracy throughout the lifetime of all now living, even yesterday's babies. But this thaw in the cold war's deadly climate can nevertheless mean something extraordinary, something without precedent in the history of the world.

Always, since the beginning, man has formed himself into rival, armed groups. It was so between Athens and Sparta, and indeed long before that. It was so among the medieval barons, not only in Europe but in Asia. It was so among the kings who in the end won out over the barons. It was so again with the nation-states that came with Napoleon, right up to the time the 20th century great powers fought the world's two greatest wars. The common thread was an armed rivalry that sooner or later, whether by calculation or by accident, always exploded into warfare.

With the invention of the hydrogen bombs there came something new. Now it doesn't matter who is aggressor and who the intended victim. As long as the two sides are in readiness, once the big ones are let loose there follows mutual destruction. It is even possible that such a war might, through its fallout and other after effects, end all life on this planet.

The leaders of both sides in the cold war's armed rivalry are well aware of this. As long ago as 1954 President Eisenhower told us, "There is no longer any alternative to peace." Therefore it now becomes possible, for the first time in history, that both sides may seek to achieve the ends hitherto always sought in war by peaceful means. Von Clausewitz's famous statement was, "War is an instrument of policy. . . . The conduct of war . . . is therefore policy itself, which takes up the sword in place of the pen." Now we may reverse that, and take up talking in place of firing ICBM's.

There are those who oppose the Russian dictator's coming. But surely the overwhelming proportion of the American people will go along with the President. No one has to go out and cheer, or even to see our visitor, who doesn't feel like it. But surely we are not so small of mind, so shrunken in our hearts, that the only way we can express ourselves is by giving ourselves over to a hatred that can end only in killing. Man reaches for a gun only when he faces problems too big for him to solve.

Are we so small, so poor in mind and spirit, as that? President Eisenhower's invitation to the Soviet dictator is an act of affirmation that we are not.

Well, then, what can come of it? The President made it clear in his extraordinary press conference yesterday that this is no meeting to negotiate on Berlin or any other outstanding East-West difference. He does

not conceive of it as a summit conference at all. And indeed it is not a summit meeting, in the present sense of four-power talks by heads of government to settle special differences. This is, however, a summit meeting in the sense used by Mr. Churchill earlier in the cold war, when he invented the idea of talks "at the summit."

Mr. Churchill had in mind the wartime meetings of the Big Three, in which they coordinated the strategy that won the war. Now, as Mr. Nixon puts it, we are not going to convert Mr. Khrushchev to freedom, any more than he is going to convert us to communism. But in addition to the first great hope—educating Mr. Khrushchev in American realities by what he can see for himself—talks between the two national leaders will achieve the ultimate in talking things over instead of fighting them out.

All this is positive, and hopeful. But lest the American people with their habit of great shifts in sentiment go too far in the other direction, let us be utterly clear in our minds about one thing: Mr. Khrushchev is never going to relax his determination to win the world for communism. No true Marxist ever can. They are dedicated to their dictatorial system, including its ultimate brutality, with a passion like that which sparked the religious wars between the Crusaders and the infidels. It is in the nature of communism to advance and retreat, to zig and to zag, but never to give up its determination to communize the world.

The big difference in Mr. Khrushchev is this: Ever since his famous speech of 1956 to the Twentieth Party Congress, in which he debunked Stalin, he has preached the novel doctrine that communism might win by peaceful means instead of in the Marxist mythology's inevitable final war with a dying capitalism. He still boasts of his rockets and his H-bombs. He still says that communism will fight if we want war. But he also talks of outstripping us economically, and of beating us in the admiration and affection of the world's people.

This visit should help us to see if this may be. If so, the cold war may continue cold indefinitely, perhaps without ever becoming hot. Either way there must be an unyielding struggle for supremacy. But it is now possible that there may be a choice between peaceful competition, and the grim futility of mutual destruction. The President's move shows that we are ready for the peaceful way, if we can have it.

Oregon Juvenile Judges Association Endorses Youth Conservation Corps

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. NEUBERGER. Mr. President, the Oregon Council of Juvenile Court Judges, meeting in convention in Eugene, Oreg., during the week of July 27 through July 31, 1959, passed a resolution to provide youth with an opportunity to work which endorses S. 812, to create a Youth Conservation Corps, which I am cosponsoring in the Senate. I ask unanimous consent that this indication of support for the YCC program be printed in the Appendix of the Record for the information of the Senate.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION TO PROVIDE YOUTH WITH AN OPPORTUNITY TO WORK

Whereas the lack of opportunity for employment and the lack of educational provisions for boys are significant factors in the ever present and expanding problem of juvenile delinquency; and

Whereas the establishment of such a program would develop and conserve the natural resources of our country and would give boys and young men an opportunity to work in the open and to develop physical fitness and character; and

Whereas the initiation of this program provided in Senate 812 now pending in the U.S. Senate for the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for males between the ages of 16 and 21 inclusive: Now, therefore, be it

Resolved by the Oregon Council of Juvenile Court Judges in convention in Eugene, Oreg., That it supports and approves the principle involved in Senate bill 812 and urges that the Congress of the United States take favorable action on said Senate bill 812 or other appropriate legislation to establish this program.

The Constock Project

EXTENSION OF REMARKS

OF

HON. T. A. THOMPSON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. THOMPSON of Louisiana. Mr. Speaker, development in the field of petroleum has meant much to the success and economy of our Nation. Particularly has it added to the economic growth of the gulf coast areas where far-sighted and competent development of our petroleum industry has been undertaken at great risk of invested capital. In evolving the many processes much assistance has been given in furnishing jobs for those who have been forced to leave the farms or for other reasons have been displaced in our changing economy.

The Continental Oil Co. has been one of those which has added immeasurably to my areas of southwest Louisiana by its faith in the future of our resources. Rather than being satisfied with the production of oil and gas, I am informed by my good friend, Orville Fisher, vice president of the Continental Oil Co., that they have looked beyond our own use of natural gas. The company has developed a method whereby much of this resource, which is normally wasted or unused, can be reduced to liquid and carried in containers much smaller than the potential numbers of cubic feet when in gaseous state, making it possible to be shipped to those in need of fuel. The following is Mr. Fisher's explanation to me as to how this pioneering accomplishment has been brought about. I think it to be sufficiently noteworthy as another "America first" to be commended to the attention of the membership:

OUTLINE OF THE CONSTOCK PROJECT FOR CONGRESSMAN THOMPSON

Constock International Methane, Ltd., owned 50 percent by the Continental Oil Co. and 50 percent by the Union Stockyard & Transit Co. of Chicago, has been engaged for several years in all phases of a program to liquefy and transport natural gas. The basic idea of the project is to utilize natural gas which is in overabundant supply in many areas of the world, such as the Middle East and Venezuela, but is shut in or flared to waste for want of accessible markets. When liquefied by refrigeration to a temperature of minus 258° F., the gas is reduced in volume 600 times and will be carried without pressure in this highly concentrated form in specially constructed tankers to energy deficient areas of the world such as Western Europe and Japan.

Due to the extremely low temperatures and intricate technical problems to be solved, shipment of liquid methane by sea has never been attempted before. By early 1959, Constock had spent over \$14 million in developing techniques and equipment for the liquefaction, transportation, and storage of liquid natural gas, and was recognized as the leader in this field throughout the world.

Work on the project really originated as far back as 1951, when Mr. William Wood Prince, then president of the Union Stockyard & Transit Co. of Chicago, started the Chicago Stockyards Research Division on a plan to liquefy natural gas in the southwestern portion of the United States and transport it by barge up the Mississippi to Chicago, where the idea was also to make use of the refrigeration contained in the liquid in the meatpacking operations surrounding the stockyards. Under the direction of Mr. Willard L. Morrison, the stockyards research division commenced construction of liquefaction equipment, mounted on a barge for the sake of mobility, capable of liquefying approximately 7 million cubic feet per day of liquid natural gas, and a transportation barge capable of carrying 35,000 barrels of liquid in 5 tanks of 7,000 barrels each. This activity, carried on for the most part at Pascagoula, Miss., attracted fairly widespread attention, and through a report issued by the International Bank for Reconstruction and Development was brought to the notice of the British Gas Council, who, as a major potential customer for imported liquid methane, followed developments closely from this stage on.

In 1954, before completion of the work referred to above, the Continental Oil Co. made a thorough investigation of the progress achieved, and as a result joined the Union Stockyard & Transit Co. in forming the Constock Liquid Methane Corp., for the purpose of developing the whole project on a commercial basis. The Mississippi barge scheme was dropped in favor of large-scale overseas movement of liquid natural gas from countries where natural gas is a surplus commodity to energy deficient countries where there are little or no native supplies and which cannot be supplied by pipelines. It has been concluded that liquid methane cannot for many years compete with pipeline transported gas in the United States nor the fuel oils, but will find its use in the expanding energy market of the European and Asian countries, replacing gas manufactured from coal or oil.

Constock employed expert consultants in all the specialized fields involved in such a new and complex engineering concept. Two tanks on the transportation barge, lined with balsa wood, were completed. The liquefaction barge was completed, and operated successfully throughout 1956. Invaluable experience was gained during this period in the techniques for processing, storing and

handling of large volumes of liquid natural gas. Further, a prototype ship's tank, approximately one-third the size of that visualized on a large tanker, was constructed and tested with liquid nitrogen (at minus 320° F.) simulating insofar as possible on land every conceivable condition that could occur at sea. After the successful conclusion of these tests, the British Gas Council, as a prelude to large-scale importation of liquid methane into Great Britain, indicated their willingness to participate in conversion of a small ship which would make several trial shipments to England in order to demonstrate the feasibility of the novel transportation system developed by Constock.

In the latter half of 1957, the MV *Normartt*, a Cimavi-type dry-cargo vessel of 5,000 deadweight tons, was purchased by Constock. Conversion of this vessel to carry 32,000 barrels of cargo, according to the plans and design drawn up by Constock and its naval architects, the J. J. Henry Co., of New York, was performed under conditions of the strictest secrecy by the Alabama Dry Dock & Shipbuilding Co., of Mobile, Ala. The ship, renamed the *Methane Pioneer*, was completed in October 1958, after which all its special features were thoroughly tested with liquid methane during sea trials in the Gulf of Mexico. The climax of nearly 7 years of research and development occurred when the *Methane Pioneer* left Lake Charles, La., on January 28, 1959, on her historic maiden voyage to England, carrying a full cargo of 32,000 barrels of liquid methane. This voyage was a complete success: the ship arrived at Canvey Island, situated on the River Thames, near London, on February 20, without incident, and the cargo was discharged without incident into the British built receiving facilities.

Methane, the largest constituent of natural gas, had never before been transported as a liquid by sea; and unlike conventional L.P.G. ships which carry a mixture of propane and butane (or bottled gas) under pressure in heavy metal cylinders, the *Methane Pioneer* is designed to carry liquid gas at atmospheric pressure and minus 258° F. in special aluminum tanks which are installed within heavily insulated holds of the ship. It is impossible to hold methane as a liquid under pressure above its critical temperature of minus 115° F., while the critical temperature of propane and butane is plus 206° F. and 306° F. respectively. Constock's system of transportation of low temperature liquid gas without pressure may also be successfully applied to L.P.G. (propane and butane) and is more economical than the present conventional pressure method of shipping these materials.

The *Methane Pioneer* is owned and operated by British Methane, Ltd., a Bahamian corporation formed jointly by Constock International Methane, Ltd., and the British Gas Council. At the time of writing (June 9, 1959), the *Methane Pioneer* has completed two round trips to England, and will make a number of further trial runs before a decision is made to go ahead on a commercial program. Gas for the experiment is supplied by Constock from the barge mounted liquefaction plant and loading terminal located on the Calcasieu River near Lake Charles, La. Constock's land storage tank, the largest of its kind in the world, has a capacity of 35,000 barrels of liquid for transfer to the ship.

At the unloading end, the British Gas Council has constructed a terminal at Canvey Island, which is situated on the north bank of the River Thames, between Southend and London. Here, two land storage tanks, each capable of holding 15,000 barrels, have been built to store the liquid methane until it is vaporized to gas under pressure and delivered by direct transmission line to the North Thames Gas Board's

works at Romford, about 20 miles away in the direction of London. At Romford, the methane gas is mixed with off gases from the Shellhaven Oil Refinery and reformed to town gas before delivery to the board's consumers in the London area.

For years oilmen have been eyeing the tremendous wasted and unusable supplies of natural gas throughout the world, and have been dreaming up ways and means of supplying this gas economically to other inaccessible countries which nature has not so richly endowed. The significance of the achievement in the *Methane Pioneer* is that it has now been demonstrated that it is possible to establish a link (which is more flexible than a pipeline) between these areas of over and under supply.

Constock has been negotiating for long term-gas supplies throughout the world, since gas for the long range program would not come from the United States. It has also developed markets other than Great Britain and within a few years expects to have a full fleet of tankers carrying energy in highly concentrated liquid form at low temperatures serving the gas hungry nations of the world at a price which is cheaper than that of gas manufactured expensively from coal or oil.

Selection of Houston and Dallas Public School Systems for Experimentation With Advanced Mathematics for High School Seniors

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. JOHNSON of Texas. Mr. President, high honor has been bestowed upon two of Texas' proudest cities, Houston and Dallas. The Houston and Dallas public school systems have been chosen as the two school systems in the Nation for experimentation with advanced mathematics for high school seniors.

Mr. President, I ask unanimous consent that an article entitled "Dallas Chosen in Math Study," from the Dallas Times Herald of August 4, 1959; an article entitled "Students To Get Advanced Math," from the Houston Chronicle of August 4, 1959; and an editorial entitled "Making Students Work Harder," from the Dallas Times Herald of August 5, 1959, be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Dallas Times Herald, Aug. 4, 1959]

DALLAS CHOSEN IN MATH STUDY

(By Al Hester)

The Dallas school system has been chosen as one of two public school systems in the Nation to take part in a pilot program in advanced mathematics for high school seniors, school leaders said Monday.

Jesse F. Cardwell, coordinator of secondary education for Dallas schools, said Monday the district will begin the program this coming school year. The program is under the sponsorship of the School Mathe-

matics Study Commission of the College Entrance Examination Board, he said. It will give selected high school seniors advanced instruction which will better prepare them for college math work, Mr. Cardwell said.

By spring, 1960, first classes will be set up under the new program. The course will be called elementary functions and analysis and will be open to selected seniors in their last semester of work. The National Science Foundation and Yale University are helping to set the program up.

The advanced math program will be similar to the widely known Physical Science Study Commission's "Massachusetts Institute of Technology science course." Dallas schools have also pioneered in making the MIT physics course available to high school seniors. The course emphasizes new concepts in science and new methods of making material meaningful to students.

Mr. Cardwell said Dallas was selected for the pilot math program because of the work the schools have done to strengthen mathematics teaching.

"I understand Houston schools are the only other schools chosen for the project," he said.

Selected Dallas mathematics teachers will attend supplementary training courses at Southern Methodist University this fall to better prepare them to teach the new math course.

Mr. Cardwell said the course will ready high school students for college calculus courses. It will not be a part of the college-level honors math courses already offered, Mr. Cardwell said.

"We hope to further emphasize the meaning and understanding of mathematics, rather than just the work necessary to do problems," Mr. Cardwell said. He said the approach to teach the meaning of math is now being used throughout the 12 grades in Dallas schools.

School Supt. W. T. White said the pilot program is a significant step in providing a more complete education for youngsters.

"The more varied the curriculum can be in regard to the interests of students the more complete the educational program is," Dr. White said.

[From the Houston Chronicle, Aug. 4, 1959]

STUDENTS TO GET ADVANCED MATH

The Houston public school system is one of two systems in the Nation which will be offered a program of advanced mathematics to prepare high school seniors for college.

John McFarland said the program, which would go into effect in the spring of 1960, must receive approval of the board of education.

Dallas plans a similar program.

The program, set up by the National Science Foundation and Yale University, would be an elective course here, McFarland said, and open to high school students who already have completed 2 years of algebra, trigonometry and plane geometry.

McFarland said he believes Houston was chosen because of the schools' work with Dr. Lincoln Durst, professor of mathematics at Rice Institute, who is helping to write a special textbook for the advanced course.

Outstanding mathematics students in Houston public schools have been taking a course in advanced mathematics at Rice during the summer months.

[From the Dallas Times Herald, Aug. 5, 1959]

MAKING STUDENTS WORK HARDER

Public education in this country has grave shortcomings, but fortunately it is not static. School leaders and the public they serve have open minds where improvements are suggested. In Dallas, especially, the at-

mosphere seems conducive to policy alterations and promising innovations.

Two years ago our district became one of the first in the Nation to adopt the plan of special classes for extra-bright students. Now Dallas is to become one of the two school districts in the Nation that will experiment in offering advanced mathematics instruction to gifted seniors.

It is well to challenge the abilities of gifted students to the fullest. Our Nation needs all the outstanding leaders in every field that it can produce. No less important, however, is that student bodies as a whole be goaded to work harder than they have been.

Foreign exchange students almost invariably remark at how easy it is to breeze through public schools in the United States. They note that our children are permitted to take too many soft nonacademic courses and that they are not expected to study hard. The ease of acquiring educational certificates and diplomas, of course, extends into many of our colleges and universities.

If education in our country is to meet its responsibility, all students, not just those with exceptional aptitude, must discover that going to school is no picnic. If they do not, they and the Nation will be cheated. It is not enough that only our ablest students be expected to work as diligently as they can.

Twenty-Part Series Helps Amateur Weathermen

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. DADDARIO. Mr. Speaker, I request unanimous consent to include an article from the Gannett, a publication of the Gannett newspaper chain, on a recent service inaugurated for people of Hartford in the Hartford Times, one of the outstanding papers in my district.

The service concerns an effort on the part of the newspaper to make available to its readers a better understanding of weather forecasting and the day-to-day communication of what our forecasters know into useful information around the home.

We need, of course, much more effort in this direction. The funds provided this year for a study of a National Institute of Atmospheric Research is a valuable start; so is the increased attention being given around the country to the scientific effort needed to know more about the climate and atmosphere in which we live.

One of the most difficult problems in any scientific area, as we on the Committee on Science and Astronautics have reason to know, is the translation from the scientific language in which this work is done. That is why an aggressive journalistic effort such as that of Times reporter, Harland W. Warner, and Managing Editor Richard J. Hartford is welcome.

TWENTY-PART SERIES HELPS AMATEUR WEATHERMEN

Last Christmas, 5,000 barometers were sold in Hartford stores and delivered, gaily wrapped, as presents. Local weather fore-

casters immediately reported floods of telephone calls from new owners of barometers, asking how to set the instruments, how to read them, and how to use the information.

This and other indications called to mind the hoary saying that everyone was talking about the weather. In July, the Hartford Times set out to do something about it. On assignment, Harland W. Warner spent several weeks learning to be an amateur weather forecaster. He emphasizes that he didn't become a meteorologist. "All you need," he says, "is a barometer, a thermometer, a radio or television receiver, a daily newspaper that carries a weather map and a good pair of eyes. The only thing that's really necessary is the pair of eyes."

With his study completed, Warner wrote a 20-part series inviting readers to join him in amateur forecasting and giving instructions incorporating the training he had received.

Titled "Weatherscope," and starting July 20, Warner's series also introduced a new, exclusive presentation of published weather information. Designed in part to compete with graphic, visually-attractive television weather presentations, the new Times charts, maps, and tables give information the amateur forecaster can use.

Key to the new weather presentation is a special map prepared for the Times by the Travelers Insurance Co.'s Weather Service, one of the top independent services in the Nation. The accompanying layout also incorporates data provided by the U.S. Weather Bureau at Bradley Field, some 12 miles north of Hartford.

The map, charted each morning on latest information available, is a "status map," showing fronts, present conditions, and trends. With the instructions in Warner's "Weatherscope," readers will be able to analyze weather fronts. Matching frontal analysis with information in tables carried in the Times, observation of the simple instruments, visual observation of weather tell-tales such as cloud formations, and the information presented periodically on radio and television, they'll be able to forecast for themselves.

In "Weatherscope," Warner explains the new type of published information, explodes or substantiates old wives' tales about weather, includes pieces on clouds, winds, precipitation of all kinds and emphasizes analysis of weather fronts.

He also pinpoints Hartford's status in the world of weather. The city has the Travelers Service and the U.S. Weather Bureau. In addition, Pratt and Whitney Aircraft, East Hartford, has been awarded a multi-million-dollar contract for development of a nationwide electronic forecasting network. And a summer institute, first of its kind, is being conducted locally by the American Meteorological Society for high school students.

When the series is completed, Managing Editor Richard J. Hartford sees extensive possibilities for followups. Readers who have submerged themselves in forecasting will probably want and need more information. Weather bureaus now receive hundreds of letters requesting weather information, and diversion of many of these to the Times is foreseen. Possible use of "Weatherscope" in booklet form in school classes is anticipated by Hartford, who also is considering printing forecasts of staff members.

And the boom on barometers next Christmas may be an accurate measure of reader interest.

THE GANNETTEER.

Military Airlift as Important as Airpower in Defense Setup

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. THURMOND. Mr. President, I am delighted to see the increased interest exhibited in the Military Air Transport Service, which has been evidenced concurrent and subsequent to the debate in the Senate at the time of our consideration of the military appropriations bill. Two excellent columns have been written by the perceptive columnist, Holmes Alexander, on this subject. I ask unanimous consent that Mr. Alexander's column entitled "Military Airlift Lags Because of Competition and the Budget," which appeared in the Greenville News, Greenville, S.C., on July 17, 1959, and his column entitled "Military Airlift as Important as Airpower in Defense Setup," published in the July 21, 1959, edition of the Greenville News, be printed in the Appendix of the Record.

There being no objection, the columns were ordered to be printed in the Record, as follows:

[From the Greenville (S.C.) News,
July 17, 1959]

MILITARY AIRLIFT LAGS BECAUSE OF COMPETITION AND THE BUDGET

(By Holmes Alexander)

SCOTT AIR FORCE BASE, ILL.—There is a daily carrier plane which flies between Frankfurt and West Berlin with American soldiers and civilians. Until I went there a few weeks ago, I had assumed that this flight, over enemy territory in the most hotly contested area of the cold war, would be accomplished with the best and newest American planes. But this ticklish mission is carried out by the C-47 a two-engine DC-3 which has been a good old Dobbins in service since the early 1930's. Why this famine ration in military aviation? Why put the armed services, of all our American facilities, on an austerity program?

There are five divisions of the American Army in West Germany, and they are well armed, well trained, fit for whatever is to come. If a European war turns into an all-out thermonuclear war (as President Eisenhower says it almost certainly must), then the American troops will die in the general holocaust without giving much of an account of themselves.

But if, as we must consider a possibility, there is a limited war in Europe, or a series of limited actions around the world, we are going to need the biggest, the best, the swiftest, the most reliable airlift armada that American industrial capacity can produce.

But this sort of airlift we do not have. The American troops in Europe do not have the best chance we can offer them of being reinforced on time, in force. Again—why short rations for the military machine? Again—what's this rubber-tire midriff which business, labor, and the general population are wearing at home, while the armed forces

are subsisting on retread aircraft and promises?

The intercontinental and the transcontinental airlines are flying payloads in the new jets, the Boeing 707, the Douglas DC-8, and the Convair 880. The official armed service airlift called MATS (Military Air Transport Service) does not have a single jet transport. The only three-passenger jets in military use are for the use of very important persons in the civilian government. How come Pan American, American, TWA, United, and Delta are today better equipped, and are several years ahead in orders, training, and experience, than our military airlift?

MATS is a round-the-world system which carries military passengers wherever they are supposed to go. MATS also carries missiles and rockets, generally manufactured in the West or on the Pacific Coast, to the test sites at Cape Canaveral and to overseas bases in Britain and Germany. The military passengers and cargoes are far more urgent and critical than anything carried by the big airlines. But the vital military payloads are being toted in hand-me-down aircraft which the commercial lines are discarding.

The internal airlines like Capital, Ozark, and Western are going in for the propjet planes, the Viscount, the Fairchild, and the Lockheed versions. MATS is beginning to get a few of the big propjets—there are only 24 in operation today—for the missile supply missions. But virtually the whole military airlift today is made up of yesterday's planes—which operate at greater cost, lesser efficiency, poorer economy each year. MATS in size is the second largest airline in the world. The biggest airline is the Soviet equivalent of MATS—the Aeroflot, which recently brought Comrade Kozlov nonstop from Moscow in something over 11 hours.

There are a couple of answers to the questions raised above, and I doubt if the American people will like what they hear. For one thing, there is the spending which the Federal Government does to bolster the farm economy, to provide subsidized housing, to bid for good will with foreign aid—these things have made it necessary to slow up the program of aircraft procurement. Combat aircraft necessarily get priority over airlift, but this produces the anomaly of Strategic Air Command and Tactical Air Command flying two or three times faster than its supporting unit. This could bring about a situation where SAC and TAC might fly combat missions from overseas bases—and then be forced to wait several days for the next supply of bombs, fuel, and replacement part.

There is another reason, and a much less worthy one, why MATS is an obsolete airlift, and is falling further behind in the state of aviation as the months go past. There is a petty and avaricious jealousy on the part of the commercial airlines toward MATS. Theoretically, if MATS were dissolved, the commercial lines would get the business of flying military passengers and cargoes overseas. Actually, the personnel would probably be sent by ship, and be out of circulation that much longer. Much of the cargo is too dangerous and cumbersome for aviation handling. Moreover, MATS last year spent about \$71 million buying supplemental airlift from several dozen airline firms, most of which fall in the field of small business. There are 80-odd airline companies bidding for the MATS dollar.

The Federal budget and commercial competition, then, are the two main reasons why our military airlift is lagging. On the

other hand, there is every reason in the free world why MATS should start modernizing tomorrow.

[From the Greenville (S.C.) News, July 21, 1959]

MILITARY AIRLIFT AS IMPORTANT AS AIRPOWER IN DEFENSE SETUP

(By Holmes Alexander)

ABOARD C-133 No. 62007.—"That's where we dumped yesterday," said S. Sgt. Ronald Carson (Albany, N.Y.) pointing to a spot in the Pacific Ocean. He meant that yesterday there was a propeller malfunction on this aircraft, requiring the plane commander, Capt. John Watson (Evans Mills, N.Y.) to discharge 30,000 pounds of jet fuel in order to make an emergency landing.

Nobody except this reporter seemed to regard this as much of an experience. "Standard operational procedures," said Captain Watson with the sang-froid of a 17-year Air Force veteran.

But this reporter has never been able to cultivate a bias attitude toward military aviation. Every mission has its own romance. This particular Air Force assignment calls for a journey of better than 6,000 statute miles, from California to Britain. We are carrying 67,142 pounds of support equipment for the Thor, a 1,500-mile missile to be delivered to a Royal Air Force station of classified location.

This morning before takeoff I saw the Thor projectile at the start of its journey in another aircraft of the transport fleet. Thor, an intermediate range weapon that is ideal for the distances of West Europe, has been exhibited at a number of static displays and is reasonably familiar to interested folks. But the ground support equipment of the Thor is about four times as large as the missile itself and is many times more secret.

The largest item aboard is a 33,000 pound liquid oxygen (LOX) tank. But for the most part the load is electronic gadgetry, not easily comprehended. It is enough to write that the U.S. Air Force is busy transporting critical material close to one-third of the distance around the world. Since the end of World War II, we have repeatedly risen to crises—in Berlin, Hungary, Korea, Formosa, Vietnam, Lebanon—by the handy use of airlift, rather than air power. It seems you can't have one without the other.

Like all normal Air Force transport flights, this one has a dual purpose. We are sending the Thor missile system to Britain, but are also training rookie airmen. Three of the seven crew members are instructors. Besides Captain Watson, there is Capt. Edward Fox (Port Jefferson, Long Island), pilot, and M. Sgt. John Roberts (Richmond, Calif.), an instructor-engineer. Capt. Allan Jensen (Attica, N.Y.) is on board to do some "stick time" as pilot. S. Sgt. Clarence Hertz (Easton, Pa.) is a student flight engineer. During most of the flight the cockpit is an attentive classroom.

Air Force flight crews are not unionized. Their duty-day is 21 hours. They seldom know when they report to Operations where the next trip will take them, or who their fellow crew members will be. All this is a far cry from the close camaraderie of wartime flying where crews stuck together for the duration and usually flew the same aircraft until it got shot down.

These are advantages which the Air Force has had to discard because of limited skills and equipment. Today, with flight crews and maintenance crews so specialized and individualized, a wholly new kind of morale and discipline must be developed. Instead of unit spirit, a man needs the inspiration of pride in work and sufficiency of family income. The 5 married men of this crew have a total of 12 children.

Among the specialists aboard is A2c Edward North (Camden, N.Y.), this aircraft's loadmaster. Airman North is a graduate of

two service schools. At Tachikawa, Japan, he studied weights and measures as applied to aircraft systems. He has the big job of supervising the loading and placing of the cargo, keeping in mind its weight and balance. He is also responsible for restraining the load during in-flight turbulence. In addition to knowing air freight in general, Airman North took a course at Sheppard Airbase, Tex., in the delicate work of loading missile systems. He studied the ability of Air Force planes to carry missiles.

This whole job of military transport is unglamorous and unsung—but there is no more important work throughout the Armed Forces.

Cardinal Cushing Explains Opposition to Invitation for Khrushchev

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a statement, sound, logical and correct, made by His Eminence Richard Cardinal Cushing, of Boston, appearing in the Portal of August 8, 1959, setting forth the reasons why he feels an invitation should not have been given to Mr. Khrushchev to visit the United States.

As Cardinal Cushing well said, "His [Khrushchev's] only purpose of accepting an invitation to any country is to propagate communism."

How well and pointedly he calls attention to the people of big, strong and proud America of the actions of the people of Scandinavian countries when he said, "The Scandinavian countries knew that and their people protested with such vigor that Mr. Khrushchev canceled his visit."

What a contrast between the peoples of the small but proud and brave Scandinavian countries and our own.

CARDINAL EXPLAINS OPPOSITION TO INVITATION FOR KHRUSHCHEV

In the light of my addresses and writings concerning atheistic communism, I could not favor an official invitation to the leader of that international conspiracy to visit the United States.

It can be said that communism is a fruit of the materialism of the world and a judgement thereon.

Like all of us, the Communist leaders fear another war. They say that it is possible to live together peacefully. But actually their ideologic war, a third world war, has already started, and their intention is to bring it to victory.

Khrushchev is a dedicated man. Therein lies his strength. But he is dedicated to a godless ideology, leading to slavery. That is what makes him so dangerous. Men like him have been won to nobler beliefs and have become their greatest champions. But whoever thinks that we can influence Khrushchev merely by showing him how our democracy functions and how well off we are, has no conception of the passionate, hate filled contempt for our way of living which possesses Khrushchev and company. We cannot change him. Day and night, in thought and in deed, he is working with cunning determination together with his as-

sociates for the worldwide victory of communism. Every problem or situation—Berlin, Geneva, friendly visits, cultural exchanges—used to further one primary purpose—world revolution. Are we ourselves so completely without passionate faith in our ideals that we cannot believe others capable thereof?

I recall Mikoyan's visit. It was pitiable to see with what supreme cleverness he made use of the whole gamut of emotions—idealism, love of peace, sentiment, simple-mindedness, vanity, business acumen, mammon. If we were taken in by him, what can we expect from Khrushchev's visit?

Ideologically disarmed, we lay open our country, through an invitation to Khrushchev, to the planned offensive of an ideologic elite force. That is like opening our frontiers to the enemy in a military war. It is unwise. What is more: If the United States opens her doors to the Communist world revolution dictator, we fall the struggling people of the countries behind the Iron Curtain. But if we refused to open our doors, we shall strengthen their courage; and the young nations of Asia and Africa, who are standing at the crossroads, anxious to learn about us will see in the path of democracy a new and clearer light. Having invited Khrushchev how can we fail to invite the other dictators—the head of Red China et al.

But there is a more important aspect. The Soviet Union is an ideologic power arsenal. In a short space of time it has revolutionized 900 million people. We seem to be ideologically impoverished, possessing only little of the love of God and country that characterized our forebears. We have fallen for the idol of materialism. When we get into contact with the Russian thought power arsenal, the current runs toward us, not the other way.

But the current can be turned. The United States can become a moral ideologic power arsenal of such potency that the current will pass from us. Too long have we been content with pleasure, luxury, wealth, and lukewarm Christianity. Every Christian prays: "Thy will be done, on earth as it is in heaven." It is nonsense to pray like that without seriously desiring what we are praying for. If I really want it, then I must stand up for it, in my own life and in the life of others, in the life of the Nation and in the life of the whole world, with all that I am and have, led by God, in community with others who feel the same obligation. Then indeed the miracle will be achieved and other nations and peoples will be impressed. They will follow genuine moral leadership not material progress.

That is ideology. That is Christianity. That is moral strength. If we do not choose this way and live it, as individuals and as nations, we choose communism, as Khrushchev wants us. His only purpose of accepting an invitation to any country is to propagate communism. The Scandinavian countries knew that and their people protested with such vigor that Mr. Khrushchev canceled his visit.

Excellent College Facilities Serving the City of San Antonio, Tex.

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. JOHNSON of Texas. Mr. President, on August 4, 1959, the San Antonio

Light published a memorable article entitled "A World of Knowledge." This article outlined in detail the excellent college facilities serving the city of San Antonio. I ask unanimous consent that the article appear in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the San Antonio Light, Aug. 4, 1959]
A WORLD OF KNOWLEDGE AT HIS FINGERTIPS
(By Joe Rust)

Books are the gateway to learning. Of them, Sir Francis Bacon once penned: "Books are ships which pass through the vast seas of time."

Books to worldly writers and philosophers have been "wells of living waters," "compasses, telescopes, sextants, and charts," "the chloroform of the mind," "sepulchers of thought," "the soul of the past," "dead laurels of the dead."

But, to the average college student, a book has little such philosophical connotation. To him, books are guides, aids to learning, often necessary evils.

As to the great men of literature, books are to the college students instruments to be lauded, loved, hated, denounced.

Colleges today, rather than persisting that the student develop a love only for venerable works, orientate the student toward using books to fill that ever-present gap between experience and education.

That is, books are not ends in themselves, but means to ends. Critical reading of even the most revered of the classics is emphasized today in colleges across the Nation.

San Antonio's four major colleges and two universities support this critical education program. Each has extensive libraries of resource materials, as well as the great works of literature.

Thomas Carlyle was perhaps near the truth when he defined a university as "a collection of books."

But, just to what extent must a student penetrate these books to become educated? It has been said that the educated man knows not the answer to every question, only where to find it.

Then, the true value of college is the true value of books—a guide and an aid to learning.

How many books does a student read during 4 years of college? Naturally, the answer depends on a student's major field of study, and, to a great extent, the student himself.

One would expect an English major's reading load to be more voluminous than that of a mathematics major.

Too, just what length must a work be before it becomes a book?

Despite these limitations, several San Antonio educators have supplied qualified answers. The conclusion—the average college student penetrates at least 400 complete books while in undergraduate work.

San Antonio's six institutes of higher learning offer a variety of paths in achieving this average, through both liberal arts and specialization.

The Alamo City ranks high on the listing of Texas college towns. The city's six colleges should reach peak enrollment of near 13,000 this fall.

St. Mary's University, the city's largest senior college, is a school for men, but is co-educational in the law school. The 108-year-old school will enroll near 2,200.

The school, under the administration of the Society of Mary, offers the B.A., the B.S., the M.E., an industrial engineering degree, a law degree, and the B.B.A.

San Antonio's other university, Trinity, is privately supported under the auspices of the Texas synod of the Presbyterian Church, U.S.A. Trinity will enroll some 1,700.

Trinity, which boasts of its 107-acre skyline campus overlooking the city, confers the baccalaureate degree in 24 fields; the graduate, in 10. These are through the bachelor of arts, the bachelor of science, the bachelor of medicine, the master of arts, the master of science, and the master of education.

San Antonio has two junior colleges, San Antonio College and St. Phillip's. Both are supported from urban tax funds and State revenue.

The former, the largest separate junior college in Texas, will enroll a total 6,000 in day and evening classes this fall; the latter, 1,100.

St. Phillip's specializes in vocational-technical training.

Our Lady of the Lake and Incarnate Word, both privately endowed women's colleges under the auspices of the Catholic Church, will register approximately 750 and 950, respectively.

Incarnate Word offers the bachelor of arts, the bachelor of science, the bachelor of medicine, the master of arts, and the master of education; Our Lady of the Lake, the bachelor of arts, the bachelor of science, three music degrees, the master of education, and a social work degree.

Following an undergraduate degree plan is not a matter of taking only courses in one field of study. Each major degree field must be supplemented with a general arts and sciences core.

For instance, a major in English takes only one-third of the required degree hours in English courses. The remainder is taken with natural and social sciences, languages, and background courses.

Liberal arts courses, especially English and history, carry stiff reading loads. An English graduate of Incarnate Word make the following estimation: 400 books in English; 250 in her minor field; 180 in general education courses; 20 in languages; 20 in professional courses; more than 500 reference works.

Dr. Marjorie Morrison, head of the Trinity English department, said an English major is required approximately 200 pages of critical reading per week per course.

She said reading load varies as to the type of course—literary personality, literary types, and survey courses.

A history major will read from 17,000 to 27,000 pages in his major in college, according to Dr. Frances Hendricks of Trinity.

Contrasted with an English major, a music major does not carry a heavy reading load. But, as was pointed out by Dr. Frank Hughes, Trinity music director, emphasis in music study is switched from the printed page to printed sheet music.

In this relation, the music major reads as much as does the English major. Too, the two must have the same liberal arts background.

Also, Hughes pointed out that 50 of the 68 hours required for a music degree for teaching in public high school must be in music theory, history, and teaching methods.

Too, such a major must take 24 hours of education in order to receive a State teaching certificate. Such a requirement must be met by any potential secondary school teacher, regardless of his major.

Education courses require two to three textbooks per course, each book approximately 650 pages in length, pointed out Dr. Felix Ullrich, of the Trinity education department.

He said potential teachers are urged to read extensively from more than 80 professional magazines and are required to become acquainted with many reference works for research papers.

Another field requiring extensive reading in periodicals, Government documents, and journals is that of social work. Said Sister Mary Immaculate, director of the Worden School of Social Work, Our Lady of the Lake College:

"We strive to teach our students to ensue intelligent, orderly use of study material references rather than texts."

Worden, the only private coeducational school of social work in Texas, utilizes a basic library orientation program for all students. Sister Mary Immaculate said also that each student is encouraged to build his own library of basic social workbooks.

Our Lady of the Lake also is outstanding in speech therapy. Outside materials also play a great role in this field, Speech Clinic Director Sister Mary Arthur said.

She pointed out that the therapy major must have a broad background in phonetics, languages, and anatomy. Much time is spent in actual on-the-job clinical training rather than in specific texts. Sister Mary Arthur added:

"By supplying our students with a lengthy bibliography of materials, we strive to teach them learning through their own initiative. This encourages and stimulates them to do their own reading."

Still another field where professional manuals are extensively used is business administration. St. Mary's University boasts the largest business library in south Texas.

Brother Paul Goetz, S.M., estimated a business major penetrates more than 150 books in his major alone during 4 years of undergraduate work. He said there are more than 50 outstanding professional periodicals recommended to all business majors.

One major in which extensive use of required books is practical because of the cost of texts is science. However, a graduate student in chemistry at St. Mary's said an undergraduate in the science must purchase up to eight books in each of nine chemistry courses.

Chemistry requires long hours of technical reading in quantitative and qualitative analysis and thermo-dynamics from large volumes, he said.

Brother Charles Cummins, S.M., head of the St. Mary's chemistry department, said the average chemistry major reads approximately 150 books in his field.

Science reading is also heavy in medical technology, Sister Mary Daniel, professor of chemistry at Incarnate Word, said. The college is known for its nursing, medical technology, radiologic technology, and medical record library science programs through the Santa Rosa hospital.

Incarnate Word also is acclaimed for its work with teacher training for exceptional children, the mentally retarded, and the physically handicapped.

Even fields of industrial education require heavy reading loads. Some 22 books and 11 manuals are used annually in the study of auto mechanics alone. Oscar Eason, director of industrial education at St. Phillip's, said.

Professional fields in graduate work require the heaviest reading loads. An average law student reads some 37,000 to 40,000 pages of case books and law reviews during 3 years of work, it was estimated by Dean Ernest Raba of the St. Mary's law school.

Institutes of learning today need increasing educational facilities to meet increasing enrollments and demand for expanded subject fields. This means new college construction projects almost yearly.

San Antonio schools are keeping up with the construction tide. New projects include:

Trinity: The new \$500,000 Marrs McLean Science Center; new \$100,000 Cobb-Racey Science Auditorium; \$145,000 Olympic swimming pool; \$61,000 tennis stadium.

St. Mary's: New \$400,000 faculty residence; \$375,000 student residence hall to be constructed.

Our Lady of the Lake: Pacelli hall, women's residence hall; Anchilla-Domini Hall for Nuns; Harry Jersig Memorial Speech Clinic.

SAC: Groundbreaking for new \$880,000 science building.

St. Phillips: New \$23,000 warehouse to house sheet metal and welding classes; new 100-car parking area; two new \$30,000 tennis courts.

Incarnate Word: New student center and residence hall; Katherine A. Ryan Center for Mentally Retarded Children in planning stage; plans for new chapel underway.

Renewed evaluation of books and upswing of construction in San Antonio schools must be coupled with the increasing excellence of school faculties. Trinity now boasts of a 42 percent doctor-of-philosophy faculty with 1 teacher for every 15 students while St. Mary's recently inaugurated a "Great Teacher" program.

Count of faculty in the six schools now stands as follows:

Trinity—105; SAC—146 part time, 106 full time; St. Mary's—49 full time from Society of Mary, 57 full time lay, 47 part time.

St. Phillip's—22 full time, 50 part time; Our Lady of the Lake—72 full time, 21 part time; Incarnate Word, 74.

Any final analysis of how well educated a student may be after college rests with the student himself. To say that the Storch Memorial Library of Trinity University has loaned some 125,000 books over the past 4 years is not to say that these books were evenly distributed among the students.

Some students read only what was required of them, some read more. Those who read more will probably carry the habit with them into their homes. They are searching for new ways to push back the frontiers of knowledge.

Reading is not an enterprise which ends with college. Good books are a prized possession of any home. Marcus Cicero, the Roman orator, was a perceptive man. Once he said:

"A room without books is a body without a soul."

Halfhearted Action Hurts Justice Code Statute

EXTENSION OF REMARKS OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. WAINWRIGHT. Mr. Speaker, I should like to include here a distinguished article from the Army, Navy, Air Force Journal of August 8. The Journal has been the spokesman of the services since 1863. The subject of military justice has been vital since the beginning of military forces. It warrants our attention when the Journal propounds its views on the present state of the Uniform Code of Military Justice. These views I hold correct. The editorial follows:

HALFHEARTED ACTION HURTS JUSTICE CODE STATUTE

The Department of Defense between now and January should make up its mind if long-sought revision of the Uniform Code of Military Justice is important. If the answer is affirmative, as it has been for more than 4 years, then the Pentagon should go all-out to obtain favorable congressional action.

As the case now stands, defense leaders advise Congress each January that military morale and combat effectiveness are being hurt by certain provisions of the Uniform

Code of Military Justice—one of which, for example, requires enlisted men to be court-martialed in circumstances where officers are not required to stand trial. Having presented is annual quick brief on the need for amending the complex law and strengthening the discipline authority of commanding officers, Defense leaders then retired to their Pentagon chambers, away from the inevitable controversy that will be provoked by changing the Uniform Code of Military Justice.

This hit-and-run approach certainly has done nothing to gain a proper hearing for the proposed changes. Worse than that, the annual statements concerning its shortcomings have damaged the stature of the code throughout the fighting forces.

If the Pentagon decides that Uniform Code of Military Justice changes are not important enough to fight for next year, or that they cannot be attained in an election year, we advise silence on the problem come January. But the half-documented story that has been made available to date indicates clearly enough that the administration of military justice would be served well by a comprehensive congressional inquiry into the changes that, up to now, have been suggested so earnestly and advocated so ineffectively.

Financial Aid to Small Business

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. MORSE. Mr. President, I received a very fine article in the Oregon Business Review, published monthly by the University of Oregon Business Research, written by Prof. Edward W. Reed, professor of finance at the University of Oregon, entitled "Federal and State Measures for Financial Aid to Small Business."

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Oregon Business Review, May 1959]

FEDERAL AND STATE MEASURES FOR FINANCIAL AID TO SMALL BUSINESS

(By Edward W. Reed, professor of finance, University of Oregon)

The financing of small business has long been a problem in America. Large and long-established businesses are generally able to obtain equity capital and long-term funds from the sale of stocks and bonds through organized capital markets. Small firms have, however, had difficulty in obtaining funds through the capital markets, and, if they are able to do so, the cost is almost prohibitive. A study made by the Board of Governors of the Federal Reserve System early in 1958 indicates that adequate credit is available to small business from banks and private sources; but recent testimony in Congress regarding the financing of small business points to the inadequacy of facilities for providing long-term loans and equity capital.

This problem has been partially met over the years by local industrial foundations and in more recent years by State development credit corporations. Congress has struggled

with the problem for the past several years, and during the last session enacted legislation designed to promote and encourage the long-term financing of small business. This legislation had three phases. (1) The Small Business Administration was made a permanent agency with increased lending power and a reduction in the maximum interest rate it may charge borrowers (the Small Business Administration was established as a temporary agency in 1953 for the purpose of making short and intermediate loans to small business). (2) The tax obligations of small firms were lightened. And (3) the Small Business Investment Act was enacted to make funds available to specialized investment companies. In this article we are concerned primarily with the latter legislation.

The Small Business Investment Act is unique in that greater emphasis has been placed upon private enterprise and local initiative than on direct government aid. The act is designed to augment ownership capital indirectly by providing for Federal along with private funds to investment companies, which in turn will invest in and make loans to small businesses. It is hoped that this legislation will result in the organization of small-business investment companies, which will attract large amounts of private capital and channel them into the small businesses throughout the country which have need for additional capital.

Small-business investment companies may be organized under the general incorporation laws of the various States. If, however, the Small Business Administration determines that such companies cannot be chartered under State law and operate in accordance with the purposes of the act, they may be chartered by the Small Business Administration under Federal law. However, they must be chartered under State law after June 30, 1961, when the chartering authority of the Small Business Administration will terminate. By that time States will have had an opportunity to provide for the formation of such small-business investment companies and the chartering function by the Small Business Administration will therefore be unnecessary. Termination of chartering authority by this agency will have no effect upon the continuing activities of any of the small-business investment companies previously chartered.

A minimum of 10 stockholders may organize a small-business investment company under Federal law. These stockholders may be individuals, partnerships, corporations, insurance companies, and financial institutions, including banks insured by the Federal Deposit Insurance Corporation. Insured banks, however, may not hold shares in such companies and in amount aggregating more than 1 percent of their capital and surplus. There is no requirement regarding the minimum or maximum amount of stock that a stockholder must or can hold. Theoretically, one stockholder could supply virtually the entire amount required to start a small-business investment company. A bank, for example, with a capital and surplus of \$15 million could organize such a company as a subsidiary; in fact, this has already been done.

A small-business investment company must have a paid-in capital of at least \$300,000 before commencing business. At least half of this must be provided by the stockholders; the remaining 50 percent may be invested by the Small Business Administration in the form of subordinated debentures. Subordinated debentures are evidences of long-term debt which rank ahead of common stock but behind other indebtedness in case of liquidation. The \$150,000 secured from the Small Business Administration cannot exceed a term of 20 years and will carry an interest rate of 5 percent. In addition to the

\$150,000 provided by the Small Business Administration as a part of the original capital, an investment company may borrow an amount equal to 50 percent of the paid-in capital and surplus from the same source. This loan will also carry an interest rate of 5 percent and will have a maturity of 20 years. Thus it is possible for the stockholders to derive \$300,000 from the SBA in the formation of a small-business investment company with assets of \$450,000. Small-business investment companies will also be able to borrow from private sources and will probably borrow up to \$4 for every \$1 of capital and surplus. The \$150,000 loan from the SBA is authorized to encourage the formation and growth of small-business investment companies until they have been able to build up sufficient capital of their own.

Small-business investment companies will be, it is hoped, of assistance to small business by making long-term loans and by purchasing convertible debentures. Loans can be made to both incorporated and unincorporated small-business concerns which have need for funds for sound financing, growth, modernization, and expansion. Loans may be made directly or in cooperation with other lending institutions on an immediate or deferred basis. Loans are limited to a maturity of 20 years unless an extended maturity, not exceeding 10 years, "will aid in the orderly liquidation of such loans." The rate of interest charged by the company on loans will be established by the company, but cannot exceed the limit set by the usury law of the State in which it is incorporated. If there is no legal limit, a limit will be established by the SBA.

Small-business investment companies may make capital available to small business by the purchase of convertible debentures. These debentures will bear a rate of interest established in the same manner as are loans. Debentures may be callable on any interest-payment date upon 3 months' notice at par plus accrued interest. They may be convertible at the option of the company or a holder in due course into the stock of the small-business concern. Before providing capital in this manner, the small-business investment company may require a small-business concern to reneance any or all of its outstanding indebtedness so that the investment company will be only holder of debt. The small-business concern must also agree not to incur further indebtedness without the approval of the small-business investment company and to give the company an opportunity to finance such additional indebtedness. A business concern securing capital from a small-business investment company in this manner is required to become a stockholder in the investment company in an amount equal to not less than 2 nor more than 5 percent of the capital provided. The amount that a small-business investment company may lend to any one small-business concern is limited to 20 percent of its combined capital and surplus, unless otherwise approved by the Small Business Investment Division of the Small Business Administration.

The Small Business Investment Act created a fund of \$250 million to be made available to small-business investment companies. These funds will have to be repaid in time. This amount of money will act as a revolving fund to be made available to other investment companies as it is repaid. There has been widespread public interest in this new legislation, and a number of individuals, banks, and other financial institutions have applied for charters to establish small-business investment companies. Nineteen of these applicants have been asked to proceed with their organization even though licenses have not been completely approved. Two licenses have been issued. The companies that have already received a

license are the First Minneapolis Investment Co. and the Citizens & Southern Small Business Investment Co. of Atlanta, which is an affiliate of the Citizens & Southern National Bank. Though there has been some interest expressed in Oregon, no investment companies have been chartered. Most of the interest has been in Portland, where two groups are seriously considering the formation of a company.

In addition to the funds that are made available to small-business investment companies, Federal funds are also available for a specific purpose to State and local development companies that are already in operation. The Small Business Administration is authorized to make loans to State and local development companies for plant construction, conversion, or expansion, including the acquisition of land. These loans may be made directly or in cooperation with banks or other lending institutions through agreements to participate on an immediate or deferred basis. Such loans are designed to assist an identifiable small-business concern and are limited to \$250,000 for each identifiable small business, such as one cannery or one foundry. These loans are made for a period of 10 years plus such additional period as is estimated may be required to complete construction, conversion, or expansion. However, this period may be extended for an additional period not to exceed 10 years if such renewal or extension will aid in an orderly liquidation. In agreements to participate in loans on a deferred basis the Small Business Administration's participation is limited to 90 percent of the balance of the loan outstanding at the time of disbursement. The authority to make such loans to local development companies expires June 30, 1961. There are at the present time 17 local development companies in Oregon which could take advantage of this provision of the Small Business Investment Company Act.

The Small Business Administration is also authorized to make loans to State development companies exclusively. The funds that may be advanced to State development companies will be made in exchange for obligations of such companies, and the amount available is limited to an amount equal to the amount borrowed by it from all other sources. These loans will be made for a period of 20 years at 5 percent interest and the funds may be used for any acceptable purpose.

During the recent session of the Oregon Legislature a law was enacted which permits the formation of State development credit corporations, which when organized will be eligible to take advantage of some of the provisions of the Small Business Investment Company Act. The objective of the Oregon act is to promote the industrial, agricultural, and recreational development of the State. A corporation organized under this statute will have the authority to borrow money from various sources, including individuals, financial institutions, and the Federal Government and to lend funds and purchase shares in business and industrial corporations in need of financial assistance. It will also have the power to hold, lease, and transfer property. Such a corporation may be organized by nine persons for a capital of not less than \$25,000. In addition to the stockholders, provision is made for membership in the corporation. Members of the corporation may consist of such financial institutions as commercial banks, trust companies, savings and loan associations, mutual savings banks, insurance companies, and union health and welfare funds. These members will have no voting rights, but may lend funds to the State development credit corporation. Banks, trust companies, savings and loan associations, and insurance companies may lend an amount equal to 3

percent of their capital and surplus to the credit corporation; mutual savings banks may lend 3 percent of their guarantee fund; and union health and welfare funds may lend up to 3 percent of their funds. Those members who agree to lend to the corporation will be called upon to lend when the needs arise and the call will be prorated among the members on the same proportion that the maximum lending limit bears to the aggregate maximum lending limit of all members. The credit corporation is required to set aside 10 percent of its net earnings in a surplus account each year until this surplus amounts to one-half of its stated capital for losses and contingencies. State development credit corporations organized under this act are exempt from the corporation franchise tax and the State income tax.

The act permits the State bond commission to invest moneys from the various funds under its jurisdiction in the bonds of State development credit corporations. However, not more than 3 percent of each fund may be invested. State development credit corporations will be examined by the division of audits of the office of the secretary of state.

The act states that the department of planning and development "shall encourage and promote the formation of State development credit corporations where it determines that their formation is in the public interest." The department may also consult with, advise, and give technical assistance to persons interested in organizing such credit corporations.

Whether or not the program will be successful will depend on many factors. Basically, the success will depend upon the enthusiasm expressed on the local level for such a program, and the provision of a portion of the capital required. It seems that a certain amount of civic pride and responsibility will be necessary for the operation and success of a small-business investment company. In addition to this very important factor is the level of management of the small-business investment companies. It will be management at the local level that will evaluate the requests for financial aid and extend credit and equity capital rather than just another agency located in Washington.

In Oregon a small-business investment company could be formed under the general incorporation laws of the State. The recently enacted legislation permitting the formation of a State credit corporation was not absolutely necessary; however, there are certain advantages in this legislation. In the first place, the legislation places the State legislature and the Governor on record that they recognize the long-term financing problems of small business and are hopeful that someone will do something about it. Second, the legislation permits certain financial institutions which will serve as a source of funds and possibly very valuable advice to take part in a program that has as its objective the industrial, agricultural, and recreational development of the State. Third, the legislation also permits the State bond commission to invest a portion of its funds in a program designed to help small business. Fourth, the legislation creates an organization that can take advantage of that portion of the Federal laws which permits a State credit corporation to borrow from the Small Investment Division of the Small Business Administration an amount equal to all of its other borrowings. Finally, the State legislation permitting the creation of State credit corporations opens up more avenues for funds than is found in the creation of a small business investment company.

Both the Federal legislation and the State act offers a tool to private investors to earn a return on their funds as well as to help

small business; then programs should eventually result in the increased incomes and profits, the basic ingredients of a higher standard of living. It is certainly a new frontier to small-business financing.

Young Champions From New Jersey

EXTENSION OF REMARKS OF

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. CAHILL. Mr. Speaker, Delaware Township, in Camden County, N.J., is a growing community which finds itself, day after day, engulfed in a continued effort to head the list of other communities grouped in the same classification. Delaware Township is one of the most civic-minded localities in the United States and permits nothing to stand in its way in striving to improve itself and its citizens. This American zealotness has resulted in many accomplishments for which its residents may justifiably claim the right to "hold our heads high."

Among these accomplishments is the attention given to the youth of the municipality insofar as concerns the development of sports and sportsmanship. Adults, men and women alike, have given unceasingly and ungrudgingly of their time, exertions, and knowledge to aid in properly directing the energy and the acts and the hopes of their boys and girls. Local businessmen, industrialists, and individuals have generously and repeatedly supplied financial aid and support. The children, themselves, have recognized the advantages which are being offered and have wisely and wholeheartedly seized the opportunities which have thus been developed.

In Delaware Township, no program is given greater attention than that of the baseball Little Leagues and Babe Ruth Leagues. Literally starting from scratch several years ago, the men and women developed a Little League organization to the point where there are today two complete and separate leagues wherein a total of over 900 boys annually, between the ages of 8 and 12 years, are taught the fundamentals and the fine points of baseball and, more importantly and more intentionally, are impregnated with the worth and the value of American patriotism, citizenship, morality, and sportsmanship. In addition, a Babe Ruth League is now closing out its sophomore year of activity with more than 100 boys in the 13- to 15-year-old age group having participated each year. The guidance and development of these Babe Ruth League boys can and must have only a good, healthy, and healthful effect in the neighborhoods, in the towns and cities, in the States of our United States, wherever the boys eventually establish their own homes and businesses and professions.

All this is wonderfully exemplified here in our Nation's chief city during this week of August 10 to 14, 1959. In Griffith Stadium, the Middle Atlantic regional

games in the National Babe Ruth League tournament are being played. Among the competing teams is the tournament team from Delaware Township in Camden County as the representative team of New Jersey. The boys on this team come from homes involved in all walks of life—some of their families may be less wealthy than others; some of their families may be less educated than others; some of their families may be less fortunate than others—but Delaware Township League defies anyone to identify the boys on the field as coming from one or another of such classifications.

In 1955 and 1956, Delaware Township created a precedent when its team played in the final game of each year in the Little League world series at Williamsport, Pa., and no group of boys ever earned a warmer spot in anyone's heart as they lost out in the last game by one run in 1955 and by two runs in 1956. Now, after only 2 years of membership in the Babe Ruth League, nine of these Little Leaguers have formed the nucleus of a team which has scored triumph after triumph in the State of New Jersey to earn the honor of carrying that State's name into the regional competition right here in the District of Columbia. Because they recognize that they are but a part of a team, these nine former Little Leaguers know they can be successful only if the entire team of 15 players can continue to coordinate their abilities and talents and to conduct themselves as a unit in their drive to get to California later this month where they expect to fulfill this year's goal—the winning of the 1959 Babe Ruth League championship.

The following is the list of the boys on this Delaware Township Babe Ruth League team which is representing the Garden State of New Jersey:

Name	Age	Address
Warren Andress....	14	Clover Ave., Haddonfield post office, New Jersey.
Sidney Baker.....	15	428 Garden State Dr., Merchantville post office, New Jersey.
Edward Becker....	15	103 Spring House Ct., Merchantville post office, New Jersey.
Robert Brush.....	15	127 Lenape Rd., Merchantville post office, New Jersey.
Edward Butler.....	15	32 Moore Ave., Haddonfield post office, New Jersey.
James Cooper.....	15	22 McPhelin Ave., Haddonfield post office, New Jersey.
David Dubin.....	15	1522 Berlin Rd., Haddonfield post office, New Jersey.
Roy Hayman.....	15	43 Curtis Ave., Haddonfield post office, New Jersey.
Ian Kent.....	15	56 Grant Ave., Haddonfield post office, New Jersey.
Gerald McNeen.....	14	11 Elmhurst Ave., Haddonfield post office, New Jersey.
Wilbur Robinson.....	15	27 Moore Ave., Haddonfield post office, New Jersey.
John Rose.....	15	Kresson Rd., Haddonfield post office, New Jersey.
Henry Singleton.....	15	73 Berlin Rd., Haddonfield post office, New Jersey.
Ronald Starrett....	15	11 Massachusetts Ave., Haddonfield post office, New Jersey.
Thomas Young.....	14	Burnt Mill Rd., Haddonfield post office, New Jersey.

¹ Their individual hobbies include baseball, swimming, football, bowling, basketball, voice and instrumental music, photography, camping, dancing, stamp collecting, fishing, and skating.

The 1955-56 Little League teams were managed by Elmer Bauer and were coached by Ray Strohmeier and Bacon Trotman.

The 1959 Babe Ruth League team is being managed by Tod Lyon and is being coached by Harry Fischler and Irving Dean.

The 1958-59 Babe Ruth League officials are: President, Harry Young; vice president, Tod Lyon; secretaries, Larry Kent and Harry Fischler; treasurer, Thomas J. Fallon.

Bureau of Reclamation Program in Alaska

EXTENSION OF REMARKS OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. BARTLETT. Mr. President, in 1955 the Congress granted the Secretary of the Interior continuing authority to investigate and report on the water resources of Alaska.

In the current fiscal year, the Bureau of Reclamation, which carries out these studies, is bringing to completion two important reports. One is a feasibility study of the Crater-Long Lakes Division of the Snettisham project, which would furnish hydroelectric power for industrial and municipal uses in the Juneau area. The other is a feasibility report

on the Devil Canyon project, Susitna River, a major project that may prove to answer the need of the State of Alaska and the Federal Military Establishment for low-cost power in the Fairbanks and Anchorage areas and along the Railbelt connecting those cities.

On August 7, 1959, at the annual convention of the Alaska Rural Electric Association, Inc., at Fairbanks, an address prepared by Daryl Roberts, Alaska District manager of the Bureau of Reclamation, was read by electrical engineer George Benesch. It provides an excellent summary of the current and projected studies being made by the Alaska District of the Bureau.

I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF DARYL ROBERTS, ALASKA, DISTRICT MANAGER, BUREAU OF RECLAMATION, GIVEN BY GEORGE BENESCH, ELECTRICAL ENGINEER, AT THE ANNUAL ALASKA RURAL ELECTRIC ASSOCIATION, INC., CONVENTION, AUGUST 7, 1959, AT FAIRBANKS, ALASKA

I am pleased to discuss with you the present and contemplated activities of the Bureau of Reclamation in the development of the water resources of Alaska. I am personally convinced that water is probably the most important natural resource in the State. Its orderly development and use should be the concern of every individual.

Public Law 322 enacted by Congress in 1955 granted continuing authority to the Secretary of the Interior to investigate and report on the water resources of Alaska. Prior to that time such authority was made on a year-to-year basis. The Secretary has in turn appointed the Bureau of Reclamation to carry out the studies for the Department. Therefore, the Bureau's work in Alaska is not governed by the Reclamation Acts. There is no prerequisite for Alaska to become a reclamation State for this work to continue.

Our Alaska program is now in its 12th year. The early years were spent not only in completing a comprehensive overall study of Alaska's water resources, but in building the much-needed Eklutna project. This hydropower development went into operation in 1955 and is currently supplying 159,400,000 kilowatts of energy annually in the Anchorage area. It is, incidentally, returning \$1,600,000 in revenue each year to the payment of interest and retirement of the Federal investment. House Document 197, better known as the Alaska Reconnaissance Report, published in 1952, was the first all-inclusive report made on Alaska water resources. It cataloged such notable potential power projects as Ramparts, Yukon-Taiya, Wood Canyon and Devil Canyon. It lists, with a few minor exceptions, all of today's known potential projects having a capacity of 5,000 kilowatts or greater.

We have been asked why we did not update this valuable report. This might be in order, if it were not for the fact that for most of the streams no new water supply information is available. To reevaluate power potential without basic water supply data contributes little. We believe funds are better spent in obtaining basic information which is contained in the feasibility reports on specific projects. These reports are usually necessary before Congress considers authorization of water resource projects and we hope to have two completed by the end of this fiscal year.

The principal function of the Alaska Reconnaissance Report, on the other hand, was to evaluate and call attention to the poten-

tial water resources of Alaska. In addition, it provided a basis for selecting projects for detailed studies. We believe it has accomplished this purpose.

Those of you who have studied hydroelectric developments in Alaska are aware that lack of water supply information is still a major problem. We are seeking to remedy this deficiency by providing funds to the U.S. Geological Survey for establishing new stream gaging stations. This continuing program has already proven its importance to our water resource studies.

During the past fiscal year we established a stream gaging program on the Chakachamna River. This year one will be established on the Skwentna River.

We anticipate and are planning on the basis that the Bureau's future overall program in the State will keep pace with Alaska's economic growth and need. Proper development and use of your water resources are keys to this growth, and we want to help in any way possible. In fiscal year 1960, we plan to study Vee project on the Susitna River and Chakachamna project, located about 90 miles west of Anchorage. Following completion of the Vee project investigations, we plan to study Watana project unless higher priority work develops. Other studies will follow on tributary streams to the Susitna River and elsewhere in Alaska as the need arises. I want to emphasize that hydropower is only one benefit which can be expected from water resource development in Alaska. Our studies are concerned with ways and means of obtaining the maximum use of the available resource for all purposes.

Presently, the Bureau's activities in Alaska are directed to studies of the Matanuska Valley, the Snettisham project, and the Susitna River. The Matanuska Valley project study is on sprinkler irrigation. It is a cooperative endeavor conducted with the Soil Conservation Service and the State Agricultural Experiment Station to determine benefits derived through use of irrigation in Alaska. Results of last year's work showed potato yields increased 35 percent, carrot yields by 70 percent, and a substantial increase in timothy production. We plan to continue these studies and believe they will demonstrate the importance of irrigation in Alaska.

Our Snettisham project study is directed toward bringing about a source of relatively low-cost power for industrial and municipal use in the Juneau area. The investigation comprises two separate studies, the Crater-Long Lakes Division and the Speel River Division. In the past fiscal year, we have completed studies and have prepared a feasibility report on the Crater-Long Lakes Division. This development would provide an installed capacity of 48,000 kilowatts. Since industrial development in the Juneau area is dependent on a power source, early action on authorization and construction is important in the future.

We also expect to complete a feasibility report this fiscal year on the Speel River Division which will further augment the power supply in the greater Juneau area when constructed. Depending upon other feasibility findings, this may be a natural sequel to the Crater-Long Lakes development.

The Devil Canyon project study on the Susitna River is the first in a series of programmed comprehensive studies to be made on power potential of Alaska's fourth largest river.

Recently compiled data gathered from water supply records, field survey, geological investigations, and other basic data indicate a greater potential than was previously anticipated in the development of this river. Design of the Devil Canyon project in the basin points up some very interesting possibilities. We have been conducting a comprehensive investigation of this project for

the past 3 years and also expect to complete a report on its feasibility before the end of the current fiscal year. The project includes the Devil Canyon power site and the Denali Reservoir site. The firm power potential of the project would be about 3,300,000 kilowatt-hours annually with an installed capacity of 500,000 kilowatts. Current cost estimates indicate that this power can possibly be delivered in both Anchorage and Fairbanks for about 5 to 6 mills per kilowatt-hour. This power rate is made possible by the upstream storage provided at Denali. Development of the Devil Canyon project would be the initial step in an overall basin development. The basin concept of development has long been recognized as yielding the greatest benefits. Such a development of the Susitna River has several desirable characteristics. Two additional power sites, Vee and Watana are located between Devil Canyon and Denali. As each of these is developed, better upstream regulation is provided. This in turn decreases the necessary drawdown in Devil Canyon Reservoir permitting its operation at a higher average head. The result is not only the power added to the system by the new plant but also a greater output from Devil. Completion of the fourth dam on the Susitna would provide complete regulation above Devil Canyon permitting that reservoir to be maintained full continuously. The firm potential estimated for the four-dam development is in excess of 7 billion kilowatt-hours. The system cost of this block of power including transmission costs is estimated to be less than 5 mills.

A second desirable aspect to such a development of the Susitna is its location. The four sites discussed are about equal distance from Anchorage and Fairbanks. They could supply the entire railbelt with a minimum of line loss.

One of the more attractive features of the Susitna is its adaptability to area load growth. In speaking of power costs for large projects, we are prone to base them on the assumption that all power will be utilized immediately. This provides a common denominator for comparison with other projects but it may not prove to be very realistic. We should be cognizant of the fact that the cost of power can be greatly influenced by how early and how fully a project's generation capacity is utilized.

The stage development effect of adding power dams one at a time on the Susitna River can be geared to meet the load growth of the entire rail belt area. The initial transmission grid from development of Devil Canyon will provide an early tie between generating facilities in Anchorage and Fairbanks. Availability of emergency capacity, interchange, nonfirm power use and other power pool benefits would accrue to both major load areas.

Because of its ideal location, large power potential and adaptability to meet any pattern of load growth with low cost power, the Susitna River could play a vital role in Alaska's development.

Address Delivered by South Carolina
State Senator L. Marion Gressette

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. THURMOND. Mr. President, on June 23, 1959, South Carolina State Senator L. Marion Gressette of St.

Matthews, S.C., addressed the State and local officers of the Citizens' Councils of the State of South Carolina. Senator Gressette has served with ability and distinction in South Carolina as chairman of a special State committee on public schools. In his address to the officers of the Citizens' Councils, Senator Gressette ably reports the situation in South Carolina on a most vital question to the people of not only South Carolina, but of the entire South and Nation as well. I ask unanimous consent that the address of Senator Gressette be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS OF L. MARION GRESSETTE TO THE STATE AND LOCAL OFFICERS OF THE CITIZENS' COUNCILS OF SOUTH CAROLINA, AT COLUMBIA, S.C., ON JUNE 23, 1959

Mr. Chairman, distinguished guests, ladies and gentlemen, it is a pleasure to be with you today. I have been looking forward to this opportunity. When approached by your affable and efficient executive secretary, Mr. Farley Smith, in reference to a meeting of this kind, I was delighted. I welcome the chance to discuss with you the problem that is our mutual concern.

Before undertaking to brief you to some extent on the work of our committee and what the State is doing to protect the rights of its citizens, permit me to say that your organization is playing a most important part in this fight. You are rendering a great service to the people of our State, the South, and the Nation. After all is said and done, we are concerned primarily with only one thing and that is to restore constitutional government. You are helping to do that. It is good to know you are organized and that your influence and support can be depended upon to crystallize the right sentiment and attitude on the part of our people. It is important that this be done. They should know that they will be called upon to make sacrifices, and that it is going to take the support and understanding of the people in order to preserve the American way of life.

We live in a time of great trouble and trial, neither of which is a stranger to our people. We are assembled here in the cause of individual liberty and popular freedom, both of which I hope and believe are uppermost in the hearts and minds of our people.

We do not propose to foment political rebellion, nor is it our purpose to bring about a social upheaval which would hurt all of our citizens and benefit none of them.

On the contrary, it is our purpose and our firm resolve to prevent such a rebellion and to temper such an upheaval to the end that all of our people, regardless of race, color or creed may continue to make progress in a political and social atmosphere that is conducive to the individual's making the most of his talents and his opportunities.

Contrary to some of the libels which have been perpetrated against us, we of South Carolina are determined to guarantee equality of opportunity—not just for one race or creed, but for all. We are determined to protect the rights of all citizens, and not just those who happen to enjoy the favor of a particular group of self-seeking politicians and professional do-gooders who temporarily occupy positions of power and influence.

Because it is thrust upon us from every side, we cannot ignore the race issue, but let us forget it for a time. Our primary concern is on a much higher plane. It has to do with the preservation, nay, the reestablishment of constitutional government in our country.

It has to do with the preservation or the loss for all time of the real rights of the individual. The radical agitators have chosen to place emphasis on a rather sordid sort of issue, but it is not the real one. If these people can succeed in depriving the citizen of the rights of freedom of association, if they can destroy the power of the States to order their internal affairs as they see fit, then the end of all individual rights and all powers of the States is clearly in sight.

And with that the sorry fate of the Republic will be sealed. What really is at stake in all of this turmoil is the right of individuals to decide who shall be their governors and the right of sovereign peoples to govern themselves.

We here bear a noble ancestry. Our forefathers entered this country and cleared the land and erected their homes, overcoming many obstacles. They produced generations of soldiers and statesmen. They were in the forefront of the fight for independence of the tyrannical British Crown, and they contributed much to the writing of the Constitution of the United States.

To the extent that all citizens and all branches of Government have obeyed and properly interpreted that Constitution, it has been the cement which has held the Union together. It is only when the Constitution has been misinterpreted and perverted by evil men for their own purposes that the safety of the Union and the solidarity of the American people have been threatened.

Our grandfathers, in the War Between the States, fought for the principles upon which the Union was founded as they saw those principles. They did not in their day apologize for what they did. Even less so is there reason for apology for what we have done in our day to uphold those same principles, the rights and powers of the States and the proud and honorable culture that is ours.

Our region, especially South Carolina, is the last citadel of really free conservative thought left in the United States. And true conservatism, as opposed to radical liberalism, is the final line of defense between freedom and the insidious encroachment of a highly centralized government that would destroy all liberty and pervert the minds of men.

If we fail, our country will go the way of the Greeks and Romans. The ancient republics fell when the people were more interested in security than they were in opportunity, when they placed comfort ahead of responsibility and when they preferred bread and circuses over the satisfaction of self-government. When these things happened, the Greeks and the Romans ceased to be free, and they were never free again.

It can happen here. The signs are evident in our own country. The attitude of the U.S. Supreme Court, a long line of decisions which have been accepted by many as absolutely binding precedents and the abdication by some Members of Congress of power held in trust for the people are contributing to our downfall. Unless we can reverse the trend, and the initiative rests with the South, I shudder to think what the future holds for our Nation. What now passes for government could become either dictatorship or anarchy.

In the face of this trend, South Carolina has made its position clear. We are not defying the "law of the land" we are fighting for a return to the law of the land. They call us reactionaries and racists, but we are neither. The true reactionaries are those who would subject the law to the whim of those who happen to be in power at a given moment. The real racists are those who would set neighbor against neighbor in an effort to gain false goals and who make enemies of friends in the name of "equality."

For the best part of a decade I have had the privilege of serving as chairman of a

committee of citizens created by the general assembly to offer advice and counsel on how best to meet the problems created by the decisions of the U.S. Supreme Court in the school cases. The committee is composed of five senators, five representatives and five laymen. There have been no changes among the laymen, but the legislative membership has changed in direct proportion to the changes in the general assembly. All of this has given us the benefit of the thinking of a broad cross section of the people of our State.

Since its formation, the duties of the committee have been enlarged so as to cover all phases of the segregation problem, not only the public school system, but all other public facilities. It acts in an advisory capacity only, advising the Governor and the general assembly as to what course of action it feels should be taken to meet any actual or anticipated situation. The members of the committee do not receive any special pay for their services, they are only allowed per diem expenses as any other legislative committee. Authority is given to it for the employment of such clerical and technical help as may be needed.

I cannot heap too much praise on my fellow members of the committee. They have proven themselves to be men of the highest calibre, truly great South Carolinians and Americans. All meetings are well attended and absentees are the exception rather than the rule. They have been diligent and fearless in carrying out their assignment, and I commend them and their patriotic service to you.

It should be remembered that South Carolina was the first of the 17 States who recognized segregation as a matter of law, to organize a committee to guide the Governor, the general assembly, and the people through such difficulties as might arise if the U.S. courts should nullify the laws providing for separation of the races.

After consultation with many citizens in many walks of life, and with all of the public officials concerned, and after exhaustive study of the laws, the court decisions and events in other States, the committee has made certain recommendations. Without exception, they have been adopted by the general assembly and accepted by the public.

It is gratifying to be able to report that we have had peace and tranquility among our people, even while we were making amazing progress in the development of our schools. There is no longer any excuse in South Carolina for anyone to grow up illiterate, and no one can say he is being denied an equal opportunity for an education. Those who are suffering most are the white children in our more rapidly growing communities who are faced with the prospect of double sessions and overcrowded classrooms.

South Carolina has acted in good faith in providing equal educational opportunities as between the races. We have worked very closely with the educational finance committee to that end, and we think a vast majority of the colored people are satisfied with their schools, and would prefer that they be operated on a segregated basis. There is no discrimination in this State between the races, as both white and colored have good, equal facilities. This has been accomplished by the willingness of the people to pay their tax money for the support of the schools.

There is separation of the races by choice, and so long as this continues no one can be heard to complain—unless it is some out-of-State do-gooder, either individuals or organizations, and they can shed as many crocodile tears as they care to, so far as we are concerned. The people of South Carolina intend to operate their schools in accordance with their own wishes so long as

they are allowed to do so, and when this right is denied to them they will close the public schools and seek some other method for the education of their children.

This position on the part of our people is made crystal clear by the laws that were enacted following the obnoxious U.S. Supreme Court decision in 1954, when the general assembly of this State passed, and Governor Timmerman approved, a bill to the effect that if any child is transferred, pursuant to or in consequence of an order of any court, from one school to another, all appropriations for the school to which and from which he is transferred shall cease and become inoperative. The purpose of this legislation is to squarely bring into play, as between the Federal Government and the State government, the right of the State to operate its own public school system. We do not believe the U.S. Government, by its courts or otherwise, has any right to say how money appropriated by our general assembly shall be spent in South Carolina for public education.

From its very beginning, our committee has said the 1954 decision of the U.S. Supreme Court was both illegal and immoral. The general assembly has said as much in a statement of public policy interposing its sovereignty between the people and their elected school officials and the tyranny of the Federal Government. We have said that we would not recommend any course of action that would force white children to attend Negro schools or Negro children to attend white schools.

If this policy is violated, resulting in the closing of any school in South Carolina, it will be because of a decision of a Federal court, and not by any act of the General Assembly of South Carolina. The laws of the State of South Carolina so provide and we make no apologies about it.

Up to this time we have been successful, because—and solely because—we have had the approval and support of the overwhelming majority of the people of our State. Our people have shown that they prize educational opportunity above dubious social experimentation demanded by persons of questionable integrity and background. We hope that attitude will continue.

There is nothing more indicative of the progress we have made in our efforts to solve the existing problem than that the relationship between the races in South Carolina is good. Our colored people do not want their children to attend white schools nor do they want to attend white churches or to bring about a mongrelization of the races which would mean the downfall of our Nation. If there is one thing that we have tried hard to do, it is to cultivate a proper relationship between the races.

It is important that we keep the line of communication between the races open. We feel that we have accomplished a good bit in that direction, in that we are providing our colored children with equal school facilities and doing everything possible to maintain good relations among the people of the State. Each of you can help tremendously in the promotion of good relations. Frequently I have colored people call at my office and they are frank in saying that they do not go along with the NAACP and other misguided associations and individuals for integration of the races, that they are satisfied with our southern, and American, way of life and that all in the world they want is good will on the part of their white friends. This relationship should be encouraged and I am sure you are conscious of its value and will help to promote it, so that the State of South Carolina can continue to be free and clear of any racial disturbance.

The events of the last 7 years have done much to destroy communications between us and our colored friends whom we have sought to help and who have helped us.

These people are the victims of a system of intimidation and oppression such as even the Dark Ages failed to produce. In an effort to alleviate that situation an old law has been brought to the front. It is known as the crime of barratry, which simply means that no person will hereafter be permitted to solicit or incite another to bring, prosecute, or maintain an action at law or at equity, in any court having jurisdiction within this State. Putting it another way, no person without or within the State can solicit or prevail upon another person to bring an action in any court having jurisdiction in the State of South Carolina. This will prevent organizations such as the NAACP from promoting lawsuits and inciting members of the colored race to bring suits for any purpose in the State of South Carolina.

Any corporation or unincorporated association found guilty of the crime of barratry shall be forever barred from doing any business or carrying on any activity in this State and shall be subject to a fine of not more than \$5,000, or imprisonment of not more than 2 years, or both.

We think this law will have a wholesome effect on those who would incite and foment trouble among the good colored people of the State of South Carolina. We feel that we owe them this protection and this law will be strictly enforced in order that they may be protected against our common day carpet-baggers and scalawags.

We have been blessed in that we have had none of the ugly incidents which have occurred in some of our sister States. But we must face the fact that every interracial crime makes our task all the more difficult.

Our good fortune is due to a sound and healthy public opinion. You of the citizens' councils have had a lot to do with that, and you have an even bigger job in the future.

Here's the challenge:

Our committee and the general assembly and the Governor have gone as far as we think we should at this time. We are prepared to go further and we are studying every development that occurs and every idea that is advanced. But we do not pretend to know all of the answers. We think we are on sound legal grounds, but who can predict a decision of the Federal courts these days?

We need the active advice and assistance of organized groups throughout the State, whatever may be their name or origin. We need organized groups who are prepared to present ideas and to prevent lawlessness. We are a God-fearing and a law-abiding people. We do not propose to act otherwise. But there is a restlessness in the land that should disturb us all.

We in South Carolina do not intend to surrender our right to run our schools as we see fit for the best interests of all of our people. But we also intend to see to it, in our own way, that all of our people have equal opportunities. We feel that we are on sound legal ground and intend to resort to every legal means at our command to support the position we have taken.

You know we hear a great deal about contributions to NAACP from individuals, foundations and other organizations for the purpose of financing suits for integration in the South. Intelligence of this kind fails to frighten us. We have one of the best staffs of lawyers that can be found anywhere and we intend to utilize its services to the fullest in order to see that the rights of the people of our State are protected.

We are prepared, ready and willing to meet them in any legal forum at any time for the purpose of defending our position in this fight. We have no idea of permitting any lawsuit to go by default. It is our intention to protect our school trustees and other local and State officials in carrying out their duties and no one, be it individual or organization, shall ever deter us in doing so. We

ask nothing more than that the laws of our land be carried out as intended by the Constitutions of our State and of the United States. We cannot be coerced or intimidated and we intend to pursue the course we have charted with the knowledge that right is on our side and that it will prevail.

We must go on with our program of better schools and with our efforts to provide greater economic opportunities for all of our citizens. Given time, those two things alone may solve most of our problems.

But we must also work for public acceptance of these ideas and precepts. This calls for the active participation of every citizen, and I ask you to take the lead in that. It will require the best efforts of our best leaders.

Finally, we can take heart in the fact that there is arising here and there over the entire country a new appreciation of our position. The cause of States rights and the right of individual self-determination as to his associates and his way of life is far from being lost. I am hopeful that we have allies where we didn't know they existed.

Meanwhile, let us not lose sight of the fact that the basic issue is a showdown between government by the people and a dictatorship of the worst sort.

Time will not permit a full discussion of the applicability of other laws that have been enacted, such as the amendment to the State constitution eliminating the provision for a public school system for all boys and girls between the ages of 6 and 16 years, the repeal of the compulsory attendance law, the granting of almost unlimited powers to the local boards of school trustees, increased powers to the Governor, and other measures. But suffice it to say that they are geared to protect what we conceive to be the constitutional rights of the people of South Carolina and to defend true constitutional government from those, from within or without the State, who would tear it down.

In closing, it is my earnest hope that your organization will continue to grow—and if the need should arise for action on your part you will be ready and willing to step in and act.

I tell you there is no time for indifference and lack of interest, or the feeling that someone else will attend to the job. It is the concern of everyone. We are reminded of this daily when we read our newspapers or listen to other news media.

Places where strong public sentiment did not exist have surrendered with little or no opposition. On the other hand, where public opinion for sound government exists, our enemies have made little or no headway.

Edmund Burke, that great English champion of American liberty said: "When bad men combine, the good must associate; else they will fall, one by one, an unpitied sacrifice in a contemptible struggle."

Ours is not a contemptible struggle, nor do we propose to become an unpitied sacrifice. But our cause is great enough to merit almost any sacrifice.

We need to stand together as our forefathers stood at other crucial times, in the defense of our individual rights and liberties, in order to succeed.

This can be done if we share the responsibility—as I feel certain, we will.

Operation Bootstrap, Indian Style

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to

insert in the CONGRESSIONAL RECORD an article from the August 7, 1959, issue of Congressional Quarterly on my program, "Operation Bootstrap, Indian Style."

The author, Helene Monberg, has presented an excellent analysis of the need for the program, its success in Puerto Rico, and its potential on the Indian reservations in the United States.

The article is as follows:

OPERATION BOOTSTRAP, INDIAN STYLE

The Commonwealth of Puerto Rico (population 2.3 million), oldest Territory under the American flag (it was discovered by Columbus in 1493) is offering a helping hand to the oldest inhabitants of the United States, the American Indians (pop. 535,000).

Under the leadership of Gov. Luis Munoz Marin, the Puerto Ricans in 1946 embarked on Operation Bootstrap, a program to industrialize Puerto Rico, then known as the "poorhouse of the Caribbean." It has succeeded so well that leaders from all over the world have come to the tiny Caribbean island (35 miles wide, 100 miles long) to learn the Puerto Ricans' magic formula. Puerto Rico's Operation Bootstrap has intrigued leaders of the American Indian, for the industrial age in America has swept past reservation Indians living in remote areas. Many Indians are permanently on relief because their reservations, based on an agricultural economy, cannot support the rapidly increasing Indian population.

BACKGROUND

In 1958 the House Interior Committee, including Representative E. Y. BERRY, Republican, who lives in Standing Rock Sioux territory in South Dakota, took a first-hand look at Puerto Rico's Operation Bootstrap. After long talks with Munoz Marin and Puerto Rico's Resident Commissioner in Congress, Antonio Fernos-Isern, who "gave me great encouragement," Berry told Congressional Quarterly, he decided that Operation Bootstrap could be tailored to meet the needs of the American Indian.

BERRY introduced a bill (H.R. 7701) on June 12, 1959, which he calls "Operation Bootstrap, Indian-style." Similar legislation (H.R. 8033) has been introduced by Representative ODIN LANGEN, Republican, of Minnesota. BERRY told Congressional Quarterly that H.R. 7701 had evoked more nationwide response than any other legislation he has ever introduced, particularly from Indians, mission priests, and church groups. Among those who have already announced their support of the Berry Bootstrap measure are the Governors' Interstate Indian Council made up of Indian tribal chairmen in 18 States ranging from New York to Washington, the North Dakota Indian Affairs Commission, the Board of National Missions of the United Presbyterian Church of the USA and four Indian agency superintendents in South Dakota and Oklahoma. BERRY told Congressional Quarterly he anticipates a "generally favorable reaction" to the bill from the Administration. Chairman WAYNE N. ASPINALL, Democrat, of Colorado, of the House Interior Committee has promised to hold hearings on the Indian Bootstrap measures early in the next session of Congress.

PUERTO RICO'S PROGRAM

Puerto Rico's Operation Bootstrap is designed primarily to industrialize and diversify the Island's rum-and-sugar economy by encouraging new industry to locate there. The U.S. Congress gave the Island a major assist in this regard in 1950. Under the Commonwealth Act of July 3, 1950, (Public Law 600, 81st Congress), Puerto Rico was exempted from U.S. individual and corporate income taxes, excises, estate and gift

taxes and permitted to retain proceeds from its customs duties. Thus, under Bootstrap, Puerto Rico is able to exempt new industries from municipal, corporate, partnership, and personal income taxes for 10 years; from taxes on dividends or profits for 7 years; and from taxes on property from 5 to 10 years. The Commonwealth government will sell or lease a plant on a long-term basis to new firms and offer them technical assistance. These exemptions go to industries never in operation in the Island prior to June 2, 1947, to 34 specified industries ranging from animal feed to tinware manufacture which can utilize the skills and resources of the Island, and to tourist and commercial hotels. Some 600 industries have located in Puerto Rico under this plan.

Operation Bootstrap has made profound changes in Puerto Rico. The island has risen from a burden on the U.S. Treasury to sixth place as a major customer of American goods. Puerto Rico now buys more from the United States, on a per capita basis, than Canada. Since 1940 the annual per capita income on the island has increased fourfold. Life expectancy of the average Puerto Rican has increased nearly 20 years. Infant mortality has been halved.

INDIAN BOOTSTRAP PROPOSAL

BERRY reasons that if the U.S. Congress will allow the same tax exemptions on Indian reservations as it has allowed the Commonwealth of Puerto Rico, some industries, notably small manufacturers who would utilize the manual dexterity of the Indian, will move to Indian reservations. His bill would authorize Indian tribes to set up corporations empowered to construct plants to sell or lease to an industrial firm on a long-term basis, subject to the approval of the Secretary of Interior. These plants could be built with tribal funds, Federal loans, or through commercial loans to the tribal corporations. Industries moving onto Indian reservations would receive complete exemption from Federal, State, and local taxes for 10 years, the right to amortize property eligible for depreciation on a 5-year schedule, a deduction for 5 years from any Federal tax in an amount equal to three times the annual welfare payments paid to an Indian prior to his industrial employment, and Government aid in conducting on-the-job training for Indian employees.

BERRY believes that the American Indian, like the Puerto Rican, "will lift himself up by his own bootstraps if given freedom of opportunity" and assistance in developing resources on and bringing industry to his reservation. Currently, about 80 percent of the reservation Indians in this country have no incentive because they have no opportunity, BERRY holds. Most of those on relief "would gladly swap a Government relief check for a weekly paycheck," BERRY told Congressional Quarterly.

Bootstrap comparisons

	U.S. total	Indian	Puerto Rico	
			Pre-bootstrap	After bootstrap
Per capita income.....	\$51,639	(9)	\$121	\$480
Literacy..... percent.....	91	50	68.5	83.8

Distaste for Communism Felt by West German People

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. BYRD of West Virginia. Mr. President, a few days ago, I received a letter from Dr. Walter Becher, of Munchen, Germany, a member of the Bavarian Landtag and secretary general of the Sudeten German Council. The letter contained two clippings from the official Press-Bulletin of the West German Government, and Dr. Becher's translations of these articles into English.

I feel that the letter and translated articles, Mr. President, express much of the devout love for freedom and strong distaste for communism that are felt by the West German people. Therefore, I ask unanimous consent that the items may be printed in the Appendix of the RECORD.

There being no objection, the letter and articles were ordered to be printed in the RECORD, as follows:

SUDETEN GERMAN COUNCIL,
Munchen, July 1, 1959.

HON. ROBERT C. BYRD,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BYRD: I take the liberty to call to your kind attention two articles published in the official Press-Bulletin of the German Federal Government. The one is picturing the last communication measures in the German Soviet Zone, indicating that the Communists never intend to give up their zone voluntarily and that they wish only a reunification with West Germany in communism. The other article is a radio speech made by the Honorable Dr. Hilger van Scherpenberg, Deputy Minister of Foreign Affairs of the West German Republic, which is an able summary of the German standpoint regarding the last Soviet proposals.

I enclose the original Press Bulletin as well as the English translation of the most important places of the article. I would be deeply grateful if you could kindly consider the insertion of the translated portion in the CONGRESSIONAL RECORD. We greatly esteem the RECORD, this unique publication of your Congress, and know the importance of what is published there. I believe the enclosed article is of interest now, when the Geneva conference reopens.

I planned to visit the United States in June and July and hoped also to have the honor to meet you and to ask you personally to kindly make this RECORD insertion. For different reasons I had to postpone my U.S. trip and so I take the liberty to send to you my polite request in this form.

We, the German expellees, fully endorse the policies of the Free World and of the West German Government. What we can do, is to support the policies of the free governments and good and sound ideas here in our country as well as in other nations.

I would greatly appreciate if you most kindly would put the enclosed translated material into the RECORD.

With my best personal wishes.

Yours very sincerely,

DR. WALTER BECHER,

Member of the Bavarian Landtag,
Secretary General.

[Bulletin, No. 83, p. 804]

The Investigatory Council for Questions Pertaining to the Reunification of Germany, in the Federal Ministry for All-German Questions, convened in Berlin on May 4 and 5, 1959, under the chairmanship of its president, Dr. J. B. Gradi, a deputy of the Federal Diet. At the end of the session the following communique was issued:

"Last year, the SED Party already began to conduct an extermination campaign against the remnants of private enterprise in a particularly ruthless manner. Compulsory fusion into cooperatives in agriculture and handicrafts, the formation of semi-state enterprises in industry and the conclusion of commission contracts in the retail trade are the main measures resorted to in order to exterminate the middle class.

"The number of private industrial concerns that have been obliged to accept state participation has increased, from 440 at the end of 1957, to 2,638 in the first quarter of 1959. The share of the private concerns in industrial production has decreased from 12 percent in 1957 to about 8 percent at the end of 1958, and by the end of 1959 it will barely amount to 5 percent.

"Up to the end of 1957, the handicraft enterprises were able to maintain their independence almost completely. But then, however, they were forced to form production cooperatives. By the end of 1958, practically one-tenth of the persons engaged in handicrafts were employed in these cooperatives.

"In agriculture only a little over half the arable area is at present still cultivated by independent farmers. The number of agricultural production cooperatives has increased from 234 in 1956 to 3,000 in 1958. By the end of March 1959, the agricultural production cooperatives numbered 378,000 members and controlled more than 39 percent of the arable area.

"In the retail trade, 14 percent of all the private retailers and restaurant proprietors already have commission contracts with the state wholesale trade or TO which make them employees of these state institutions."

[Bulletin, No. 71, p. 677]

In a talk broadcast on April 15, 1959, in the series of programs, "Problems of Germany's Policy," of the Hessen Broadcasting Corp., Dr. Hilger van Scherpenberg, Secretary of State in the Foreign Office of the Federal Republic of Germany, said:

"The relation of the West to the Soviet Union will in the end be determined by the question as to whether communism is prepared to renounce its domination plans. The West is well aware of the fact that, so far, there have been no convincing signs of any such renunciation and that its principles of freedom and its way of life thus continue to be endangered.

"In any case, the Federal Republic has a very definite conception as to how far it may make concessions without endangering the freedom-loving way of life of its subjects and without rendering a reunification of Germany in freedom impossible. It is thus logical that a confederation of the two German states is out of the question. In the opinion of the Federal Government, the restoration of Germany's unity can only be effected on the basis of the principles of freedom.

"The right of self-determination of the peoples is a basic principle of the Charter of the United Nations, which was also signed by the Soviet Union. Free elections alone can insure the free right of all Germany to decide her constitutional order and her foreign political relations. For this reason, the Federal Government does not feel that it can recognize the so-called German Democratic Republic.

"A peace treaty could only be negotiated and concluded with a government responsible for the whole of Germany. The draft made by the Soviet Union clearly expresses the intention of the latter to legalize the existing situation in Europe, to isolate the Federal Republic and to expose it later on to an attack on its internal freedom-loving order. Since the problem of Germany is only the expression but not the cause of the international political tension, an isolated treatment of a peace treaty with Germany would not be in keeping with political reality. The Federal Government is convinced that the suggestions of the West must be put forward as a complex whole at the coming Foreign Ministers' Conference. It is further of the opinion that a general, controlled disarmament would represent an important step toward an easing of international political tension and, at the same time, a step forward in the German problem.

"No one can deny the Federal Republic the right to see to it that its security and also that of its allies is guaranteed. In view of the overwhelming military superiority of the Soviet Union, the Federal Republic sees itself forced, as was so far the case, to rely on the Western defense community for its security. And this seems all the more advisable since all the suggestions made by the Soviet Union so far with regard to disarmament and security have, in principle, aimed to strengthen the power and the positions of the Soviet Union and, whenever possible, to undermine the defensive strength of the West. It is the endeavor of the Soviet Union to pick out the military aspects to its advantage out of the entire complex of disarmament and security questions and effect an isolated solution in this respect, whereas such burning political problems as, for instance, the reunification of Germany, are to remain unsolved indefinitely.

"In this connection, certain suggestions which provide for a detachment of the Federal Republic from the Western defense system must be regarded as extremely dubious. Any plan which creates a political power vacuum between the two great power blocs will not lead to an easing of tension, but, on the contrary, will only aggravate the unrest and insecurity and thus endanger peace still more.

"It is essential for the security of the Federal Republic that the original legal statute of Berlin should be maintained, since it represents the legal basis for the presence of the troops of our allies in Berlin and thus for the freedom of Berlin."

The Need for a Modernized Army

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WEAVER. Mr. Speaker, we have reached a point in history which, if we are not extremely careful, may become a point of no return. In our defense planning we may be reaching the point of stalemate with any potential enemy in which we may in actual fact, be in a state of disarmament because neither we nor any enemy would hazard a nuclear exchange which conceivably could destroy both our Houses and perhaps every human on earth.

In such an impasse lies the danger of a sudden military adventure by a potential aggressor using conventional arms. Therein also lies the danger of constant probing, and constant thrust by an enemy to find soft spots around his perimeter for further expansion and consolidation.

There are many such exposed places in the free world. We are hearing a lot about one of them—Laos—at the present. We are likely to hear of other such spots, perhaps Iraq or Iran or Turkey in the not-too-distant future.

For these reasons, Mr. Speaker, I feel that the House should pay most careful attention in next year's budget to the growing need for modernization of the Armed Forces, particularly our tactical troops whether in the Army or the Marine Corps. These men need new weapons and new fighting strength which must be forthcoming if we are to protect the free world from the threat of these potential military adventures on the part of world communism.

Perhaps one of the best studies of this problem I have seen in recent weeks was contained in an editorial in the Washington Post on Sunday, August 9. I would like to bring that editorial to the attention of my colleagues now. It covers the subject well, ably, and succinctly. The editorial follows:

[From the Washington Post and Times Herald, Aug. 9, 1959]

THE PERILS OF STALEMATE

The new Army Chief of Staff, Gen. Lyman L. Lemnitzer, has forcefully restated the Army case for modernization. He warns sternly against the false security of an atomic stalemate based upon weapons for mass destruction. The warning comes at an appropriate time, when Congress has provided some four times the sum for modern Army equipment which the Pentagon apparently will be allowed to spend under the tight Budget Bureau defense spending ceiling.

As General Lemnitzer has put it, the coming era of stalemate (already seemingly recognized in diplomacy), with each side possessing relatively invulnerable deterrent nuclear striking power, will be equivalent in some respect to a nuclear disarmament. Each side may, in effect, be disarmed by its own unwillingness or political inability to accept the wholesale destruction which would accrue to attacker and attacked alike in a nuclear war.

Such a situation clearly would invite the more reckless use of conventional arms in the pursuit of limited objectives, once it had become unequivocally clear that a nuclear war was truly out of the question. Communist military pressures and adventuring in Eastern Europe and in southeast Asia could in such circumstances be effectively deterred only by the counterpoise of a modern and balanced armed force, consisting of land, sea and air units equipped to fight localized battles with weapons suitable for the purpose. Such fighting might occur on the soil of nations friendly or allied with the United States, and it could be seriously contemplated only if a defense were realistically possible that would not result in utter devastation.

For the cost of a relatively few big missiles, with supporting installations, the preparedness of the Army could be greatly enhanced. Attention to this neglected aspect of defense might go far toward repairing the

widespread demoralization of servicemen of which Hanson Baldwin writes in shocking terms in the Saturday Evening Post. Modernization of the forces for limited wars—and provision of adequate air transport for them—can no more be postponed to the day of an actual engagement than can preparedness and maintenance of the general war deterrent. The country faces what appears to be a long-term, sustained outward pressure from the Communist bloc—pressure that must be met, deterred and resisted, if need be, on an equally sustained basis.

Short of a nuclear war, the West could lose many and perhaps irretrievable battles to determined Communist forces before it could create and bring to bear adequate limited war strength. Since the Nation's diplomacy already recognizes a condition of virtual nuclear stalemate, is it not time to recognize the same facts in military planning? General Lemnitzer's call for a strengthened and modernized limited war defense can be ignored only at the risk of serious Western losses or the invocation of a general war which is becoming increasingly unacceptable as an instrument of national policy.

International Cooperation in Attack Upon Cancer

EXTENSION OF REMARKS OF

HON. EUGENE J. McCARTHY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. McCARTHY. Mr. President, on July 22, 1959, Senator HUMPHREY called for an international cooperation in the effort to find a cure for cancer. He expressed hope that the combined research of scientists in many countries could lead to full medical understanding of cancer, its causes and its cure. The Wichita (Kans.) Beacon of July 24, 1959, commented editorially on Senator HUMPHREY's proposal. I ask unanimous consent that the Beacon editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WAR THAT MAKES SENSE

In the midst of horrendous speculation about nuclear war, at last comes a suggestion for a war that would make sense.

Senator HUBERT HUMPHREY, of Minnesota, wants the United States and the Soviet Union to declare war, not against each other, but against a common enemy—cancer.

Cancer, the Senator pointed out, killed 250,000 people in the United States last year. The Soviets also counted a quarter of a million cancer deaths last year. All over the world, 2 million people died of cancer last year.

This number, the Senator said, is equal to the population of West Berlin.

"If the major powers cannot agree politically on Berlin, let the leaders of the major powers at least agree on trying to save the lives each year of as many people as live in Berlin."

A global assault on cancer is so obviously sensible that it might seem impossible in a world where nonsense often rules.

But some progress already has been made. In his January 1957 State of the Union message, President Eisenhower invited the Soviets to join in an all-out offensive against

cancer and heart disease. There have been some efforts at cooperation.

Translation of scientific journals has been a major step. Our National Cancer Institute has arranged to translate the principal Soviet cancer research journal into English. It is also sending to Russia many of our own journals. A few scientists in the two countries have exchanged information and findings.

There are excellent cancer researchers in America. There are others in the Soviet Union. And still others scattered throughout the world.

There are, HUMPHREY says, "clues to the cause and cure of the mystery of cancer . . . all over the world."

The United States already has stated its eagerness for a worldwide hunt for the worldwide killer. Surely there should be no "nyets" from the other side of the Iron Curtain.

On Guard

EXTENSION OF REMARKS OF

HON. HUGH J. ADDONIZIO
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to bring to the attention of the Congress an editorial "On Guard," that appeared in the Advocate of August 6. This is the official publication of the archdiocese of Newark, N.J., and diocese of Paterson, N.J.:

ON GUARD

For some time it has been evident that an invitation to Russia's Khrushchev to visit America was in the making. So many public figures—Senators, Governors, the Vice President—were talking of it that it was obvious that the American people were being prepared—softened up, one might suggest—for it.

The only surprising thing, therefore, about Monday's announcement was the timing. It proved to be a faster sell than had been anticipated. Can it be that we have been too complacent, too slow in letting our servant-officials know what we want and what we do not want? About 2 years ago a buildup for a visit by Yugoslavia's Tito aroused so much popular opposition that the proposal was dropped in great haste. Have we been so well brainwashed in so short a time?

We cannot help feeling that a visit by Khrushchev is a horrible mistake on our part, an insult to decent-thinking people everywhere, a grave danger to our national security, a dark stain on our national honor. It will surely bring deep discouragement to the captive nations to whom we solemnly dedicated the week of July 19 last.

We are realistic enough, however, to acknowledge that what we think or say will do nothing to call back the invitation already extended. Accepting a most regrettable fact, we venture to offer comment on the presence of the Kremlin killer in our midst.

We trust that our Government has given adequate consideration to the potential dynamite in the matter of Khrushchev's security while here.

It is one of the glories of our America that we have in recent years admitted thousands of refugees; the vast majority of them have been the victims of the very tyranny headed by our guest. It surely must be accepted as well within the realm of possibility that not a few of them, carried away by national

patriotism or personal hatred, may seek revenge for the wrongs inflicted by Khrushchev's minions on themselves, their families, their nations. He would not be the first gangster to get a bullet in the back.

Have we honestly been able to give Khrushchev assurance of safety, of complete protection? Or are we going to demean ourselves still further by calling upon the Russian secret police? Or have we already degraded ourselves by submitting to the arrogant demands of the Soviet dictator that he be watched over by his own bodyguards?

It is, indeed, devoutly to be hoped that Khrushchev will not be assassinated on our soil. It is equally desirable that our reception of him be kept strictly official, cold and formal. He is the de facto head of a government (irrespective of the means by which he seized and holds power) and should be treated as such. He is, at the same time, so detestable a person, so vicious an enemy, that anything that even hints at cordiality should be rigidly excluded. Let there be no ticker-tape parades, no fawning industrialists pressing invitations to luncheon and dinner, no society leaders clamoring for the distinction of entertaining so incredible a guest.

One of the strongest reasons advanced during the "sell" for inviting Khrushchev to come here was that it is important that he get to know America. Let us not be taken in by such nonsense. The Soviet espionage system has been so active here for so many years, and we have been so careless (if no worse) about it, that there can be little, indeed, that Khrushchev does not already know. Above all, let us never lose sight of that fact that he knows what he wants; that what he wants is to bury us (the expression is his), to achieve world domination for communism; that he is driving relentlessly toward that goal. His visit to America is designed in some way to contribute to its attainment. Let us be on guard as never before.

The Great Diplomatic Struggle

EXTENSION OF REMARKS OF

HON. VANCE HARTKE
OF INDIANA

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. HARTKE. Mr. President, the battle for the minds of men today lies largely in the skirmishes of the cold war. And, Mr. President, it is in this area that we have been somewhat negligent.

We have had great difficulty in our years of existence in training a diplomatic corps of dedicated career men. The tradition for this sort of work is not what it should be in this country. For centuries the diplomats of some of our allies have been members of this kind of corps.

Yet, the United States of America has had leadership of the free world thrust upon her. We must rise to the occasion.

One step in this direction, Mr. President, would be enactment of a measure to establish a Foreign Service Academy. Such a proposal was made last January by the junior Senator from Missouri. It is regrettable that no action has been taken by the Senate thus far.

Most of us had the opportunity in recent days to read in *This Week* magazine an excellent discourse written by

the distinguished junior Senator from Missouri. Thereafter, Mr. President, the Fort Wayne Journal-Gazette, one of the truly great newspapers of my home State of Indiana, published an excellent editorial in support of Mr. SYMINGTON's bill.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Wayne (Ind.) Journal-Gazette]

THE GREAT DIPLOMATIC STRUGGLE

The great struggle known as the cold war is to win the minds of men around the world.

The United States is deeply committed in this war. If she loses it, her glory will have departed.

If she loses it, freedom will have to surrender to dictatorship.

America cannot win the cold war without the best and most highly trained diplomatic service in the world.

Dollars alone will not perform miracles. Our country spent \$60 billion since the end of World War II trying to prop up and save the free nations.

Because Americans who were handling this aid program were not properly trained for their jobs much of this money has been wasted.

This costly experience has shown that we need trained diplomats as well as dollars—men who know what they are doing and how to do it.

Of such wise and skillful foreign service America is in short supply.

It is imperative that we increase the supply.

One of our most far-seeing statesmen in the field of national defense is Senator STUART SYMINGTON, of Missouri.

Senator SYMINGTON has fought year in and year out for an adequate military defense and to see that the American citizen gets more value from his defense tax dollar.

But Senator SYMINGTON knows that military defense is not enough—that the cold war must be won by brilliant diplomacy which only highly trained men and women can provide.

That is why he introduced in the Congress last January a bill which would provide for a Foreign Service Academy—a West Point of diplomacy—to train the Nation's ablest young men and women for diplomatic jobs in the cold war.

Senator SYMINGTON has pointed out that 50 percent of those now serving us in that capacity do not speak a foreign language. In addition, they often know little or nothing of the culture and economics of the country where they serve.

This, of course, ought to be corrected.

Inability to speak the language sets up a barrier between the American Foreign Service personnel and the people of the countries where they are assigned.

Those selected for the proposed Foreign Service Academy should be the cream of the crop. They must be young men and women who can take the intensive training. They must have good commonsense as well as high academic ability.

Part of the faculty for such a school could be composed of successful retired diplomats who would be able to give the students the benefit of their rich experience. For the training must be realistic.

It is of vital importance that we have the best diplomats in the world because the Soviet Union is giving this sort of training of its prize students the highest priority.

America cannot win with a second-best effort.

In the past our Government has filled diplomatic posts in payment for political debts here at home. There was a time when the country could stand such a haphazard system. But not today.

The American way of life is at stake in the cold war. We have to win it. There is no other choice. Let's give our Foreign Service the best training that the world of diplomacy has ever seen.

Our Men on Okinawa

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by Francis Vivian Drake which appeared in the August 1959 issue of Reader's Digest. The article entitled "Our Men on Okinawa—Why We Must Keep Them There" follows:

OUR MEN ON OKINAWA—WHY WE MUST KEEP THEM THERE

(By Francis Vivian Drake)

(This Island outpost is more than a mighty airbase; it is a showcase for American resolution and integrity. As such, it is being watched by the entire Orient—slave and free.)

Today and every day a group of young men wait in a corrugated-iron hut on the island of Okinawa, in the East China Sea. They are engaged in preventing a war. In their room are unshaded lights, shelves of cheap reprints, a blanket-covered poker table, metal cots. Over their olive-green overalls the men wear G-suits, and the ankle pockets are stuffed with checklists and pencils. Never more than an arm's length away is a brown leather briefcase blazoned in white letters with the words "top secret." The contents specify precise military missions in case the Communists attack areas in the Pacific under our protection.

There is an atmosphere of constant tension. At least once a day, at a moment never known ahead of time, the red-enamelled "hot line" telephone rings and a voice from headquarters utters the words, "scramble" followed by a coded number. A klaxon sounds. The pilots dash out. Each F-100 is already armed, checked, linked to its starting unit. As the pilot's left hand flicks across the panel switches, his right signals to the starter crew. The connecting lines snap free, the canopy crashes down, the throttle goes forward and the jet tears toward the runway Time: 3 minutes.

Destination depends on the code number that the followed the word "scramble." It may be: return to parking pad. It may be: go to 50,000 feet and await orders. Or it may be: Follow defensive war plan. The pilot never knows. His plane is always ready, always under maximum security; not even the commanding general may approach it—only the pilot and crew chief known by sight to its armed sentry.

It is young men like these, ashore and afloat, and not the speeches, the diplomatic notes, or the forbearance of an enemy, who have saved Formosa from invasion and the United States from a big war. The Communists have screamed of American "Paper Tigers" and threatened world war III, but month in, month out, they have been gazing straight down the muzzle of a gun and they know it. Throughout the free Orient their stock has fallen, and that of the United

States has risen. There it will remain—unless we are ever insane enough to surrender the great fortress of Okinawa that blocks Red aggression.

Four hundred miles from the nearest point on the Chinese mainland, Okinawa lies at the center of a 900-mile circle rimmed by the major cities of the Orient: Tokyo, Shanghai, Seoul, Taipei, Hong Kong, Manila. It is the forward bastion of our complex of islands, ships, planes, troops and bases throughout the Pacific, designed to keep the peace and prevent war from touching the United States. From Okinawa's rockbound shores all the forward bases in Red China which could launch a war of aggression are within close range—so close that retaliation could reach the aggressors before our forces farther back were halfway to their targets.

A major factor in Okinawa's importance to us is that our forces there are always instantly available in case of emergency. At our bases in Japan, the Philippines, Morocco, Spain, France, England, we must ask the local government's permission before launching a counterattack to aggression. Not so on Okinawa. No leftist legislature, no Communist threats, no ruler's indecision, could bring about a last-minute cancellation of our rights to use our runways and missile sites. It is largely for this reason that in Okinawa's red-soll valleys, between its pine-clad hills and around its curving beaches, we have constructed more than a billion dollars' worth of the most modern defense facilities of our time.

Item: two tremendous air bases, with runways capable of handling the fastest supersonic planes in existence. Item: a naval supply base, to support the ships of the Seventh Fleet constantly cruising the East China Sea. Item: a Marine Corps unit consisting of men, guns, tanks, trucks, helicopters and transports, all in readiness to move to any trouble spot at an hour's notice. Item: a big Army supply base, through which are funneled the arms, supplies and food needed to maintain our total force of 50,000 men and their 20,000 dependents on the island.

This great complex is defended by fighter fields, missile bases, radar stations, submarines, surface ships and early-warning radar planes. It is linked by radiotelephone with Formosa, Japan, Guam, the Philippines, Hawaii; even its supply needs go out from radio transceivers that trigger IBM machines in the United States and start replacements flowing over the Pacific. Atom bombs could destroy all surface life on Okinawa; but even they could not knock out Gibraltar-like caves capable of housing retaliatory missiles able to reach the length and breadth of China and make any attack upon the free Orient an act of suicide.

It is no wonder that the Communists are straining every nerve to break our grip on this island, to achieve by words what they are powerless to achieve by force. Communist propaganda is busy telling the world that Okinawans live like slaves, forced to labor under our Armed Forces, that their land has been taken from them without payment, that they are unable to vote for political candidates they want. None of these things is true, but the propaganda has had an effect; even in the United States doubt has been aroused regarding the wisdom of our remaining on the island. It is because of this violent propaganda that we need to know something about a place which is a vital part of our outer defenses.

Okinawa is the largest of the Ryukyu (Rye-uke-you) Islands. It is administered by a U.S. High Commissioner. The 837,000 Ryukuan citizens are fully enfranchised, elect their own legislature and mayors, appoint their own police. So, far from being slaves, they are free men and women, working at any trade they choose. Out of the total labor force of 316,000 on Okinawa,

about 158,000 work at farming or fishing, about 154,000 work in industry, and of these last about 40,000 work on tasks connected with our base systems. Less than 1 percent are unemployed.

Before the war, Okinawa had been built up as a steppingstone for the Japanese march to the Philippines and Australia. Then, on the morning of April 1, 1945, the island was invaded by the United States (10th Army, the Marines, and the Navy). The battle that followed was one of the grimmest of the war. Japanese losses exceeded 250,000, including many Okinawans. We lost 12,000 killed and 37,000 wounded. When it was finished, the entire south end of the island, the heavily populated part, was completely devastated. Not a house, a vehicle, a tree, even a growing crop was left; only smoking craters and walled-in caves containing thousands of Japanese bodies.

Today the same walled-in caves rim the bustling capital city of Naha and its modern office buildings, multifloor department stores and factories, handsome Ryukyuan government buildings. The city's 210,000 people frequent supermarkets, camera stores, beauty salons, movie theaters. The busy streets are equipped with traffic lights, and some 20,000 automobiles (imported from the United States) are controlled by white-helmeted traffic policemen. Taxis weave in and out of traffic jams; the bus system sold 70 million tickets last year. The airport boasts a modern \$250,000 terminal served by four scheduled airlines. The island has 328 schools, teaching approximately 211,000 children, and the University of the Ryukyus, established with our help in 1950, has 2,000 students. The whole transformation has been the miracle of the Pacific.

The Okinawans are cheerful and friendly people. They dress in Western style; their children sport blue jeans, bicycles, and hula hoops. The Okinawans have been quick to learn modern ways and complicated tools, and, although our money has helped pull the island up from the depths, the people have done the work themselves.

The farming areas of the country are typical of the same emergence from poverty. Each village is generally grouped around the community well, the tiny post office and two or three general stores. The store shelves contain the standbys of the farmers—rope, wire, tools, sacks of rice, bread, soy, and the dried meats and fishes with which orientals flavor their rice; but these staples are now mixed with American and Japanese canned goods, cigarettes, cady, beer, and drugstore items.

To be sure, there is not yet enough electric power; nor are there enough vehicles or fertilizer or even roads. Life is hard—the grinding labor of the Orient done by men often working with inadequate tools and ancient methods. But there is hope. The gross national product has risen from \$70 million before the war to \$170 million in 1958; the Bank of the Ryukyus has accumulated \$81 million in assets, and the U.S. dollar currency used on the island can be freely exchanged for any currency in the world. If all this be tyranny, it is what the Okinawans want more of.

Not all this progress, however, has been accomplished in sweetness and light. The United States has caused plenty of resentment in the past and has made many mistakes. The most serious of these concerned our handling of landowners. To an oriental, the little piece of land that belonged to his ancestors is the be-all and end-all of his existence. In the early years after the war we seized land arbitrarily and paid for it at far too low a valuation. To make matters worse, the money was passed in one down-

payment and when the farmer had spent this he was penniless and had no land to live on. There followed real hardship, real resentment.

Today the whole picture has changed. In 1958 U.S. authorities and the Ryukyuan government sat down together voluntarily, and a whole new system of payments was worked out, roughly five times higher than before, and made retroactive. In addition, payments are now made in annual installments, and the farmer remains the legal owner of his land. At one stroke these reforms changed the Okinawans' attitude toward our administration.

Only one thing clouds this bright picture: the incessant efforts of Communist China to cripple the Okinawan Government and kick us out. The Okinawans have come to despise the Communists, whose candidates have recently been roundly defeated at the polls. Faced with a flop in their efforts to steal independence from within, the Communists are now concentrating on trying to bring about a reversion of the island to Japan. Although the peace treaty with Japan accorded Japan residual sovereignty over the Ryukyus, it specifically reserved to the United States complete administrative and occupational authority as long as tension remained in the Far East. It is this right that is now being challenged by leftists in Japan. "Go home, Americans" is a favorite Communist cry.

If we permit the island to revert to Japanese control, the whole fortress could conceivably become useless as a deterrent to war, because a Japanese Government could control our use of our bases. Under menacing threats from Peiping or Moscow it could forbid us to use runways and missile sites. This is what the Communists want. Our men would still be there, but they would be hamstrung. The Communists would then be entitled to call our great bastion, now so powerful in the Far East, a paper tiger.

The fact is—and the present Japanese Government appreciates it—we need Okinawa. Not for money, or exploitation, or selfish imperialism, but simply to help us preserve peace and save one of the most strategic areas in the world—including Okinawa itself—from Communist domination.

Since Okinawa is thus a vital element in our defense setup, we should do everything possible to clarify and make smoother our position there. First, the U.S. Government should declare that it intends to retain its rights on the island as long as it deems necessary, as provided in the peace treaty. Second, the provisions of a bill introduced into Congress by Representative MELVIN PRICE should be carried out. The bill authorizes the Treasury to set aside a sum not to exceed \$6 million a year out of Federal income taxes received from Americans employed or stationed on the island, and to allot this money to the Government of the Ryukyus for urgently needed public works. These would include dams, roads, electric plants, fertilizer factories, hospitals, schools, and loans to approved industries.

These basic improvements are sorely needed to help the Ryukyans achieve an independent economy. The cost would be repaid to us a hundredfold by creating a prosperous partner, bound to us by economic ties rather than military power. It would be a tiny sum to pay to help maintain our great fortress, and it is a wonderful chance for the United States to show what can be accomplished in freedom rather than under Communist fear. Okinawa has become a sort of showcase for American resolution and integrity. It is being watched intensely by the entire free Orient. It is up to us to keep the showcase window clean.

The Status of Foreign Ministers

EXTENSION OF REMARKS OF

HON. EUGENE J. MCCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "The Status of Foreign Ministers," written by Doris Fleeon and published in the Evening Star of August 4, 1959. This column contains some comments on the status of American diplomacy, and particularly on the role of Secretary of State Herter in connection with diplomatic activities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STATUS OF FOREIGN MINISTERS—GENEVA AFFAIR VIEWED AS WEAKENING POSITION OF NATION'S FOREIGN CHIEFS

(By Doris Fleeon)

Republicans left Congress so they could go to the airport and give Vice President NIXON a hero's welcome. Within hours, Secretary of State Herter dragged in from Geneva where for 3 weeks he has been sitting on what he knew of his own knowledge were china eggs.

The contrast is of the same sort as that between the propaganda aspects of the new moves and their shaky diplomatic underpinnings. Dispatches from Europe emphasize the latter, and the picture drawn in them of Uncle Sam is not flattering.

For it cannot be concealed that the Soviet Union has won a diplomatic victory at first-sale prices. Khrushchev gets the trip to the United States and the attentions from President Eisenhower to which he has so long aspired. The President has abandoned the substantial progress conditions he earlier laid down for such a meeting.

All the foreign ministers at Geneva are in the position of the acrobats who opened the old vaudeville shows. It is held further that they were compelled to warm up the stage for an unconscionably long time, weakening to them personally and debasing to their status. The President's inadvertent reference to Geneva as one of the "much lower levels" at which the plans were developed is widely quoted.

It appears difficult at this point to do much to gild Secretary Herter's role, even if that is recognized as desirable. In the first place, he will unpack only to repack for a hard week of fence-mending in South America.

An appointive and not an elected official, he lacks the resources to come back on his own, even if he had the temperament for it, which he has not. A strong flavor of shadowboxing also was imparted to the Vice President's role when he was disclosed as having been taken into Mr. Eisenhower's confidence at the last minute only so he wouldn't accidentally mess things up in Moscow.

Yet, with the politician's art, Mr. Nixon is managing to stage a triumph at home and win substantial though by no means universal approval abroad.

The State Department sees so much work piled up for Mr. Herter during the futile weeks at Geneva it does not expect him to accompany the President to Europe or even play much part in the delicate task

of arranging the Khrushchev journey across the United States. Members of Congress sympathize with him but cannot help him.

The Eisenhower decisions as such have a wide range of acceptance, ranging from enthusiasm in Great Britain to caution in Italy. Yet even the British are making light of his explanations and describing almost flippantly the course he took prior to crossing the great divide.

It appears that Europe's once complete faith in the soldier-President has been replaced by hope and not too much charity. This is the press preview as he takes up the tasks which lie immediately ahead in Europe and in Russia.

And everywhere the cautionary note is strong: Don't sell Khrushchev short; he is smart and tough.

The Grievous Economic Justice the American Farmer Is Suffering

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. PROXMIRE. Mr. President, too few people in America who are not farming for a living recognize the grievous economic injustice the American farmer is suffering.

One of the rare exceptions is the Daniel F. Rice Co., New York Stock Exchange members, with principal offices in Chicago. In a recent commodity letter, the Rice Co. speaks out as follows:

Agriculture has fallen on evil times. In the midst of unprecedented national prosperity, agricultural income has fallen to continually lower levels. The outpourings of farms have exceeded the capacity of the Nation to consume. Legislative action needed to solve the problem has not been taken. At this critical time when the problem of falling farm income gets worse and worse we are about to see Congress adjourn without any new legislation. One bill was passed and vetoed. The problem is not impossible of solution; all it takes is a program that faces the problem of too much production squarely and attacks it directly by taking the steps necessary to reduce production. But it takes a little courage; the Congress has to call its shots and let the chips fall where they may. They cannot have it both ways, riding off in all directions.

The contribution of the executive branch of the Government is to give up on the current solution of the problem and turn on agriculture with the violence of a wounded bear. The office of the Secretary of Agriculture continually furnishes biased and exaggerated statistics to the urban press for its increasing attacks on the farmers.

Mr. President, I ask unanimous consent that the full text of this compassionate, thoughtful, and disinterested expression for farming, by a business organization, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMODITY LETTER

DANIEL F. RICE & Co.,
Chicago, Ill., August 5, 1959.

A major problem of growing old is that, as one looks backward, as we all sometimes

must, we can see only so far. Not only can one remember too much but also the same issue has been met so many times that one's decisions become somewhat ossified into a pattern and a set of principles by which one thinks he lives. We do not think that we are the last leaf on the tree, but as we look about us, our being out of step with general thinking suggests that indeed we may have become old.

The first belief to which we like to think we ascribe is that everyone is equal and should have a competitive shot in the sphere in which he chooses to work—without advantage or disadvantage. Equality before the law and equality in the economic world of business are the keystones of this belief. The inalienable right of equality carries with it the responsibility for preserving this right. The first responsibility in preserving this right is to take a careful look at issues, to call one's shots and to let the chips fall where they may. We try to do this. Our long history as a commodity investment firm has taught us to do so. Ours is not a business that forgives mistakes or accepts alibis.

Within this bigger belief one of the things we hold uppermost is that a virile and progressive agriculture is essential to the well-being and prosperity of the Nation. Throughout its history the United States has accepted and supported this belief. Note the land grant college system, the county agent system of farmer education, the Soil Conservation Service, and the vast research work of the U.S. Department of Agriculture. For 30 years the Federal Government, and the Congress in particular, has recognized the unusual problems of farmers and has tried to assist them in obtaining a fair share of the national income. This assistance to agriculture does not arise only from a sense of fairness; it is absolutely essential to the progress of the country. Three or four million commercial farmers produce the food and fiber needs of the country. At the birth of the Nation three-fourths of the population was engaged in farming. How much industrial progress could have been made without agricultural progress? How far can we go in the future without agricultural progress?

Agriculture has fallen on evil times. In the midst of unprecedented national prosperity, agricultural income has fallen to continually lower levels. The outpourings of farms have exceeded the capacity of the Nation to consume. Legislative action needed to solve the problem has not been taken. At this critical time when the problem of falling farm income gets worse and worse we are about to see Congress adjourn without any new legislation. One bill was passed and was vetoed. The problem is not impossible of solution; all it takes is a program that faces the problem of too much production squarely and attacks it directly by taking the steps necessary to reduce production. But it takes a little courage, the Congress has to call its shots and let the chips fall where they may. They cannot have it both ways, riding off in all directions.

The contribution of the executive branch of the Government is to give up on the current "solution" of the problem and turn on agriculture with the violence of a wounded bear. The office of the Secretary of Agriculture continually furnishes biased and exaggerated statistics to the urban press for its increasing attacks on farmers. The anti agriculture propaganda of the Department of Agriculture is very well illustrated by a recent editorial in Life magazine. We have repeatedly called your attention to this dereliction of duty on the part of the incumbent Secretary.

Our second belief is that organized exchanges, especially futures markets, are an essential part of an effective commodity marketing system. They have built an im-

portant place for themselves in their more than 100 years of operation. They should serve farmers first and the public second, but they must be operated for the benefit of the public too. They will succeed and last only so long as they render real service. Within the limits of the exchanges all parties must have an equal and competitive shot. At the present time this statement is especially applicable to speculators. We make no case for individual speculators and ask for no favored treatment or quarter for them. They are in about the toughest competitive business in our whole economic system and if they cannot compete they do not belong in the business.

We see some things about futures markets that we think are wrong. And we have called a spade a spade. We have to do our part to make these markets competitive.

In the field of Government regulation of agricultural marketing, we find the Commodity Exchange Authority, the Warehouse Administration and other important agencies controlled by single individuals who are in a position to dictate basic policy. We strongly advocate that these Government controls be administered by Commissions consisting of at least six individuals with two representative of the farmers' interests. To achieve this aim, we urge that either Congress or the Secretary of Agriculture immediately take the necessary action to end one-man rule of agencies and revert to a commission plan. This would give farmers, the public, and the grain trade a voice in their own fate.

DANIEL F. RICE & Co.

Youth Need an Opportunity To Work

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. MORSE. Mr. President, I have received a letter from Robert D. Maclean, secretary-treasurer of the Oregon Juvenile Judges Association, with an attached resolution in support of the Youth Conservation Corps bill, of which I happen to be one of the cosponsors.

Mr. President, I ask unanimous consent that the letter and the resolution be printed in the Appendix of the RECORD.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

OREGON JUVENILE JUDGES ASSOCIATION,
August 4, 1959.

Senator WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: We are forwarding for your information a copy of "A Resolution To Provide Youth With an Opportunity To Work," as was resolved by the Oregon Council of Juvenile Court Judges, in convention in Eugene, Ore., during the week of July 27 through July 31, 1959.

Yours very truly,

ROBERT D. MACLEAN,
Secretary-Treasurer.

A RESOLUTION TO PROVIDE YOUTH WITH AN OPPORTUNITY TO WORK

Whereas the lack of opportunity for employment and the lack of educational provisions for boys are significant factors in

the ever-present and expanding problem of juvenile delinquency; and

Whereas the establishment of such a program would develop and conserve the natural resources of our country and would give boys and young men an opportunity to work in the open and to develop physical fitness and character; and

Whereas the initiation of this program is provided in Senate bill 812 now pending in the U.S. Senate for the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for males between the ages of 16 and 21 inclusive: Now, therefore, be it

Resolved by the Oregon Council of Juvenile Court Judges in convention in Eugene, Oreg., That it supports and approves the principle involved in Senate bill 812 and urges that the Congress of the United States take favorable action of said Senate bill 812 or other appropriate legislation to establish this program.

Dirty Deal in District of Columbia

EXTENSION OF REMARKS OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. HARTKE. Mr. President, the campaign for home rule for the District of Columbia is being supported by newspapers throughout the Nation. Last Tuesday, August 4, the St. Louis Post Dispatch printed an outstanding editorial calling upon Congress to support legislation to democratize the District of Columbia. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis (Mo.) Post Dispatch, Aug. 4, 1959]

DIRTY DEAL IN DISTRICT OF COLUMBIA

I deem it my duty to again call your attention to the condition of the District of Columbia. Is it not just to allow them at least a delegate in Congress?

So spoke President Andrew Jackson in his annual message to Congress in 1831. It was but one of the many official notices over the years that have called attention to the denial of the rights of citizenship to the residents of the national capital.

Until 1802 the city of Washington was governed under the statutes of Maryland. In that year Congress granted Washington its first charter and provided for a city council of 12 members to be elected annually. It also provided for a presidentially appointed mayor.

In 1820 Congress went all the way in home rule and gave the residents of Washington the right to elect their mayor as well as the council members. This was how the District of Columbia was governed until 1871 when it was reorganized by Congress on what amounted to territorial lines. Although the 1871 plan changed the chief executive official from an elected mayor to an appointed Governor, the council continued to be popularly chosen.

Then in 1874 came the swing away from all semblance of home rule. In that year the residents of the national capital were deprived by Congress of the right to vote and otherwise of any say in the conduct of their governmental affairs. In essence, this has

been the plight of those who live in the District of Columbia for 85 years.

Today with a population of approximately 1 million, Washington is one of the country's major cities as well as its capital. It has more population than 15 States, each of which has two Senators and up to three Representatives in Congress. Yet the District of Columbia is voteless and must look to Congress to be its city council.

The 15 States each with smaller populations than the District of Columbia include four New England States, Maine, New Hampshire, Vermont and Rhode Island, and six Western States, New Mexico, Utah, Montana, Idaho, Wyoming and Nevada. The others are Delaware, both Dakotas and the two new States, Alaska and Hawaii.

The time has come to do something about our disfranchised national capital. The Senators and Representatives from the smaller States ought to be taking the lead in seeing that justice is done in the current session.

Capital Times Pleads for World of Love on 14th Anniversary of Hiroshima

EXTENSION OF REMARKS OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. PROXMIRE. Mr. President, on August 6 the Madison Capital Times wrote editorially about a letter of prayerful love from a group of Japanese citizens to the Air Force major who dropped the atomic bomb and whose resultant guilt complex has so shaken his sanity that he is now a patient in a mental institution. This editorial is remarkably revealing for what it tells of the human qualities of the plane commander, Maj. Claude Eatherly, the compassionate Japanese, and the Capital Times of Madison, that published the editorial. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLAUDE EATHERLY AND HIROSHIMA 14 YEARS LATER

Recently a group of Japanese citizens wrote a letter to a patient in an American mental institution which read as follows:

"We wish you to know that we regard you as a victim of war in much the same way as those who were injured in the war, and are praying for your complete recovery and that the day shall come when you will join the forces of good will, forgiving any wrongs of the past on either part and work for establishing a peaceful world, a world of reconciliation and love. May God bless you, hasten your recovery and help you so that you may decide to devote your life to the cause of peace."

The letter was written to Claude Eatherly, one of the most tragic figures of our time. Mr. Eatherly's name means nothing to most people but he played a key part in one of the saddest and most significant moments in modern history.

An August 6, 1945—14 years ago today—an American bomber based on the Island of Tinian in the Marianas, made its bomb run on Hiroshima, Japan, and dropped the first atomic bomb, killing more than 100,000 men, women, and children.

The commander of the plane was Maj. Claude Eatherly.

In the years since then Major Eatherly has been haunted by the memory and driven into mental illness by an acute guilt complex. He believes the Japanese are "after him," seeking revenge for the Hiroshima holocaust.

Whether the letter he has received from Japan will help to cure him, no one can say.

But the spirit of forgiveness its discloses and the plea it makes for a "world of reconciliation and love" is one that needs to be noted on this 14th anniversary of Hiroshima.

In this spirit lies the hope that there will be no more Hiroshimas and no more Claude Eatherlys living in the darkness of haunting guilt.

Harold L. Cross

EXTENSION OF REMARKS OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news story and an editorial dealing with the death of Harold L. Cross, a distinguished lawyer and fighter for freedom of information.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Aug. 10, 1959]

HAROLD L. CROSS, FOUGHT SECRECY IN GOVERNMENT

Harold L. Cross, the attorney who led the fight of the American Society of Newspaper Editors against secrecy in Government, died of a coronary occlusion yesterday at his summer home in East Boothbay, Maine. He was 69.

Mr. Cross was one of the Nation's foremost authorities on newspaper law. For 25 years he was counsel for the New York Herald Tribune.

He wrote "The People's Right To Know" in 1953 while counsel on freedom of information for the ASNE. It soon became the standard legal source for newsmen and others engaged in obtaining information from local, State, and Federal agencies.

WITH NEW YORK FIRM

Mr. Cross, a graduate of the Cornell University Law School, was with the firm of Brown, Cross & Hamilton in New York.

He was professor of libel law at the Columbia University School of Journalism from 1937 to 1950 and associate dean in 1949 and 1950. In 1943, on leave from Columbia, he opened China's first graduate school of journalism in Chungking for the Chinese Government.

Mr. Cross became counsel for the American Society of Newspaper Editors in 1951. He called attention to abuse by Government agencies of a 1789 statute authorizing Federal officials to have custody of their files and papers. The ancient housekeeping statute, Mr. Cross discovered, was cited more often than any other as an authority for withholding information.

UNITED STATES CODE AMENDED

The attention his book and speeches focused on this distortion of the law led 2 years ago to the passing of an amendment to the United States Code. It said the statute was not to be construed as an authority for secrecy.

Mr. Cross, despite the fact that he officially retired last year, still was sought by news-

papermen and others throughout the country for his advice.

He recently was summoned to Washington to counsel the special Government Information Subcommittee of the House Committee on Government Operations. He also was asked frequently for testimony by House and Senate committees in the field of civil rights and Government information generally.

Mr. Cross was awarded the Peter Zenger award at the University of Arizona in 1958 and was a distinguished achievements fellow of Sigma Delta Chi, the journalism fraternity. He was awarded an honorary doctor of laws degree by the University of Maine in 1950.

Mr. Cross is survived by his wife, Elaine; two sons, Malcolm A. Cross of Danville, Va., and Schuyler F. Cross of Denver, Colo.; two brothers, Arthur and Adam Cross of Morris-town, N.J., and eight grandchildren.

Funeral arrangements have not been completed. The family asks that flowers be omitted and contributions made to the Herald Tribune Fresh Air Fund. Mr. Cross was vice president and a director of the fund for many years.

TRIBUTES TO MR. CROSS

Other leaders in the fight for freer access to Government information paid tribute to Mr. Cross last night.

Representative JOHN E. MOSS, Democrat, of California, of the special Government Information Subcommittee of the House Committee on Government Operations, said:

"Dr. Cross was a man who had a special understanding of a most fundamental right of the American people, the right to know and be informed. I personally and my associates will miss his very wise counsel."

V.M. Newton, Jr., managing editor of the Tampa (Fla.) Tribune and chairman of the freedom of information committee of Sigma Delta Chi, said:

"It is very unusual in our modern society for a lawyer of Harold Cross' eminence to go all out for the principle of freedom of the press. He is honored and revered throughout the ranks of our profession."

J. R. Wiggins, president of American Society of Newspaper Editors and vice president and executive editor of the Washington Post, said:

"Mr. Cross' contribution to the right of American citizens to know about their Government was greater than that made by any other person working in the field. He furnished the leadership and legal research that has been made in the last 8 years."

"He was the architect of information statutes that have been adopted in more than 30 States and the mainstay of those engaging in trying to improve Federal statutes."

James S. Pope, executive editor of the Louisville (Ky.) Courier-Journal and the Louisville Times and a member of the American Society of Newspaper Editors' Freedom of Information Committee, said:

"Mr. Cross was not only a man with a brilliant mind. He was a man with a heart and spirit and wisdom of a truly great editor; a man who made us see the scope of our own job, who reacted powerfully against tyranny, petty or otherwise; a man who comprehended the real meaning of freedom and its perils; a man who got up mad every morning because of the injustice he knew had been hatched overnight."

[From the Washington Post, Aug. 11, 1959]

HAROLD L. CROSS

With the death of Harold L. Cross the public has lost one of its most effective and tenacious advocates in the constant struggle for freedom of information. The longtime campaign of Dr. Cross against unjustified suppression and restraint, particularly in his role as general counsel for the American Society of Newspaper Editors, was unquestionably the stimulus for the formation of the House Government Information Sub-

committee which has done such useful work. In turn the instances of unnecessary secrecy pointed up by this subcommittee and the companion Senate Constitutional Rights Subcommittee spurred legislative reform in the amendment of the housekeeping statute, the requirement for disclosure of essential data about foreign aid and new scrutiny of the operation of the Administrative Procedures Act. Dr. Cross also helped bring about new laws covering access to public records in many States.

No one knew better than Dr. Cross that the battle is never ending, not because public officials are tyrannical by desire, but because the emphasis of big government is toward concealment for convenience. This soft-spoken, scholarly New York lawyer and Columbia University professor attacked the legal basis for withholding information. His 1953 book, "The People's Right to Know," remains a bible for those interested in this essential aspect of American freedom. Much of Dr. Cross' immediate labor on access to information was on behalf of newspaper groups, but he never lost sight of the larger purpose. That purpose was not to gratify editors, but to inform adequately the constituents of democracy so that they could make intelligent decisions. Dr. Cross' belief deeply in the ultimate wisdom of an informed public, and he was in a real sense the people's counsel in this important area of relations with government.

Keenotes

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of my newsletter released yesterday:

KEENOTES

(By Representative ELIZABETH KEE)

The big news in Washington is the proposed exchange of visits planned by President Eisenhower and Premier Khrushchev.

Some people have expressed strong opposition to the forthcoming visit of Mr. Khrushchev. They believe we will in effect be rewarding Mr. Khrushchev to calm down the Berlin crisis—a crisis which he himself manufactured.

Mr. Khrushchev's attitude toward the West presents one of the most serious threats to peace. Ignorance of just what we want in the world is a big factor in this attitude. Also involved are fear and envy.

It seems to me that giving Mr. Khrushchev an opportunity to visit this country might help to overcome his present attitude. I am sure his misconceptions about "capitalist slavery" will be corrected.

The exchange of visits will not solve the world's problems. Certainly we have no intention of dividing up the world into two spheres of influence.

The great hope of the visits is that Mr. Khrushchev will discover that many of his fears about the United States are groundless and that Russians can live in peace without any fear of attack by us. Equally important, he may learn that his sabre rattling is not scaring anyone and that through a miscalculation he can touch off a war.

HOUSING BILL TRIMMED DOWN

The Senate Housing Subcommittee is working on a new housing bill. It is hoped

that a bill acceptable to the President can be passed by Congress.

One thing is certain—Congress cannot adjourn without passing a housing bill. If it should, then the Federal housing mortgage guarantee program will come to an end. This would mean a virtual halt of home construction.

It was not many years ago that FHA was considered a dangerous invasion into private enterprise. Yet the years have demonstrated that this Federal program under which repayment of a major part of a home mortgage is guaranteed by FHA has proved to be a big boon to the housing industry.

The mortgage guarantee program is self-supporting. A fraction of 1 percent is added to the interest charges. This money goes into an insurance fund from which any losses are paid.

The bill which the Senate committee plans to bring out will not give the President everything he wants but it should be acceptable.

Prevailing Mood in Latin America One of Optimism

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. MORSE. Mr. President, I read an article which was published in the Eugene Register-Guard on Tuesday, August 4, 1959, entitled "Educator Reports Prevailing Mood in Latin America One of Optimism."

As the chairman of the subcommittee of the Committee on Foreign Relations which deals with Latin-American affairs, I found the article very helpful. I should like to have it printed in the Appendix of the Record, because it is a newspaper story of a report given by the chancellor of the Oregon State System of Higher Education, Mr. John R. Richards, based upon his recent tour of Latin America. I therefore ask unanimous consent that the newspaper article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATOR REPORTS PREVAILING MOOD IN LATIN AMERICA ONE OF OPTIMISM

(By Ralph Olive)

John R. Richards, who has just returned from a tour of Latin America, reports that optimism, caused by economic expansion, and the promise of population growth, is the prevailing mood of the people.

Richards, chancellor of the Oregon State System of Higher Education, toured 10 countries on a State Department-sponsored trip. He talked with ministers of education and other government leaders, inviting them to a UNESCO Conference in Denver, September 28 to October 2. The purpose of the Conference is to discuss education in Latin America.

Among the countries that particularly impressed Richards with their growth potential were Brazil, Argentina, and Mexico.

Many businessmen in Brazil believe the country, now with a population of 60 million, will soon have as many people and as much strength as the United States had in the 1930's, Richard said.

SHARP DIFFERENCE

The chancellor, who was accompanied by Mrs. Richards, was also impressed by the air of democracy in Argentina, which was so recently a dictatorship.

"Now, to all appearances, it is completely democratic, with a press that gives all sides of political questions," Richards said.

The university system in Latin America differs sharply from that in the United States, Richards explained.

"Most students, and many of the professors, are on a part-time schedule," he said.

The students work, and have to fit classes into their job schedules. Faculty members are mostly professional men, who take time out for classes, usually at no pay.

The faculty generally acts as the governing body, too. There are full-time administrators, however.

EUROPEAN MODELS

Richards explained the system caused some financial difficulty. The universities receive either a percentage of the gross tax or the income from a special tax. The program has to fit the money available, and there is seldom hope of getting any more, if the cost should exceed the tax income.

There is also a difference in emphasis, Richards explained. The humanities are considered all important. The universities are generally patterned after European models, and educators there are often critical of the United States for its stress on technological training, Richards said.

Most Latin American countries send future engineers to the United States or Europe for their specialized educations, Richards said. This comes after study of liberal arts at home.

However, the applied sciences are taught, although there is some difficulty finding enough faculty members.

EXCEPTIONS NOTED

"There is little capacity to support the higher cost of teaching the exact sciences," he explained.

There are exceptions. In Uruguay, Richards found a scientific institute doing significant work on antibiotics, including a number of original experiments.

Educational opportunity is definitely restricted in Latin America, Richards said. In many areas the average person has little more than 2 years of formal schooling.

But the people are anxious to study, he said.

"The whole educational process is characterized by the fact that the people place more value on education than we do, but have a smaller capacity to support it," he explained.

DENVER CONFERENCE

Next to religion, Richards said, the urge for education is perhaps the most prevailing theme in the Latin American's life.

About 2,000 persons will attend the Denver conference to discuss these areas of Latin American education: Scientific development, cultural advances, educational practices, interorganizational work and social studies.

In addition to Latin American officials, university presidents and administrators from the United States will attend. Industries that do business in Latin America will also send representatives.

Richards is chairman of the U.S. National Commission for UNESCO.

In addition to his official duties, Richards said he enjoyed the opportunity to practice his Spanish, and observe the different way of doing business. In most Latin American countries, he said, little work is done until the afternoon, at least among businessmen and executives. After a leisurely midday meal, they settle down to business, and work late, finishing with a dinner at about 10 p.m. Business is often intermingled with social activity, he said.

Richards visited the following countries: Mexico, Nicaragua, Costa Rica, Panama, Colombia, Peru, Chile, Argentina, Uruguay, and Brazil.

Our Refugee Problem

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. JAVITS. Mr. President, the disaster of the European refugees and escapees is not only a European problem but our refugee problem as well, a responsibility we acknowledged by our undertaking of participation in the World Refugee Year which began last month. I ask unanimous consent to have printed in the Appendix of the RECORD the second of series of articles on Europe's refugee camps which appeared recently in the New York Daily News, stressing the very human aspects of a situation which has too long been with us.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Daily News, July 21, 1959]

DP'S WITH A PASSPORT TO SICKNESS, DESPAIR
(By Kitty Hanson)

(Second article based on tour of European refugee camps)

The Western democracies appear to be throwing away their most effective weapons against communism: the men and women who know its tyranny at first hand.

The refugees who languish in camps and slums in Western Europe, and those who risk their lives every day to cross frontiers to freedom, are the world's most ardent anti-Communists. But if the free world does not soon adopt some positive program for them, they will become useless—to the West as well as to themselves.

Talking with refugees fresh from the border, one feels the drive, the strength and vitality of these people who still are fired with a momentous decision to leave homes and families for an idea.

And talking with other refugees who have been waiting as long as 10 to 14 years for admission to some free nation, you can not escape the sense of futility and resignation that surrounds them. Initiative has succumbed to inertia; physical strength to weakness. Camp existence has taken its toll.

There are, in Western Europe today, nearly 1,800 refugee camps. They were never intended to be more than temporary quarters for men and women who, through no fault of their own, had been made homeless by Europe's two wars; the hot and the cold.

DRUNKENNESS, PROSTITUTION

I spent days in some of these camps in Italy, Greece, Austria, and Germany and came away marveling that these people could keep their faith in democracy after such a disgraceful sample of life in the free world.

In the worst of the camps there is drunkenness, prostitution, and a disintegration of moral values; in the best, illness, disillusionment and a numb acceptance of being surplus population.

There is a depressing sameness about refugee camps. Whether an internee is housed in a dreary barracks, converted stable, a one-

time factory or a former concentration camp, his living conditions are the same.

PRIVACY SOMETHING THEY LEFT BEHIND

He and his family live in cramped cubicles along corridors where other families live in cramped cubicles, separated by partitions of the thinnest wood, some not even reaching the ceilings. If the refugee is single, he or she lives in a dim and fetid dormitory.

The only running water is in the community washroom; the only toilets are community toilets; and usually one must share the cooking facilities with others or use a community mess hall.

Internees live with the living sounds of others in their ears. Privacy is something they left behind in Yugoslavia or Hungary or Poland—along with their home, perhaps their family, and everything they ever owned.

GIFTS FROM AMERICANS

If you are a refugee, you are not only without a country, you are without possessions. You escaped in your everyday clothes, perhaps just walked away from work, so as not to be conspicuous. You arrived in the nearest border country without a toothbrush, comb, or razor—all incriminating evidence should the police pick you up.

You sleep on mattresses which have been slept on by thousands before you, and if you have a sheet or blanket, it probably is a gift from the U.S. escapee program. The clothes you wear came from the United States too—used clothing contributed by Americans to church clothing drives.

(This produces some odd effects. It's startling, for instance, to talk with refugees dressed in bright and vivid resort clothes or to see young men in bowling shirts bearing the names of alleys from coast to coast.)

In Italy and Greece, the camps lie arid and lifeless in the blazing sun, the refugees wasted by waiting and drugged with idleness. The two poorest countries in Western Europe, Italy, and Greece, do not allow refugees to work, since thousands of their own citizens are still unemployed. Refugees who work "work black" (illegally) and constantly run the risk of being picked up by police.

DREARY BARRACKS SCAR COUNTRYSIDE

In Austria and Germany, shrubs, trees, and often flowers blur but do not hide the outlines of the endless rows of dreary brown barracks that scar the countryside. Refugees are permitted to take jobs, but many do not because they feel they are "temporary."

Of all the camps in Europe, Camp Valka in Bavaria, and San Sabba at Trieste probably rate as the worst.

A broken-down section of what was once a huge meeting hall for the annual Nazi Party Congress, Valka's foul-smelling barracks have, since the war, housed more than 30,000 persons.

It looks it.

The rooms are smelly cubicles in which, for many, the bed is just a moldering mattress flung on the floor in one corner. Garbage is thrown out the windows and the stench from the common toilets at the ends of corridors demands a strong stomach.

Men and women are housed together in the same barracks. Venereal disease is rampant, pregnancies frequent. Days are filled with idleness; nights with drinking, fighting, and sex. Police and doctors make frequent calls at Valka.

Valka's residents are the saddening remnants of what once were decent, healthy men and women with a strong love of freedom and the courage to risk much in order to find it.

They have not found it in Valka, the only screening center in Germany for incoming refugees. Here they wait to be granted political refugee status which will allow them to work, move and regain their self-respect. Valka is a transients' camp, but some of its residents have waited in transit for 6 years.

THREE HUNDRED AND FIFTY FOUR IN EVERY MONTH

Approximately 350 refugees arrive every month at San Sabba, a former Nazi concentration camp near Trieste, in northern Italy. You can smell San Sabba long before you see it.

Part of the stench is from the place itself; part from a nearby oil refinery. An almost unnoticeable relic of Nazi efficiency is a railroad track which runs down the center of the camp street.

On one side, in cardboard-partitioned, poorly ventilated compartments, live San Sabba's families. On the other are the dormitories. Single men and boys are quartered on the second floor; single girls on the first. They are told to stay where they belong.

But San Sabba's life of enforced idleness, frustration, dirt, and poverty is a breeding ground for immorality. Many of the young refugees are away from their parents' guidance for the first time in their lives and, more important, most of them have no money.

Although the Italian Government forbids the refugees to work, most of the men in camp find ways to pick up odd jobs and pocket money. For refugee girls in need of money there is prostitution.

Similar conditions exist in other Italian camps, in varying degree. Idleness produces depression and indifference. For a man, this can mean the wearing away of his moral fiber and the desire to stand on his own feet. For the women it can mean sex experiences of the most degrading sort, a new concept of morality, and often a new profession—the world's oldest.

In nearly all the Italian camps, wine is sold on the premises, and drunken free-for-alls keep the police busy.

HAS PASSPORT BUT NO TAKERS

Much of the blame for these conditions can be placed on the Italian authorities. Much must also be laid at the door of the rest of the free world, which accepts fewer and fewer refugees while more and more pour into Italy. Today, escape to Italy is an escape to regimentation, confinement, and neglect.

In Greece, refugees are about as well off as many Greek citizens, who are desperately poor. Refugees cannot be assisted without raising their living standards above those of a considerable number of natives. As a result, most refugee work is conducted by voluntary agencies with a large assist from the U.S. escapee program.

At Lavrion, Greece, refugees are housed in a converted stable which, though grim, is cleaner than most of the camps I had seen. I arrived just as a busload of refugees was leaving for Sweden, which had accepted a number of hardship cases.

THE GODS, HE SAYS, DON'T TALK TO HIM

When the bus finally left, there were tears on both sides. Standing silently at the roadside were several camp inmates who had been rejected. One of them turned on me fiercely as the bus disappeared.

"Everybody say outside communism is free," he blurted, tears glistening, but his mouth sullen and angry. "In camp is not free. I have passport to leave Greece, but no country takes me. I do not know why. The gods don't talk with me."

It would have to be "the gods" who told him, because no one ever tells a refugee why he has been rejected. The lucky ones know only that they are going; the rejected only that they must remain behind.

Some eventually succumb to Commie pressures and return to their homelands. Others continue to wait and hope and to dissipate the very strength and courage which had led them to escape in the first place.

In either case, the free world loses a citizen and another round with Communist propaganda.

Bakersfield Californian Outstanding Conservation Newspaper

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. ENGLE. Mr. President, I recently issued a statement commending the Forest Service for the steps it has taken to implement recommendations on fire control made last year by a special subcommittee of the House Interior Committee. The Bakersfield Californian then followed up with a fine editorial commending the work of this committee of the Congress. Now in turn I want my colleagues to share with me this gratifying reaction to the work and deeds of a committee of Congress as reflected by the editorial.

During my long service in the State legislature and in Congress, I have found the management and editorial staff of the Bakersfield Californian dedicated to the sensible cause of conservation. It has been a privilege to meet and know Mrs. Bernice Harrell Chipman, president of the corporation; Mr. Walter Kane, publisher; Mr. James Day, managing editor; and Mr. Ralph Kreiser, editorial writer. The cause of conservation is capably advanced by their efforts.

I ask unanimous consent to have my statement of May 18 and the Bakersfield Californian editorial of May 21 printed in the Appendix of the RECORD.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

NEWS STATEMENT

Senator CLAIR ENGLE, Democrat, of California, announced today that the Forest Service has taken steps to implement recommendations on fire prevention and control made last year by the special subcommittee he headed as chairman of the House Interior Committee.

"The steps taken by the Forest Service are a real contribution to better fire protection in southern California," Senator ENGLE said. "Much remains to be done," ENGLE added, "but I am delighted to learn of the constructive measures the Forest Service has taken as a result of the committee's findings."

In October 1957, ENGLE took an eight-man subcommittee to southern California to see what could be done about preventing and controlling the disastrous forest and brush fires that have plagued that area. An 8-point program of prevention and control resulted from the committee's investigation and study, pointing up the need for—

1. More funds and year-long programs for southern California.
2. More advance measures preparatory to fire suppression, such as access roads, firebreaks, helicopter ports.
3. Improved employment conditions.
4. Better protection of forest and brush cover.
5. Newer and improved equipment and techniques.

6. Exclusion of heavy residential concentration from national forests.

7. More liberal authorization for postfire emergency treatments on denuded watersheds.

8. More active use of the Armed Forces trainees on national forests.

In a recent letter to Representative WAYNE ASPINALL, Senator ENGLE's successor as chairman of the House Interior Committee, the Forest Service stated that "several projects of the Forest Service recently undertaken are aimed at accomplishing some of the recommendations of the subcommittee," and that "overall, the committee's findings are particularly constructive, lending us helpful support in our efforts to cope with the many difficult problems involved."

EDITORIAL

PRaise FOR FOREST SERVICE WORK

Prompt and energetic action on the part of the U.S. Forest Service to improve fire prevention and fire fighting techniques and strategy has brought warm praise from Senator CLAIR ENGLE, who conducted an investigation a few years ago as chairman of a special subcommittee of the House Committee on Interior Affairs, following a disastrous blaze that cost several lives in southern California.

The steps taken by the Forest Service, Senator ENGLE said this week, are a "real contribution to better fire protection in southern California." He declared he was delighted with the constructive measures taken by the service as the result of the findings of his subcommittee.

After interrogating witnesses, studying evidence and examining the situation from all angles, the committee came up with the following recommendations; more funds and the establishment of year-round programs for fire suppression, such as more access roads, firebreaks, helicopter ports and other means; better employment methods for fire-fighting crew recruitment and maintenance, better protection of forest and brush cover, newer and improved machinery and techniques and other equipment, the exclusion of heavy residential concentration from national forests, a more liberal authorization for postfire emergency treatments on denuded watersheds, and more active use of the Armed Forces trainees on national forests.

These recommendations embodied thoughts that had been expressed many times by experienced foresters who somehow had been unable to convince Congress of their desirability until Senator ENGLE, then chairman of the House Interior Committee, began to explore the subject. Many of these ideas had been included in reports by regional foresters as applicable to all forests having problems similar to those that are present in the southern California region.

Given the green light by the House committee and the encouragement of Senator ENGLE and others who are aware of the problems and needs of the Forest Service in its tremendous job of protecting the Nation's timber, grazing, watershed and recreation areas from destruction, the Service has moved forward with skill and ability to accomplish as many of the objectives listed in the committee recommendations as possible. Forest Service leaders have expressed warm appreciation of the work of the committee, declaring that "overall, the committee's findings are particularly constructive, lending us helpful support in our efforts to cope with the many difficult problems involved."

It may be pointed out that local support could also be extended to the Forest Service along these lines in order to assist in its important work of protecting and developing the areas so important to the State's economy and progress.

A Tribute to Joe Weingarten, of Houston, Tex., and to His Dream: Teaching World Peace

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. YARBOROUGH. Mr. President, it sometimes seems mankind is devoting so much money and time devising ways of destroying people that peace plans are receiving nothing but lip service.

Recognizing the need for understanding between people, Mr. Joe Weingarten of Houston has advanced a new idea for furthering world peace: establishment of a world university to teach peace and setting up institutes or chairs for world peace in various present institutions of higher learning. "We must start learning to live together or be prepared to die together," he says.

Mr. Weingarten says this idea has the endorsement of a number of noted educators and religious and political leaders. But the teaching of peace would be divorced from governmental and political influences, he adds.

With typical energetic activity which has long characterized his leadership in civic affairs, Mr. Weingarten is already looking toward establishment of an organizational steering committee.

I ask unanimous consent to have printed in the Appendix of the Record a number of articles and editorials on Mr. Weingarten's plan:

First. An article by Nathan Broch from the Houston Post for Tuesday, July 21, 1959, entitled "Weingarten Drafts World Peace School."

Second. An editorial from the Houston Chronicle for Thursday, July 23, 1959, entitled "Weingarten Has Peace Plan."

Third. An editorial from the Houston Post for Wednesday, July 22, 1959, entitled "Joe Weingarten's Plan: Educate For Peace."

Fourth. An article by Editor George Carmack of the Houston Press, printed Saturday, July 25, 1959, under the title "Man With a Dream—Don't Bet Against It Becoming a Reality."

Fifth. A resolution of the Texas House of Representatives of the 56th legislature.

There being no objection, the article, editorials, and resolution were ordered to be printed in the RECORD, as follows:

[From the Houston Post, July 21, 1959]

WEINGARTEN DRAFTS WORLD PEACE SCHOOL
(By Nathan Broch)

Joe Weingarten said Monday that the appointment of an organizational steering committee will be the next step toward the actual creation of a World Peace University.

"The men to serve on this committee will come not only from the United States," he said. "They will be drawn from areas all over the world."

Weingarten is chairman of the board of the Houston-based J. Weingarten, Inc., supermarkets. He has just completed a world tour highlighted by talks with governmental and educational leaders.

The Weingarten concept for cementing world peace through special educational institutions was first formulated in full-page newspaper advertisements on New Year's Day, 1958. This message was headed, "We Must Start Learning To Live Together, or Be Prepared To Die Together."

New Year's Day, 1959, Weingarten published another full-page message, telling of the response his appeal for establishment of a World Peace University has received.

Monday he reported to representatives of news media during a Houston Club luncheon on his talks during his recent world tour.

He explained the two major phases of the plan:

1. Establishment of a central World Peace University, possibly in Geneva, Switzerland.

2. Formation of peace institutes at major universities throughout the world. ("If I have my way, the first such institute will be established right here in Houston," he said.)

Weingarten said about 95 percent of the letters he has received so far favor the project. The remaining 5 percent are not opposed but express the feeling that existing university and college facilities should be improved before money is spent on an entirely new venture. He said the heads of the University of Houston and the Rice Institute have expressed approval of the project.

He cited the approval of Dr. Grayson Kirk, president of Columbia University in New York, who liked the idea very much. The head of the University of Chicago also was impressed with the idea.

"He took me to a window and showed me the tower of a building," Weingarten said. "He told me, 'That's where the atom bomb was born. And sometimes I can't sleep so well at night when I think what I may have done to the human race. A chair for world peace at the university here may help the human race not to destroy itself.'"

He found equal interest at the University of California in Los Angeles. The University of Hawaii felt the world peace university should be established on its campus, because they felt they were at the cross roads between East and West.

The response to the Weingarten project also was favorable in Japan. "Over there, they know what nuclear war is," he pointed out. He added that the head of the University of Hong Kong "was all hepped up over the idea."

"They thought it would be good to have the world peace university right there, because of the proximity of Red China," he said.

Favorable comment also was heard in Thailand and India. The vice president of India told Weingarten that Parliament recently approved the Gandhi Institute for Peace to be established at New Delhi in memory of the Indian leader. "They will keep me advised on their progress," Weingarten said.

In Israel, the Weingarten plan also was well received. Weingarten met with Prime Minister David Ben-Gurion. It was his fourth visit to Israel. Jerusalem previously had been suggested as one of the possible sites for the proposed world peace university.

In Switzerland, Weingarten found a famous surgeon-educator who offered to work for the world peace university. "He told me he operates in the mornings, but if we could get this university established, he would devote his afternoons to it for the rest of his life," Weingarten said.

In Rome, Weingarten was received by the Pope. He handed the pontiff a letter about the university project and copies of his published messages. "I talked to the Pope through an interpreter," Weingarten said. "But he told me, in Italian, that during my next visit he hoped to be able to talk to me in English. He said he was taking English lessons."

Summing up the problems and promise of his project, Weingarten made these points:

1. A top educator of international reputation will have to be found to head the university.

2. A climate for world peace must be created.

3. The task of financing the proposed institution won't be too hard a job once we get something started to produce some results.

4. The university would have to be run by a worldwide board of trustees, backed by a faculty representing a cross section of educators of the world.

Weingarten observed finally, "People seem to have a defeatist idea about world peace. They think only in terms of Ike, or Khrushchev or the United Nations. But I think there is a third force—public opinion."

Weingarten's statement about the next step toward implementation of his plan was made to a Post reporter following the luncheon.

[From the Houston Chronicle, July 23, 1959]

WEINGARTEN HAS PEACE PLAN

In seeking to get an organization started for his plan to promote world peace, Houston's Joe Weingarten is showing sound judgment in wanting to keep his plan completely disassociated from any existing organizations which have political aspects or implications. He wants his plan to be implemented by the people of the world who sincerely crave peace.

Weingarten, board chairman of J. Weingarten, Inc., food stores, has just completed a trip around the world to promote his plan. He said he received enthusiastic support for it from educational, political, and religious leaders in many countries.

Weingarten wants to have established a central University for World Peace, possibly in Geneva, Switzerland, and institutes of world peace in universities all over the world. He wants to reach young minds and, through them, to influence the governments of the world toward peace.

The Houstonian is well aware that if his plan becomes associated with any ideological movements, it will be seriously impeded from the start. Freedom is an essential ingredient of peace. A plan which exalts a free way of life is likely to be more attractive to the peoples of the world than a program which seeks to buy their friendship with money and goods.

[From the Houston Post, July 22, 1959]

JOE WEINGARTEN'S PLAN: EDUCATE FOR PEACE

Joe Weingarten, a practicing altruist, has a vision of universal peace, and a practical concept for its realization. He envisions the founding of a central World Peace University, perhaps in Geneva, Switzerland, which is a sort of world peace capital, and the establishment of peace institutes at leading universities throughout the world.

On a recent world tour, advancing his project, Mr. Weingarten received strong encouragement from distinguished educators and government officials. They recognized the basic principle behind it, which was expressed in full-page newspaper advertisements on January 1, 1958, explaining the plan for a University for Peace: "We must start learning to live together or be prepared to die together."

Men have emphasized the need of educational training in the sciences which produce the nuclear weapons of war. We have government-operated academies for training youth in the bloody arts of war. There is a United Nations for the settlement of troubles between nations after they develop. But nothing to train men for peace. Surely the conduct of many nations has demonstrated the need for some such training.

Why not a Peace University?

Joe Weingarten has worked long and selflessly in pursuit of his humanitarian vision. He has spent much time and no little money on it, and every ounce of energy spent, every hour of time, and every dollar, have been for the good of mankind. The next step will be the appointment of an organizational steering committee. Then the actual translation of the vision into reality will begin.

There is a great, worldwide need for some force, some agency, to condition people for peace on earth. No one has ever before offered a practical plan or made a major effort to effectuate one. Maybe Joe Weingarten has it. May he enlist the support necessary to put it into effect.

[From the Houston Press, July 25, 1959]

MAN WITH A DREAM—DON'T BET AGAINST IT BECOMING A REALITY

DEAR PRESS READERS: Here's my nomination for the Houston Man of the Week: Joe Weingarten.

Make no mistake about it, this world was made by the dreamers.

We're where we are because a few men in every generation had the imagination to foresee a project of staggering size—and then were such idealists that they set out to accomplish what the so-called practical men of little courage would say was impossible.

I was privileged to sit in on a little meeting of newspaper, radio, and TV men this week to hear Joe Weingarten in his quiet, modest way tell about a trip he has just made around the world.

Joe wasn't just going around the world on a sight-seeing expedition—though when you hear Joe talk you know he kept his eyes completely open and saw plenty.

What Joe was really doing was carrying an idea around the globe.

As has every man in this day of the A-bomb and the H-bomb—the guided missile—and the armed satellite—Joe has been doing a lot of thinking about the horrors of modern war.

As all of us acknowledge, no gift on earth can compare in value to the simple gift of peace.

But where there are millions of us who think of the horrors of modern warfare—and pay lip service to the ideal of peace on earth and good will to men—there are only a handful of us who have ever thought that we could do anything much about it.

Joe Weingarten is one of that little band—an idealist—a crusader, if you please, who has decided that he—Joe Weingarten—a business man here in Houston, Tex.—just one man—and far removed from the places where men of high rank in government and diplomacy ordinarily gather to play the chess game of war and peace—that he might come up with the idea that would tip the scales to peace when the decision to go to war or to try to work out the problem by negotiation hangs in dread balance.

WORLD-PEACE UNIVERSITY

Joe first made public his idea back on New Year's Day in 1958—in a full-page advertisement in the Houston Press and other Houston newspapers and in newspapers in other cities where there are Weingarten stores—thus talking to homefolks.

The ad was headed: "In This New Year of 1958—We Must Start Learning to Live Together Or Be Prepared to Die Together."

In it he broached the simple idea of establishing a worldwide university dedicated to the search for world peace with chairs for world peace in universities in every section of the globe.

One paragraph and a portion of a second paragraph of Joe's original message carried the heart of what Joe wanted to ask thinking people everywhere—

First, said Joe:

"Why not start a worldwide university dedicated to the search for world peace—to be established by one of our great religious seminaries—Protestant, Catholic, Jewish—because faith in God must be wedded to science and research—if we are to find the Lord's true answer to peace and friendship among nations? The alternate will be war and destruction."

Then, ever the practical man and knowing that even the greatest project must take a first short step, Joe added:

"Why not make even a modest start right now in one of our great schools right here in Texas by setting up a 'Chair for World Peace' and naming an outstanding educator to head it?"

OFFERING A PRACTICAL HOPE

Joe's idea not only hit a nerve of worry in hundreds of people—it also struck many of them that here was a man who not only saw the problem but was offering a practical hope that something could be done about it.

Hundreds of people wrote Joe Weingarten. And this encouraged him to do more.

So, Joe set out to be a part-time salesman of the idea—or maybe the word "missionary" would better describe his role. Wherever business took him, Joe took time out to talk with top people—particularly leading educators—about his idea. And most of the people who heard him were immediately intrigued.

But still Joe wasn't satisfied that this was enough.

Earlier this year he and Mrs. Weingarten decided to take a trip around the world, and as Joe says:

"When we had decided to go, it occurred to me that this was a marvelous opportunity to see how others in other lands felt about this idea."

I am not going to recount Joe's experiences on this unique "Trip Around the World With an Idea." Jack Mohler, Press staff writer, did that in Tuesday's Press and I certainly want to give a word of praise to Jack. I thought he did one of the best jobs of reporting and writing on this that I have read in a long time.

Let it be enough to say that Joe saw great educators, government leaders, newspaper editors, and men of influence and ideas in Hawaii, Japan, Hong Kong, Siam, India, Israel, Turkey, Italy, and Switzerland.

And to climax the trip—and to give you some measure of Joe's determination and ingenuity and how doors seem to open almost miraculously for a man with a real idea—Joe got a semiprivate audience with Pope John XXIII and was able to give the Pope the gist of his dream and leave some material with him for further consideration.

WOULD BET AGAINST HIM

We don't know whether or not Joe will ever see come into being his great world university dedicated to the cause of peace—

It may be that he will never get his chair, or institute, of peace in even a single university—

But knowing Joe Weingarten—and particularly after hearing him tell in his quiet, modest way what had already been done and what men around the world think about it—I wouldn't want to bet that Joe's idealism will not some day turn this "impossible" dream into a "practical" reality.

And no matter what comes of it in a physical way, the dream already lives—much has already been done—even the thought that Joe Weingarten has spread is a ray of light added to the little beam of hope that shines—even though dimly—wherever there are men who know that all mankind must not be cremated in the fiery furnace of the H-bomb.

We said at the start of this letter to you that the world we know had been made by the dreamers.

That same world will have to be saved by the dreamers.

And Joe Weingarten is one of that goodly company.

HOUSE SIMPLE RESOLUTION 36 OF THE TEXAS HOUSE OF REPRESENTATIVES

Whereas a distinguished resident of Harris County, Tex., Mr. Joe Weingarten, has just returned from a trip around the world on which he, as a private citizen, strongly advocated the cause of world peace in personal contacts with governmental and religious leaders in Japan, Hong Kong, Thailand, India, Israel, Italy, Switzerland, and other countries; and

Whereas Mr. Weingarten encountered a warm reception wherever he traveled; and

Whereas this highly successful Houston businessman has proposed a twofold approach to the spreading of good will, including, first, the establishment of a new university devoted to world peace, and, second, the endowment of professorships in world peace at existing universities in all parts of the globe; and

Whereas Mr. Weingarten envisions this educational program as a movement of people, rather than of governments: Now, therefore, be it

Resolved by the House of Representatives, 56th Texas Legislature, That Mr. Joe Weingarten be recommended for his active interest in the cause of world peace; and be it further

Resolved, That, although public funds are not available for such a project, the house of representatives invites the attention of all concerned to the desirability of establishing, by private donations, the aforementioned international University for World Peace within the borders of this freedom-loving State; and be it further

Resolved, That the idea of privately endowed professorships of world peace at public and other institutions of higher education, to be established in strict consonance with the policies of the various colleges and universities, is hereby enthusiastically endorsed by this house; and, be it further

Resolved, That a copy of this resolution be forwarded to Mr. Weingarten with the congratulations and best wishes of the house of representatives.

The President's Commendable Recognition of Inequities of Retired Military Officers' Pay

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

MR. YARBOROUGH. Mr. President, continuously since this 86th Congress convened, I have joined with others in pointing out the inequality of the current pay plan for certain retired military officers. I am cosponsor of a bill to equalize the pay plan.

The President has recently said he favors equalization of the retired officers' pay. I would like to commend the President for this statement and for his recognition of an inequity which we have been laboring to correct.

The military pay bill, passed in 1958, provides that members of the Armed

Forces who retired after May 31, 1958, will receive pensions based on a percentage of the current pay of persons on active duty. This is higher than the straight 6-percent increase which was granted those who retired prior to that time. The bill which I am cosponsoring to correct this, carries out the recommendation of the Cordiner report and has been endorsed by an overwhelming number of veterans' groups.

The convention of the Department of Texas of the American Legion recently unanimously adopted a resolution on this subject submitted by Roy A. Pennycook, commander of Business and Professional Men's Post No. 10 in San Antonio, Tex.

I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the American Legion, Department of Texas, assembled in convention at San Antonio, Tex., on July 26, 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the President of the United States, Dwight D. Eisenhower, has announced publicly on July 20, 1959, that he favors the equalization of retired pay for all members of the Armed Forces, and plans to include that appropriation in his budget to be submitted to the Congress in January 1960; and

Whereas the passage of such legislation will serve to restore and bolster the morale of our members of the Armed Forces: Now, therefore, be it

Resolved by the American Legion, Department of Texas, in convention assembled in San Antonio, Tex., on this 26th day of July 1959, That President Eisenhower be publicly commended for his action in this matter, and that all Members of the Congress from Texas be presented with a copy of this resolution.

Further Diversion of Water From Lake Michigan

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. WILEY. Mr. President, on Friday of last week, a subcommittee of the Senate Committee on Public Works held its final hearings on H.R. 1 and S. 308—to authorize an additional diversion of 1,000 cubic feet per second from Lake Michigan. I appeared before the subcommittee in opposition to these bills, and it is my sincere belief that the bills to authorize temporary diversion of more water from Lake Michigan are merely an excuse for more and a permanent diversion of such waters.

I believe that the water diversion bills are unjustified and without merit. The Chicago Sanitary District, which has continuously been pleading for increased diversion from Lake Michigan in order to meet existing sanitary needs, has in recent years undertaken a tremendous territorial expansion program, which by necessity makes the present

sewage treatment plant inadequate. The sanitary district has increased its territory 81 percent from 1954 to 1958 and because of the resultant fall in sanitary efficiency, Chicago wants more water and is now coming to Congress for aid. But more water diversion from the lake is not the solution. Despite all of Chicago's diversionary tactics it is obvious that more and better plants are the only answer.

I believe that Chicago Sanitary District's argument lacks merit both in law and in equity. And since a special master was appointed by the Supreme Court on June 28, to consider the facts in this case, I believe that it would be ill-advised to authorize diversion of additional water at this time, since such diversion would alter the facts in the case. An additional diversion will be contrary to the best interests of all other Lake States, and the use of lake waters for the flushing of sewage will certainly be an uneconomic and unsound utilization of this gift of nature.

I ask unanimous consent that a telegram sent to Senator KERR, chairman of the Public Works Subcommittee, by Mr. Zeidler, mayor of Milwaukee, and by Messrs. Harry Slater, deputy city attorney, and Harry Brockel, municipal port director, voicing Milwaukee's opposition to any further diversion, be inserted in the Appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

AUGUST 7, 1959.

HON. ROBERT S. KERR,
Public Works Committee,
U.S. Senate,
Washington, D.C.:

We join with our Honorable Senators ALEXANDER WILEY and WILLIAM S. PROXMIRE in vigorously protesting the passage of H.R. 1. Their able and valiant fight on behalf of millions of people who oppose additional water diversion is enthusiastically supported by the city of Milwaukee. Issues have been clearly defined in brief filed with your committee by Senator WILEY.

Although the opposition of Canada to the passage of legislation having for its purpose diversion of additional water from Lake Michigan by Chicago is already evident and passage would have an effect upon our relationship with our neighbor, it is strikingly evident that the internal opposition to that same legislation which would divest many millions of people of their fundamental rights to equal use of a natural resource which is held in trust for all as against a small segment of the population should motivate both the committee and the Senate to reject this bill.

The old tune which Chicago constantly plays on the heartstrings of anyone who will listen concerning their dire need for diversion, rather than accept their municipal responsibilities to deal adequately with their own sewerage problems, has lost all sense of merit or melody. It is unfair to the busy activities of Congress and to the millions in opposition to repeat this theme constantly in the hope that a lack of alertness to the evils of this type of legislation may succeed in giving one area an inequitable and unfair advantage over an entire region relying heavily upon the advantages which this great natural resource affords in navigation, fisheries, commerce, water supply and recreation. All these vital fields of public interest would be trespassed upon by this bill. The Great Lakes States and 50 million people resi-

dent in the Great Lakes watershed rely upon the Senate to protect their Constitutional rights and to reject the special privilege demanded by the State of Illinois for the benefit of a few.

For more than 50 years, Milwaukee and the State of Wisconsin have fought to preserve the vital water resources of the Great Lakes for the general good of our great country and our neighbor. Increased diversion of water from the Great Lakes, if sanctioned by the Senate, will impair the efficiency of navigation and of harbors; will threaten the limited fishery resources remaining in this area; will frustrate recreational uses; and above all will detract from the full use and operation of that great international navigation and power project, the St. Lawrence Seaway at a time when many hundreds of millions of dollars have been and are being expended to make this great facility as beneficial as it can be to the great region which it serves. It is unseemingly that efforts would be made to impair its full usefulness through further water diversion.

It should be pointed out that the principal demand for diversion comes from municipalities and governmental agencies in the Chicago region. If their desire for diversion is to flush raw or untreated sewage down the Illinois waterway, this will create a nuisance and a health problem for all of the municipalities and communities along this waterway, probably as far as St. Louis. It is curious to us that the great State of Illinois should be insensitive to the needs of the communities along this waterway by promoting diversion for sewerage purposes. Rather public officials and the State itself should demand that the Chicago area treat its sewage in the most modern and efficient methods possible, stop dumping sludge and meter the water supply of Chicago so that the sewage problem will be greatly reduced.

If a precedent is established and sanctioned by the Senate permitting one locality to take more than its equitable share of water from the Great Lakes, the flood gates will then be open to any and all communities to make similar demands. Where will this then stop, and how will it be stopped if the precedent for further diversion is approved? We are fighting to preserve the Great Lakes as an international water resource. This fight is not only for the present, but the future generations. Many incipient demands for extraction of water from the lakes are being formulated at this very moment, and courageous action must be taken to safeguard this resource for present and future generations.

We will appreciate full text this statement being incorporated in record of hearing on H.R. 1.

FRANK P. ZEIDLER,
Mayor.
HARRY G. SLATER,
Deputy City Attorney.
HARRY C. BROCKEL,
Municipal Port Director.

Attention, Congress: Consider the Death of Roy Underwood

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 11, 1959

Mrs. ST. GEORGE. Mr. Speaker, as we start our deliberations on the labor bill, I can think of no better reading than

"Attention, Congress: Consider the death of Roy Underwood."

This is the leading article in the Reader's Digest for August. It is the story of a union member, highly considered in his union, who, in the end died for the right.

Mr. Speaker, I know that it will be objected that this is an exceptional case. The reply to this objection is that in a free country such as ours exceptions like this should not exist. In a time when our whole philosophy is on trial we cannot afford to allow such exceptions to be shown to the world.

This Congress has a great opportunity to pass a strong and just labor bill. The American people expect and want just that.

Mr. Speaker, in the words of our great President, who is not easily provoked: "I want that sort of thing to stop."

ATTENTION, CONGRESS: CONSIDER THE DEATH OF ROY UNDERWOOD

(By Lester Velle)

On a windy hill outside Philadelphia early last April, an undertaker's assistant scattered the still-warm ashes of Roy Underwood. Thus ended in tragic martyrdom the life of a valiant union man who had merely dared to seek for his fellow workers, a few basic civil rights. His tragedy is a scathing indictment of Congress, of the National Labor Relations Board, of the courts, and of the good unions for their current apathy—for their failure to provide protection for the members of a few bad unions against repression by their leaders.

Roy Underwood was a spectacled man in his early fifties, full faced, and ample of girth. Had he been a printer, or a plumber, or a member of some equally upright union, he would undoubtedly have been one of America's important union leaders, for he was a dedicated union man and the sort of man other men follow. But Roy Underwood, a crane operator, was fated to be a member of the Operating Engineers. And so he was doomed to make the most frustrating of all struggles: the fight against evil masked as unionism and defended by men commanding entrenched power.

The things which Underwood laid down his life to win were things all of us take for granted: the right to assemble and speak out freely; the right to elect those who will rule and tax us; the right to seek redress against injustice. In the debate now raging over labor reforms, his story becomes exhibit A in the case for urgent action to win for union citizens the rights they presumably enjoy as American citizens.

I first met Roy Underwood 5 years ago when I was piecing together the fantastic story of Joe Fay, the Operating Engineers vice president who had gone to jail for extortion but continued to rule his union empire from prison. Underwood was then the picture of the happy warrior. He was in a fight, and his round face exuded the confidence of the born leader. His international president, a crony of Joe Fay, had booted him out of his job as president of a local, and out of the union. The international president had then plunged the local into a species of union martial law known as "supervision," and Underwood was suing in the Philadelphia Federal court to win reinstatement for himself, plus self-rule and an election for the duespayers.

Underwood had come to Philadelphia in 1937 and into a topsy-turvy Operating Engineers world. In the local, as ruled by Fay—and as was spelled out in McClellan committee testimony—wrong was right and right was wrong. It was right for business agents to extort 3 percent weekly assessments (over and above dues) from the members; it was

wrong for the members to ask about this at meetings—thugs patrolled the aisles and beat them up. It was right for Fay to make "soft," conniving deals with employers; it was wrong for the members to have a voice in the kind of contracts they would work under. It was also wrong for them to elect their own officers, because the union had been under "supervision" as long as the oldest member could remember—and Fay was the supervisor.

Underwood formed a "Committee of Liberation" in 1945, and soon learned his first bitter lesson about trying to right wrongs inside a corrupt union.

He found that he must exhaust every means of obtaining justice within his own union before he could appeal to the courts. This meant that in the Operating Engineers he had to appeal to the men who were responsible for his plight. For it was with the connivance of Fay's crony, the international president, William Maloney, that Underwood's local remained under supervision. And, under the Operating Engineers' constitution, it was Maloney to whom petitions for relief had to be addressed.

When Underwood's committee of liberation tried to get members to sign petitions, Fay's toughs beat them up and tore up the petitions. When Underwood's men got the petitions signed anyway—at clandestine night meetings in members' basements—Maloney ignored them.

After several months Underwood and his followers obtained a lawyer and, in 1947, sued for union self-rule in the Philadelphia court of common pleas. Miraculously, they got away with their suit—for a while. Maloney was in no position to fight, because Joe Fay, to whom he had entrusted the lives and fortunes of the 2,000-odd men in the Philadelphia local, was on his way to jail. Fay and his henchmen had kept no records of an estimated \$3 million collected in assessments and permit fees. Written contracts with employers had said one thing, but (as subsequent arbitration hearings proved) verbal agreements resulted in softer conditions. It was a system of built-in corruption in which the local's business agents got paid off for overlooking the contract.

To avoid airing this mess, Maloney settled with Underwood. The rank-and-filers could have their union back provided they didn't sue Fay and his boodlers for the missing money. So, in a court-supervised election, Roy Underwood was elected president of the local. He proceeded to bring back clean unionism.

Underwood and his regime were living on borrowed time, however. President Maloney could no more permit free rule in Philadelphia than Khrushchev could permit freedom in Hungary. For Underwood's local was an island in a sea of union corruption: two of Maloney's locals in Chicago had been under union martial law for 23 years; the New Jersey local was still under the thumb of Joe Fay, although Fay was in prison; the Long Island local was run by one William DeKoning, Sr., who was soon to go to jail for extorting from his members.

Restive members in these locals might get ideas from Underwood's free union. Worse still was Underwood's threat to the rotten fabric of collusive agreements between Operating Engineers officials and favored employers.

When Underwood tried to make one big contractor live up to the Philadelphia-area agreements, he got an angry call from Maloney. "Stay away from him—the contractor"—the international president ordered, according to McClellan committee testimony. "He is a friend of mine, and that is all I should have to tell you."

When bitter wrangles over the contracts Fay had left behind him exploded into a prolonged strike over wages and conditions, Maloney stepped in and took the union away

from Underwood and the members. Underwood was tried by a union board controlled by Maloney and dependent on him for union jobs. Under provisions of the union constitution, he was fined \$3,500 and suspended from the union for 6 years. Union martial law returned.

What broke Roy Underwood's heart now was the system of union and legal custom which gave him and his men no forum in which they might hope to win justice. As rebels, many of the Underwood men could no longer get work—jobs were largely controlled by the union hiring hall and by the supervisor's business agent. So, first, they complained to the NLRB. For a workingman who lives from paycheck to paycheck, however, justice that takes 2 or 3 years to get is no justice at all. And in the end only a handful could win their NLRB cases. How can you prove that a business agent has put pressure on a boss to keep you off a job? Where are you going to get the witnesses?

Underwood tried the Federal courts. Here there were 5 years of delay. His followers fell away. His wife had to go to work. The other side had no such problems. From the parent union's \$15 million treasury, contributed by the members, came ample money to hire lawyers. Against these, Underwood had but one lawyer, Abraham Freedman, who neglected his regular practice, gave his time free, and even dug into his own pocket to defray occasional expenses.

Underwood's day in court crushed him. He listened as the judge praised the local that he, Underwood, had run, and excoriated the terrorists who had taken over. But the court would not interfere in a union's internal affairs, provided the union gave complaining members a fair trial. And Underwood, said the court, had had a fair trial.

Underwood didn't know whether to laugh or cry. Fair trial? Was it a fair trial when the union boss whom he fought—William Maloney, who, as Senator McClellan told his committee, had risen to power with gangster guns—had tried him with his own executive board? Was it a fair trial when the charges were that he had spread defamatory literature—the papers in his suit against Maloney? Even more, should Underwood have had to stand trial by his union at all—for going to court to prevent Maloney from intervening against his own members in a strike?

"It is crystal clear," the judge summed up, "that under the leadership of (Supervisor) Hunter P. Wharton . . . there will never be a chance for decent operation (of the Philadelphia local)." But the judge held: "The courts do not look with favor upon interference by the courts in the internal workings of any . . . labor organization." In effect, the judge ruled: There is a grievance, but I can't help you.

"When Roy came home from the court," his wife told me, "he looked like a licked man. 'All those years of fighting, and where do you wind up? I'll never believe there's justice in the courts,' he said."

Now, alone in his home, Underwood brooded. Evil seemed to be inheriting the earth—and legally.

Joe Fay, out of prison, had been rewarded by his old local with a lifetime pension of \$10,015 a year—after taxes. To give him additional cash, some locals also bought their limousines through him.

William Maloney had quit his presidency rather than face questions by the McClellan committee about the contents of 11 secret safe-deposit boxes. But no civil or criminal suits followed. Now he lived in happy retirement on his estates outside Chicago and in Florida.

Hunter P. Wharton, supervisor of Underwood's Philadelphia local, who had been excoriated in court and before the McClellan

committee as a harbinger of terrorists, continued as the local's boss. More, he was elected secretary-treasurer of the parent union on a clean-up slate.

"Never fight the rackets as I did," Roy Underwood said to his 16-year-old son, Roy, Jr., on the morning of last April 3. "You can't win."

These were among the last words he uttered. When his son had left for school, and his wife for work, Roy Underwood methodically burned the bushels of papers, clippings, legal documents that had accumulated during his 14-year fight. He typed a note to his wife, and his hand shook so with exhaustion that he couldn't sign his name. Then, utterly defeated, he went into his garage and shot himself.

I went to Philadelphia after Roy Underwood's death and made my way, uninvited, into a meeting of his old local one night. Some 600 men had crowded into the basement auditorium of Philadelphia's Town Hall to hear the wages and conditions that the supervisor and his business agents, none of them elected, had accepted from the contractors.

There had still been no election after 9 years, for on the rostrum was a chairman whom the supervisor had chosen, presumably for his leather-lunged ability to shout down the heckling from the floor. The same old crowd that had been involved in brutal beatings of Underwood's men still dominated the proceedings on the floor. All around me men grumbled to each other about the terms of the contract hurling occasional four-letter epithets at the chairman. But, when the time came to be counted, few stood up to indicate their opposition openly. The old fear of antagonizing men who hold your livelihood in their hands prevailed.

I talked to a remnant of Underwood's followers and found that the old pattern of discrimination against "troublemakers" was still making it difficult for them to get work. And a union member who had briefly held office as a business agent disclosed that the old system of built-in corruption in which employers paid off for their relief from the hard provisions of a contract still flourished, too. When the ex-business agent, an honest man, sought to confer with a contractor about his labor needs on a new job, he found the contractor closeted with the local's acting supervisor, then under indictment for extortion, and now dead. Employer and acting supervisor worked out their own deal for conditions on the job.

"Don't stick your nose into things that aren't your affair," the ex-business agent was told by the acting supervisor.

It was as if Roy Underwood had never lived.

But can Americans let the Underwood story end this way?

"The International Union of Operating Engineers stands out as an ugly example of ruthless domination of workmen through violence, intimidation and other dictatorial practices," the McClellan committee reported a year and a half ago. The committee's declaration that "democracy within this union is nonexistent" and that "there has been extensive collusion between union officials and management" went to the AFL-CIO's Ethical Practices Committee for investigation. The AFL-CIO has before it a report that has been gathering dust since August 1958.

It is this kind of apathy, delay and postponement that destroyed the hope, the fight and finally the life of Roy Underwood.

AFL-CIO leaders argue that no written guarantees are needed to protect the rights of the union man. His own union constitution—enforceable as a contract in court—protects him, they say. This the life and death of Roy Underwood contradict.

A bill of rights for the union man is urgently needed. How long will Americans stand by without establishing this protection?

U.S. People and Khrushchev

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Mr. David Lawrence which appeared in the Washington Star on Thursday, August 6, 1959:

U.S. PEOPLE AND KHRUSHCHEV—CITIZENS' DISSENT AGAINST VISIT BY DICTATOR HELD CONSTITUTIONAL RIGHT

(By David Lawrence)

Do the people of the United States really want Nikita Khrushchev to visit this country? President Eisenhower assumes that they do. The Governments of Sweden and other Scandinavian countries recently issued a similar invitation, but the Soviet Premier, after accepting it, decided not to go there because it was evident the people didn't want him to come.

What happened in Sweden between the time the invitation was extended and the announcement that Khrushchev had given up the idea for the present? A letter from Dr. Bela Fabian, written from Geneva a few days ago, tells the story. He is chairman of the Federation of Hungarian Former Political Prisoners and was in Sweden at the time of the planning for the visit of the Soviet Premier. Dr. Fabian writes:

"Naturally, Major General Zacharov, deputy chief of the Soviet security police, knew that the August committees were preparing mass meetings and demonstrations. In Sweden 10 meetings were to be held simultaneously on August 13. The one thing he did not know was whether the Swedish people would demonstrate by ostentatiously staying at home, so that the streets would be empty and there would be no one there except the police, or that there would be enormous crowds who would turn their backs on Khrushchev."

Dr. Fabian writes that the August committees contained a large number of members, among them prominent intellectuals, several Nobel Prize winners, university professors, and writers. Many student organizations were represented.

Already there are varying points of view in this country as to what the reaction of the American people will be in the cities to be visited by Khrushchev. Certainly any disorderly demonstrations would only result in worldwide criticism on the theory that the Americans were not as courteous to the Soviet Premier as the people of the Soviet Union have been toward Vice President Nixon. But inside the United States—unlike the situation in the Soviet Union, where everything is controlled by the Government—the people have a right under the Constitution to speak. They have a right to picket peacefully, if they like, with placards expressing their ideas.

If the Scandinavian plan were put into effect in the United States by boycotting the parades or by viewing in silence the public events where Khrushchev makes his appearance, an orderly protest could be registered.

There may be some in this country who are willing to "let bygones be bygones," but

among the hundreds of thousands of Americans who came here originally from the lands which now are held captive by the Communist dictatorship there will be no suppression of emotions. Their point of view toward the Moscow autocracy which has ordered the murder or exile of so many innocent people in the last several years is deeply rooted. They cannot forget.

It is true that after wars are over friendly feelings toward former enemies often are developed. But the governments which ruled in Nazi Germany, in militaristic Japan, and Fascist Italy have been removed and free governments established. No such change has occurred in Moscow, where the same kind of regime is in power today as the one that broke the pledges given at Yalta in 1945 and at Geneva in 1955.

"Khrushchev's criminal record exceeds all," wrote Dr. L. E. Dobriansky, professor of economics at Georgetown University, in a letter to President Eisenhower dated July 31. The Georgetown professor was the originator of the resolution adopted by Congress to proclaim Captive Nations Week. Expressing the hope that Khrushchev would not be invited to America, Professor Dobriansky added:

"It is patently naive to believe that a visit by the 'hangman of the Ukraine' would add anything to what he already knows about our country. . . . Moral principle alone should dissuade us from conferring respectability and legitimacy to a dedicated enemy, the attributes he desires in order to extend his empire."

There is talk now of arranging a parade of hearses in each American city where Khrushchev appears. On each hearse would be placarded the statistics of the number of persons murdered or exiled from each of the 14 captive countries in recent years. This is one type of orderly demonstration.

Another which is being suggested is that memorial services be held throughout the Nation to carry out the spirit of the resolution in behalf of the captive nations adopted overwhelmingly last month by both Houses of Congress. Nationwide prayers for the liberation of the captive peoples, as well as memorial tributes to the many who have been enslaved or killed by the ruthless Communist dictators, would at least let the rest of the world know that, however polite the Government has to be to any visitor, the people here have the right of free speech. They can express their dissent from the position of their Government, which has invited to free America at this crucial time the man who has threatened war unless the Western forces surrender Berlin and who has never withdrawn that threat.

State Income Taxes on Out-of-State Corporations

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mrs. KEE. Mr. Speaker, recently I introduced legislation to prevent States from levying an income tax on a company that solicits business in the State but has no stock of goods there.

I am pleased to note that just last Thursday the Senate Finance Committee approved a bill similar to the legislation I proposed. I sincerely trust that the House Ways and Means Committee will

also give prompt attention to this legislation.

A recent decision of the U.S. Supreme Court makes it imperative for the Congress to act. This decision sanctioned the application of a State income tax where no office is maintained in the State.

This decision, Mr. Speaker, threatens business and industry with a chaotic condition unless it is corrected. It means that the door has been opened for all the States to amend their tax laws to assess income taxes on out-of-State corporations even if the corporation's sole activity consists of the solicitation of orders.

It is difficult to think of almost any type of business which could escape this new form of taxation.

The implications of the Supreme Court decision are far reaching. It needs to be studied carefully. Senator BYRD has said he regards the bill reported out by his committee as stopgap legislation while Congress carefully reviews the problem and all of its ramifications.

I sincerely trust that the Congress will not adjourn without dealing with this serious yet little understood problem.

Tribute to Former President Herbert Hoover

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. WILEY. Mr. President, yesterday Herbert Clark Hoover, the 31st President of the United States, celebrated his 85th birthday.

Throughout the Nation, well-deserved tributes were paid to the former President in recognition of his long and honorable career.

Although there are conflicting views on his Presidency, even those who disagree with him maintain a high respect for the honesty, intelligence, and devotion with which Mr. Hoover has continued to serve his country.

I well recognize, of course, that it is not possible to summarize in a brief statement his 85 years of service to our Nation.

During his lifetime—as a mining engineer, expert organizer, businessman, and humanitarian—however, Mr. Hoover has made highly significant contributions to our country's progress and foreign policy.

As an example of his work, we recall that in recent years the special commissions headed by Mr. Hoover have made unique contributions to promoting efficiency and economy—as well as savings—in operation of the Federal Government.

Recently, a bill, S. 1711, was reported by the Senate Foreign Relations Committee to establish a fund for peace program. Among the great forerunners of

this idea of utilizing our food for humanitarian purposes, not only in this country but abroad, were the programs headed by Mr. Hoover. During World War I, he served as Food Administrator in the United States. After the armistice, he took charge of the American Relief Administration, which delivered millions of tons of food to Europe and saved thousands of lives.

These are examples of only two of the magnificent ways in which Mr. Hoover has devoted his time and energies to worthwhile programs.

Although he served as the Republican President—during which he significantly took the unprecedented action of "voluntarily cutting" his salary by about 20 percent—he has continued to serve his country in a bipartisan, statesmanlike manner under both Republican and Democratic administrations.

Yesterday, August 10, 1959, the New York Times published an article on how the ex-President—a man who has never retired—is carrying on active work and interests in a wide variety of fields. I ask unanimous consent to have the article printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 10, 1959]
TOO BUSY FOR ILLS AT 85: HERBERT CLARK HOOPER

Herbert Clark Hoover reaches his 85th birthday today, alert to the problems of the world, the standing of the baseball clubs, and intent upon substituting work for pills. He has made one concession to his advancing years. He rises now at 7 a.m. instead of 6. The years have been kind to the former President. His silver hair has thinned somewhat, and his worsened hearing has made him dependent upon a hearing aid, but his general physical appearance has changed little in the last few years. His step is steady, his shoulders square.

Headquarters for Mr. Hoover's many activities is a 31st floor suite in the Waldorf Towers, a combination of offices, stacked with filing cabinets, and quietly luxurious living quarters.

WORKS WITH STAFF OF SIX

A staff of six women, all under the command of Miss Bernice Miller, who declares she "never tells the chief what to do," helps the former President handle his correspondence, carry on the duties that go with "active" membership on many boards of directors, and do the research necessary for Mr. Hoover's seemingly endless literary output.

Despite his concern with many serious projects, Mr. Hoover has never lost his interest in sports, both as a spectator, and as a participant.

In reporting on the uncompleted tasks before him at a pre-birthday interview last Friday, he listed among them "attending baseball games." And the next day he attended one, as a guest of honor of the Yankees—the annual Old Timers' baseball game.

His interest in baseball dates to sandlot days in West Branch, Iowa, where he was born, and in Salem, Oreg., where he lived in his teen years.

When he entered Stanford University, he confesses, it was with the hope of getting a berth in the varsity nine. After his first game, the coach told him, "You'd make a better manager than a shortstop," and his professional career ended there.

FISHING FOR RELAXATION

Mr. Hoover has not been trout fishing this year. But he got in considerable bone fishing on his yacht, *Capitva*, during a 2-month vacation in Florida last winter.

Such excursions are only interludes in the otherwise busy life of a man who never retired.

"Those who retire without some occupation can spend their time only in talking about their ills and pills," he says. "And the other fellow wants only to talk about his."

As a former engineer, one of Mr. Hoover's chief concerns is that the country is falling behind in the training of engineers. He keeps tab on comparative figures and is alarmed at the larger number being trained by the Soviet Union. He, reportedly, suspects that part of the problem is created by high schools under the spell of "progressive" education.

In recent years, the Boys Clubs of America movement has become one of the former President's chief interests. He is proud that under his leadership the number of units working with boys, mostly from underprivileged surroundings, has grown from 130 to 526. He is the board chairman of the organization.

An average day's mail brings in about 250 letters, which will include several requests to speak at public gatherings. Many of the letters are returned by Mr. Hoover with his reply jotted on them. He has curtailed his public appearances somewhat but has made between fifteen and twenty major speeches in the last year.

WRITES OWN SPEECHES

One engagement he accepted was as President Eisenhower's representative at the World's Fair in Brussels. He writes out his speeches in longhand.

The former President works at a large mahogany desk in a corner of a 40-foot living room. Scattered conveniently about are trays crammed with large kitchen matches, which he uses to keep his pipe lighted. On an end table beside his favorite chair for relaxing is a rock almost as big as a football. It serves for scratching matches and knocking the dottle from his pipe.

On a wall, catercorner from his desk, is an oil portrait of Mrs. Hoover on which his undimmed blue eyes often fall as he glances up from his work. When she died in 1944, she left a letter reminding her two sons, Herbert and Allan Henry, of their good fortune in having Mr. Hoover for their father. Both sons will be among the small group today that will help the Republican patriarch mark the midpoint of his eighth decade of life.

Address Delivered by Alex Cairns at Convention of International War Veterans' Alliance, Crookston, Minn.

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, August 11, 1959

Mr. YOUNG of North Dakota. Mr. President, during the first part of this month, the International War Veterans' Alliance held its annual convention at Crookston, Minn. This organization is composed of veterans from Canada and the United States and is dedicated to promoting comradeship among the representatives of these two great countries

who fought together in the common cause of freedom.

At this convention, which was attended by many delegates from my State of North Dakota, Mr. Alex Cairns, a prominent Canadian, delivered an inspiring and meaningful address attesting to the friendship and common understanding which exist between his country and the United States.

Mr. President, I think that Mr. Cairns' remarks are so noteworthy that I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS GIVEN BY ALEX CAIRNS,¹ OF WINNIPEG, MANITOBA, CANADA, AT THE ANNUAL CONVENTION BANQUET OF THE INTERNATIONAL WAR VETERANS ALLIANCE AT CROOKSTON, MINN., ON AUGUST 2, 1959

Following the First World War, American and Canadian war veterans living close to the international boundary, instituted the practice of paying fraternal visits—at the same time to cooperate with each other in memorial services. Sometimes these meetings would be for social and sporting events. As a result of that practice the International War Veterans Alliance was organized.

It was in the summer of 1937 that Col. Ralph Webb, then mayor of Winnipeg and president of the Canadian Legion in Manitoba, received an invitation from C. D. Loughlin, commander of the American Legion at Grand Forks, an invitation to attend an annual rally of the American Legion posts in North Dakota, and, asking Colonel Webb to address the gathering—and to bring with him a few Canadian exservicemen. The invitation was accepted and he arrived in Grand Forks accompanied by over 500 Canadians who had chartered a special train and several buses—and, of course, a large number went by auto.

Following the memorial service in the stadium a joint meeting was held in the Dacotah Hotel, the outcome of which was the unanimous decision to form an international organization of war veterans from North Dakota, Minnesota, and Manitoba. It was found on examination that the ideals of the organized war veterans in Canada and the United States were identical and it was felt that the genuine friendship and good will existing between the two groups as exemplified in such a united international organization would serve to influence all English-speaking people to the end that they would work toward that cherished goal—world peace. Its main purpose, however, was and still is the furtherance of the friendship and associations of United States and Canadian war veterans and the promotion of friendly relations between the English-speaking peoples of the world. That objective is now being brought closer by the march of world events as today we find the world divided into two armed camps—one

a solid land mass stretching from the Baltic to the China Sea—frankly organized for world domination. The other—made up of freedom-loving peoples working for peace—but united and determined to defend themselves against all aggression.

The struggle before us now is fundamentally one for men's minds. Much of the force now is the force of ideas which appeal to the aspirations of men's souls but with such ideas we can be free from panic and fear. The greatest mistake of the whole Communist idea is not its demand for new territories or spheres of influence—but rather its ruthless attacks on the freedoms of life and the liberties of the human spirit. You who have fought to preserve those liberties know full well that any force or idea which seeks to obliterate them cannot long survive.

After two catastrophes in our own time we look forward to a lasting peace and the world had the right to hope that there would now be some respite from conflict. In the Yalta agreement of February 1945 the following statement was made: "Only with continuing and growing cooperation and understanding among our three countries, and among all peace-loving nations can the highest aspirations of humanity be realized, a secure and lasting peace which will, in the words of the Atlantic Charter, afford assurance that all men in all lands may live out their lives in freedom from fear and want." The three countries referred to were the United States, Great Britain, and the Soviet Union.

There was nothing much said there regarding political theory and certainly there was no direct definition of democracy. The inspiration lay in the word "freedom," and the allies were fighting against a people who threatened them with slavery. They were more concerned with what they were fighting against than what they were fighting for and the crusade word was democracy.

I am reminded of the story told of a party of old crooks used as pioneers who were sent to an isolated point during the last days of the war and had no rumors of proceedings until armistice morning, when the young officer in charge received the all important message. He at once fell in the party, adjusted his monocle and read the news in a very grave and impressive tone. After he had finished there was a heavy silence, then an old Cockney sergeant stepped forward, "Beg pardon, sir," he said, "but 'oo's won?"

Well—now we know that in war today—no one wins. Somewhere, somehow there must be another approach to this whole problem of human survival, but such an approach will only be found in a willingness to common understanding throughout the whole world, a frame of mind which, unfortunately, is entirely unacceptable to the majority of mankind today. Our problem is one of words, thoughts, honor, and morality against the reeking tube and iron shard.

The world has become far more dangerous than it was when World War II ended. We now have mightier powers and deadlier weapons than were even thought of then. Disarmament has been proved a snare and appeasement a delusion and we must therefore build our security on preparedness, for the assault, should it come, will be swift and devastating, and we in Canada are not unmindful of the fact that in such an assault, we will be in the middle.

Today a deeper darkness lies upon the world, a confusion in which spiritual values and moral sense seem almost lost to whole nations. We now live in an age which is more responsive to the impact of ideas upon whole groups of people than ever before, and the world now appears to be in the midst of one of these great confusions which change the history of mankind every few hundred years. We are now reminded of the message

of King George in August 1945 when he said, "From time to time in a nation's history it is given to a few brief generations of men to determine the fate of their civilization. On their judgment and action depends the future of society for centuries to come. To the nobility of high endeavor, or back on the road to the barbarian from which they sprang. Today an immense responsibility is ours, we are the custodians of the future, we live in the beginning of a new age, an age that will fulfill the high aspirations of mankind, or another era of strife and discord in which the forces of evil may yet triumph. In many respects we find the tasks of peace even heavier than the burdens of war and only by unity can we conquer the anarchy that threatens the world at all times."

Every nation on earth therefore had a stake in the recent discussions of the foreign ministers at Geneva. There was little expectation that the Conference would reach agreement on any of the major issues concerning the future of Berlin, the reunification of Germany or European security, but it was felt that the talks could clear the way for future discussions by heads of state to reach a system of operation between East and West.

It is therefore significant of the times that such a movement as the International War Veterans' Alliance should be born among the exservicemen, a movement which should indicate to the world at large that the men who know what war actually means are moved to action in the interests of world peace, and if it be true that the fundamental cause of war today is economic, one cannot overrate the importance of an organization such as this. Modern war is nonetheless terrible because it is no longer waged to satisfy a monarch's pride or the injured dignity of certain classes of people and any scheme which would banish it from human life is worthy of the best efforts of the world's best men.

Not so long ago we cherished the hope that a new era had dawned upon the world, wherein a nation's signature to a treaty would be held as something sacred, and the international wrongdoer would be promptly suppressed by the collective power of those who lived within the law, but a survey of the world today suggests that this was merely a dream of man in his sanest mood and the indication is that might still dominates right and the only strength that can command respect from nations who venerate nothing else. At long last we realize that democracy must be strong if it would survive but tardiness in learning the lesson has been responsible for much humiliation in the past few years.

There is no need for our two countries to be beset by a narrow nationalism—we are too young in history for that sort of thing. Both the United States and Canada are inhabited by peoples who had their origins in older lands—but who have contributed to the development of their respective countries—and who—over the years—have merged in a great melting pot of human endeavor. Not limited by narrow national aspirations but searching out and maintaining all that is best of the old—and developing the new and wider outlook which results from pioneering in the wide unlimited spaces of new lands, lands in which a full reward for expended effort can be obtained. Uninfluenced by the history of past generations we have been permitted to establish a new heritage of which those who follow us can be justly proud.

Three times in our own generation the United States and Canada have stood side by side in repelling the tide of aggressive militarism—twice in conflicts of worldwide dimensions. Their objective was not territorial gain but merely to be able to walk upright in the sun—to speak freely—and to

¹ Mr. Alex Cairns was born in Scotland. Emigrated to Canada in 1907 at the age of 17. Served in World War I with the Yukon contingent in France. Commissioned to 12th Manitoba Dragoons in 1920. Was provincial secretary of the Canadian Legion from 1930 until retirement. Enlisted in World War II April 1, 1940, with rank of captain. Served in Newfoundland, Washington, and Great Britain. Was deputy assistant adjutant general in 1941, and, was made assistant adjutant general in June 1944. Is presently president of the Manitoba and Northwest Ontario Command, Canadian Legion. Was the first president and one of the founders of the International War Veterans' Alliance.

maintain our own way of life—a condition simply defined in the word "freedom." It is true that we have conflicts of opinion on many matters of international import—but the very fact that we are able to have those differences and discuss them in a friendly and cooperative spirit is an indication of that freedom and way of life that we have fought to maintain.

When we think of these things it is increasingly clear that these annual meetings of the International War Veterans' Alliance hold a particular significance. We have so much in common. All members have served in the armed forces of their respective countries and it seems right and proper that men who had been willing to fight for the same principles—and experienced the same priceless comradeship should get together in this way and thus prove to a perplexed and frightened world that it is possible for countries living side by side to honor and respect each other—in spite of differences of opinion. We are aware, of course, that there is still a lack of knowledge regarding Canada in some parts of the United States. Canada is no land of the midnight sun—half British, half American—populated chiefly by Indians, Eskimos, the mounted police and trappers on snowshoes; and, governed by the British Parliament in London.

The British North American Act of 1867 is the basic document of the constitution of Canada and through the years up to 1931 she developed toward full nationhood. First there was the gaining of equal status within the empire, followed by the statute of Westminster in 1931 which declared the British dominions to be equal in status, and in no way subordinate to the mother country in any aspect of their domestic affairs. Modern Canada is a child of the last century, of free trade and liberal institutions. It is not a carbon copy of any other country. It shapes its course autonomously but it must at all times integrate it with the world policies of the United States and the United Kingdom. It is in Ottawa—not London—that the course and character of the Canadian people are shaped. Like the other dominions in the commonwealth she controls her own political and commercial systems. Britain has no power of veto over her laws and no power of taxation. She is under no compulsion even to remain in the commonwealth and if Canada goes into a war it is by the free vote of her parliament. She is part of the commonwealth and remains in it because she wishes to do so and because the British Commonwealth of Nations expresses the type of political society in which she desires to live. The statute of Westminster formally recognized the United Kingdom and the dominions to be autonomous communities within the commonwealth, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations.

When the Queen came to Canada to open, with President Eisenhower, the St. Lawrence Seaway, which is another example of international cooperation further uniting the interests of our two countries, she came as Queen of Canada and she received the acclaim of loyal Canadians wherever she went, but perhaps the most significant event in her tour was her visit to Chicago where a few years ago a certain mayor of that city promised to punch the King of England on the nose if he should appear in Chicago. He must have turned over in his grave when the union jack alternated with the stars and stripes in the streets and an U.S. Marine band played "Rule Britannia" when our Queen landed. Yes, in Canada we honor and respect our Queen. Don't ever let anyone tell you otherwise, and, we appreciate too that hers is a position of responsibility

rather than privilege for she is the tie that unites in common ideals the people of all races and creeds that make up the commonwealth. The monarchy is a symbol, and symbols are important, as organized religion has learned—and even outside religion and politics we adopt symbols from the past which we find convenient, though they have long ago lost in practice their original meaning.

The difficulties of cooperation between independent states is not a new story. It is as old as the failure of the Greek city states to achieve it. It is obviously one of the most difficult of all the tasks undertaken by men and if human experience anywhere gives any hint of forces which would help toward success in that task we ought to be ready to use those forces.

It was Bismarck, the Iron Chancellor of Germany who said that the most significant factor of the 19th century was the fact that Great Britain and the United States spoke the same language, and even today, the fact that the language spoken in the United States and in all self-governing dominions of the Commonwealth is the same, is still the most potent force in world politics. When Washington and London speak there is no chance of misconception or ambiguity in the exchange—and there is an understanding that can avoid hazards and lead to cooperation, while Canada stands side by side with both and helping in every way possible to establish freedom and peace in the world.

In closing this report to the annual convention of the International War Veterans' Alliance here in Crookston, Minn., on this 2d day of August 1959, I would like to give you this quote from an eminent American citizen, Dr. Ralph Bunche: "None can speak more eloquently for peace than those who have fought in war. The voices of war veterans are a reflection of the longing for peace of people the world over, who within a generation have twice suffered the unspeakable catastrophe of world war. Humanity has earned the right to peace. Without it, there can be no hope for the future, and without hope, man is lost. The voice of the people must be heeded. They aspire to a richer life in freedom, equality, and dignity, as in things material; they pray for peace. Their will for peace and a better life can be, must be, crystallized into an irresistible force against war, aggression, and degradation. The people have had to work and sacrifice for wars. They will work more willingly for peace. Let there be a dedicated effort, a greater crusade than history has ever known, for a world of peace, freedom, and equality."

Exchange of Top Level Visits

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of August 4, 1959:

[From the Wilkes-Barre (Pa.) Times-Leader of Tuesday, Aug. 4, 1959]

DIPLOMATIC OFFENSIVE—EXCHANGE OF TOP LEVEL VISITS

Confirmation in Washington and Moscow of reports that President Eisenhower and Premier Khrushchev will exchange visits in the fall will be received with mixed emotions.

Frankly, the American people do not relish the idea of playing host to the Red dictator whose record of ruthlessness, duplicity, and demagoguery has nauseated them.

On the other hand, the practical aspects of international politics would seem to make it necessary to deal with the Soviet leader without regard to personal feelings. That obviously is the view of the President who, there is reason to believe, regards it as duty rather than a pleasure.

If the results justify the experiment, no serious objection can be raised despite the American public's abhorrence of communism and its principal spokesman at the moment.

Whether or not the Eisenhower administration wants to deal with the Kremlin, it is left with little choice in view of the role the Soviet Union is playing in world affairs and the current tension. It is well to recall in this connection that this is not a matter of partisan politics, since it was Franklin Roosevelt a quarter century ago who opened the doors to the Moscow regime by extending recognition. The Democrats, therefore, cannot make political capital out of the exchange of visits on this score.

Burying personal feelings as far as possible and weighing developments on the scales of diplomacy, there is much to be gained from such an exchange of visits and possibly much to be lost if the Americans are not wary and if Khrushchev runs true to form.

There is no question Khrushchev wanted this invitation more than any other and pulled every conceivable string to accomplish his purpose. His immediate aim apparently is the prestige it will give him, enhancing his stature at home and in satellite lands. We may be certain he will exploit propaganda advantages to the limit. Washington cannot be unmindful of these pitfalls.

To offset these disadvantages, we can hope for a number of developments. One is that a visit to America will open Khrushchev's eyes as to the strength and peaceful attitude of the American people as a whole, discounting the possibility of adverse effects of untoward incidents or hostile demonstrations by certain groups who understandably hate the Red leader and everything he represents. Then, too, there is the hope personal contact will accomplish what formal diplomacy to date has failed to do—open the door of understanding.

While the spotlight is on Khrushchev's trip to America, the visit of President Eisenhower to the Soviet Union is equally important. He is no stranger there, and received a hero's welcome in Moscow after the war. The Russian people will be able to discover again that he is not the ogre he has been painted by Red propagandists.

In the wake of the huge success of Vice President Nixon, who will may succeed to the White House in 1960, the President's forthcoming mission should have a most salutary effect. The only cause for concern is the toll the heavy schedule, including preliminary conferences with our allies, will take of his health.

Coming on top of the obvious failure of the Big Four foreign ministers to agree on Berlin and Germany, the sudden outbreak of exuberant goodwill might be viewed as an unexpected, highly welcome ray of light.

But the Berlin affair is working out as predicted by those familiar with Soviet ways. Khrushchev issued an ultimatum. To carry through on it would have been a grave risk. To back down would have been awkward. What better solution than to leave the whole matter up in the air while Khrushchev lingers about the United States trying to look like a pigeon of peace?

It would be foolish to expect miracles as a result of this exchange of visits, knowing Red tactics and ambitions. Whatever benefits accrue, if any, will be a gain if Soviet traps can be avoided.

One thing is certain: This is not to be construed as appeasement under any circumstances. There will never be another Yalta or Potsdam, even though the alternative be nuclear warfare.

The Better Tilton Contest

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. COTTON. Mr. President, one of the great characteristics of the American way of life is the spirit of initiative and self-reliance which leads people to rely on their own efforts and their own skills as they seek to improve themselves and their communities.

This spirit was recently put to work in an effective and revealing fashion in Tilton, N.H., through a "Better Tilton Contest." I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Concord Monitor of July 28, 1959, describing the Better Tilton Contest and outlining its achievements.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Concord (N.H.) Monitor, July 28, 1959]

TILTON CONTEST SHOWS BENEFIT—IDEAS TO IMPROVE AREA GET IMPETUS—PUSH WILL BE CONTINUED

TILTON, July 28.—The Better Tilton contest was sponsored May 15 to July 1 by the Tilton Park Commission as a means of inducing residents of Tilton and Northfield to develop ideas of improvement which would be of benefit in producing more eye appeal for Tilton and Northfield.

Tilton and Northfield will be gaining great opportunity for expansion with the new Federal defense highway due to reach Tilton and Northfield in 1960-61. Tilton and Northfield are located in a section of much natural beauty, but the park commission felt that the two towns had gradually been slipping in a run-of-the-mill category for small towns. That is why the Better Tilton contest was sponsored. Neither Tilton nor Northfield has a daily newspaper, but the contest was greatly supported by nearby daily and weekly newspapers which kept the contest in the public eye.

Governor Powell was quoted as saying "I would like to state that the local residents and the Tilton park commission are setting a fine example with their volunteer citizens' action program for community betterment. You are encouraging the property owners as well as business and industry to undertake successful projects to beautify and increase growth in your town."

The park commission also made personal contacts with Tilton and Northfield residents. They answered questions and introduced new facts about the contest. Judging was kept on a very impartial basis, and judges did not know whose letter they were reading. The prize of a \$25 savings bond was presented to William Lawrence at an informal coffee hour held at the Tilton Inn. Mr. Lawrence is first vice president of the Tilton Chamber of Commerce and has a real insight on what improvements could be made for Tilton and Northfield.

At present extensive work is being made to carry out the ideas presented by Mr. Lawrence in this Better Tilton contest entry. The park commission sincerely hopes that the citizens of Tilton and Northfield will be as responsive to the new Better Tilton contest which will be sponsored sometime next year, as they have been in the past. The commission is doing its utmost to make Tilton a better community in which to live, and a more attractive place in which to settle, or even start a business.

A Threat to Peace

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues an editorial entitled "A Threat to Peace" appearing in the latest issue of Prevent World War III—No. 54, summer 1959—published by the Society for the Prevention of World War III, Inc., a nonprofit educational organization located at 515 Madison Avenue, New York, N.Y.

This editorial deals with the unlawful action of the Egyptian Government in blocking and seizing Israeli cargo going through the Suez Canal. As the editorial rightfully points out, the Egyptian action has implications of international significance for, if Egypt is allowed to violate international agreements with respect to one nation, all other maritime nations, large as well as small, may find themselves in the same predicament. Needless to say, such lawlessness on the part of the Egyptian Government not only flouts international law and the U.N. Charter but heightens tensions in the Middle East and is therefore a threat to peace.

The editorial follows:

A THREAT TO PEACE

Two world wars have demonstrated that peace cannot be preserved by passivity. It demands an active vigilance; i.e., the ability to anticipate and to act promptly at those major points of friction, large or small, which have the potential of suddenly igniting the world.

It is precisely this principle of "fire prevention" that is so fundamental to the purposes of the United Nations. Thus, it behooves the U.N. to take remedial measures wherever and whenever international developments loom as a threat to peace. The need for such action is again unmistakably indicated by the latest moves of the Egypt Government at Suez.

The immediate point at issue involves Egyptian interference in the shipment of Israeli cargo through the canal. In itself this action may appear to be "small potatoes" to a world now engrossed in the central European crisis. However, the Egyptian seizure of these cargoes has implications of international significance. Unless halted, it will set in motion a chain reaction which could touch off a world catastrophe. It is this awful prospect that is our basic concern.

To many nations, regardless of size or status, the Suez Canal is almost synonymous with their survival. The fact that it lies within the territorial limits of Egypt does

not detract one iota from its international character. Block the Suez and you may find it easy to strangle the lifeline of many nations. Free passage through this vital artery of world commerce is therefore an imperative transcending the petty conflicts between individual states.

The recognition of this fact is at the core of the Convention of Constantinople of 1888 which laid down the basic policies on the operations of the canal. The treaty stipulated, "The Suez Maritime Canal should always be free and open, in time of war or in time of peace, to every vessel of commerce or of war, without distinction of flag." The convention provided that the canal should remain open "in time of war as a free passage, even to the ships of war of belligerence . . ."

The principles of the Constantinople Convention have been accepted ever since by all users of the canal and have more recently received the endorsement of the United Nations. On September 1, 1951, the U.N. Security Council ordered Egypt "to terminate the restrictions on the passage of international shipping and goods through the Suez Canal wherever bound." The Security Council also made it clear that Egypt's harassment of certain ships visiting Israeli ports "represented unjustified interference with the rights of nations to navigate the seas and to trade freely with one another, including the Arab States and Israel."

In 1954 the Egyptian Government, itself, told the Security Council that it did not interfere with the passage of Israeli cargoes, nor did it violate the Constantinople Convention. The Egyptian representative gave these assurances to the Security Council which had been considering new complaints against Egyptian interference with shipping through the Suez Canal. In October 1956, following Nasser's seizure of the canal, Egypt reaffirmed its support of free passage in a statement to the Security Council. At the same time, the Security Council adopted six principles which opposed any kind of discrimination of shipping through the canal and emphasized "that operation of the canal should be insulated from the politics of any country."

The following year (1957) the Egyptian Government enunciated its policies with respect to the operations of the canal. Once more Egypt reaffirmed its "determination to respect the terms and the spirit of the Constantinople Convention of 1888 and to abide by the Charter and the principles and purposes of the United Nations." It is significant that up to February 1959 Israeli cargoes had freedom of passage through the canal. Since then, the Egyptian Government has undertaken on its own to block passage of ships carrying Israeli goods and to confiscate them. Thus, at the whim of Nasser, the U.N. Charter no less than the specific pledges made by the Egyptian Government have been brazenly violated. The attitude of the Egyptian regime was summed up by one of its top men, Aly Sabri, Minister of State, who said that freedom of passage would be blocked to Israeli cargoes regardless of "any actions taken by the United Nations, the World Court, or the big powers."

This is the bitter fruit of policies which have made it possible for Nasser to exercise a stranglehold over the Suez Canal. In 1956, when Nasser deliberately set off demolitions in the Suez, the United Nations as well as the United States came to his rescue. At that time, the United Nations organized a powerful salvaging operation which cleared the canal. The greater portion of the moneys spent for this purpose came from the U.S. Government.

More recently, the United States leased the giant hopper dredge *Essayon* to the Egyptian Government for improving the facilities of the canal. Egypt will pay \$1,600 less for the

use of the dredge than would be the charge to an American company. As the Christian Science Monitor noted, "The daily charge to the UAR will be less than when the dredge is in transit or out of operation for any reason" (Jan. 12, 1959). This is by no means the extent of Western generosity. In May it was announced from Cairo that the World Bank had offered "the first installment of a \$40 million loan for Suez Canal development" (Reuters, May 26, 1959). It is important to bear in mind that the World Bank loan would not be made unless the U.S. Government consented in view of the fact that it holds 35 percent of the Bank's voting stock. Thus, more aid and money will be poured into the Suez, and additional revenues will flow into Nasser's coffers, while he flaunts the authority of the United Nations.

In his attempt to find a "legal" justification for his pirate-like assault against shipping through the Suez, Nasser speaks about Egyptian "security" and the state of war against Israel. Aside from the fact that his persistence in maintaining a state of war against Israel violates the U.N. Charter, it is a convenient cover-up for his real motive. The authoritative Egyptian newspaper *Al Jumhuriyah* revealed the game when it wrote that the reason behind Israel's "insistence on claiming the right of passage through the canal is that it wants to increase its trade with the Afro-Asian countries and develop its economy." As though this were a crime. In short, the Nasser regime's blockade at Suez is aimed at sabotaging the development of international trade and commerce—another basic principle to which the United Nations is dedicated.

In the larger context, Egypt's interference at Suez is a grave challenge to the delicate fabric of international law. If Israeli shipping can be subjected to this arbitrary blockade, who can tell when other states will be victimized. There is no such thing as a little lawlessness. International law, like international peace, is indivisible. Let it be broken in one place and the whole structure will ultimately crumble and the ensuing flood will surely engulf those who regard themselves as onlookers. On the occasion of Egypt's acceptance of the six principles laid down by the Security Council to govern the Suez Canal, President Eisenhower declared: "... We should not assume that, if Israel withdraws, Egypt will prevent Israeli shipping from using the Suez Canal or the Gulf of Aqaba. If, unhappily, Egypt does hereafter violate the armistice agreement or other international obligations, then this should be dealt with firmly by the society of nations" (President Eisenhower in address to American people, February 20, 1957).

Will the United States now call upon the society of nations to deal with Nasser's brazen challenge?

Will the United States make it clear to the Nasser regime that piracy at Suez, regardless of how it is camouflaged, will not be tolerated?

Will the United States insist that financial aid for Suez be withheld as long as Nasser flouts the basic tenets of international law and the U.N. Charter?

The prestige and power of the United States, both in and out of the United Nations, presents our Government with a unique opportunity to take a bold initiative in defense of peace. There must be no equivocation on the part of the United States. The time for action is now. Unless the President's words are translated into prompt and effective action, the United States will not be able to deny its share of responsibility in a crisis that threatens to explode.

Steel Strike Example of Union Monopoly

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. ALGER. Mr. Speaker, as a further example of the need for unions being placed under antitrust law, related to my remarks during debate today, I would like to point out that the current steel strike emphasizes once again that organized labor has the ability, whenever it wishes, to force the national economy to its knees. In this instance the Steelworkers Union has shut down the steel industry, cutting off production of this vital commodity in a time of serious military tension and throwing hundreds of thousands of men out of work.

Never in our history has any group wielded such life or death control over our industrial economy. The industrial trusts of the last century were puny weaklings in comparison with the power of labor unions today. The alarming fact is that this tremendous power is concentrated in the hands of a small number of men who head the national labor unions and control the policies and actions of those unions. In the steel situation reliable public opinion polls show that the overwhelming majority of the members of the Steelworkers Union and their families do not want the strike and, in fact, feel that the wage increases demanded by the national union officials would simply mean corresponding increases in their living costs. In spite of this the top officials of the union forced the strike on the steel industry and upon its rank-and-file members.

The question now facing us is whether the people of the United States are going to permit the continuation of this absolute power in the union officers. Shall we allow them to force continual inflation upon us, to price American products out of world markets, to cut off interstate commerce at will, and rip apart the structure of our economic existence? Many serious and thoughtful people are now convinced that unless labor unions are put under the kind of reasonable restraints that are imposed upon business organizations by the antitrust laws, we are in for drastic times ahead.

On June 29 of this year, I introduced a bill, H.R. 8003, to limit and prevent concerted activities by labor organizations which obstruct or interfere with free production of goods for commerce and the free flow of goods in commerce. This bill was carefully drafted with a view toward providing proper protection to the public interest without restricting unions in the pursuit of their lawful and legitimate objectives. Among other things, this bill would prevent the national union officers from imposing dictatorial control over the bargaining policies and activities of the local unions.

It would restore bargaining power to the local unions where it properly belongs. In this way the rank and file union members would have a direct voice in decisions to strike and other matters which vitally affect their welfare.

Under this bill the current steel strike could be enjoined as an illegal interference with interstate commerce resulting from an unlawful combination or conspiracy brought into existence by the national union officers to enforce industrywide wage demands and other conditions which would substantially affect the production and cost of steel.

I urge that each Member of Congress give serious consideration to H.R. 8003 the need for protection against restrictive trade practices and restraint of trade herein provided, as an amendment of this long overdue labor bill.

Proposed Constitutional Amendment

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, August 11, 1959

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a resolution adopted by the Department of Mississippi, Veterans of Foreign Wars of the United States, in support of Senate Joint Resolution 116, providing for an amendment to the Constitution, introduced by me—for myself and other Senators—on July 2, 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas on June 29, 1959, the Supreme Court of the United States in the case of *Kingsley International Pictures Corporation v. The Regents of the University of the State of New York* denied to the State of New York the right and power to prohibit the public exhibition of a motion picture which admittedly presented adultery as a desirable, acceptable, and proper pattern of behavior; and

Whereas this decision clothed the advocacy of adultery in motion pictures with constitutional immunity and renders both State legislatures and the U.S. Congress helpless to legislate in this area for the protection of the people on questions of decency and morality; and

Whereas this decision opens wide a gate where the State is helpless to protect its children against a mighty flood of obscene, indecent, lascivious, and immoral pictures, books, and magazines; and

Whereas the Veterans of Foreign Wars organization believes that democracy begins in the home and that it is not only the right but the duty of the State and local community to protect the public generally, and the children particularly, against the exhibition and sale of pictures and printed literature that are contrary to the common standards of morality and decency as recognized by a local government; and

Whereas Senator JAMES O. EASTLAND has introduced in the U.S. Congress a resolution (S.J. Res. 116) providing for an amendment

to the United States Constitution which will insure "the right of every State to decide on the basis of its own public policy questions of decency and morality and to enact legislation with respect thereto, shall not be abridged;" and

Whereas Senator EASTLAND has called on all decent and right-thinking citizens to give every possible aid and support for the quick passage of the resolution through Congress and its ratification by the requisite number of States: Now, therefore, be it

Resolved, That the Department of Mississippi, Veterans of Foreign Wars of the United States, at the regular called meeting of its council of administration on August 2, 1959, wholeheartedly endorse the purpose of the proposed constitutional amendment and urge its speedy adoption; and be it further

Resolved, That the commander, Department of Mississippi, Veterans of Foreign Wars of the United States, is hereby instructed to present the above resolution to the delegates attending the 60th convention of the Veterans of Foreign Wars of the United States in session the week of August 30 to September 4, 1959.

LOUIS POST, Jr.,

Commander, Department of Mississippi, VFW.

Attest:

CURTISS MEEKS,

Adjutant, Department of Mississippi, VFW.

Statement of Former Senator Knowland on the Khrushchev Visit

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I included a statement made on August 4, 1959, by former U.S. Senator and former Senate Republican leader, Hon. William F. Knowland, on the invitation issued by President Eisenhower to Mr. Khrushchev to visit our country.

While one of the strongest Republicans of the country, Bill Knowland's patriotism is above reproach.

STATEMENT OF WILLIAM F. KNOWLAND,
AUGUST 4, 1959

The invitation to Khrushchev to visit the United States will have a devastating adverse effect upon the captive people behind the Communist Iron Curtain.

It is a victory for Soviet diplomacy which has angled for such an invitation for the past several years.

Khrushchev is still the "Butcher of Budapest." Three years does not outlaw murder of an individual or a nation.

Communists the world over will make massive propaganda use of the red carpet treatment in New York, at the United Nations, in Washington, and on the grand tour throughout the United States.

Whether we intend it or not, they will by word and picture, convey the idea that this gives to the Kremlin's leader and to the Soviet Union the moral support of the free people of the United States and their leaders.

An invitation to Hitler or Himmler while Denmark, Norway, Belgium, Holland, and a part of France was held in Nazi subjugation would have shocked the conscience of the free world.

Blood on the hands of Khrushchev is neither less red than that which covered Hitler's nor are his threats to bury us, meaning the United States and the free world, faded by the passage of a few months.

What is morally wrong can never be politically right.

The admonition of II Corinthians still stands: "Be ye not unequally yoked together with unbelievers, for what fellowship has righteousness with unrighteousness and what communion has light with darkness."

Mines for Defense

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sunday Dispatch of Pittston, Pa., on August 2, 1959:

MINES FOR DEFENSE

There has been much said during the past few weeks about what is going to happen to the coal mines of the Greater Pittston region.

Looking at it from the standpoint of the defense of the United States, the Federal Government has a big stake in keeping the mines of the region in operational condition.

Most of us can recall what happened during the recent World War II days. Gas and oil were rationed and difficult to obtain. Coal, still a major factor in space heating, was at a premium, and the supply was limited, even though anthracite producers mined three times as much coal then as is being produced today.

Should world war III come—and, like everyone else, we fervently hope it never will—we must be prepared for it. Production of coal is down to 17 or 18 million tons a year, and each year the total tonnage grows less through mine shutdowns and the abandonment of many operations. With no gas or oil freely available during another war, what will happen with no coal to fill the gap?

Just look at how many mines have been shut down since World War II in the Greater Pittston area—No. 9, Ewen, No. 6, Exeter, Butler, just to mention a few. And in addition to the mammoth Ewen and No. 14 breakers have been dismantled and removed. Now there are prospects that a half dozen other regional operations will be abandoned because of the Knox disaster—mines that will not be rehabilitated.

Now is the time for the Federal Government to look into the matter—not when the disaster of war strikes.

It is too late then. If the mines are allowed to fill up with water and literally become cesspools of debris underneath the surface, it would take years to get them back into condition suitable for coal production.

Another important part the mines could play is in the protection of citizenry in case of nuclear war to guard them from radioactive fallout. It is generally known that in case of nuclear war even remote parts of the country far from the bomb target will be endangered by the deadly radioactive fallout.

In support of this, the argument for using mines for protective cover in nuclear war, the Pennsylvania State University in its recent issue of the Industrial Reference Viewer

has an interesting article titled "Come Blast and Radiation Whither Shall I Hide Me?"

An excerpt from the article states:

"On the positive side, the coal mines of the State of Pennsylvania offer innumerable natural shelters of critical activity; they could be converted to emergency headquarters with little more than the installation of communications, subsistence facilities, and protected ventilation."

More and more intelligent thinking leans toward the vital importance of the mines to the defense of this country, and any expenditure by the Federal Government to keep the regional mines workable would be a sound, profitable investment.

Eisenhower's New Leadership

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. WAINWRIGHT. Mr. Speaker, when considering the merits and demerits of the President's decision to exchange visits with Soviet Premier Khrushchev, today's lead editorial in the New York Times is well worthy of your attention:

EISENHOWER'S NEW LEADERSHIP

The magnitude of President Eisenhower's personal effort to unfreeze East-West relations and keep them from an explosive climax is vividly demonstrated by his unprecedented travel schedule. Beginning later this month he proposes to visit Bonn, London, and Paris to confer with Western statesmen, return to Washington for a meeting with Premier Khrushchev and then go on a return visit to Soviet Russia, with the possibility that he might have to go abroad again for an East-West summit meeting.

These travels, comparable only with President Roosevelt's wartime journeys, are a measure of both the new role he has assumed in world affairs and his determination to do his utmost for peace before leaving office. His efforts may not succeed, and there is even a certain risk in them. But if in the end they fail the world will know that the responsibility for failure will rest on other shoulders. Therein lies also the justification for the steps he is taking.

There is particular wisdom in his decision, before meeting with Mr. Khrushchev, to go to Western Europe, starting with Bonn. The Soviet dictator has made plain that the overriding issue he proposed to discuss with the President is Berlin and Germany, which means Europe. He has likewise indicated that he would like to settle this issue directly with the President and then impose the solution of the two super powers on the lesser breeds. He obviously expects to make a better deal that way since, as he argues, these two primary powers have neither territorial disputes nor other insoluble problems between them.

Mr. Khrushchev is, of course, mistaken. The United States is committed to defend not only its own territories but also the frontiers of freedom which embrace Western Europe, Germany, and Berlin. Likewise, while the President may explore the situation, he does not propose to negotiate on these issues behind our allies' backs. But since he will talk about these issues it is only right and proper that he should consult our allies both to get their latest views and to demonstrate Western solidarity. That he will initiate this demonstration at Bonn is

both a recognition of Germany's role in Europe and a pointed answer to Mr. Khrushchev's gibes at Chancellor Adenauer and the "Bonn-Paris axis," echoed in some Western quarters. The Western Big Three have become the Western Big Four.

Fortunately, as emphasized by Secretary Herter, on the East-West issue, barring minor nuances, Western solidarity is stronger than ever. Any Soviet attempt to split the West or sow suspicion among our allies is doomed to failure.

But the President will also be confronted by some inter-allied disputes which mar Western unity and even impair Western defenses. These include the latest contest between the European Economic Community and the British sponsored free trade area and President de Gaulle's pressure for a bigger role for France in world, NATO, and atomic affairs as well as for American support in the Algerian war. Important as these issues are to the nations concerned, their importance is obviously secondary compared with the Soviet challenge to all free nations. Certainly any attempt to use that challenge to wrest individual advantages for a particular ally is suicidal.

As these disputes concern not only the nations involved but the whole North Atlantic alliance, it must be hoped that President Eisenhower will be able not only to put them in proper perspective but also to employ his genius for conciliation to resolve them.

Louisiana Lesson

EXTENSION OF REMARKS OF

HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CHAMBERLAIN. Mr. Speaker, recently—on page 12839 of the CONGRESSIONAL RECORD for July 23, to be exact—I stated that the Gov. Earl Long story in Louisiana should serve as an urgent reminder to this Congress that we have not yet made provision in our Federal Government for the tragic eventuality that the competence of a President should ever come into question.

In those remarks I commented that the press, while giving Governor Long and his troubles full coverage, had neglected to emphasize what the Federal Government should be learning from Louisiana's situation.

I am now pleased to point out that the Washington Daily News yesterday moved to correct this oversight with an editorial which shares my views on the urgency for resolving the Presidential disability question, as has been repeatedly recommended by President Eisenhower.

Under leave to extend my remarks in the RECORD, I include this editorial, which follows:

[From the Washington Daily News,
Aug. 10, 1959]

LONG AND THE PRESIDENCY

Gov. Earl Long will attempt an extremely difficult legislative feat at a special session of the Louisiana Legislature.

The Governor wants to make it harder to commit patients to the State's mental hospitals. If his own case is a fair example, it is practically impossible to commit them now. He's been in two in the last several

weeks, one in his home State, and neither could hold him.

Governor Long's habitual behavior might be considered eccentric by ordinary standards, but obviously now he's a sick man, so considered by friend and foe alike.

And there doesn't seem to be anything in the legal machinery of Louisiana to take care of the situation. Neither is there proper national law to take care of the succession in case a President ever should become similarly incapacitated.

President Eisenhower several times has called to the attention of Congress the danger the country might face if a President ever were unable or unwilling to recognize his own disability. This has, in fact, happened at least twice in our history. President Garfield lingered, often unconscious, for 11 weeks after he was felled by an assassin's bullet in 1881. President Wilson was desperately ill for months following a stroke in 1919.

Drafting of legislation to cover such a tragic situation admittedly is difficult, but the passage of more years will not make it any less so. Congress might be reminded by events in Louisiana that the problem should be made an urgent order of business.

Spotlight on Nuclear Plane Program

EXTENSION OF REMARKS OF

HON. MELVIN PRICE
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the August 3, 1959, issue of Aviation Week. The editorial entitled "Spotlight on Nuclear Plane Program" follows:

SPOTLIGHT ON NUCLEAR PLANE PROGRAM

The open congressional hearings on the military nuclear-powered aircraft programs sponsored by the Air Force and Navy have shed considerable light on the past performance, current situation, and future prospects of this security shrouded, budget-slashed program. The American people owe considerable thanks to the Joint Congressional Committee on Atomic Energy and the sparkplugs for these specific hearings, Senator CLINTON ANDERSON, Democrat, of New Mexico, and Representative MELVIN PRICE, Democrat, of Illinois, for their persistence in demanding a public accounting on this program.

The most important fact to emerge from these hearings is that, despite other indications to the contrary, the nuclear-powered aircraft program will be pushed at a moderately accelerated rate in the future and that considerable thought will be given to establishing a more effective technical direction of an overall program pushing both the General Electric Co. direct air cycle approach and the Pratt & Whitney Aircraft indirect cycle approach where major technical breakthroughs have resulted recently.

It is evident from testimony of Dr. Herbert York, Defense Department director of engineering and research, that considerably more emphasis will be placed on reactor and materials development and less emphasis on putting a flying testbed into the air to gain flight experience with nuclear powerplants.

Certainly there can be no argument with the thesis that major emphasis must be given to research on improved airborne reactors and the materials required for them. How-

ever, there is considerable difference of opinion on the abandonment of the construction of prototype nuclear-powered aircraft to gain flight experience with a complete system of this type. Dr. York and his scientific advisers argue that this would hardly be a useful exercise in advancing the state of the art. It is apparent from their testimony that this technical viewpoint also is strongly tinged by the current budget problems of the Defense Department, and it is often difficult to measure where the technical considerations end and the budget influence begins.

Maj. Gen. Donald Keirn, who has directed the USAF portion of the ANP program and whose experience in developing radically new types of power goes back to the first turbojet engines, takes the opposite view. He believes the experience gained from flying nuclear-power prototype aircraft with powerplants that it is technically possible to develop now, would provide valuable experience necessary to the ultimate development of a useful weapon system. General Keirn must find many of the arguments advanced against the nuclear prototypes very familiar as they are the same arguments advanced by many apparently competent technical experts in the thirties and early forties against the application of gas turbine power to aircraft. People with sufficiently long technical memories will recall that even such ordinarily sage advisers as the National Advisory Committee for Aeronautics dismissed jet propulsion on the ground that it would hardly be useful unless aircraft speeds were over 500 miles per hour. And such speeds were obviously not in sight. But only a few years after that judgment was rendered the German ME 262 twin jet was fighting at speeds in excess of 500 miles per hour.

General Keirn must recall the difficulties involved in getting USAF acceptance of jet propulsion in the early forties when only the unwavering determination of the late Gen. Henry H. Arnold, overruling his technically timid subordinates, pushed the project through to successful completion with the help of General Keirn and others not so technically conservative.

It is also appropriate to recall in this controversy the case of the XB-15 and XB-19 experimental heavy bombers built by Boeing and Douglas, respectively. Only one of each was ever built, and they were too slow to be useful for combat. Yet the experience gained by building and flying these experimental giants laid the technical foundation for the development of the combat capable heavy bomber lineage of B-17, B-24, B-29, B-32, and the four-engine transport fleets that made U.S. manufacturers supreme in this field during the postwar decade.

It is easy for technical experts lacking the background in aircraft development problems to dismiss too lightly the need for experimental flight experience as a sound foundation for ultimate military developments.

There was considerable testimony submitted by such technically competent witnesses as Gen. Thomas White, Dr. Herbert York and his staff, Vice Adm. J. T. Hayward, General Keirn, Roy Shoultz of General Electric, and John McCone, Chairman of the Atomic Energy Commission, who has had considerable experience both in aviation and nuclear developments. The conflicting viewpoints expressed by these gentlemen should be carefully considered in formulating a new and more solidly supported nuclear aircraft propulsion program.

In contrast, the testimony of some newcomers to the Pentagon scene should be heavily discounted as a mere parroting of the Budget Bureau party line.

It has been the sad history of the nuclear powered aircraft program that it has been the technical people who have been closest to the program, both in the military and industry, who have had the strongest faith in

its ultimate success, and it has been the politically appointed Defense Department officials and the bookkeepers of the Budget Bureau who have been most pessimistic and have tromped hardest on the brakes to slow its progress.

The congressional hearings have done much to clear the security-shrouded air surrounding this vital program. We hope that USAF, the Navy, and Atomic Energy Commission will join with General Electric, Pratt & Whitney Aircraft, and airframe constructors to formulate a technically vigorous program to drive ahead with maximum speed to produce militarily useful results.

ROBERT HOTZ.

Trade Policy Queried

EXTENSION OF REMARKS

OF

HON. FRANK A. BARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article entitled "Trade Policy Queried," which was written by my very good friend, Hugh B. Hester, brigadier general, U.S. Army, retired, and appeared in the "Letters to the Times" of the New York Times on Saturday, July 25, 1959:

TRADE POLICY QUERIED—DISAGREEMENT EXPRESSED WITH OUR STAND ON DEALING WITH SOVIETS

To the EDITOR OF THE NEW YORK TIMES:

Will Rogers used to say that all he knew was what he read in the papers. But apparently the trade experts in the Department of State don't even take the trouble to read. Just released is a reply to the more than 6-months-old questionnaire of Senator Fulbright concerning trade with the Soviet Union. In this reply the Department apparently revived the old, and by now thoroughly discredited, argument that increased trade with the Soviet Union might disclose scientific and technological secrets which would in turn strengthen our supposed enemy.

As early as 1954 Clarence B. Randall, then chairman of Inland Steel and head of a special economic commission appointed by President Eisenhower, reported that restrictions upon trade with Communist countries, especially with the Soviet Union were probably doing the West more harm than its intended victims. He cautioned that discriminatory restrictions on trade might accelerate technological development and economic independence in an area formerly closely associated with the West in trade matters.

These he viewed as injurious to the West; certainly dramatic events in rapid succession since have more than justified his fears.

OLD ILLUSIONS

Unfortunately, customs, folklores, and myths never die easily or quickly, and have a habit of reappearing long after they have been thought dead. The State Department's reply to Senator Fulbright's questionnaire is merely further evidence of the recurrence of old illusions.

This reply unfortunately could not have come at a psychologically more inopportune or politically inept time. It will now be most difficult, if not impossible, to convince the unaligned nations and peoples that the United States believes in coexistence and peaceful settlement of disputes, while maintaining what amounts to an almost total stoppage of trade with the Communist world. Cer-

tainly some of our closest allies do not agree with this policy. This is particularly true of Great Britain and West Germany, who are now increasing their trade with the Soviet bloc substantially.

Trade is a two-edged sword. It can be used as an instrument of peace or a weapon of war. And with the leaders of the Soviet Union at every level strongly urging increased trade with the United States, it is only natural for most of the world to suppose that the latter is using the stoppage of trade as a weapon of war.

The leaders of the underdeveloped countries know that economic warfare increases poverty and that discrimination, in whatever form, heightens international tensions; and any nation engaged in these practices must therefore expect to receive their disapproval.

DANGER TO IDEALS

In fact, the cold war, of which trade discriminations are an integral part, now threatens to completely destroy the world's former picture of a free and peace-loving American Government and people. Actually we are in real danger of surrendering our basic ideals of a free, cooperative society at peace under law; all in the name of national security.

As an old soldier, and one who has personally witnessed and known the horrible injustices of three great wars, I would like to offer a few words of caution to those who advocate economic warfare while constantly asserting, "Yes, we want peace, but only with justice." And my few words of caution are these: While it is certainly possible to have peace without justice, it is absolutely impossible to have justice without peace.

HUGH B. HESTER,

Brigadier General, U.S.A. (Retired).

PHILADELPHIA, July 16, 1959.

Interest Rates

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mrs. KEE. Mr. Speaker, the question of interest rates is one in which the entire country has a vital stake. If interest rates continue to increase, just about every family in the Nation will be adversely affected.

For this reason, I trust that the House will not give its consent to a request by the administration for permission to remove the present ceiling of 4½ percent on the interest rate which the Government can pay.

If the ceiling is removed, the interest rate on Government bonds will go up immediately. And that will mean a significant increase in the interest rates which people must pay on the purchase of homes, automobiles, and appliances of all kinds.

Mr. Speaker, many respected economists insist that the Treasury Department does not have to have an interest rate increase to permit it to refinance Government bonds. This can be done, these economists tell us, by staying within the present interest ceiling.

Should this Congress permit the interest rate ceiling to be removed, we would be adding materially to the cost of living for millions of people.

I for one am not willing to approve such a move and if the issue ever reaches the House floor, I will vote against it.

TVA Triumphs

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. EVINS. Mr. Speaker, on Saturday, August 8, there appeared an excellent editorial in the Washington Post entitled "TVA Unfettered," and as it relates to the recent signing of the TVA self-financing legislation, I ask unanimous consent that this editorial be reproduced in the Appendix of the RECORD.

The editorial follows:

TVA UNFETTERED

The President and the congressional leaders of both parties deserve high praise for the ingenious and statesmanlike way in which they have resolved differences over self-financing legislation of the Tennessee Valley Authority. Mr. Eisenhower approved the bill after the legislators assured him that one feature which he felt to be an encroachment upon executive branch prerogatives would be eliminated promptly by passage of another law. Thus the important substance of the TVA bill was saved, and the Authority is assured adequate financing for its power modernization and expansion needs for the first time in many years. Moreover, TVA will now begin to repay the \$1 billion Federal investment in its power facilities, with interest.

The feature which for a time threatened to doom the bill was that which, in effect, gave Congress a veto over TVA's construction program but foreclosed any opportunity for Presidential control of the program. Although we thought that the arrangement made some sense because TVA is now "on its own" and not dependent upon Federal revenue, Mr. Eisenhower's feeling that the scheme transgressed upon his Executive functions and curbed his constitutional role in the legislative process was not without point. We think the solution adopted was the best one—the repeal of the provision for congressional review of TVA projects. Within the carefully defined framework of the self-financing authorization, TVA will manage its affairs without the interference of either Congress or the President. This seems to us to be the simplest and most businesslike way to handle the matter.

Mr. Speaker, now that this legislation has passed its last hurdle and has become law, I want to take this occasion to publicly express my appreciation for the signing of the TVA bond bill—the self-financing bill signed by the President. The people whom I represent have been greatly interested in this legislation for the past several years and the signing of this bill by the President represents a culmination of four years' work and effort. It means that TVA will remain unfettered and be permitted to continue to serve the six million people of its service area in the South.

TVA has had a most successful 25 years history and the approval of this bill which provides an alternative and additional method of financing—private

financing—will mean that this great Agency of the Government will have another 25 years of growth and service to the Nation.

I am pleased the President approved the bill.

I want also to commend the dean of our delegation from Tennessee, our friend and colleague, Congressman CLIFF DAVIS, and our colleague and friend, Congressman BOB JONES of Alabama, for their joint effort and leadership in the passage of this legislation. Both Congressman DAVIS and Congressman JONES have worked untiringly over the past several months and years to secure the enactment of this legislation. The bill has had a very rough chartered course at times but these pilots have brought the measure safely into harbor and they are deserving of our thanks and commendation and praise.

I would also express my appreciation to Speaker RAYBURN, our distinguished majority leader, Congressman MCCORMACK, and all of our colleagues who have voted for this needed legislation.

Among the many advantages of its enactment is the fact that we should have a recess from the annual recurring battles over TVA and the controversy which, in the minds of some, it invokes.

I congratulate all who have had a part in the securing of the passing of the TVA legislation and of course urge the passage of the pending bill to perfect this legislation.

**Address by Gen. Lyman L. Lemnitzer,
Chief of Staff, U.S. Army, at Annual
Meeting, Association of the United
States Army**

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. THURMOND. Mr. President, on Monday, August 3, 1959, Gen. Lyman L. Lemnitzer, Chief of Staff of the U.S. Army, delivered a very able and informative address to the Association of the United States Army, at its annual meeting in Washington, D.C. The subject of the address is "Why We Need a Modern Army."

General Lemnitzer is one of the ablest men in the entire Department of Defense. His outstanding address will be of concern to people in this country and other countries who are interested in the United States maintaining a strong modern army. I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHY WE NEED A MODERN ARMY

(Address by Gen. Lyman L. Lemnitzer, Chief of Staff, U.S. Army, at the 1959 annual meeting Association of the United States Army, Washington, D.C., August 3, 1959)

In appearing before this audience today, I feel special pleasure and gratification. The

continuing and impressive growth of the Association of the United States Army, as strikingly demonstrated by this gathering, gives me extremely great satisfaction.

The task which has been assigned to me at the session this morning is to discuss the subject of "Why We Need a Modern Army."

In my opinion, there are a number of very clear reasons which emphasize the particular importance of a modern army today.

The first of these, which needs no elaboration before this audience, is the Communist threat. I shall merely remind you that it is relentless in its menace and massive in its strength. It is global in its geographical extensiveness. Furthermore, its versatility permits it to take forms which range across the entire spectrum of aggressive activity, from subversion and infiltration to general nuclear war. I think that it is most pertinent to note that the Soviet armed forces—and, in varying degrees, the armed forces of the other Communist nations—have been maintained in strength and have also been the subject of extensive modernization. This is especially true of the Soviet ground forces.

In citing a second reason, I want to take a look into the future. Present trends indicate clearly the direction which the development of long-range, strategic weapons is taking. In the coming ICBM era, we can anticipate a day, not too many years away, when our missile retaliatory resources can and must be made so numerous and relatively invulnerable that no missile or other attack upon them, even by surprise, could possibly eradicate them all. This means that our response to the attacker would be absolutely devastating to him—so clearly so that it would be senseless for him to attack in the first place.

When that time arrives, it could bring about, in a curious way, what some have characterized as the equivalent of strategic nuclear disarmament. We shall always want, as a vital component of our military power, the invulnerable missile deterrent needed to maintain this situation. With this in being, the situation will then mean, realistically, that the other components of our power will play the vital role in coping with the tactics and strategy of communism short of the threat of general nuclear war.

These considerations are of vital importance today. In any meaningful planning, we have to take into account, from the beginning, the long leadtime from concept to actual fruition. This requirement for leadtime is obvious in the field of hardware. The requirement for lead-time is even greater in developing the capability to carry out a changed doctrine or strategy. It is greater, because many additional factors are involved. Therefore, we must be keenly aware that basic decisions made this year—decisions on national strategy or decisions on the budget—will inexorably establish the parameters of our actual capabilities 5 and more years from now to meet the then existent threat.

Thus, in speaking of the importance of a modern Army, I am not speaking solely of its role today. I am speaking even more importantly of its role in light of the foreseeable nature of the power balance in the world during the next decade.

As a third reason for the importance of a modern army today, I should like to emphasize two of the key elements of our response to this threat. I refer to the concept of collective security, and to an essential concomitant to its effectiveness—a forward strategy.

The massive strength of the common threat to all free nations makes the need for collective security self-evident. This need is met by the system of alliances to which the United States strongly subscribes today.

As for our forward strategy, it is an inherent ingredient of any positive effort. Through a forward strategy, we are prepared to meet and halt an enemy before his attack can gain momentum. The alternative for us

would be to withdraw within our own borders, adopting a so-called Fortress America strategy which, by its exclusively defensive character, would be completely negative. Consequently, it would be doomed, from the outset, to ultimate failure.

A forward strategy is also important to the success of collective security. It provides our allies with firm assurance that we are determined to stand with them against attack. It provides them, moreover, with a sound basis for confidence that the alliance as a whole can successfully meet the military challenges which may confront it.

Land power—represented, primarily, by the Army—has a vital role in both collective security and forward strategy. You all recognize, I know, that an enemy using military means to extend control over free peoples—not merely to destroy all life indiscriminately—would necessarily base much of his effort on the seizure of land. Land forces are the only means through which, finally, land can be controlled and domination asserted over the people who inhabit that land.

To carry out our responsibility in this regard, the Army maintains forces deployed in strategic areas overseas. There, to our friends and our prospective enemies alike, these forces furnish realistic, visible evidence of our ability to hold firm against attack, not merely to liberate territory after its seizure by an attacker. A modern army is capable of conquering without destroying, of defending without reducing the defended land to radioactive waste. The physical presence of armed men on the ground can exert more effective and lasting control than the threat of megatons of firepower that may never be used.

In addition to maintaining operational forces, we have an obligation to help our allies to develop their own military resources to the fullest extent possible. This is a vital part of the U.S. mutual security program. The Army has a special responsibility in this program. In this connection, I should like to say a particular word about the splendid work being done by the members of the Army's military assistance advisory groups and military missions in 42 countries throughout the world.

In my opinion, it is no exaggeration to claim that they are doing an absolutely tremendous amount to give meaning to the entire concept of collective security. They are helping to develop the basis for effective allied military operations in case of attack. Beyond this important contribution to the free world's total military strength, they are helping to reduce or eliminate the possibility of attack through other than overt military means. In assisting the allied armies to expand their effectiveness, both through improved material and increased professional knowledge, our MAAG's and missions are contributing to a basic element of governmental stability in allied countries. Stable governments, with capable, well-equipped armies, are not open to successful attack by such methods as subversion, infiltration, coups d'etat, or revolution—all of which are methods which communism has sought to employ in pursuing its ominous goals. Thus, the Army is strengthening the free world not only by helping to develop a solid front of effectiveness, but also by helping to strengthen the individual elements of that solid front.

The reasons I have mentioned are, in my opinion, conclusive evidence of the importance of a modern army. However, there is another reason I want to cite, which in itself is sufficient.

Modern military operations are not restricted to any particular element. The Army must fight as a part of a team which includes forces of the other U.S. armed services and those of our allies. We are all well aware that land warfare is not conducted solely on the surface of the land. It includes the conduct of operations in the air above the land and in the waters contiguous

thereto. In order to carry out its responsibilities with the effectiveness to permit its fellow team-members to realize their own full potentials, the Army must be as modern in its functional area as the U.S. Navy, Marines, and Air Force are in theirs.

Let me turn now to discuss some of the key qualities which make an army modern.

In order to obtain maximum effectiveness in terms of the essential characteristics of firepower, mobility, and communications, a modern army requires, first of all, modern weapons and equipment.

That is, to employ firepower with discrimination, within its own resources, the versatility to deal with any of the enemy's capabilities which directly affect it. Army weapons have a number of special advantages which should be exploited to the greatest possible extent. One of these which I want to mention is their precision, both in terms of accuracy and of measured lethality. This gains added importance in the light of their reliability, which permits them to deliver their firepower regardless of the conditions of weather or visibility. Another special advantage, especially in view of an enemy's own destructive capabilities, is their mobility, which includes their carefully built-in ability to operate in the field, without elaborate installations or launching sites.

These characteristics permit us to apply an important principle of war—the principle of economy of force. They do so because their precision enables us to achieve destructiveness exactly appropriate to the need—that is, to employ fire power with discrimination—and because their mobility enables one unit to do the job of several.

In connection with the basic requirement for versatility, I want to emphasize that a modern army requires the capability to fight successfully in either nuclear or nonnuclear conflict. This does not mean, in any sense, that the army conceives of its role in modern war as being an unimaginative repetition of the methods of the past. What it does mean is that a modern army must have a fully adequate nuclear capability to meet and defeat an enemy with nuclear weapons. At the same time, however, a modern army's nonnuclear capability must be great enough that it need not feel compelled to use nuclear weapons as the only alternative to failure.

The second essential characteristic of a modern army which I mentioned as deriving from modern weapons and equipment was mobility. I have already suggested the value of mobility both for protection of our installations and for multiplying our effective capabilities. Beyond that, modern developments in this area represent some of the most important advances and most striking potentials in the entire military field.

Mobility, of course, has both strategic and tactical aspects. I shall make further reference to strategic mobility in connection with a modern army's requirements for flexibility. With respect to tactical mobility, however, I want to make particular mention of the various types of aircraft, both in being and experimental, which make up army aviation. What these and other developments in mobility mean is that we are on the verge of a situation which is drastically new. Throughout history, a major limitation on the freedom of action of land forces—and, consequently, on their effectiveness—has been the barrier of terrain. We can now foresee a time when mountains and rivers and other terrain features will cease to be obstacles or limitations. They will be meaningful chiefly as advantages to be exploited as the situation indicates.

The third area I mentioned in which hardware plays a particular part is communications. The great tactical dispersion to be expected in modern battle, due to increased ranges and effectiveness of firepower and to

increased mobility, greatly magnifies the requirement for efficient, reliable, extensive communications. Closely related is the need to locate targets at distances that permit us to exploit to the full the added range capabilities of our weapons.

Also related to the whole field of weapons and equipment, another requirement which is underscored by the complexity of modern equipment and the dispersion of modern battle is adequate logistical support. The problems of providing that support under such conditions are numerous and difficult. Nevertheless, for an Army to be modern, the specialized requirements of materiel and personnel must be met, the extended distances from the supplier to the users must be traversed, and the added vulnerability of supply complexes in this day of nuclear weapons must be overcome.

Before I leave the subject of weapons and equipment, I want to stress that an essential requirement for a modern Army is a program through which it can stay modern. That is to say, a program of research and development which continually explores new avenues of possibility. In this connection, I want to say a word or two about the importance to land warfare of our growing knowledge of space. Its exploration offers prospects of great benefits in fields of immediate concern to the Army. To illustrate, I need only mention the improvements which will become possible in communications, in geodesy, in meteorological research, in early warning, and in obtaining data which will facilitate our development of effective defenses against long-range missile attacks.

After modern materiel, a second major requirement for a modern Army is a tactical doctrine which fully exploits the capabilities of advanced weapons and equipment. Because technology is continually increasing these capabilities, doctrine must be constantly reexamined and revised as necessary. Exploitation of new resources brings increased effectiveness, but often raises new questions as well. The need to find answers emphasizes the importance of imagination, openmindedness, and originality, as well as thorough technical knowledge, about which I shall have more to say later.

Closely allied is the requirement for organization so designed as to make the employment of our modern tactical doctrine feasible.

Beyond the need for realistically modern tactical organization, there is a need for realistically modern organizational concepts for the overall employment of military forces, of which Army forces are an integral part. I have already referred to the fact that modern military operations involve the combined energies and resources of all services and allies, working as a team. Vital to the achievement of integration of our total military effort is the concept of the Joint Chiefs of Staff, as now organized. Since the recent reorganization of the Department of Defense, the Joint Chiefs of Staff have exercised direct authority over the unified commands. These, of course, are the instruments through which integration of our military effort is now sought within any particular functional environment. To my mind, there is a particular advantage in the fact that each member of the Joint Chiefs of Staff is the uniformed chief of his own service. With this composition, the Joint Chiefs of Staff as a body can act not only more authoritatively but also more realistically than if it consisted of officers removed from direct connection with their respective services.

Another major organizational requirement of a modern army is flexibility, which must be provided in several different ways.

One of these is that a modern army must be able to respond promptly and vigorously to threats in areas other than those in which Army forces are already deployed. To an

important degree, the function of providing this capability rests upon the Strategic Army Corps, which stands ready to move, at a moment's notice, to any area of the world where it may be needed. The employment of this force, of course, depends upon the availability of transport. In this end in providing sustained administrative and logistical support to overseas forces, strategic mobility provided by the other, responsible services plays an important role in making an army truly modern.

The other major element of Army flexibility through organization which I want to mention is the modern army's requirement for reserve components. These must be able to fill promptly any gap in active military strength resulting from a commitment of strategic reserves, and to expand Army strength to the degree necessary for sustained, general operations. This ability lends not only flexibility but also staying power to Army operations. The reserve components occupy a prominent and indispensable place in any assessment of a modern army's effectiveness.

In order to discharge these vital functions, it is clear that reserve component units need to be so equipped, trained, and organized that, with minimum additional training, they can promptly take their places beside the units of the Active Army. In brief, the reserve components of a modern army must also be modern.

The historically great value of our Army Reserve components has been enhanced by a year of truly remarkable achievement. I want to make special mention of the advances which have taken place in the level of training throughout the reserve component units, and of the successful reorganization of the units themselves.

Today, over 90 percent of the ready reservists, including National Guardsmen, have completed basic training. Almost a year ago, many of the reserve component organizations were able to eliminate basic training of individuals and concentrate exclusively on unit training. By the end of this year, all units of the Army Reserve and the Army National Guard will be engaged in unit training.

The achievement has been equally impressive with regard to conversion of reserve component divisions to the new organizational structure in effect for units of the Active Army. This reorganization, which was begun in the field only last January, was scheduled to be completed over a 2-year period. As a matter of fact, however, all but 1 of the 37 reserve component combat divisions had been reorganized prior to the annual field training this year. The remaining division will begin its reorganization next month.

Through these notable accomplishments, the Reserve components have achieved the highest state of readiness they have ever known in the peacetime history of our country. This is a striking tribute to the energy and devotion of their members. It is also a major and positive contribution to the strength and effectiveness of the modern concept of one army, united in its effort to serve the Nation to its utmost.

In describing the requirements of a modern army I have discussed weapons and equipment, tactics, and organization. There is, of course, a major requirement which I have not yet mentioned. The compelling necessity both to achieve and to capitalize on the advances in technology emphasizes the continuing importance—no matter how marvelous our mechanical and electronic devices—of people. Weapons, equipment, tactics, and organization can achieve their full potentials only when combined with the required numbers of people operating with skill, efficiency, and devotion. Indeed, since the inevitable price of the new capabilities is increased complexity, this magni-

fies the requirement both for maintenance and for the level of skill necessary to perform it adequately.

The requirement for skill is clearly brought out when we compare new with old items of equipment. Consider, for example, cargo helicopters and trucks. Helicopters offer many obvious advantages. They are not roadbound. They are less hampered by terrain. They are considerably faster, due both to their speed and their ability to move across country. They can get easily into and out of places where trucks can go with difficulty, if at all.

In replacing transportation truck units by cargo helicopter units in the field army, the basis of substitution is three H-34 helicopter battalions for four transportation truck battalions, because of a comparable capability to transport a given number of troops over a given distance in a given amount of time.

However, trucks require 1 hour of maintenance for every 12 hours of operation. Helicopters, by contrast, require 9 hours of maintenance for every hour of flight. For an equal time of operation, therefore, a helicopter requires more than 100 times as much maintenance as a truck. Thus, while the 4 truck battalions require only 108 maintenance personnel, the 3 helicopter battalions require a total of 800. Furthermore, to train a helicopter mechanic to an acceptable level of skill requires three times as long a time as to train an acceptable truck mechanic.

This same situation, in essence, prevails in all of our Armed Forces today.

As I have already mentioned, beyond the requirement of a modern Army for technical skill in its people, there is the necessity for judgment and imagination—for leadership. The leaders in a modern Army must have the initiative to take effective action in the widely dispersed conditions of modern battle. They must have the vision to see the extensive new capabilities of modern materiel as it becomes available. They must have the understanding to apply these capabilities, alone and in combination, to achieve maximum effectiveness. With all this, there has been no reduction in the eternal requirements for courage, determination, and character which have always been so essential to successful leadership in war.

The Army owes an immeasurable debt to the scientist and the engineer. In the final analysis, however, it is the soldier—men like you veterans in this audience—who must weigh and balance the many factors involved, who must determine the military ends to be served, who must decide on the course of action to be followed, and who—with vigor, courage, and devotion—must pursue that course of action to its victorious conclusion.

Our Army is modern in many vital respects. It is modern in its outlook and its thinking. It is modern in its knowledge, in its tactics, and in its organization. It is looking always to the future, and striving with all its energy to be ready for that future.

This is an effort which requires thought and devotion and persistence. It requires that concepts not only be envisioned but that they be promptly translated into existing reality. The Army does not balk at the requirement, because it knows that no matter how perfect a blueprint may be, no blueprint by itself ever took a hill, won a battle, or fired a single round.

The Army knows, too, that in the light of the existing threat, our national security, today and for the foreseeable future, requires a modern Army as an indispensable element of our Nation's military power.

The Churches and Family Farm Life

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. McGOVERN. Mr. Speaker, throughout American history the churches have added dignity and spiritual content to farming as a way of life. Our farm families have learned through the church the concept of stewardship of the land. They have viewed the results of their labor as the gifts of a bountiful Father.

I believe very deeply in family farming as a worthwhile way of life. Boys and girls, men and women, who have worked together as a family unit on the land have benefited from a wholesome, stabilizing environment that has contributed more than anyone can fully grasp to American institutions. Thomas Jefferson held throughout his life that the small landholders constitute the most precious part of the State.

The church has recognized from the first the spiritual and social values of good family farm living. Today with large numbers of Americans moving from the farms to the cities our churches both urban and rural have an increasingly difficult task in preserving community and family values.

The August 1959 issue of the National Union Farmer has an excellent article on the role of the rural church which I believe will be of interest to the members of Congress which I include at this point in the RECORD:

WHAT IS HAPPENING TO THE RURAL CHURCH?

Up to the recent past the rural church was of, by, and for farmers and their families. Towns and villages had their own churches and institutions, although they were shared to some extent by the families on neighboring farms.

This situation is changing drastically. Churches of the open country are consolidating with those in the villages and towns. Often the churches also run buses into the countryside to transport farm families to the village church. Frequently congregations have merged with those in town to provide a broader area of service.

THE NEED TO RETAIN RURAL VALUES

The application of Christian principles to farming as a way of life is a historic contribution the rural ministry has made in rural America. In modern terms, these principles spoke of stewardship of God's bounty, the role of family life, and the mission of farm people in the feeding and clothing of mankind.

These and other identifications have caused farm people to develop a keen feeling for the welfare of others, the brotherhood of man, the place of sacrifice, and awe for God through nature. A broader translation of these values into community churches, where both town and farm people congregate, can do much to deepen this understanding for people in all walks of life. The church must not lose this mission.

THE CHURCH'S CONTRIBUTION TO FAMILY AGRICULTURE

Family-type farming is an effort in which the entire family participates. The church

has recognized and continues to stress the vital relationship among the members of the family that this develops—working together, sharing together.

While needs may remain constant, the pace of farm life—specialization, complete mechanization, enlarged units of production, contract farming, vertical integration, and the impact of the consolidation of schools, churches, and services, as well as urbanization and all that it implies—makes necessary an almost daily "new look" at how best the needs of people might be served.

THE CHURCH'S ROLE IN THE COMMUNITY

Whatever the complexion of the rural America of tomorrow, the church does have the expanding challenge of bringing together the forces which make for a wholesome community. These are many—community councils, parent-teacher groups, farm organizations, cooperatives, service associations, and youth organizations.

Churches can provide the horizontal relationship so necessary if problems are to be solved and people of good will brought together in common effort.

FARMERS UNION BELIEVES

1. That the rural church can deepen its meaning for farm people in terms of world need for food and fibre.

2. That the church's concern for family-type farming can serve to preserve the family and community values inherent in a family-farm economy.

3. That churches have a major role to play in translating the unique spiritual values of living on the land into the practical everyday experiences of both rural and urban people.

4. That urban churches have a definite stake in the continued functioning of rural churches, in that farm youth, finding employment in business and industry, and farm families leaving the land, carry with them into city life the values and attitudes derived from active rural churches.

The Commander and Civil Affairs Military Government

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. THURMOND. Mr. President, on July 4, 1959, Maj. Gen. Charles K. Gailey, Jr., the able former Chief of the Office of Civil Affairs, Department of the Army, delivered a lecture to the U.S. Army Congressional Command and Operations Group, USAR. The subject of the lecture was "The Commander and Civil Affairs Military Government." The lecture is a most informative and enlightening one, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the lecture was ordered to be printed in the RECORD, as follows:

THE COMMANDER AND CIVIL AFFAIRS MILITARY GOVERNMENT

(By Maj. Gen. Charles K. Gailey, Jr.)

I am very happy to have this opportunity of meeting and talking to you gentlemen of the U.S. Army Congressional Command and Operations Group, USAR, and to discuss with you the subject of "Civil Affairs Mil-

tary Government." My purpose shall be to present some interesting and challenging thoughts which I hope will indicate how increasingly important the subject should be to you as future commanders and key staff officers of our Armed Forces.

Let me make it immediately clear that I have no intention of devoting any great amount of the time allotted to me here to a consideration of the occupational aspects of CAMG. It is not that I consider occupational functions to be unimportant. Rather, it is because I consider the combat aspects of civil affairs military government to be of more immediate importance. In this respect it is sufficient to say that the thorough integration of the commander's CAMG responsibilities as an inseparable part of his combat mission will constitute a sound basis for the conduct of a successful occupation after the war has been won.

I do intend, however, to stress the responsibility of the commander for the conduct of civil affairs military government operations as one of his important means of facilitating and insuring the ultimate success of his combat operations and the attainment of U.S. policy objectives. I also intend to stress the means which you yourselves must employ as combat commanders or major staff advisers to effectively accomplish your mission.

Of all the ingredients of warfare, that which has been least understood is the factor of civilian populations. The ultimate aim of all military training is success in battle, yet that success can readily be jeopardized by the inability of a commander to cope with the problems that grow out of the inevitable presence of civilians in every arena of conflict and in those areas in which troops prepare for combat. These problems seldom show up in the course of military instruction.

The proper handling of military-civilian relationships can be a potent weapon in itself. Since the object of war is to impose our will upon the enemy, then it is sensible to exploit all means, in addition to force of arms, in the process of attaining this objective. Armed conflict may and will usually be required to crush the enemy's resistance, but success in battle does not always insure the winning of the peace. We have found from sad experience in the past that military victory is not always followed by complete peace.

There are numerous historical examples which prove that proper dealings with civilians constitute an indispensable factor in the success of a military operation. On the other hand, there are cases in which a military operation which might have otherwise been a success failed because of a lack of full consideration of the civilian factor. I would like to give you a few such examples in order to emphasize clearly the real necessity for the integration of civil affairs-military government planning and operations as a part of any military effort.

The Mexican War of 1847 was the first substantial experience of our country in civil affairs. Many of the policies and techniques then formulated are still in use. You will recall that as a result of our winning the war, Mexico ceded to the United States the area comprising most of the present day Texas, New Mexico, Arizona, Colorado, Utah, Nevada, and California. This was achieved not by invasion of this vast land mass but by the seizure of Mexico City, the national capital.

Gen. Winfield Scott, placed in command of a small American task force, was sent to take Mexico City to force the capitulation of the Mexican Government. At the beginning of the operation he knew that he was faced with three major tasks. First, the conduct of a successful military operation with a limited force supported by a dangerously thin and lengthening supply line from Vera-

cruz. Second, the control and discipline of his troops in their relations with the civilians of an area not subject to U.S. civil law, as well as the control and discipline of the civilians themselves in their relations with the military; and, third, obtaining and maintaining the good will of these same civilians in order to achieve the aims of the war.

General Scott took positive action to insure the accomplishment of all three objectives. His famous General Order No. 20, made necessary due to the absence of international law governing the conduct of war and the inadequate articles of war governing the conduct of American troops on foreign soil, defined his powers for control of soldiers and civilians under what was termed martial law and established means of enforcing these powers. Soldiers and civilians alike soon recognized the firmness and impartiality with which transgressions were corrected and came to respect the firm justice upon which General Scott insisted. American forces paid in cash for material needs supplied from local resources. Proper respect was shown for the customs, laws, and religion of the country. Scott emphasized and published the fact that the United States was fighting the government of Santa Anna, and not the Mexican people.

General Scott risked his career on a principle of combined military and civil affairs operations. His beliefs and actions were proven correct. The friendliness of the Mexican people permitted Scott's long line of communications from Veracruz to operate without serious or prolonged interruption.

We all know the brilliant success of General Scott's operations. This is a story of successful action attained through the blending of military and civil affairs strategy into a mutually supporting pattern. There were many witnesses to the efficiency and humanity of Scott's administration. Among these was Ulysses S. Grant who said, "I question whether the great majority of the Mexican people did not regret our departure as much as they had regretted our coming."

During World War I, civil affairs activities predominantly concerned the French public and, accordingly, these activities were accomplished by the French Army Command in coordination with the French Government. The ensuing period of military government, however, in which U.S. forces exercised responsibility in Germany and Luxembourg, taught us an outstanding lesson. The occupation was conducted by combat forces which had proven themselves in battle, but these same forces were somewhat unprepared for the monumental tasks involved in the reestablishment and administration of government. Do not let me give the impression that the World War I occupation failed. It did not, but it was certainly attended by problems which could have been circumvented by clearer foresight and more adequate preparation. Col. L. I. Hunt, who was the civil affairs officer of the American forces in the occupation of the Rhineland, summed up his difficulties in a special report submitted to the War Department at the conclusion of the occupation. Hunt called attention to the utter lack of qualified personnel available to him for the proper conduct of CAMG operations. He closed this report with what was almost a prayer: "Never again should the American Army be permitted to undertake such a task without having first trained a sufficient number of officers qualified for the work of government and the special duties involved in it."

World War II saw CAMG elements operating in direct support of combat as well as in occupational functions in every area affected by war. Many varying problems were encountered and many varying organizations were established for their solution. Regardless, however, of whether the CAMG operations were joint in nature, as in the case of

the Mediterranean and European theaters, or conducted by either the U.S. Army or Navy, as was the case in the South Pacific and Far East, there was a similarity of pattern. Direct combat support required the control of civilians in the area of combat and the prevention of their interference with tactical operations. Minimum essential needs of war-affected civilians had to be met. Policies of the United States and of Allied countries had to be effectively implemented in order to insure the reestablishment of governments in enemy territories that were in accord with the objectives of the free world. The mission of CAMG elements in every theater was to assist the commander in the complete accomplishment of these objectives. Their effectiveness was attested to by Gen. George Patton in a statement made after the Sicilian campaign: "Military government furnished me with more replacements than the replacement command." Enlarging on this, he said: "It was necessary to drop off companies and platoons to take over occupied towns. Then along would come a military government officer with his team, take over the running of the town with a few trained people, and I would get back what to me were replacements, the release of my trained fighting unit."

The 16th of December 1944 will long be remembered by the Allied Forces of World War II. Seven Allied armies, 2 million strong, were moving or preparing to move into Germany. In the north was the British 21st Army Group. On its right was the American 12th Army Group composed of the 1st, 3d, and 9th U.S. Armies. To the south, the 7th U.S. Army and the 1st French Army composing the 6th Army Group were operating in northern Alsace.

On the morning of the 16th of December 1944, the 6th SS Panzer Army, spearheaded by the Adolph Hitler Division, began the Germans' last counterattack and the campaign now known as the Bulge was underway.

A careful appraisal of the record of the Battle of the Bulge reveals that important contributions to the successful termination of this campaign were made by the G-5 sections and the CAMG operational elements. Their efforts in preventing hysteria among civilians, in controlling circulation, in enforcing curfew and other security measures, in guarding against enemy agents and saboteurs, in stabilizing civil administration and reinforcing governmental operations, as well as in the evacuation of civilians where required, enabled the combat forces to proceed with a minimum of interference on their mission of halting the Nazi threat.

I would be remiss if I did not give you an historical case which exemplifies the result of failure to integrate fully the military and civil affairs operations. As the German armies rolled eastward across the Ukraine in the summer of 1941, their commanders had good reason to be pleased with the progress of the whole campaign. Especially encouraging was the attitude of the Ukrainian people. In town after town the German forces were greeted not as conquerors but as liberators. To the commanders, this situation promised an unhampered flow of men and materials, a minimum of security troops along the supply lines, and the prospect of obtaining at least some of their required supplies from local resources.

Within 10 months these great military advantages had vanished. The Nazi Government's policy of ruthless oppression, pillage and mass cruelty had converted the people's initial friendliness into a deep hatred that was soon being expressed in many concrete ways. German commanders were forced to divert frontline units to antiguerrilla actions in rear areas. Supply and communications lines, despite the heaviest defensive measures, suffered frequent disruption. The opposing Russian commanders began to ben-

efit from the increasing flow of intelligence on German plans and troop dispositions. These factors played a leading part in the eventual collapse of the whole Nazi effort in the East. The kind of civil affairs operations which the Nazi regime chose to employ helped to seal the doom of its armies in the Ukraine.

As a chapter in the history of civil affairs, the Ukraine story is a vivid object lesson of continuing value in teaching how the civil affairs functions should not be accomplished.

Gentlemen, these historical examples vividly point out to you as combat commanders that you must be cognizant of the importance of your CAMG capability and what it can do for you; how necessary it is for you to exploit this capacity to its utmost in order to successfully accomplish your mission. This has been true in the past and will be even more true in the fast moving, fluid type of operation that has been brought on by the advent of mass destruction weapons.

You as a commander must know the people with whom you must deal, know their historic background, customs and problems. You should know something of their social structure so as to be aware of areas of sensitivity and importance. You should know the general pattern of the economy so that you do not unnecessarily interfere with the livelihood of the people. You should have some appreciation of the general cultural, religious, and political background of the people, and, for purposes of day-to-day operations, you should acquire an understanding of the governmental structure to which the people are accustomed.

The commander should strive to indoctrinate his officers and men, from top to bottom, in the principles and techniques of CAMG. The degree to which they understand and apply those principles will have a direct bearing on the success of his mission. It must be firmly understood, however, that responsibility for civil relationships lies solely with command. Subordinates may be charged with specific assignments, or entrusted with specific missions, but it is the commander who sets the tone of such operations.

CAMG activities should begin with the initial planning for an operation and continue concurrently through all subsequent operations in which the force—be it Army, Navy, or Air Force—is engaged. The moment a commander moves into an area, immediate decisions must be made with respect to the civilian population. He cannot afford to wait or defer these decisions which, either through commission or omission, will affect the attainment of the objectives and aims for which the war is fought. CAMG planning cannot be delayed until the war is won. The commander's proper utilization of CAMG techniques and procedures contributes materially, and sometimes essentially, to the winning of the victory and later of the peace.

The commander's decision is influenced not only by the relative combat power of opposing forces but also by the characteristics of the area of operations. Accordingly, the commander makes decision with respect to his responsibilities to a population by carefully weighing the CAMG estimate of the situation in conjunction with the estimates of the other members of his staff.

CAMG planning must be timely, concurrent, continuous and in full coordination with other staff sections to determine the manner in which CAMG operations may best contribute to the overall operational mission. The coordination of CAMG activities with tactical operations is also essential in order to insure the capability of the commander's CAMG operations to cope with the civilian problems caused by war.

As the scope of warfare enlarges with the appearance of weapons of increased destruc-

tiveness, the scope of the commander's CAMG operational responsibilities becomes correspondingly intensified. Modern military operations, even if carried out with discrimination, will create tremendous problems. Let's briefly examine some of the problems arising from the presence of civilians which inescapably confront a commander in the conduct of his operations.

Civilians, in larger numbers than ever encountered before, will suffer the effects of war in personal loss, injury, deprivation and lack of the barest essentials of life. They will not have the guidance, assistance or control normally provided by the former local levels of Government. Continuing damage will contribute to mass hysteria and tend to convert the previously normal populace into an uncontrolled mob; a multitude of scared, hurt and disrupted people who seek only to flee further injury with whatever possessions as are intact and obtain, by any means possible, that which is necessary to remain alive.

From the commander's point of view, what is the effect of the problems posed by these civilians on his combat operations? The answer is not difficult to imagine. They clutter the roads and interfere with or prevent the essential movement of troops and supplies. They require amazing tonnages of military supplies merely to remain alive and can compel a diversion of combat troops to protect lines of communications and supply installations. They can require a similar diversion of troops to neutralize guerrilla action fomented by undetected enemy agents among them. They can do all this and more; they can all but stop a military operation in its tracks unless proper action is taken to anticipate and plan in advance necessary CAMG controls.

Thus, the commander's CAMG operations are required fully as much by military necessity as by the customs of war and the principle of humanity.

The commander's CAMG operations are not limited to civil control and relief. In coordination with CIC, civilians are screened to insure the detection of enemy agents and the prevention of sabotage and rear area disorders. Local civil defense and damage control activities are coordinated with those of U.S. forces. Steps are taken to enforce directives and maintain a condition of law and order among civilians. Public health and sanitation are kept under surveillance to insure the prevention of epidemic disease that might affect the combat effectiveness of our Armed Forces. Information media are exploited to inform the civil populace of the purposes and aims of U.S. effort and to improve the relations between our forces and the people of the country with which we are at war. Resources of the country are mobilized in support of military requirements as well as minimum essential civilian; and, certainly not least, the extensive CAMG organization, functioning constantly at the grassroots level, constitutes an effective source of information and intelligence of importance to the combat effort.

At this point, I would like to reemphasize what is presently being done to assist you as commanders in the discharge of your CAMG responsibilities and I would like also to remind you of my earlier stated intention of stressing the responsibility of the commander for the conduct of CAMG operations as one of the important means of insuring the ultimate success of his combat operations and the attainment of U.S. policy objectives.

First, what is presently being done to assist you as commanders in the discharge of your civil affairs military government responsibilities? The Office of Civil Affairs has been established within the Department of the Army General Staff level under the Deputy Chief of Staff for Military Operations. Presently for the first time between wars,

we are continuing the training of civil affairs military government personnel. A military government group and two military government companies are being maintained in a state of readiness at Fort Gordon, Ga.; a U.S. Army CAMG school has been established and is in operation at Fort Gordon for the training of your CAMG personnel; extension courses are also provided by the school at Gordon; CAMG doctrine has been developed and published in appropriate publications; CAMG departments have been established in U.S. Army Reserve schools; a CAMG branch has been established and is flourishing in the Army Reserve; a CAMG career specialization program has been developed for officers of the Active Army; CAMG staff sections and units are participating in Army maneuvers and exercises; plans for CAMG operations have been made an integral part of plans from the JCS to division level; CAMG reserve units have been organized to meet foreseeable contingencies; augmentation table staff sections have been provided for field Army and below; and, what is very important, CAMG doctrine and functions are being taught in Army service schools.

Now what must you do, as combat commanders yourselves, to insure that civil problems do not hinder or seriously interfere with your combat operations and that you gain the combat support assistance of which the area is capable of providing?

This is what you must do.

First, remember that you and you alone are responsible for the proper conduct of your CAMG operations as well as your tactical operations. Become fully familiar with all of the elements of your force. Organize your staff so that you get the full benefit of the advice and help of your CAMG element. Gain an understanding of CAMG principles and techniques so that you can employ your CAMG elements with the same facility with which you employ your combat arms and the technical and administrative services.

Second, insure that members of your CAMG staff are competent; that they plan continuously in complete coordination with all other staff advisers; and, that they are constantly alert to the requirement of keeping you accurately informed of civil conditions which assist or deter your military actions.

Third, issue orders which give clear requirements for integrated tactical and CAMG operations.

Fourth, require your CAMG staff to actively supervise the implementation of your directed actions and check on them yourself.

Gentlemen, your knowledge and application of CAMG policies, doctrine, and procedures are essential to the successful accomplishment of your operational mission. More than that, they will materially assist the conversion of a military success to an ultimate victory in a lasting peace.

TVA

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Flint Journal, Flint, Mich., of August 8, 1959, which effectively points out some

of the many objectionable features which led me to oppose this legislation.

The editorial follows:

SATURDAY REFLECTIONS

Once again, public electric power has won out over you, the Michigan taxpayer. Your money will continue to pay for expansion of the Tennessee Valley Authority, which in turn will mean more cheap power for that area, which in turn will mean greater efforts to lure Michigan industry to the Tennessee Valley Authority's region with the promise of cheaper power. Truly a vicious circle.

It is regrettable that President Eisenhower saw fit to sign the bill in which Congress authorized TVA to issue up to \$750 million in bonds for future expansion. It is another sign of how firmly entrenched this public-power project has become in the minds of our representatives in Washington. It seems to be a case of "it's always been with us."

Michigan taxpayers are among the hardest hit by the public-power policy, because our State is one of the biggest Federal taxpayers.

When the TVA bill was before the Senate, leading Michigan figures implored Democratic Senators McNAMARA and HART to vote against it. They voted for it.

The next time they run for office, ask them how in the world they can justify spending your tax money to provide cheap power in another part of the country; cheap power which is used to lure industries from our State.

Public power, of course, has always been a darling of the Democratic Party, born in the early New Deal days when there was so much fuzzy thinking in Washington.

Now, however, it begins to appear that even some Democrats have decided to do some straight thinking on the subject. When the bill was before the U.S. Senate, the 12 Democrats in the Michigan Senate joined the 22 Republican Senators in offering a resolution demanding that U.S. Senators McNAMARA and HART oppose the bill.

The issue is as clear and simple as this: Your tax money is being used by the public-power interests to undermine Michigan industry. Think about that the next time you vote in a congressional election.

Labor Bill Demanded

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Oregonian, Portland, Oreg., on the pending labor legislation:

LABOR BILL DEMANDED

The AFL-CIO leadership is against the Kennedy-Ervin labor reform bill in the amended form approved by the Senate. It is against the Elliott bill adopted by the House Labor Committee, a weaker bill than the Senate bill. It is against the Landrum-Griffin bill which will be proposed on the House floor as a substitute for the Elliott measure, a stronger bill supported by Republicans, some Democrats, and President Eisenhower.

President George Meany, of the AFL-CIO, carefully refrains from saying that he wants no bill at all. He proposes specific amendments, which will be most difficult to obtain

from the floor. But he rejects the thinking that the public demands legislation this session to cure the abuses in labor and management revealed so starkly by the McClellan committee. He says the public is not morose and will not accept legislation "which will hamstring free democratic trade unionism under the guise of getting at the crooks."

The meat of this is that the AFL-CIO leadership will not settle for anything except its own bill, and such a bill must contain no sections amending the Taft-Hartley Act to tighten "hot cargo," secondary boycott, and organizational picketing controls. Thus, the AFL-CIO has fallen into bed with the Teamsters Union which it kicked out on the basis of corruption.

The House of Representatives this week must decide whether it is an independent body or will bow to the superior judgment of the AFL-CIO and the Teamsters. Mr. Meany may not believe it, but the people do demand labor-management reform legislation. They may not understand all the fine print, but they want action. It would be advisable for Members of Congress to understand this. The reaction is not going to be good if Congress again fails to adopt a labor bill.

Government Should Appeal Dixon-Yates Decision

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from a selection of editorials appearing in the July 27 to August 2, 1959, issues of the St. Louis Post-Dispatch. The editorial entitled "A Loophole To Plug," follows:

If the opinion of the U.S. Court of Claims in the Dixon-Yates case is allowed to stand, Congress will have some urgent repair work to do on the conflict-of-interest law.

A 3 to 2 majority of the court awarded the Dixon-Yates group \$1,867,545 in damages for the Government's cancellation of its contract to build a powerplant near Memphis. The principal ground for the award was a finding that there was no conflict of interest in the activities of Adolphe Wenzell, who helped promote the contract, while simultaneously serving as consultant to the Budget Bureau and as vice president of the investment firm which hoped to finance the project.

We sympathize fully with the court majority's view that "there is something essentially cynical about the Government's Wenzell defense." The Eisenhower administration sedulously promoted the Dixon-Yates contract as a weapon in its campaign against the TVA. It hired Mr. Wenzell to advance that cause. Then when the contract got too hot to handle, and had to be canceled, the same administration tried to escape financial responsibility for its blunder by charging that Mr. Wenzell had been guilty of conflict-of-interest. "Cynical" is the right word.

Nevertheless the court majority puts a highly questionable interpretation upon the conflict-of-interest statute when, in an opinion by Judge J. Warren Madden it absolves Mr. Wenzell in these words:

"We see not the slightest conflict of interest in Wenzell's position. The interest which he shared with the President and the Bureau of the Budget, that the negotiations should produce a contract, was the Govern-

ment's interest, although it coincided with the sponsors' interest."

Surely this is a strange construction to put upon a law which quite plainly bars anybody with a pecuniary interest in the profits of a business entity from acting as agent of the Government in transacting business with that entity. The Court seems to say there was no conflict because the Government, Mr. Wenzell and the Dixon-Yates group all had a common interest in promoting the contract. They certainly did. But while Mr. Wenzell as a Government official could claim to be acting in the public interest as he saw it, he could not make the same claim as a vice president of First Boston Corp. And he promoted the contract while serving in both capacities. If that is not conflict, what is?

Retired Supreme Court Justice Reed, sitting with the Court of Claims by assignment, came much closer to the mark in his dissent. He remarks that even while Mr. Wenzell was busy in his dual role, the questionable legality of his activities was pointed out by the Dixon-Yates group itself, by Budget Bureau staff members, and even by legal counsel for his own firm.

First Boston's lawyers advised him to get out of the Government as soon as they heard about his dual role. On the strength of his dual role, they advised First Boston to accept no fee for financing the Dixon-Yates plant. Justice Reed says Mr. Wenzell's compensation at First Boston was based on the business he brought in, and thus he had a direct and positive pecuniary interest in putting the Dixon-Yates contract over. Justice Reed concludes:

"If the statute in question is to perform its intended function in the protection of the Government against prohibited actions that might influence contracts by public agents with private connections, courts must carry out the legislative purpose."

Senator KEFAUVER has demanded that the administration appeal to the Supreme Court, but we rather imagine the administration wishes it had heard the last of Dixon-Yates long ago. If no appeal is taken, then certainly Congress should set to work at once plugging up the hole this decision leaves in the conflict-of-interest law.

Polish Cultural Meeting

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Wednesday, August 5, 1959:

POLISH CULTURAL MEETING

With Poland in the limelight because of the official visit of Vice President Nixon, the convention of American Council of Polish Cultural Clubs, opening in Wilkes College this afternoon, takes on national and even international significance. It is a most happy coincidence for Wilkes-Barre because of the added interest in the sessions which will continue until Sunday.

Poland has a rich cultural background and has produced scores of internationally known figures in the arts through the centuries. It is the purpose of affiliated clubs, of which the Women's Committee of the Polish Room of Wilkes College is one, to preserve this heritage. The council itself coordinates these efforts.

In the preamble to the council's constitution, there is this brief outline of its role in American life:

"To perpetuate and develop the culture, created by our forefathers; to encourage higher education and scholarship among people of Polish descent; to foster in Americans of Polish descent a consciousness and pride of their own heritage; to enrich the forming pattern of America's great culture by weaving into it the best from Polish sources of inspiration, and of accomplishment, we associate ourselves together."

The council maintains a clearinghouse for the interchange of information and ideas, pertaining to the promotion of Polish culture in America. It suggests cultural activities and provides guidance to clubs for the fulfillment of their objectives. It encourages the formation of new clubs. It cooperates with other organizations and maintains close contacts with the creative forces of contemporary Polish cultural life. The council's principal task is one of initiative and inspiration.

Its projects have covered a wide range. They include the Norwid literary contest, the Marcella Sembrich Kochanska voice contest, and the Mickiewicz centennial. The convention theme this year is the "Millennium of Poland," the national observance of which will be ushered in here, no small distinction for the community as well as the organization. The public will become increasingly aware of this in the years immediately ahead, with the American Council of Polish Cultural Clubs spearheading the movement.

It is fitting that the 1959 gathering of this distinguished body should be held in Wilkes-Barre which has made so considerable a contribution of leadership to organizations of Americans of Polish extraction. Currently, Charles Rozmarek is president of the Polish American Congress and the Polish National Alliance and Dr. Joseph Kocyan is chairman of the board of the Kosciuszko Foundation, to cite two of many examples. Joseph Lester is an officer of the American Council of Polish Cultural Clubs and convention chairman. Nowhere could the council meet where it would be more at home.

It is a privilege to join with President Eisenhower and other notables in extending greetings to the city's guests for the next 5 days and wish them well in their efforts to enrich our national heritage.

Khrushchev's Meeting With Nixon

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following column by Mr. Drew Pearson which appeared in the Wilkes-Barre Record of Friday, July 31, 1959.

[From the Wilkes-Barre (Pa.) Record, July 31, 1959]

DREW PEARSON SAYS: KHRUSHCHEV TOLD NIXON THE TRUTH ABOUT SUPERIORITY OF RUSSIAN MISSILES; IRONICALLY, NIXON HAS URGED MORE U.S. MISSILE PRODUCTION; RUSSIA IS AHEAD OF US IN EVERY MILITARY DEPARTMENT EXCEPT SEAPOWER

WASHINGTON.—There was irony in the fact that Nikita Khrushchev's unprecedented and on the whole healthy public debate at the American Exposition in Moscow was staged with the man who has consistently urged more American concentration on missiles.

When Khrushchev threw in Vice President Nixon's face the warning "we have means at our disposal which can have very bad consequences" and again when he said; obviously referring to missiles, "but ours are better if you want to compete"—Nixon knew Khrushchev was telling the truth.

It was Nixon who urged a franker policy in telling the American people how far behind Russia we were when the first Russian sputnik was launched on Oct. 4, 1957. He was overruled by the White House. In the approximately 2 years since then, we have lagged even farther behind. And the real reason Foreign Minister Gromyko has been so tough at Geneva is because Russia is now ahead of the United States in every military department except sea power.

Here is the box score on Soviet versus American military strength, which both Nixon and Khrushchev had in mind when they debated in Moscow:

Intercontinental missiles: Russia suddenly resumed testing intercontinental missiles in March after a long lapse. From this, Secretary of Defense McElroy hopefully concluded that the lapse meant the Russians, like us, were having trouble with their long-distance missile. Other experts believe Russia stopped firing the big missiles simply because she was busy producing them.

In any event, there can be no mistaking the fact Russia has been blasting off about four missiles a month since March from her great test center northeast of the Caspian Sea. Our powerful radar eyes in Turkey have spotted the missiles take off; another radar station in the Aleutians has followed the warheads as they plunged back to earth. Only two of the big missiles have been hurled a full 5,000 miles. The remaining 18 which we were able to track went 3,500 to 4,500 miles. Whether these were test models or production models, however, remain a question mark.

Our own ICBM firings have been plagued by minor malfunctions. It is no military secret that we have tested 26 Atlas ICBM's, of which 11 have been successful, 6 partially successful, and 9 complete failures. In contrast, our monitor shows that 75 percent of the Russian ICBM tests have been successful. They have operated with alarming reliability. The first of our 5,500-mile Atlas missiles were supposed to be combat-ready in July. But five misfires in a row have delayed the operational date until September or October. It is doubtful that we will have the 10 operational Atlases that Secretary McElroy promised by the end of the year. Russia ought to have 10 times that number.

Intermediate missiles: Russia is known to have 750 medium-range missiles ready to launch against our overseas bases. They include both T-4's, which can shoot 1,000 miles and T-2's which can hit targets up to 1,800 miles away.

Our first squadron of 1,200-mile Thor missiles was delivered to England last winter and was supposed to be ready for combat by January. It didn't become operational until June.

This now gives us 15 intermediate missiles against Russia's 750. We should whip another 15-missile squadron into shape before the summer is over. Altogether, we will set up four squadrons in England. We also hope to locate four squadrons in Italy, perhaps four more in Turkey. But we have not even selected the launching sites.

Our present schedule also calls for halting production altogether after we have built about 200 intermediate missiles.

Underwater missiles: We have taken actual photographs of Soviet submarines equipped with vertical launching tubes. These are capable of firing stub-nosed Comet missiles from underwater hiding places at targets 700 miles inland. Russia has also stepped up its submarine activity in American waters during the last 3 years.

Apparently the Reds have even planted secret transmitters along the ocean bottom near our shores. These serve as homing devices to guide other submarines.

In contrast, we won't be able to launch underwater missiles until late 1960. These will be 1,200-mile Polaris missiles, which have fizzled in preliminary tests at Cape Canaveral, Fla. The test program will be stepped up for the next 12 months. Then the Navy may attempt a shipboard launching from a surface ship. If this succeeds, the Navy will try firing Polaris missiles from submerged submarines.

Of Russia's 600 submarines, an estimated 100 are equipped to fire missiles. The United States has only five missile submarines, all carrying winged Regulus missiles, which must be fired from the surface. Our total submarine fleet, counting 80 used for training or stored in mothballs, is less than 200.

Russian atomic subs: Thanks to Adm. Hyman Rickover, however, we are well ahead of Russia in designing and constructing atomic submarines. But the latest intelligence reports claim Russia will soon launch its first two atomic subs.

In atomic weapons, Russia has caught up with us in quality and is not far behind in quantity. We have picked up enough information from Russian nuclear tests to convince our scientists that Russia has developed compact hydrogen warheads better in some respects than our own.

In conventional weapons, Russia still maintains an overwhelming superiority. Her land army is still 175 divisions; ours has dwindled to 14 effective divisions. The Red Army also has better modern rifles, self-propelled assault artillery, armored personnel carriers, heavy tanks and grasshopping helicopters.

Russia still has about 20,000 combat jet planes to our 18,000. While her fighter planes are probably superior to ours, our Strategic Air Command is still considered a more effective bomber force. Russia has been testing a new, supersonic, bomber which might be the forerunner of the world's first atomic bomber. Her atomic aircraft program is believed to be ahead of ours.

On the high seas, we still surpass Russia in fleet strength. But the Red surface fleet is now second only to our own, while her submarine fleet is superior. Russia hasn't bothered to build any airplane carriers, perhaps because carriers may be as outmoded as battleships in this atomic age.

U.S. Art for Moscow

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Tablet of August 8, 1959:

U.S. ART FOR MOSCOW

(Text of a radio broadcast by Wheeler Williams, N.A., president, American Artists Professional League)

As an artist and as a Legionnaire, I am glad to have this opportunity to speak to fellow Americans on this latest fiasco in a series of well intended but mismanaged Government efforts to use American art as a bridge of understanding and friendship between peoples.

We are all indebted to Congressman FRANCIS WALTER for his alertness and courage in bringing the Red ratio of the roster so public attention.

In his address to the Congress, June 3, he revealed that a routine check of House Un-American Activities Committee files disclosed that: "of the 67 artists whose works have been chosen, 34, a fraction more than 50 percent, have records of affiliation with Communist fronts and causes," and that of these: "22, or one-third of the 67 artists have a minimum of 465 such connections."

The ratio as given is intolerable. That a slew of these are repeaters from one or more previous Government-sponsored exhibitions quite properly recalled or cancelled because their works were included, makes it even more so.

Let me assure you that, while it is true that the Communists have made the fields of our art a prime target for infiltration and subversion, they have not been successful to any such tragic degree as these figures would indicate. Ninety percent of our artists are still loyal Americans, including, one can hope, 90 percent of the abstract and other ism schools as well as those dedicated to the modern classic tradition of American art.

THE REASON

How then did this happen?

An organization known as the American Federation of Arts, dominated largely by museum directors, passed a resolution a few years back that art should be judged "on merit alone and not on the politics of the artists." No one objected to this as no one had ever concerned himself with the politics of the artist. It was as unanimous as a vote would be against the propriety of beating one's wife. Somehow this resolution got incorporated in instructions to the jury.

Unfortunately, some people confuse communism with politics and ignore the fact that in our country communism is not politics, it is subversion.

Once again in choosing a jury to select works of art, a Government agency failed to get professional advice from reputable bodies of professional artists. They ended up with a preliminary committee of seven citizens, four laymen, an art historian, an art educator, and the director of circulation exhibitions for the museum of modern art, which the New York Times magazine recently captioned as the "Awesome Taste Maker."

This committee chose the jury, chaired by a painter but including another so-called art expert, Lloyd Goodrich, director of the Whitney Museum, and another art educator. Then for sculpture, a teacher from Sarah Lawrence College was added. Judging by the example of his own work included and all but 4 or 22 selections in this field, he probably instructed in the making of welded wreckage constructions. Since these are not representations of living form they cannot, correctly, be considered sculpture.

As soon as the jury was announced, I wrote to the President my forebodings that the exhibition would be worse than the Brussels disaster.

When, at Congressman WALTER's invitation, I agreed to go to Washington as a witness at the committee hearings I was shown for the first time a full set of photos of the selections. Judged on merit alone the choices are, in my judgment, lamentable and with a few exceptions a discredit to American art.

Judged on the prerequisite of giving a true image of America, they are unpardonable.

At the hearing, I called some of the paintings and most of the sculpture "Childish Doodles" (not all as some newspapers misquoted). One painting I described as an amateur design for linoleum that my wife would never select.

A not inconsiderable proportion of the paintings I could only classify as lampoons

and social protest painting. Scenes of slum street corners with human derelicts, thugs, and prostitutes. A dismal, dreary, and technically trivial array.

On the brighter side there was a Wisconsin landscape, a lighthouse and a few other works by the same small group of conservative painters the artistic left always include to show they can tolerate traditional work. Better and more appropriate examples, even of these could have been chosen.

NOTHING WORTHY OF UNITED STATES

By and large there was nothing to give anyone some comprehension of all the natural beauty with which God has so lavishly endowed our land, nothing to honor its proud history, worthily portray its people, or the architecture of its great cities and rural villages. One thing should now be clear. No layman involved as a museum director, dealer, or critic should ever be allowed to serve on a jury.

You would not enter a horse in a show where the judge was manager of a stable with numerous entries. Goodrich has managed and purchased for the Whitney picture stable for years.

Naturally he must be pleased that five of the works for Moscow are from the Whitney Gallery and he boasts in the Journal American of July 18 that 37 of these artists are represented in the Whitney Summer Show drawings from its own collections. Incidentally three or more are to be given one-man shows at the Whitney this coming season. In the current show of the museum of modern art, reached by connecting doors are 32. Even the Met is collaborating by showing examples of some on the Moscow roster. The experts must stick together.

Much is made about how these selections will show the freedom the American artist has to paint whatever he wishes. How about the license of the jury dipping into the public's pockets to promote artists who are under Communist direction? How free are they? What about the laugh this exhibition will give the Red hierarchy who know better than the House committee which are the works of their stooges. They may well think they have captured control of American art.

This brings up a vital point. What is the Red policy regarding art? We in America wouldn't or couldn't believe that Hitler meant what he said in "Mein Kampf." The Reds are almost equally and brutally frank.

ART AS A WEAPON

Most of us now are fully aware that their first aim is to destroy peoples' faith in God. Few realize the importance they give to destruction of a nation's faith in its heritage of art and culture as a preliminary to subjugation.

William Z. Foster, Communist Party chairman, writing in the New Masses in 1946 said, "There must be a clear understanding that art is a weapon in the class struggle. Not only is art a weapon, but a very potent one as well. Moreover, rising revolutionary social classes instinctively realize the importance of art as a social weapon and have always forged their own art and used it to challenge that of the existing ruling class."

V. J. Jerome in his pamphlet "Grasp the Weapon of Culture" outlined it in greater detail and went to jail for advocating overthrow of our Government by force and violence. Picasso has written, "Art is not to decorate apartments, art is a weapon of revolution and my art is revolutionary art."

Rivera, a top Mexican Communist, whose mural including a portrait of Lenin for Rockefeller Center was quickly pointed out wrote: "The role of the artist in the revolution is not that of the fellow traveller, it is not that of the sympathizer, it is not that of the servant of the revolution. The role of the artist is that of the soldier of the revolution."

How do the Reds use "art as a weapon?" They deploy their revolutionary artists in three basic battalions.

The first is for "social protest." In this are: their front line shock troops who paint the dirty linen and garbage, of which even our land has its share, and rub it in people's eyes. Remember some of those WPA post office murals? Along with these are their political and social satirists who illustrate the New Masses and other Communist publications and alas, some less than cautious other magazines and papers.

In the second, they promote isms of the pseudo-modern schools spawned in Europe in the early years of this century. They were fortunate in enlisting all or almost all of the founders and heroes of these weird cults and have amassed a huge following of witting and unwitting practitioners and collectors.

The Red purpose with these is to destroy man's faith in his cultural heritage and, psychologically in his own judgment.

Finally, in the third, they deploy and promote the few artists of real talent they caught in their net during the depression days to act as door openers to the prestige and endowments of art societies and foundations.

Collaterally they have succeeded in placing their members or adherents of revolutionary schools of art in posts of influence as critics, as museum directors, and as teachers in our schools.

These are the same tactics they employed in Russia before the revolution and up to 1922. When entrenched in power Lenin outlawed revolutionary art. Since then only Socialist realism art has been permitted behind the Iron Curtain.

The USIA has not had the courage to admit failure and recall this Red-saturated exhibition, although the State Department and the USIA have recalled or cancelled a series of similarly, if less massively, polluted art ventures in the recent past.

They have, however, partially acceded to the demands of the Honorable R. L. Buell (a dear friend and old roommate of mine) in quickly collecting and shipping a fine collection of paintings by American masters from Stewart down to the early years of this century to give some idea of our rich national heritage of art.

The rubbish and junk pile shipped first should still be recalled and replaced with some proof that we still have fine artists who share their fellow Americans love of God and country.

Please write the President requesting that he so suggest to the USIA.

Space-Age Metals Bid for Missiles

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. MINSHALL. Mr. Speaker, I ask unanimous consent to print in the CONGRESSIONAL RECORD an article "Space-Age Metals Bid for Missiles" which appeared in the New York Herald Tribune on Sunday, June 23, 1959. The author, Allen M. Smythe, points out new policy decisions by the Pentagon for the development of new defense production equipment that should be a great aid to the machine tool industry. The article reads:

[From the New York Herald Tribune, June 23, 1959]

SPACE-AGE METALS BID FOR MISSILES—BUT ARE PROBLEMS FOR TOOLMAKERS

(By Allen M. Smythe)

Greater emphasis is to be placed on developments of new processes and manufacturing methods for the new materials that will be used for missiles and spaceships according to top Pentagon officials.

Such new alloys and heat-resistant metals as titanium, molybdenum, zirconium, columbium and beryllium will need new equipment and processes before they can be used in the fabrication of ultrasonic weapons. Some of the processes will change the molecular structure to further improve the characteristics of these metals.

Defense Secretary Neil H. McElroy has indicated he expected additional funds for this purpose in the defense appropriation bill before Congress. He mentioned only one of the new materials, "aluminized plastic." Other Pentagon officials stated that metal-coated ceramics also are under intense development.

Defense metallurgists and equipment experts stated that in the future military contractors will use such processes as chemical milling, explosive forming, ultrasonics, cold-stretch forming, electric erosion and ultraspeed grinding. Many of these are past the early development stage but are not in general use.

Industry observers have stated that research and development of the new hard and lightweight materials for the spaceships of tomorrow have far exceeded development of processes to use them.

Pentagon procurement officials now indicate they will encourage defense firms and equipment makers to develop new and practical techniques and processes for these new metals.

The Navy states that their Bureau of Ships and the Bureau of Ordnance have tested a number of new processes. Air Force procurement officials at Wright-Patterson Field, Dayton, Ohio, say they have issued 114 contracts, valued at more than \$80 million to laboratories, equipment makers and defense firms to develop these new manufacturing methods. They have evaluated nearly 200 more.

The Defense Department has more than \$5,500 million of machine tools in Federal arsenals, contractors' factories, in standby plants and in storage. Many factors have made these obsolete. The trend from aircraft to missiles has moved many tools into storage. The 30-day concept of a nuclear war has largely eliminated the need for standby plans. The complexity and lethality of modern weapons have made their mass production costly and unnecessary.

Assistant Secretary E. Perkins McGuire has estimated that obsolete weapons and equipment will soon approach \$60 billion. He is working to save storage space and costs by distributing to other Federal agencies, foreign governments and technical schools all materiel that could be used. He would scrap the rest, which he believes might return \$1 billion or \$2 billion at scrap-metal prices.

Cuban-United States Relations

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following editorial by Dr. Emilio Nunez

Portuondo appeared in Latin American Events of August 7.

Dr. Portuondo was president of the Security Council of the United Nations and is eminently fitted to edit Latin American Events.

This article was called to my attention by the Reverend Father Thorning, whose vast knowledge of Latin America is so well known that he has been called El Padre de las Americas.

The editorial follows:

This is our first newsletter which we shall send to you weekly. We believe it is unique in its field.

At the outset, I, as editor, feel it my duty to (1) explain the purposes of this letter and (2) to identify myself.

We on this continent—the United States, Canada, Central and South America—must stand together or be gobbled up separately by the Communist monster. Understanding between these nations will lead inevitably to better relations. We hope that this newsletter will create this understanding and if we fail to accomplish this purpose we shall have failed in the task before us.

Some segments of the U.S. press, as well as the Latin American press, are sending out garbled news dispatches about the Communist threat to this continent. They either do not want to understand this threat or they fail to grasp it. Consider what is happening in Cuba, to mention only one example. I could write a book on the misinformation coming out of Cuba, citing chapter and verse.

It shocks me—as it must millions of others in North and South America—that the New York Times, one of the greatest newspapers in the world would allow one of its correspondents, Herbert L. Matthews, to write a three-column glowing account of Fidel Castro's achievements. The truth is that Castro has achieved exactly nothing, unless you consider chaos and tragic unemployment as achievements.

In a recent editorial the Washington Post, another great newspaper, said of the killer Castro: "Patience is necessary while the new regime is working out its problems." Patience? Isn't 7 months sufficient time to judge the socio-economic trends in Cuba where the United States has almost \$1 billion invested and which the greedy hands of Castro are about to snatch?

Castro is a Communist, although I can't prove it since I have never seen his Communist card of membership in that infamous, worldwide tyrannical organization. I can't prove either that there are tigers in India since I have never been to India, but friends of mine who have been there have seen tigers and I have no reason to doubt them.

Despite what Castro says, he is a Communist. We judge a man by his actions and not by what he says.

Castro, furthermore, is a dangerous psychopath. Certainly, there is a dash of insanity in any man who rants and raves for a 6-hour period on TV. These ramblings are known in psychiatry as logorrhea, a form of mental sickness.

There is a similarity between Castro, Hitler, and Stalin. All three are cunning, ruthless, murderers, power hungry, obsessed with grandiose ideas, manic-depressives, long on promises and short on keeping them. All three tell (or told in the case of Hitler and Stalin) shameless lies in a brazen effort to hoodwink their subjects and remain in power.

Castro, who calls himself doctor, despite the fact that he has never practiced a day of law, told his subjects on his return to Cuba after his recent visit to the United States he had "put the fix in" so that Cuba's sugar exports to the United States would be increased, another one of his barefaced lies. Cuba today exports 8 million tons of sugar to the United States at about 6 cents a

pound, which is more than double the world market price.

In view of the social and economic turmoil in Cuba today, caused by Castro's erratic behavior, the U.S. Congress will not pass a sugar law this year, despite the understandable pleadings of U.S. sugar growers who want to make plans for next year.

If the present Communistic trend in Cuba continues next year, Cuba will be most fortunate if she is allowed even 1 million tons in the U.S. market. Castro seems to think that the United States needs the 3 million tons from Cuba, further evidence of his weird thinking. Brazil alone could send more than 3 million tons of sugar into the United States. Yet, Castro has the gall to tell his people that Cuba's sugar quota will be increased.

While I have dwelt at length on Cuban-U.S. relations in this first letter, my future dispatches will deal more in detail with the problems affecting Panama, Uruguay, and other Central and South American countries.

Mr. Frank A. English, President of Planters Nut & Chocolate Co., Dies

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news story and an editorial from the Wilkes-Barre Times Leader of Wednesday, August 5, 1959, upon the death of Mr. Frank A. English, president, Planters Nut & Chocolate Co.:

[From the Wilkes-Barre Times Leader, Aug. 5, 1959]

FRANK ENGLISH DIES, HEAD OF PLANTERS—BUSINESSMAN'S DEATH OCCURS UNEXPECTEDLY—NOTABLE CAREER

Frank A. English, 63, president of Planters Nut & Chocolate Co., and an active figure in community affairs, died unexpectedly this morning at 6:05 in Wilkes-Barre General Hospital. A resident of 555 Gibson Avenue, Kingston, he was admitted to the hospital last night at 7:30.

Funeral will be held from the family home Saturday morning followed by a requiem mass in St. Ignatius Church, Kingston. Friends may call Thursday night, 7 to 10, and Friday, 3 to 5 and 7 to 10 p.m.

In apparent good health, Mr. English had presided at the quarterly board meeting of Planters yesterday morning at the firm's offices on South Main Street, city. Although he suffered a heart attack about a year and one-half ago and several seizures since then, Mr. English had directed the company's business and was in his office each day.

On the advice of his family and business associates, Mr. English decided several days ago to go to the hospital for a rest. Last night he was admitted to General Hospital and it was assumed he would be a patient for only several days. He and his wife planned to go to Englewood, N.J., on Sunday to see their first grandchild, Francis X. Horrigan. The baby, born July 28, is a son of Mr. and Mrs. Brenda Horrigan of Englewood. Mrs. Horrigan is the former Elena English.

HEADED VAST CONCERN

Mr. English was named president of the firm February 15, 1956, succeeding the late Mario Peruzzi, Sr. He was the third president of the multimillion dollar company,

founded in this city in 1906, by the late Amedeo Obici and Mario Peruzzi, Sr.

Starting his career with Planters 43 years ago as a clerk-typist, Mr. English worked upward rapidly in all departments until becoming head of the internationally known business. When he joined the company in 1916, the offices were on East Northampton Street. The main offices were moved to South Main Street, city, in 1927.

After being associated with the firm's sales department a number of years, Mr. English was sent to Chicago, Ill., in 1920, to establish a sales branch there. His ability as an administrator and sales executive was recognized by his work in Chicago, and in 1932, he was elected to the board of directors and appointed assistant secretary.

Two years later, in 1934, Mr. English was named secretary of Planters and of the board. He also continued in the position of sales manager and as the years passed he took over more and more of the giant firm's administrative assignments under the guidance of Mr. Obici, and Mr. Peruzzi. In 1947, upon the death of Amedeo Obici, he retained the post of secretary and also was given the office of executive vice president. He also was appointed general sales manager of the firm.

Mr. English and his brother, M. J. English, formerly of Wilkes-Barre, now of Suffolk, Va., who is vice president and treasurer of Planters, had a total combined service of 81 years with the company.

Mr. English was active in the civic, business, and fraternal activities in Wyoming Valley. A founder of the Friends of St. Michaels, he served as honorary vice president of that group.

ON NUMEROUS BOARDS

Last month, Mr. English became a member of the board of trustees of Wilkes College. He also was a member and past director of Wilkes-Barre Rotary Club and a member of Westmoreland Club and Fox Hill Country Club. He served as a director of the Miners National Bank and of Mercey Hospital and was a member of the hospital building committee. He also was a governor of Wyoming Valley Community Chest, now the United Fund, and served as a director of the Greater Wilkes-Barre Chamber of Commerce.

A native of Wilkes-Barre, Mr. English was born September 20, 1898, a son of the late Anthony and Teresa Petrucelli English. The family resided many years on Park Avenue and Mr. English was a foreman for the Lehigh-Wilkes-Barre Coal Co. Educated in the elementary schools in this city, Frank English was graduated from Wilkes-Barre High School. In high school, he was a basketball star and later played with local amateur teams and the Planters Peanuts entry of the Industrial League. Later, he and his brother Mike, played with the semiprofessional team known as the Wilkes-Barre Independents.

A veteran of World War I, Mr. English served as a sergeant major in this country with the Air Corps. He was a member of American Legion Post 132. He was a communicant of St. Ignatius Church, Kingston, and of the Holy Name Society.

Surviving are his wife, the former Helen Connors; two daughters, Mrs. Brendan Horigan, Englewood, N.J., and Mariana, at home, a sophomore at Manhattanville College of the Sacred Heart, Purchase, N.Y.; a grandson; a brother, M. J. English, Suffolk, Va.; two sisters, Misses Mary J. and Anne E. English, of Wilkes-Barre.

[From the Wilkes-Barre Times-Leader, Aug. 5, 1959]

FRANK A. ENGLISH

The death of Frank A. English, president of Planters Nut and Chocolate Co., today was a shock and heavy loss to the community as well as to loved ones and business associates. This former Times-Leader Evening News

Little Merchant easily qualified for a place among Greater Wilkes-Barre's leading citizens. He belonged to that distinguished company that found its Acres of Diamonds amid the familiar scenes of the hometown, demonstrating that there is opportunity here for individuals, possessing initiative and ability.

Like so many self-made men who have scaled the heights in this community and in America, including many Presidents of the United States, Mr. English started life in modest circumstances. This humble beginning proved no handicap; if anything, it was an asset, for it provided him with added incentive to make good. We like to think that the training and discipline he received in the circulation end of this newspaper was a factor in his success.

Apart from the apprenticeship he served with this publication, his business career has been linked entirely with Planters and, more recently, with the Miners National Bank of Wilkes-Barre as a member of the board of directors. His steady progress at Planters until he finally headed the firm is a success story in the finest American tradition.

As one of the early associates of Amedeo Obici and Mario Peruzzi, founders of the firm, he was the logical man to succeed them when they passed on. For more than a quarter century, he had borne heavy responsibilities, as Mr. Obici and Mr. Peruzzi leaned heavily on him and were guided by his judgment. The fact that they delegated to him increasing authority was evidence of their confidence.

It does not detract in the least from the achievements of the founders to say that Frank English made a considerable contribution to the success of Planters which grew from a local into an international concern. Perhaps more than any individual, Mr. English was responsible for its modernization. He possessed both courage and foresight.

Greater Wilkes-Barre also knew Mr. English as a loyal son whose departure from the local scene will leave a void not easy to fill.

Speaker Rayburn's Talk on Labor Reform

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. MOORHEAD. Mr. Speaker, all of the legislative wisdom gained in his more than 46 years in the House of Representatives he so dearly loves was summed up last night in a most important address the Honorable SAM RAYBURN delivered to the American people.

The gentleman from Texas spoke on the eve of what is likely to be the most important debate of this session.

His plea was for justice and reason rather than passion and emotionalism in enactment of legislation for labor-management reform.

As the gentleman so aptly put it, "to cut out the cancer of corruption we use a surgeon's scalpel instead of a butcher's cleaver."

Unfortunately, however, there are all too many forces now at work using this serious debate on the subject of reform to mount a shortsighted attack on the entire collective bargaining structure.

They are using the broad cleaver recklessly. Instead of curing one cancer

they would create many more throughout the entire fabric of labor-management relations which has served this country so well.

If ours is to be a responsible legislative purpose in this debate, we must confine ourselves to efforts to cure corruption without harm to those honorable devices which decent working men and women have been using for years to improve their livelihoods.

In the hope that it will keep us on the path of responsible legislative purpose, I commend its reading to every Member of this House.

(For Mr. RAYBURN's speech, see remarks of Mr. THOMPSON of New Jersey, pp. 14201-14202 of House proceedings for today.)

Mark American

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. MULTER. Mr. Speaker, at the request of my constituent, John J. Shaughnessy, I place in the Appendix of the RECORD his correspondence and an editorial from the July 4, 1959, issue of the Tablet, as follows:

BROOKLYN, N.Y., July 16, 1959.

HON. ABRAHAM J. MULTER,
House of Representatives.

DEAR MR. MULTER: Enclosed is copy of letter written by my son, one of your constituents, which is self-explanatory.

There is also a clipping of the editorial "Mark American Scandal," which appeared in the July 4 issue of the Tablet.

Inasmuch as there has been no reply or even acknowledgment in over 60 days, it is evident, as past experience has shown, that the White House staff will not permit this matter to be brought to the personal attention of the President. In fact I was informed that it was impossible to do so.

Actually the combined efforts of the Catholic War Veterans and the Ancient Order of Hibernians on a national level; segments of the American Legion from whom I was awarded the Distinguished Service Medal for Americanism, and the Diocesan Union of Holy Name Societies of this diocese have been unsuccessful in achieving this purpose.

Therefore, I respectfully urge you to insert both items in the CONGRESSIONAL RECORD or read the material on the floor of the Congress.

If you do, and I trust you will, I should like to know the cost of reprinting 1,250,000 copies of the tear-sheet(s) by the Government Printing Office as I have received thus far more than 1,200,000 communications.

Thanking you in advance,

Very sincerely yours,

JOHN J. SHAUGHNESSY.

BROOKLYN, N.Y., May 15, 1959.

Subject: John J. Shaughnessy, "Mark American," 2800 86th Street, Brooklyn 23, N.Y.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: This is written without the knowledge or consent of the subject.

John J. Shaughnessy is my father, but even if he were a stranger I would have to

respect him. Right or wrong, wise or mistaken he set forth a course for duty and honor and no honest man can say he did not remain faithful to his trust.

Nearly 6 years ago you approved the unanimous declared policy of the Congress, evidenced in U.S. Senate Concurrent Resolution 40, 1st session, 83d Congress, which called upon all American producers and merchants to advertise American goods exported by affixing on all external containers, the phrase, "U.S. of America" in "indelible print of a suitable size."

At the same time you called upon your Commerce Department who was charged by the Congress with implementing this policy to request your entire executive branch to assist in giving it full effect. The record shows a deadpan view of fumbling, quibbling, and procrastination by all concerned.

Here is the story in brief: The Pentagon has not and seemingly will not affix the desired inscription on containers of the staggering quantity of American-made goods shipped all over the world for troop support. The foreign-aid agency, ICA, uses, in the main, a paper label originally designed by Paul Hoffman, with a central device "clashed hands" which was added by Harold Stassen. The Pentagon follows the same pattern on mutual defense cargo without the central device. This method was severely criticized in the official organ of the American marking industry as "worthless" and "a slick way to dupe the American people." The Department of Agriculture, custodian of our surplus food stocks does not require identification of American origin in accordance with the congressional edict on the surplus food sold or exchanged to foreign or domestic claimants. The only exception is the food donated or transferred to voluntary relief agencies, and even this is seldom properly identified because of the mandatory use of "clashed hands" symbol with the insignificant sized lettering and the similarity of the emblem to that of the one used by the Communists which the New York Times reported amazed the Germans.

What is the explanation for this? Look back a moment. Consider the key to the congressional "mark American" resolution. It simply provides for affixing the inscription "U.S. of America," in indelible print of a suitable size. It does not require the use of emblems or symbols which by their nature are expensive, and more important, in the testimony of experts worthless for the purpose intended.

Indeed, as I have is from my father, the requirements of the congressional resolution can be met without cost on all Government procured cargo if the Federal procuring officials would add a single line to the standard marking instructions calling upon vendors or suppliers to insert the phrase "U.S. of America" in bold, legible, and indelible lettering. This should be placed in an outstanding position on each container, unit, intermediate and master, preferably on both of the largest sidewalls.

This would permit complete adherence to the expressed intent of the Congress and save the taxpayers a tremendous amount of money which is presently being wasted by the Pentagon and ICA.

More than 3½ years ago my father was separated from Government service after long and faithful employment. The reason given was "economy." But he says the reason was that he refused to "desist" in inviting attention to the lack of proper action on the part of responsible officials to follow through on your orders to give full effect to the worthy measure to "mark American." He was upheld and your officials refused, as to the lack of implementation of the congressional resolution, after a hearing before the U.S. Senate Interstate and

Foreign Commerce Committee on April 10, 1956.

Yet, despite this confirmation of his veracity, his former employer, the Department of the Army, has failed to reinstate him although you are told they have made intensive efforts to do so.

Pointedly, the attached photostatic copy of a letter forwarded by the Army in reply to a letter addressed to you by the highly respected president of the Sportsmen's Club of Sheepshead Bay will give you an insight into buckpassing. The Under Secretary "has directed" it is said. Now you know and all of us who served in the military knows that if the Secretary issued a directive—that's it—period. There are no ifs, ands, or buts. So somebody is being kidded and since a copy of the aforesaid letter from the Office of the Deputy Chief of Staff for Personnel went back to you and more than 2 months elapsed without action, it has to be you.

May I urge you to take a long searching look into this?

Cordially yours,

JOHN J. SHAUGHNESSY, Jr.

DEPARTMENT OF THE ARMY,
Washington, D.C., March 13, 1959.

MR. FREDERICK ALMOND,
Brooklyn, N.Y.

DEAR MR. ALMOND: I have been asked to reply to your letter to the President, dated February 21, 1959.

For a considerable period of time the Department of the Army has been making an intensive effort to find employment for Mr. Shaughnessy in the New York area. The problem is especially difficult at this time, since Army installations throughout that area are currently undergoing reductions in force. The Under Secretary of the Army has directed, however, that Mr. Shaughnessy be contacted with respect to any suitable vacancy that occurs in the future.

Your interest in Mr. Shaughnessy is appreciated.

Very truly yours,

R. H. WILLEY,
Director of Civilian Personnel.

[From the Tablet, July 4, 1959]

MARK-AMERICAN SCANDAL

If we've made no recent mention of the case of John J. Shaughnessy, of Brooklyn, founder of the congressionally approved campaign to mark all exports "made in the United States of America," it's not because we've lost interest. It's because there've been no new developments.

When the congressional resolution was "sabotaged by inaction," Mr. Shaughnessy said so publicly, and was told to shut up or else. When he refused, the veteran civil service employee found his job abolished in 1955 "for reasons of economy," and he's been getting the runaround from the Government ever since.

A long list of "phony" excuses and broken promises preceded the declaration of March 13, 1959, that "the Under Secretary of the Army has directed that Mr. Shaughnessy be contacted with respect to any suitable vacancy that occurs in the future . . . in the New York area."

On June 9, Mr. Shaughnessy was offered a job, if he were willing to move his family to Alexandria, Va., and accept almost \$50 a week less than he was entitled to. He branded the offer as a "fake" and insisted officials knew he would not accept before they wrote to him.

And so the scandal drags on, with the Brooklyn patriot having the support of every veterans, fraternal, and religious group which has investigated his case but, unfortunately, no support from the Government which he served with distinction in war and in peace.

Publishers' Second-Class Mail Subsidies

EXTENSION OF REMARKS OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

MR. HÉBERT. Mr. Speaker, I feel impelled to rise in reply to the recent remarks of the gentleman from Pennsylvania [Mr. RHODES] entered in the Record on July 28, 1959, in support of H.R. 8433, introduced by him on that date to place an annual limitation on what he calls publishers' second-class mail subsidies.

The gentleman takes the flat position that the present second-class rate structure affords an unjustified subsidy to newspaper and magazine publishers.

I think it is only fair to call to the attention of the House, at the outset, the fact that the cost statistics which ornament the gentleman's remarks are supplied by the Post Office Department, itself.

The publishers have time and again demonstrated the illusory character of the Department's cost-accounting system. But it is not necessary to rely on the publishers alone for this demonstration.

A study of the record will show that this House has long ago learned that it must guard itself against so-called Post Office statistics.

As recently as 1954, the Post Office Department conducted a survey based on over 2,000 interviews, the questions asked being, in the opinion of Congressman DAWSON, of Illinois, chairman of the Committee on Government Operations, so framed as to bring out what the Department wanted to prove.

In fact, Mr. Speaker, that committee found, as stated in its 1956 report—House Report No. 2914, 84th Congress, 2d session, page 9—that "the timing of the survey to coincide with congressional consideration of legislation proposed by the Post Office Department to increase postage rates," and the circumstances surrounding its confection, "strongly support the conclusion that the survey was made and distributed" in direct violation of title 18, United States Code, section 1913.

Perhaps, Mr. Speaker, the gentleman from Pennsylvania is not aware of the total unreliability of data supplied to the Congress by the Post Office Department, for he asserted categorically, in his remarks in support of his bill, that what he calls subsidies to the publishers—and I quote his own words—"are carefully hidden in the overall bookkeeping operations of the Post Office Department"—page 12377.

For my own part, Mr. Speaker, I am entirely satisfied that it is really the excess revenues received by the Post Office Department over the cost of handling second-class mail matter, which, in the words of the gentleman from Pennsylvania, "are carefully hidden in

the overall bookkeeping operations of the Post Office Department."

The system of accounting employed by the Post Office Department simply does not give appropriate consideration to the relatively low cost of handling second-class mail, which a proper accounting system would show.

For instance, the Post Office accounting system fails to take into account, the fact that, to save time, many publishers themselves transport a large part of their newspapers from the place of publication thereof, to delivering post offices; so that the Post Office Department, while collecting second-class mail rates for the entire transportation service, performs no part of it whatever except minimal ultimate terminal delivery.

It must be remembered, Mr. Speaker, that the present system of high zone rates on second-class mail matter, had its genesis in 1917, as a measure to raise revenue for the First World War.

That bill was not referred to the Post Office Committee of this House for consideration. It went to the Committee on Ways and Means, as a revenue measure.

As stated by one of my distinguished predecessors from Louisiana in this House, the Honorable J. Zach Sparring, of New Orleans, the 1917 postal revenue statute "was a war measure to seek additional income from any and every source possible, including the Post Office Department"; and he said that the publishers were to be commended for their patriotic attitude, because they "did not, at the time of the increases, make any complaint"—volume 69, CONGRESSIONAL RECORD, page 5783.

But, Mr. Speaker, even at the time that the first of these measures to raise revenue through increases in second-class mail rates was being considered in this House, the principle of keeping those rates low to conform to our concept of a free press was being emphasized.

At that time, for instance, Congressman Mondell, of Wyoming, called the attention of the House to the fact that—

We have here established a rule common to all English-speaking people the world over, common to democracies the world over of treating the dissemination of news, of ideas, of literature differently from the manner in which we treat the transportation of cotton and bacon and ham. (55 CONGRESSIONAL RECORD, 2769.)

At the same time, Congressman Mann, of Illinois, pointed out (55 CONGRESSIONAL RECORD, 2765-2766):

We spend every year in the United States hundreds of millions of dollars in primary education and a very large amount in college education for the youths. But the great educational force of the country is in the newspapers and magazines. . . . Now, no one would suggest that we close our schools by taxation for this purpose and spend it on the war. . . . The circulation of the newspapers and magazines throughout the country, with their advertisements, has contributed more to the growth of business in this country, unparalleled in the world, than any other single factor. . . . We can raise sufficient money in other ways, without endeavoring to lay the heavy hand of taxation upon those influences which have worked from the start for the best interests of the country.

Mr. Speaker, there can be no question that proper accounting will show that present second-class mail rates, with their special zone rates on advertising, are substantially in excess of the cost of handling mail matter of the second class in the post offices of the country.

Advertising, Mr. Speaker, is the great force primarily responsible for the freedom and independence of our press from undesirable influences.

As conceded by the gentleman from Pennsylvania in his address to this House just a few days ago—page 13277—"actually, the subscribers to these magazines would eventually pay for the increased postage costs."

Mr. Speaker, it is the subscribers to the newspapers and magazines who are paying the tax presently levied in the form of excess second-class postal rates on the advertising content of publications passing through the mails.

I submit, Mr. Speaker, that this tax on advertising is an infringement of the freedom of the press guaranteed by our Constitution to those subscribers.

And I submit further, Mr. Speaker, that any contemplated increase in overall second-class postage rates, even in the guise of a limitation on so-called publishers' second-class mail subsidies, would be an aggravated infringement of the same fundamental constitutional guarantee.

Our Wonderful Giveaway

EXTENSION OF REMARKS OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. GROSS. Mr. Speaker, the president of the National Federation of Independent Business, Mr. C. Wilson Harder, provides some views on the multi-billion-dollar foreign giveaway program that ought to be given attention by Congress and the taxpayers who foot the bills.

I am pleased to present these views by Mr. Harder:

In the days of Kipling's British Empire whenever some colonial galloped up to report "Sahib, sahib, the natives are restless," a battalion of the Right Royal Foot Fusiliers, or some such outfit would be rushed to the scene where it would be handled with no nonsense.

But the Empire has a much better way these days. If the colonial natives are not happy, the U.S. Treasury, supplied with dollars from taxes on American free enterprise, rushes into the breach to save colonialism and its profits for the Empire.

At least this is all indicated in the report for 1958 just published by the International Cooperation Administration, or ICA, the current name for Washington's huge foreign giveaway operation.

It is interesting to note that at the end of 1958, ICA listed over 11,000 employees of which more than 9,000 were overseas somewhere, and 143, classified as "unassigned complement" were presumably sitting around waiting for somebody to dream up a nice new boondoggle for them.

But this is not really the great paradox when the U.S. public seems to have accepted, at least by default, the fact that billions are being thrown around the world.

But what really throws the chicken feathers in the fan is the reported fact that ICA has people on duty in British Guiana, British Honduras, Jamaica, Surinam, and Trinidad. ICA also has some people in British East Africa. In addition, there are a sizable number in some of the French colonies.

Now there may be some excuse for American giveaway experts to be in Trinidad. Not many years ago it was understood the favorite song down there was rum and Coca-Cola. Now apparently there is no shortage of rum down there, but perhaps they need some free Coca-Cola.

Thus, the Nation comes face to face with one of the weirdest facts of all about the entire weird worldwide giveaway programs.

There is perhaps some excuse for helping out in a small, undeveloped independent nation that could use a friendly hand right now. But to go into other nation's colonies with ICA "fast buck" boys seems quite absurd.

The whole colonial system was based on the colonizing nation making a little profit out of the natives. If there was no profit, either the world power pulled out, or else sold to some other nation that figured it could do with the extra land.

In fact, the United States picked up considerable choice real estate this way such as the lands in the Louisiana Purchase, Alaska, the Virgin Islands, to mention some.

It is perhaps unfortunate this giveaway gimmick wasn't thought of many years ago, because if it had, Texas might still be a Mexican colony, Davy Crockett would have lived to kill more bear, and the Alamo would have been ICA headquarters to pass out fresh new U.S. tax money every time the natives got restless. It would almost seem the early leaders who made this Nation great were either short of vision, or short of cash.

The Blackmail Game Continues

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues a penetrating analysis of a new twist in the propaganda put forth by Egypt's dictator, Gamal Abdel Nasser. This analysis appeared in the latest issue of Prevent World War III, No. 54, summer, 1959, published by the Society for the Prevention of World War III, Inc., a nonprofit educational organization, located at 515 Madison Avenue, New York 22, N.Y. Under the title "The Blackmail Game Continues," Prevent World War III reveals the shallowness and hypocrisy of Nasser's latest claim to be the great bulwark against Soviet infiltration in the Middle East. As all of us know, it was Nasser who, in furthering his Pan-Arabic ambitions, helped in no small way to open the Middle East to Soviet subversion. Now, he professes to be the great expert on Communist penetration and is trying to convince the West of his reliability. Meanwhile, as the article shows, Nasser continues his anti-Western propaganda and seeks to

discredit the United States and her allies both, in the Middle East and in Africa.

I believe that this article deserves to be studied by all security-minded Americans.

THE BLACKMAIL GAME CONTINUES

Under a full spread headline on its front page, the New York World Telegram and Sun carried a warning from President Nasser that the Soviet Union was out to swallow up the Middle East, Africa, and South America (April 16, 1959). Taking the form of an exclusive interview with Scripps-Howard correspondent, Henry N. Taylor, Nasser's sensational revelations were obviously intended to produce a maximum impact on American public opinion. Yet, we have the feeling that his bombshell turned out to be a dud.

The spectacle of Nasser assuming the role of the great expert on Communist aims and objectives, and educating the West on this subject is almost laughable. As though the West has been asleep all of these years while the tentacles of communism have reached out for new prey.

SUDDEN AWAKENING

Why this sudden awakening by Cairo's strongman? What brings him to the position that he must now pose as the great crusader against bolshevism after having spent so many romantic moments in Moscow's embrace? In a sense the answer is remarkably simple: Nasser is in trouble. His dreams of empire are beginning to lose their luster as his prospective victims seem to take on new strength. The Kings of Morocco, Libya, and Jordan, no longer appear to be trembling. He has been thoroughly repudiated and defied by Bourguiba, the President of Tunisia. His subversive adventures in Lebanon of last year came to naught as that proud people showed no intention of falling under Nasser's heel. Syria, the so-called northern province of the United Arab Republic, is a smoldering volcano. In repeated efforts to unseat Premier Kassim, of Iraq, Nasser found the way blocked at every turn. For this failure he has not only become the target of scorn and derision throughout Iraq, but his stature in the Middle East has also been drastically reduced. The would-be superman has become flesh.

Added to these fiascos is the souring romance with the Soviets. This can very well end the generous handouts that he has received from Moscow. As the New York Times (April 4, 1959) observed, "Nasser was the hero of the Arab world. Today he is virtually isolated."

It is precisely at this time that Nasser turns to the West—just like the peddler who fails to sell the coat that is shopworn, but turns it inside out hoping that it will now attract a new buyer. The anti-Communist line of Nasser is that and nothing more. For Nasser to pose as a friend of the West—as one who is very much concerned over U.S. interests in the Middle East—is the height of hypocrisy.

ANTI-U.S. PROPAGANDA

The organs of the Cairo propaganda machine are a most reliable indicator of Nasser's real attitudes toward the West. The hatred poured out by Cairo propagandists is in a class by itself. Indeed, many of the attacks against the President of the United States and the late Secretary of State Dulles, are so low as to be unprintable.

Because most Americans are "from Missouri" it is necessary to show them in black and white the boundless hate against the United States and the West which pours forth from Cairo. Here are some statements chosen at random.

Radio Cairo presents the United States to the Arab world as a venal Nation of colonialists. In this connection, the Wall Street

Journal August 14, 1958 quoted from the Egyptian radio commentator, Mohammad Sahaf, "Since the end of World War II the policy of the American Government turned against all liberation movements in all parts of the world, fighting against the free leaders of oppressed nations and killing those who showed a tendency of being a headache to the plans of American imperialism."

Another Cairo commentator, Mohammad Abdel Kader, described the United States as being "made of the refuse of all nations of the world molded together into a solid mass of crime and grafts and corruption." He described U.S. Middle Eastern policy as "the policy of political prostitution and vagrancy of those gathered in America from the scum of the earth."

NASSER SPEAKS

Nasser himself has displayed his venom against the United States on a number of occasions. In a statement to an Egyptian newspaper (Sept. 9, 1957), he denounced the United States and accused it of trying to dominate the Middle East under cover of the growing Communist danger in that area. "I experienced American policy for 5 years," he said. He concluded "that those 5 years taught him that the United States had one plan above all, that is, to convert the Middle East into an American zone of influence."

On February 27, 1958, Nasser delivered a speech harping on the theme that the Arab people were being sold down the river by a clique of Arab collaborators of imperialism. These so-called collaborators, Nasser screamed, were betraying their country so as to please their imperialist masters and the dollar.

On April 9, 1958, Nasser told a correspondent for the Columbia Broadcasting System that the United States was "giving itself rights which the old empires gave themselves when they asked countries which they dominated by force of arms, about everything they want in their towns and villages." Concluding his remarks in this particular interview, Nasser said, "the United States regards itself the natural heir to the colonialists in the Middle East." It should be noted that this interview with a U.S. correspondent took place just about a year before his latest statement on how concerned he was over the U.S. position in the Middle East vis-a-vis the Soviets.

On September 3, 1958, Nasser publicly denounced U.S. policy in the Far East and accused the United States of direct aggression against Communist China.

"All that America announces and all the reiteration of its propaganda machine in this respect are but a misleading pose and hocus-pocus. The statements made by Rountree and other American officials will not deceive us, because we have experienced American policy, its trends, and its crimes against us and humanity as a whole. . . .

"If we review the steps taken by Washington—namely, enabling CARE to offer meals to Egyptian students and resuming participation in the program to improve rural services—and also review the steps which we are supposed to take in return, we realize that these ridiculous moves should not be cited as a means of rectifying the many wrongs committed by the United States, which has caused aggression, war, bloodshed, and world tension." (Radio Cairo, Dec. 11, 1958.)

"Western imperialism has been the obstacle to peaceful coexistence." (Al-Gomhouriya, Cairo daily, quoted by Radio Cairo, Jan. 7, 1959.)

"It is expected that President Eisenhower will inform Mikoyan that the Western allies are not prepared to leave Berlin or make a neutral state out of Germany. This was a proposal submitted by the U.S.S.R., aimed at the unification of Germany and its transformation into a neutral state.

"This Western attitude is intransigent. . . . It confirms that Western policy is imperialistic and exploitative, and that it aims at the perpetuation of international tension which might lead to a clash and war." (Cairo newspaper, Ash-Shab, Jan. 12, 1959.)

We could go on quoting from Nasser's statements and from the Government-controlled press and radio where the United States is taken to task and smeared as the chief exploiter of the Arabs. However, we think the above quotes are sufficient to show the direction of Nasser's thinking.

AFRICA

Now that we have shown how deep rooted and bitter is Cairo's hatred toward the West in general, and the United States in particular, we can proceed to examine the essential points made by Nasser in his interview with the New York World Telegram correspondent. Nasser declared that the Communists were not only plotting to take over the Middle East and the virgin continent of Africa, but would employ these conquests as a springboard to South America and thus isolate the United States. As though our State Department has been unaware of Communist designs. While Nasser sheds crocodile tears for the fate of the United States, he has been conspiring to do the very same things which he charges to his erstwhile Communist friends.

That Nasser regards the continent of Africa as Cairo's special preserve is a notorious fact. Nasser has alluded to this in his own book, "The Philosophy of Revolution," and it will be found in other authoritative Egyptian sources. In the No. 52 issue of Prevent World War III, the society dealt at length with this subject under the title "Africa: Egypt's Dream of Empire." The sources cited in that article describe Egypt's plans to take over Africa under the guise of liberating the black man from white colonial rule.

Africa's place in Nasser's dream of empire was made clear by the authoritative Egyptian newspaper, Al Goumhouria, "Let Egypt breed and multiply itself. Egypt is destined to expand, to develop and to bloom. We have to look toward the future and not the present. Let us not forget that we live in an underpopulated Africa whose vast expanse with all of its economic potential will at some future time be in our possession."

The Cairo Weekly "Akher Saa" (February 18, 1959) wrote "the Territory of the Arab states can expand along the Nile into the heart of the African continent, and by way of Sudan they will be able to penetrate into those countries still under imperialist influence and help them throw off the foreign yoke."

The Cairo propaganda machine works around the clock inciting Africans against the white population. The incitements go beyond all the bounds of ordinary propaganda. They encourage murder, assassination, arson, and sabotage. It is significant, too, that this propaganda has more and more cast the United States in the role of chief exploiter of the African peoples. Here are some choice statements broadcast to Africa in Swahili, one of the most widely spoken of African languages.

"The European imperialist states have found that there is no way to repay their wealthy colleague, America, but to lower their poverty-stricken buckets down the African wells of riches and plenty. America is a real Jew in matters of lending and extorting usurious interest, and as the debt owed it by European states mounts daily and repayment prospects are slender, it has become necessary to make room for America in those parts of Africa dominated by European states which are indebted to America, so that Americans can take a hand in the companies' and governments' plans aimed at squeezing the wealth from Africa at the price of poverty for us Africans" (February 2, 1958).

In a broadcast in Arabic to the Middle East (December 1, 1958) Cairo propaganda contrasted the roles of the Soviet Union and Red China and that of the United States in Africa: "The events in the Congo should be an eye opener to other imperialists dominating the African countries. The outcome is known to these imperialist dogs who are always blaming communism to conceal their own domination. * * *

"Peoples of Africa, open your eyes, wake up, be united, make a joint step forward, wage war on the imperialists and wage war on the dogs who are sucking your blood and squeezing your wealth. Do not give in before the aggression of the white dog."

In another broadcast (December 8, 1958), the United States was denounced as the "spearhead" of imperialism. Discussing the African "liberation" movement, this broadcast said: "American imperialism has in fact begun to make serious attempts to dominate this ancient continent. For this purpose it has established war bases in many African countries and concluded agreements with its imperialist allies through which it will exploit the abundant oil wealth in the Algerian desert."

Thus, while Nasser sounds the alarm against Communist penetration in Africa, his own agents are moving forward and doing everything possible to defame U.S. motives in the eyes of the African peoples.

INTRIGUE IN SOUTH AMERICA

Nasser's concern for the U.S. position in South America is also phony. From time to time Cairo reports conditions of alleged exploitation in South America at the hands of the North American "imperialists." When Vice President Nixon was stoned by mobs during his South American tour last year, the Cairo propagandists could hardly contain their glee.

An example of how Cairo looks upon South America may be seen from a report in the newspaper, *Ash-Shab* (March 5, 1959). Discussing anti-U.S. demonstrations in Bolivia, this Nasser mouthpiece alleged that Bolivia is merely a military base for the Pentagon and dominated by "American monopolies." The newspaper further stated: "The people of Bolivia revolt in order to get rid of slavery, domination and American exploitation. In fact, the revolution of the Bolivian people is a part of the comprehensive revolution of all the States of Latin America, aimed at ridding themselves of the domination and exploitation of the United States. The Bolivian people will undoubtedly attain their aim. Neither America's military base nor its monopolizing domination will be of use to it. And this will not succeed in stopping the wheel of historical evolution. The people will inevitably be victorious and will lead a liberated honorable life."

The phraseology could have easily appeared in Moscow's *Pravda*. Nor is this all. Nasser hopes to embarrass the United States by trying to influence the oil policy of South American governments. Just as Nasser seeks to control the oil resources of the Middle East so as to place western Europe at his mercy, so does he envisage the day when the United States will be placed in the same position with respect to oil imports from South America.

As everyone knows, Nasser has been a violent opponent of the Baghdad Pact. At the opening session of the Union Council of the UAR in the fall of last year Nasser declared: "We thank God that this meeting has been convened at a time when the Baghdad Pact, which was created to sow dissension in the Arab nation, destroy it, and render it weak, has itself been destroyed." This is a typical Nasser diatribe against the pact. He has scorned at the idea that the pact was designed to prevent further Communist expansion. As a matter of fact, it

was precisely Nasser's fanatical opposition and intrigue against the pact that brought him into the good graces of Moscow. Ever since Moscow and Cairo have closely cooperated to undermine the foundations of the pact and so open the gates to Communist infiltration in the Middle East.

However, in his World Telegram interview, Nasser pretends to be very much concerned, lest the pact be seriously weakened by Soviet intrigue! Conveniently forgetting what he has told the Arab masses over the years, i.e., that the Baghdad Pact was primarily aimed against them, Nasser told his interviewer that the Pact's purpose was to "contain Communism within Russia, Eastern Europe and China." Only a facile tongue could portray the Baghdad Pact as a grave sin against the Arab people and then praise it as a bulwark against communism.

The interview in the World-Telegram is studded with pleas that the United States "meet Arab nationalism half way. * * * Does Nasser forget that it was the United States, above all, which supported his coup d'Etat in 1953? Does he forget that it was the United States who persuaded the British to leave Suez? Does he forget that it was the United States which played a decisive role in stopping the Anglo-French military action in 1956? Finally, does he forget that it was the United States which has contributed tens of millions of dollars in aid to Arab States, including Egypt?"

The fact is that the United States has been a consistent champion of the rights of the Arab peoples. The United States has more than met Arab nationalism more than "half way." But how long can any self respecting state submit to the blackmail concealed under nationalistic slogans? The brand of nationalism emanating from Egypt is soaked through and through with a ferocious hatred toward the West and the United States.

NASSER'S ECONOMIC HEADACHES

Just as he has become more isolated politically, so does Nasser find his economic position in difficult straits. As noted by the *Christian Science Monitor* (April 23, 1959), Cairo's foreign exchange resources stand in danger of being wiped out. Due to Nasser's commercial policies, Egypt has now been brought "very close to what, in the West, would be called bankruptcy." This, too, explains his sudden discovery of Communists all around him. It is a line with which he hopes to attract more American dollars.

There was a time when Cairo regarded American aid as the means by which countries have lost their freedom. Less than a month before Nasser gave his interview, one of his commentators declared "There is no difference between dollar and ruble slavery" (March 29, 1959). However, Nasser's financial difficulties have impelled him to swallow his "principles." He told Mr. John A. Kennedy, publisher of the *Sioux Falls Argus Leader* (New York Times, May 19, 1959), that he welcomed American private investment in Egypt. As regards needed funds for the completion of Egypt's 5-year development plan, Nasser said "we will take that money from anywhere we can get it."

The blackmail contained in this last statement is implicit. Indeed, in the New York World-Telegram interview, he declared that unless the United States showed more understanding toward Cairo, Communist and Arab policy would "very likely" coincide again. This gives the real game away. For Nasser, in his desperate situation, is willing to strike any and all kinds of bargains. Nevertheless, he is careful not to burn his bridges. Obviously, if he cut himself off completely from Moscow, his bargaining power with the West would become nil, just as his value in Moscow's eyes would be considerably reduced, were he to turn completely to the West.

It is an old and a most profitable game that has been played over and over again by unscrupulous dictators and demagogues.

WORKING BOTH SIDES

That Nasser knows how to work both sides of the street needs hardly to be demonstrated by this time. In 1958, during his visit to the Soviet Union, he told Khrushchev: "We have found friends in the Soviet Union, selfless cooperation without any conditions or obligations degrading our national dignity."

On January 1, 1959, Nasser sent the following cable in reply to a greeting from Khrushchev: "I have gratefully and appreciatively received your cable, which carried on your behalf and on the behalf of the Soviet Government the truest congratulations and noblest feelings on the occasion of the signing of the High Dam agreement between the Soviet Union and the UAR delegations. The Soviet Union's real assistance and appreciated effort in this respect is met by us with veneration and esteem."

As regards Soviet aid to Egypt, Nasser told the Indian magazine *Blitz*: "I can say without reservation that I do not remember any event in which they tried to exploit the hardships which face us."

Parenthetically, it should be noted that it was in this same interview with the Indian magazine that Nasser dusted off Hitler's pet libel against the Jews, the so-called protocols of Zion.

NASSERISM UNMASKED

It is an oversimplification to explain the present split between Moscow and Cairo on the basis of communism versus anticommunism. The slogans should not blind us to the fact that this is a power struggle between Soviet imperialistic designs and the empire builder from Cairo. When Nasser denounces Khrushchev for "interference in our affairs" he really means that the Soviet Premier has put a serious crimp in his plans to absorb Iraq. Yet, even in denouncing Khrushchev he complained that the Kremlin showed no appreciation for the fact that he, above all, prevented the establishment of Western missile bases "aimed against the Socialist world and the Communist world." On the other hand, in his interview in the World Telegram, Nasser chided the United States for failing to appreciate the fact that through his taking over of Syria, Communist domination of that country was averted. Thus, we find Nasser speaking through both sides of his mouth as only a dictator can do. The fact that Nasser can make these switches with such ease, shows how utterly bereft he is of principle.

The former commander of the Arab Legion, John Glubb, wrote "Colonel Nasser is personally charming. He is delightfully frank and sincere in appearance, but he is always telling lies."

It is in the nature of Nasser's leadership that he must keep the pot boiling. Those in the West who may be impressed by Nasser's latest crusade, ought to keep in mind a wise observation made not so long ago by Walter Lippmann with respect to Nasser: "The crux of the Nasser problem is that his position in Egypt and his influence in the Arab world would soon collapse if he agreed to negotiate and to abide by settlements with the Western nations. He must remain in rebellion against them, never for long allowing the conflict to subside. He needs the tension of international, indeed of interracial, struggle. He needs it to maintain among the Arab masses the image of himself as their champion. He needs the tension also for his political survival at home, to divert his rivals who conspire against him, and as a distraction for the people."

Appendix

Continuance of Interstate Highway Program

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. HENNINGS. Mr. President, there is growing concern in the State of Missouri over the failure of the Congress to provide legislation to assure the continuance of the interstate highway program. I have often expressed my own concern in press reports to Missouri newspapers and there has resulted a ground swell of public opinion which is reflected in many newspaper editorials published in Missouri newspapers.

This is, of course, a problem of national scope but I would like to call to the attention of the Senate the ever-mounting fear of Missourians that the dream of a vast system of high-speed, interstate highways is to be left to wither away. I, therefore, ask unanimous consent to have printed in the Appendix of the RECORD several Missouri newspaper editorials.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Joplin (Mo.) Globe, July 30, 1959]

VOTE HIGHWAY FUNDS

It is to be hoped that Congress before it adjourns will get around to bolstering the highway-building fund so that construction of the Interstate System can proceed along the lines intended. If there is to be such a system built there should be no piddling around about it.

Already the failure of Congress to act has resulted in some disruption of road planning in Missouri, as in other States. For example, the State highway commission has canceled a contract letting scheduled for this week because the backlog of Federal funds is not sufficient to guarantee payment of the Government's share in the projects.

Results of such action could become very serious, and quickly. While present projects will be completed, the fact that no new ones will be started will disrupt planning by contractors and result eventually in a layoff of employees.

A direct result, too, and one that would affect Cape Girardeau would be the reduction in the demand for cement crushed stone and similar products used in highway construction.

Since Missouri has been at the front among the States cooperating in getting the Interstate system underway the effect of the dwindling Federal money supply is being felt earlier, but what has happened in this State will also occur in all the others.

This being true, then Congress ought to be doing something and not let the road program bog down. It is going to take a long time to finish it anyway and it ought not be

delayed by obstacles that can be overcome if the legislators are so minded.

[From the Cape Girardeau Southeast Missourian, July 29, 1959]

HIGHWAY SLOWDOWN IS HERE

Unless Congress acts speedily at this session to provide more interstate highway funds, projected construction work on the interstate route between Joplin and Springfield will be delayed. Also retarded will be widening and resurfacing of highway 66 from Joplin to the Kansas State line, on the primary system.

This sad state of affairs, to bring it down to the local effects, results from the stalemate in Washington. It is confirmed by William M. Robertson, a Joplin member of the State highway commission, following drastic action earlier this week by Rex M. Whitton, chief engineer of the highway department, in ordering postponement of upcoming contract lettings in all parts of the State, by authority of the commission.

It comes down to this situation. The Federal trust fund out of which comes appropriations to reimburse the States for the Federal road work is going broke. And, since the State cannot depend upon drawing future funds from it, the State must curtail Federal aid construction contracts. The situation is further complicated in Missouri because the recent legislature refused the highway department a gas tax increase, even though construction and maintenance costs have skyrocketed.

This does not mean that all road work will be closed down. Projects under contract will be carried on, including the urban job on West Seventh Street in Joplin. The State highway commission simply is taking the very sound position that it cannot spend money it does not have, or is not pledged. Therefore, it is ordering a drastic slowdown until it finds out where it stands financially. It could hardly do anything else.

President Eisenhower warned Congress as early as last January of the impending interstate road crisis, with depletion of funds, and recommended an increase of 1½ cents a gallon in the Federal gasoline tax in order to carry on. As recently as this week the House Ways and Means Committee turned this proposition down.

Whether the Congress will find an alternative financing plan in the remaining weeks of the session is uncertain. The interstate program as originally set up some 3 years ago was geared to a pay-as-you-go plan which was sound. Trouble is the revenues didn't meet the cost.

It is most regrettable, but it may be that the entire Federal-State road program will have to be slowed down and spread over a longer period of years. Locally this would mean that the Joplin-Springfield link in the Interstate System, originally scheduled for completion in 1962, would have an indefinite completion date, and that other primary projects in this region would be retarded.

[From the Sedalia (Mo.) Democrat, July 30, 1959]

A ROUGH ROAD AHEAD

With Congress now on the downhill side of this session, the major pieces of legislation still remain to be enacted.

This, of course, is not a situation that makes the 86th Congress any different from

its predecessors. And it is about this time that the President may begin applying a little pressure to the recalcitrant lawmakers.

Most important legislation in this session would seem to be in the labor-management field. All parties agree that some kind of bill is needed to control abuses on both sides. This item has been kicked about the Halls of Congress since it convened last January.

President Eisenhower himself, in an interview the other day, gave it first priority among three bills he said he particularly wanted from Congress.

While disclaiming that he has any plans of drawing up a must list for Congress, the President next mentioned a 1½-cent-a-gallon increase in Federal gasoline taxes to finance continued highway construction in the massive interstate freeway system. Previously Congress had been warned that a 9-month suspension of construction might be necessary if additional revenue were not provided for. It doesn't take much imagination to realize what such a suspension will mean in the employment field across the country let alone the impact on the construction companies which geared themselves to the long-range program of highway building by investing millions in roadbuilding equipment.

Sensible answers to this phase of the national economy must necessarily be found to keep the highway programs moving. But Congress so far has tried to find some way around hiking gasoline taxes.

Third on the President's extemporaneous list was the enactment of a farm program that would control surpluses, now bulging in multimillion-dollar amounts in warehouses across the Nation. This he termed "terribly important."

This is a knotty problem that no President or Congress has been able to solve. Congress has already passed two bills—one for wheat and one for tobacco—which the President vetoed, calling them harmful to the country.

The approaching dog days of August promise to make things hot in the Nation's Capital. And it won't all be from the weather.

[From the Cape Girardeau Southeast Missourian, Aug. 1, 1959]

THE INTERSTATE ROAD SYSTEM

Many people are puzzled as to why the Federal interstate highway building program, started off with a bang by Congress a year ago, seems to be in trouble now because of lack of enthusiasm by the legislators for it. If it was needed then, that need still exists. If Congress repudiates the program then what about the pledges made to the States, like Missouri, which already has called off one contract letting because of the lack of Federal funds?

Because of the growing interest in the program, the Missourian is pleased to present the following explanation from the Kansas City Star, which may help to clear the atmosphere:

THE GREAT HIGHWAY DREAM FADES IN CONGRESS

There is immediate danger that the great national highway program may turn out to have been a political hoax. As of now it seems to be as ephemeral as the hot air given the program on Capitol Hill.

One group in Congress appears to be quite ready to shut off all Federal highway funds for 1 year and to shut down construction on the Interstate System for 2 years. These are strict adherents of the so-called trust fund which was set up to limit construction to the revenue of certain taxes that were allocated to the fund.

As a recession measure for 2 years, Congress spent far more than current tax income which some Members regarded as drawing on the future of the fund. To restore the money now would require the long suspension of road building. After the suspension the allocated taxes would produce revenue for only a little more than half the current construction rate.

If these resistant Members of Congress have their way the Federal Government won't build enough to keep up with the annual increase in motor cars. They would show no progress against traffic congestion in our generation.

The chief hope is in another group of Congressmen that wants to push full speed ahead. Yet most of these Members have hesitated to vote highway taxes to support the full program. They would like to allocate more of present motor vehicle tax money to the fund or continue to draw on the future income from general taxes. All suggested alternatives to new taxes would have the end effect of increasing the national debt.

A third congressional group proposes a compromise between the alternatives of full-scale construction and a shut-down. Congressmen of this view would latch onto enough money to keep the program going at a seriously reduced rate.

At this stage, you can't count on anything. Congress has so far failed to produce the money to back \$500 million of commitments made to the State last year. If it doesn't produce the money the States will be unable to make prompt payments for some work now under construction. Not in the many years of Federal participation has Congress ever failed to deliver the money after funds had been apportioned. Presumably it will honor its commitments this time, but nothing is certain.

Where are the dreams of yesterday? Do you remember the fine fervor of Congress when it caught the vision of a great system of expressways that would connect nearly all U.S. cities of 100,000 population? Congress set out to build by the tax method highways as fine as any ever built by tolls. But even as Congressmen talked big they chiseled on the program. They accepted unrealistically low estimates of costs and made high estimates of the income that would be produced by the skimpy taxes allocated to the fund.

A year later the wide gap between costs and income became apparent and Congress was shocked. Congressmen talked and talked about the big program but consistently refused to vote new taxes. You can't build superhighways with hot air.

[From the Jefferson City (Mo.) Post Tribune, July 5, 1959]

HIGHWAY TROUBLE AHEAD

The Federal interstate highway program is not exactly bowling along, and the Washington lawmakers can't seem to get worked up about it.

When the program was established in 1956, one of the main ideas was that it should stand on its own two feet financially.

A highway trust fund was created, and into this pour various types of highway user taxes. The legislators even wrote a provision into the law forbidding the use of general government revenues for this purpose.

At the depth of the recession, however, Congress in its anxiety to promote recovery let the program briefly tap general funds to speed construction.

That left the program with the necessity of one day paying back the money to the general treasury. On top of that, advancing prices had materially enlarged that program's total long-range cost.

Faced with this pinch, President Eisenhower recommended an increase in the Federal gasoline tax to keep interstate road-building at full tilt. But the move brought quick protest from many sources.

Congress thus far has been sternly opposed to boosting the gas tax. This means that unless it allows the program to dip liberally into general funds, the highly touted interstate system is bound to suffer serious delays.

Even at the fastest pace, the program is in danger of being outdated by America's valuing traffic volume.

This prospect is real. Any inaction or shunting of responsibility which leads to major delay is likely to compound the problem many times.

The Crisis in the Caribbean

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. REECE of Tennessee. Mr. Speaker, the able Ambassador of the United States to Mexico, the Honorable ROBERT C. HILL, recently delivered an address on the Caribbean crisis before the Rotary Club of Albuquerque, N. Mex. I feel that all the Members of Congress would be interested in seeing this address and I am placing it in the Record that it might be available to them.

Ambassador Hill has done an outstanding job in Mexico and has brought to an all-time high the good feeling and mutual confidence between these two neighboring Republics. He had previously served as Ambassador to Costa Rica and San Salvador, and as Assistant Secretary of State under the late great Secretary, Hon. John Foster Dulles.

Ambassador Hill is a close student of the Caribbean and all the Latin American States, and has become one of our Government's able advisers.

The address follows:

THE CRISIS IN THE CARIBBEAN

(Remarks prepared for delivery by the Honorable Robert C. Hill, U.S. Ambassador to Mexico, before the Rotary Club of Albuquerque, N. Mex., on July 23, 1959)

When I received your kind invitation to speak before the Rotary Club of Albuquerque, I accepted the honor with pleasure. I have had many warm associations, as you may know, with your organization. Last year I had the privilege of addressing the annual convention of Rotary International in Dallas, Tex. At that time, I sat on the speaker's platform looking out at the thousands of Rotarians assembled from every corner of the free world; I listened to the reports of Rotarian global plans and accomplishments. Then—more than ever—the full significance of your motto, "Service Above Self," became important to me. Since then, never have I seen a Rotary emblem or a Rotary notice that those inspiring words—"Service Above Self"—did

not cross my mind and make me realize my own responsibility.

I was pleased to accept this invitation because it gave me an opportunity to come back to the beautiful and progressive State of New Mexico, the home of the yucca flower, the road runner, and the piñon tree. Here is a State with the friendliest of ties and a close cultural background with the Republic of Mexico, where presently I have the honor to represent the United States. My knowledge of the State of New Mexico stems first from two good friends: Senator CLINTON P. ANDERSON and Senator DENNIS CHAVEZ.

Being here in Albuquerque today also brings back pleasant associations I have had with the late Representative FERNANDEZ and with Representative DEMPSEY.

When I speak of your State, I must also pay tribute to the many men and women in New Mexico who in their defense work are performing dedicated service for the United States. I also congratulate all those responsible for having brought about the tremendous progress and expansion in your State since the war.

I owe sincere thanks to the Rotary Club of Albuquerque for affording me an opportunity to discuss with you a serious problem in the Caribbean. At the present time, many responsible people in the hemisphere are concerned about Communist infiltration in this important area.

It has been my good fortune to work in Latin America for several years. As a result, I have come to respect and admire this progressive hemisphere and its people. It is an area that has an unlimited future. All of us who live in the entire Western Hemisphere have unusual opportunities if past prejudices and mistakes can be forgotten.

The peoples of this vast and powerful part of the world should strive to walk the road toward the future together—united economically, united politically, and united in our common aspirations.

The United States must do its part in the hemisphere to take the peaks and valleys out of the economic picture. Latin American countries not only want progress, they are demanding it, and it is in our deepest national interest to recognize this and to find the means to cooperate to the mutual advantage of all hemispheric nations.

To some people it may appear as though Western Hemisphere problems are less urgent than others facing the free world. In my opinion, they are no less urgent. They are of critical importance and they must be treated accordingly.

For many years, the Communists have continued their constant efforts to creep into the inner structure of governments in this hemisphere. This is the same tactic used in their efforts at subversion in Europe, the Middle East and Asia. Anyone who knows anything about communism realizes that you must be forever vigilant against Communist attempts to undermine freedoms and claim legitimate revolutions as their own.

At the present time, there exists a grave situation in the important area of the Caribbean. It has so concerned the Organization of American States that this important organization has seen fit to call a meeting of the Foreign Ministers in Santiago, Chile, in August to discuss the mounting crisis. Some of us who have labored in the hemisphere have seen communism developing for many years. At the U.S. Ambassador's Conference held in El Salvador in April of this year, the conferees adopted recommendations which led to the successful action of the Organization of American States Peace Committee in reestablishing some degree of peace and stability in certain threatened areas of the Caribbean.

The Organization of American States—this great inter-American system for preserving the peace of the hemisphere and for work-

ing cooperatively together on mutual problems—has been often described as the most solid international organization of free peoples on earth. In my opinion, this international organization deserves the support of all of us in the Western Hemisphere.

You will recall that in 1947 the Inter-American Treaty of Reciprocal Assistance, known as the Rio Pact, was signed in Brazil by the various member nations of the Organization of American States. This treaty provides for collective action to maintain peace and security within the hemisphere and to defend the Americas against any aggression from without. This pact was a striking demonstration of the trust and confidence enjoyed among the members of the inter-American system.

The inter-American system is based on certain fundamental principles, the most important of which are: the recognition of the sovereign equality of states, the duty to settle disputes by peaceful means, and the doctrine of nonintervention—that is, that no state shall have a right to interfere in the internal affairs of another.

However, we must all of us recognize that this problem of Communist aggression against our freedom and security is one that must be brought into the open. As you know, communism is an international conspiracy bent upon the domination of the world. There is an old saying that a hound dog can't chase two rabbits at the same time. Neither can a citizen of any country serve Communist interests and those of his own nation. I say a cooperative solution must be found for combating the inroads of communism without breaking faith with the great principles upon which our inter-American system is founded.

Recently, there has been a revolution in one of the Caribbean countries, a revolution which brought in its wake considerable unrest and turmoil throughout the area. The United States has recognized this new regime and desires the friendliest of relations.

The United States has no desire to interfere in the internal affairs of this, or any other nation. But in my opinion, all responsible leaders of the hemisphere should recognize the creeping danger of communism that is presently in evidence in the Caribbean and then do something about it.

The Russian people, too, once had a democratic revolution, a revolution which surged up from the people themselves. This took place in March 1917, only to be overthrown the following November by a small group of hard-core Communist conspirators. This last was not a popular revolution of the people; it was a naked seizure of power, a coup d'etat against the democratically oriented Russian republic born the previous March of an authentic popular revolution. No amount of Communist rewriting of history, no amount of Baron Munchausen fakery and lies can ever hide that fact. In place of the infant Russian republic was erected a monolithic Soviet state, a Communist system of existence dictated by unprincipled men mad with power.

You may ask why I dwell on these historical truths. After all, that was back in 1917, some 42 years ago. Ancient history, you might almost say. But that is the crux of the matter. As time goes by, people are prone to forget the facts and tend to accept the Soviet swindle that their so-called revolution erupted from the Russian people. History proves it did not.

Through the years, we have seen this pattern repeated in many countries, with the communists seeking to take over in any revolutionary situation springing from widespread public support.

The Mexican Revolution of 1910 was the uprising of an entire nation in mass discontent. It was a true democratic revolu-

tion because it was essentially an act of the people. Here, too, the Communists tried to take over. But their efforts were defeated by the strength of this revolution of the people. Mexico kept faith with its own revolution—not one exported from an alien land.

Next year, in 1960, Mexico will celebrate the 40th anniversary of her revolution of 1910—a bright landmark in mankind's struggle for liberty and individual rights. Today, the product of this revolution is a country democratically oriented and bent upon greater progress for its people coupled with freedom and social justice. A certain nation in the Caribbean might well recognize in the Mexican Revolution a significant example for itself to follow.

There is considerable sympathy in the hemisphere for the hopes and aspirations of these peoples who are struggling to achieve the fruits of liberty. However, in this driving urge for democracy, responsible leaders must not forget the dangers that are inherent in downgrading the communist conspiracy. The history of too many countries in the world today which have lost their liberty testify to this solemn fact.

Just the other day, the President of a Caribbean country urged the youth of that country to read anti-Communist books. He said he counseled them to do this "in order to prevent the revolution from being frustrated."

What did he mean? Did he wisely recognize the possibility that the same counter-revolution might happen in his country as happened in Russia in November of 1917. Today, by the way, he is no longer in office, having been forced to resign from the revolutionary government.

The conflicts which currently disturb the entire area of the Caribbean are not new. They have been developing over the postwar period in one country after another in this area. The entire world is passing through an era of unprecedented strain. The forces of conflict, on a global basis, are very often instigated, aided, and directed by the leaders of international communism.

The Soviet Union, in pursuit of its goal for world domination, aims relentlessly at the destruction of its principal adversary, the United States of America. Here is where geography comes in, because the Americans as a unit must first be divided if Soviet domination is to be accomplished. The point of division must be at the most vulnerable spot. Hence, the special interest of the Soviets in the Caribbean area.

Following closely the techniques of Lenin, international communism often disguises itself under spurious forms of nationalism and independence, pushing aside true nationalism and independence. It can take on the cloak of antidictatorship to suit its purpose, though it is itself the most cruel dictatorship ever known. It can seize control of turbulent movements for national liberation, land reform, labor organization, and political liberty—all sound and defensible ideals in themselves—in order to gain power.

Unless we realize that Moscow is the principal directing center of revolutions—more properly called counter-revolutions—all over the world; unless we note the presence of well-trained, well-supplied, and well-paid Moscow agents in the Caribbean; unless we expose to view the wider purpose of subversive Communist propaganda to split the Americas, discredit the United States and hold back the economic development of our friendly neighbors to the south; unless we strip off the false front of these hard-core Communists, we will not know how to deal with the dangers that confront us.

Recognizing this common peril, the Ministers of Government of five Central American countries—Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica—met only

last month and mapped out steps which their countries will take collectively to strengthen their defenses against communism. These steps will be against: The infiltration of Communist agents, circulation of Communist propaganda, misuse of identification documents, and foreign financing of revolutionary groups. These are weapons long used by the Communists across all border lines and all peace-loving governments must act together to combat them.

The governments of this hemisphere know well that there is no inter-American conflict which has not and cannot yield to peaceful solutions. But the common root of many current problems is not to be found in the Americas. It is to be found in Moscow. This we must first recognize if each country, by its own means, is to take measures to combat this evil foreign ideology intent upon usurping popular victories for its own imperialistic aims.

The United States as a nation is dedicated to certain principles of liberty, principles that remain as strong and bright today as when they were first conceived.

Yet, it seems to me, these days when we are locked in a great global war of ideas, sometimes—too often—many of us are inclined to approach each new conflict negatively—even fearfully—rather than drawing strength from those very basic concepts of freedom that we know are in themselves more powerful than any blustering threat emanating from the cocktail circuit of the Kremlin.

If anyone doubts the power of these democratic ideas, let him recall that these concepts brought about our own revolution and independence in 1776. These universal ideas helped spark the French Revolution in 1789, when the principles of liberty, equality and fraternity were proclaimed throughout the motherland of France.

These ideals of liberty have contributed to the independence of many nations throughout the world and continue to this day to exert their powerful influence for true freedom, true nationalism, and true independence.

A few days ago a famed Mexican philosopher, educator, and writer died. His name was José Vasconcelos. He was a man loved, respected, and honored throughout the hemisphere. The following significant lines of his appeared in a Mexican magazine called *Hoy* a few months before his death:

"The peoples of the New World live in a productive present, and know that they are destined to lay the pattern for the future of humanity—patterns of Christian morality, social justice, and freedom; that they have no need for Marxist cooperation, because they have already overcome the sterile materialism of the latter part of the 19th century, and we are all launched upon the conquest of a better future."

God bless you public-spirited people of Albuquerque. May we work together regardless of race, color, or creed for a better tomorrow.

Biography of James S. Hogg "Must" Reading for Texans

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Wednesday, August 12, 1959

Mr. JOHNSON of Texas. Mr. President, the name James Stephen Hogg has stood for progressive, crusading good government in Texas for over 60 years.

Jim Hogg served Texas as Governor for several terms, and in his time was regarded as a dangerous leftwing radical by many conservatives, and a conservative by some of the populists of the day.

But no label could be applied to this broadminded man of vision. His great qualities—tolerance, knowledge, and trust in man's free spirit, transcended political labeling.

The problems he faced 60 years ago are still confronting us now, and to my mind, it is as beneficiary as it is interesting to examine the ways in which he met those problems.

Mr. President, I ask unanimous consent that an Associated Press article of August 6, 1959, entitled, "Biography of James S. Hogg 'Must' Reading for Texans," be printed in the Appendix of the RECORD, with my qualification that it is "must" reading for non-Texans as well.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIOGRAPHY OF JAMES S. HOGG "MUST" READING FOR TEXANS
(By Dave Cheavens)

AUSTIN.—Robert C. Cotner's biography of James Stephen Hogg should be required reading for one group of Texans, recommended reading for another.

Hogg, the first native Texan to become Governor, set an example for integrity, forthrightness, and political courage that present-day politicians might well emulate.

The book should be required reading for all legislators, district attorneys, even judges, and Members of Congress.

In the recommended reading class would be all Texans interested in public affairs. Students with an eye for future State service, should study it, along with members of Republican and Democratic county and State executive committees and campaign managers.

Cotner's book is the product of more than 10 years of painstaking research into the personal and public life of Governor Hogg. Hogg made his name in Texas history as the foe of landgrabbers and securities crooks. He fought discriminatory rate and other practices by the powerful railroad interests of the 1880-1900 period of Texas growth. Hogg brought the railroads under State regulation and was the father of today's railroad commission.

Hogg has become almost a legendary figure in Texas government and politics. Cotner has spiced some of the legends and by careful documentation traced his career from through days as a farm hand, country editor, justice of the peace, prosecutor, State attorney general and finally Governor and big-time oil operator.

In the process, Cotner interviewed scores of persons who knew Governor Hogg in all phases of his life. He read and reread Hogg's public utterances and papers. He dug into court records and carefully scanned hundreds of newspapers. Cotner's greatest difficulty in putting the book together was eliminating the nonessential from the mass of raw material. The end product is both authoritative and interesting.

The Hogg biography follows Cotner's earlier publication, "Addresses and State Papers of James Stephen Hogg," published in 1951 by the University of Texas Press. The University of Texas history professor used it extensively in tracing Hogg's political career.

One passage in the book perhaps summarizes Hogg's political philosophy.

He was attacked by conservatives as a Communist—even in that distant day. And the left-leaning populists considered him to be an overcautious conservative.

In the heated campaign for Governor in 1892, Hogg summed up the issue: "Shall the corporations or the State control Texas?" in these words:

"Nugent [the populist candidate] is for Government ownership of railroads; Clark [the conservative Democrat] is for turning them loose. I want neither, but advocate their just control and regulation through the commission."

Hogg won in what Col. E. M. House, Woodrow Wilson's close adviser, called the first firm stand by "the people of any American State against the privileged classes."

Dancey in Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 19th, 20th, and 21st articles of a series by Editor Charles L. Dancey appearing in the August 7, 8, and 9 issues of the Peoria Journal Star, respectively:

[From the Peoria Journal Star, Aug. 7, 1959]

STALINGRAD TRACTOR PLANT OFF LIMITS
DESPITE CAT LETTER
(By Charles L. Dancey)

STALINGRAD.—A new city—a new guide—a new people. The guide's name is Luba and she greeted me in a very solemn fashion advising me immediately that it would be necessary to see the Intourist manager.

We went into the service bureau and met a little old woman with a grim face, who nodded, and said, "Follow me." We went through a couple of rooms, unlocked a door, and entered an office. She sat down behind a desk, motioned me to sit, unlocked a drawer, brought out an envelope and looking me grimly in the eye handed me the letter.

It was an airmail letter with Caterpillar Tractor Co. prominently identified on the envelope.

(I later learned that the Russians call their tractors "caterpillars" and not a Russian word meaning the same thing, but the English word "caterpillar" just as we say it but with the Russian accenting. It applies to wide-track tractors.)

Inside was a very gracious letter from Harmon Eberhard, the Caterpillar president, identifying the prominent Russians who toured the Caterpillar plant at Peoria a few years back, and suggesting that the Russians could return the courtesy by permitting me to tour the tractor works at Stalingrad (biggest in the Soviet Union).

I presented it to the manager who read it without batting an eye. She read it and inquired if I wanted to view the plant. By this time, I had acquired the philosophy that it is unwise to want such things, and the more interested you are in something the more suspicious they become and more difficult it is to be at all free and see what you want.

So, I said, that as a courtesy to Mr. Eberhard, who was a very important man, I would certainly like to make such a tour so that

I could advise him that the Russians had been courteous in the same measure that we had been—but that as for myself I knew nothing about production and had little personal interest.

She advised me that it not customary to permit tourists there, that I am not an official such as those who visited the plant in Peoria, and that arrangements would be very difficult, but that she would personally call the director of the factory and make every effort to arrange a visit.

Now, I'll cheat and telescope some of the days on my log to finish the story.

A day and a half later, I was again taken to the manager and advised that it was a shame I was in Stalingrad such a short time because it would be impossible to get me to the tractor factory during my stay there. They were very busy at the factory and could not be interrupted at this particular time.

The afternoon I left Stalingrad I lunched with the first foreigner I met in that city—an Englishman who had arrived that morning.

"Have you seen anything yet?" I asked. "Oh, yes," he said. "This morning they took me through the big tractor factory."

[From the Peoria Journal Star, Aug. 8, 1959]

THE FUR HAT RUNAROUND
(By Charles L. Dancey)

STALINGRAD.—I got the runaround twice in Stalingrad. Once, as told, regarding the tractor works. The second was a simple matter in which I really cheated myself, with a healthy assist.

My hotel window looked down on a rebuilt department store, or general store, and as I had been doing from the start of my trip, I grabbed the first chance to browse through it.

It was a three-story job, full of what we would regard as shoddy merchandise, and what was worse from my point of view—all commonplace items, unique only in being second rate, or third, or fourth.

This had been by problem all through Russia.

However, on the third floor, I found some of the typical Russian fur hats (even though it was summer). This, I thought, is the deal. Price: 75 rubles. Not bad, either. I was about to step up and buy, when it occurred to me that I was not able to cope with the size problem. It could wait a day while I checked on the Russian size system with my interpreter. (The hat was to be a gift).

So, I told Luba I wanted to buy a fur hat. She said, "I don't think there are any."

Well, this was interesting, so I kept my mouth shut, and simply said that I would like to find out, because I wanted to buy one—and did they have just small, medium, and large—or what was the size system—in meters? So I could translate it.

She said she would call the manager of the store and see if he had any (after all, it is summer) and if he did she would assist me in the purchase.

Next day, she said, she had contacted the manager and he was making an exhaustive search for the hats.

I thought this amusing and kept my own counsel.

The next day she told me there were no hats. I thought, "Ho, ho. When I get rid of you, old girl, I'll just stroll over and buy one."

When I strolled over, there was a big padlock on the door! This weekday was that store's Sunday, I guess. (They rotate days off). And I had to depart at 7 a.m. the next day. No fur hat.

Actually, I got even with Luba and Intourist in Stalingrad for these little incidents.

One thing that bothers them are unauthorized contacts with the local citizenry and

these just don't happen when you're with the guide.

But in Stalingrad, also seeing the sights, were many of my friends from the long boat trip up the river.

At the planetarium, a group of young people from the boat hailed me and flocked around which gave Luba quite a turn. Also there I met and talked with the waitress and two older folks from the boat.

At the museum, I met my boat companion who had fought at Stalingrad as a tank major, and we shook hands and talked briefly without the aid of Luba's interpretation.

Then, on the street, amid the newly built and building apartment houses, a cry of "Charlee" went up and Lida and Alla ran across the street and each grabbed a hand.

By this time, Luba was on the verge of a nervous breakdown. A few notes before leaving Stalingrad for Baku, in Azerbaijan.

Downtown Stalingrad has several parks, many statues to the battle heroes there, and the battle line marked (like Civil War battlefields in the United States.)

The Russian password there was, "There is no land beyond the Volga," and at one point the Germans reached to within 100 yards of the river, right in the heart of town—but no farther.

The basement where the department store I spoke of was rebuilt was German headquarters where General Von Paulus, commander of the doomed German 6th Army, was captured and surrendered what was left of that army.

So—on to Baku.

[From the Peoria Journal Star, Aug. 9, 1959]

STALINGRAD, LIKE PEORIA, FAMOUS FOR
TRACTORS

(By Charles L. Dancy)

STALINGRAD.—The famous city of Stalingrad is in many ways the Peoria of the Soviet Union. It has the largest tractor factory in the world making what the Russians call Caterpillars, plus great vodka distilleries, a steel factory, and farm equipment factory, and it is located on the waterway which, via the Don River, links the Volga to the great inland seas of Russia.

Peoria, of course, has its great tractor factory, steel factory, heavy machinery plant, and distillery, and is located on the waterway which links the Mississippi, via the Illinois, to the great inland lakes of America.

One could travel by boat from Peoria to Stalingrad given the time, the facilities, and the permission.

They did let me go past the heavy equipment factory, which got me zipped through the worker section of shabby homes. Even the new "private homes" built by State loans to workers are of shabby materials so that those still under construction are not attractive.

Then we passed through a series of huge ravines, very broad and quite deep, and each one jammed with shacks. Each of these was a cinder point much larger than our own has ever been.

I was, of course, assured, as usual, that all this was being torn down and new housing would be built, and I was reminded that Stalingrad was leveled during the war. Machines were at work in one ravine.

Stalingrad was a huge industrial park where the bulk of its industry is lumped together. (Again, no cameras allowed. Ever since leaving the resort area, the camera has been a problem.)

The told me there are 20,000 men employed at the tractor factory, that they work two shifts only, and that they make 100 tractors a day.

All I know is that there is an almost endless row of smoke-belching high chimneys in the industrial park.

They compensated me for the "failure" to see the tractor plant by letting me browse at the biggest hydroelectric project in the world. They are building a gigantic dam across the Volga River, to be topped by a highway, and controlled to provide the power for a great electric plant.

This is a city of 600,000, with great industrial development on the banks of the key Volga River—and yet there is not a single bridge across that river. The first will come when the dam is finished.

That will be a while. They use a lot of precast concrete, and I saw no continuous pour arrangement for concrete, although the dam is partially finished. They have mountains of earth to move, but the only heavy equipment picking away at it were small tractors with bulldozer blades.

A great deal of work is still being done by hand, and I saw no hand power tools at all, not even a rivet gun for the steel work. The heaviest equipment were a few huge cranes and one standard big triphammer.

But they are banging away at it, and efficient or not, it will be the biggest in the world, whenever it is finished.

One other item of interest in passing. They have a big planetarium here donated by the East Germans.

Its purpose, as Luba admitted: "To counteract religion with scientific propaganda."

At the museum, also, in this battle-torn city, they show a slot of bombs which are described as German duds, "proving that German Communists working in the factories were helping us." Here also were pictures of "Germans fighting against Hitler and with us at Stalingrad."

Once again, too, the line that, "of course, the bravest of the brave in the Battle of Stalingrad were the party members."

Dr. James E. Church

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. BIBLE. Mr. President, the long and brilliant career of one of Nevada's most illustrious citizens came to an end on August 5, when Dr. James E. Church died in Reno at the age of 90. Dr. Church had served as a member of the University of Nevada faculty for almost 50 years, imparting to countless students the ageless wisdom contained in the classics of ancient Athens and Rome.

Dr. Church's versatility, however, led him to preeminence in a field far removed from the classics. Through studies he initiated early in this century, he became acknowledged as one of the world's authorities on snow surveying. He developed the method of determining the water content of snow pack in the mountains—a method that remains basically unchanged.

Dr. Church was invited to join scientific expeditions to all parts of the world, and during his long career he pursued meteorological and snow problems in Greenland, Russia, South America, and India.

As an alumnus of the University of Nevada and a former student of Dr. Church's, I believe I can speak the senti-

ments of all alumni in describing him as a gentle, kindly, and understanding professor, thoroughly devoted to his noble profession, and genuinely fond of those young men and women who gained so much from his warm philosophy and infinite wisdom.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, an editorial tribute carried by the Reno Evening Gazette on August 7, 1959.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

SCHOLAR AND SCIENTIST

It was in 1892 when an unassuming and mild-mannered little man arrived in Reno on the morning train. As he walked along Commercial Row, pistol shots exploded in a saloon, a man staggered out the door and collapsed dead in the gutter.

That was James Edward Church's introduction to Reno, and as he recalled in later years, it very nearly caused him to take the next train out. And when he saw a few buildings on a sagebrush hill that was Nevada State University where he was to be instructor of German and Latin, it was with considerable misgiving that he decided to stay for more than a semester or two.

But stay he did, and he achieved worldwide fame for himself, for the university and for the State. His interests were not confined to the classics. Attracted to the mountains, he explored the ranges around Reno, and his keen and inquiring mind was turned to the problem of the alternating droughts and flood seasons of this Western region. Summer and winter, he had climbed Mount Rose, and his mind associated the snowpack in the winter with the following summer's runoff, not in terms of snow depth, but in water content. And from that he developed the science of snow surveying that has been adopted all over the world.

And while Dr. J. E. Church gained international acclaim as a scientist, he was still "Prof." Church to generations of students who enrolled in his courses in the classic languages, and who learned not only the subject at hand, but absorbed some of the wisdom and philosophies of a true and devoted scholar.

His contributions to the sciences of meteorology and water forecasting assured him and enduring reputation to the world, but the memory of "Prof." Church also will endure in the city and State that was his home for nearly 70 years.

The Gigantic Farce

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Appendix, I wish to include a very truthful and forthright editorial that appeared in the Winthrop Sun-Transcript of Winthrop, Mass., recently on a very important subject matter and one to which all of us should be vitally interested in; namely, the President's invitation to Premier Khrushchev to visit the United States on September 15, 1959:

THE GIGANTIC FARCE

Usually we confine our editorial comment to matters of strictly local interest, but this week we feel compelled to speak out on an issue of international importance.

We're not vain enough to suspect that our opinion will influence the issue of the forthcoming visit of Soviet Premier Nikita Khrushchev to this country, but we can't let the opportunity pass without voicing our objection to this outrage.

The double talking "Mr. K." who, in recent months, has alternately donned the mantle of peace and the armor of a warrior, is about to receive a hero's welcome from the last place in the world where he should expect to receive it, America, "the land of the free and the home of the brave."

We contend that the warrior's sword and shield is this man's only true garb—and there are millions of enslaved people in other parts of the world who will testify to this. There is a captive Poland—bravely displaying its fierce hope for freedom by hailing our Vice President in recent days. There is a bloodied Hungary—whose valiant bid for freedom was crushed beneath the Soviet boot.

For many years now, even before the end of World War II, we have all known that the Kremlin and the men in charge there have been spearheading the international conspiracy of communism which abhors our freedom, derides religion, and hates our democratic way of life.

And now the No. 1 man of that evil den has been invited to come here "to see how we live," to dispel any misconceptions he might have about us and to convince him that virtue is its own reward.

How absurd. Are our leaders and ourselves that naive to think he hasn't "cased our joint" long before this? We're not going to prove anything to him that he hasn't known for many years.

This makes about as much sense as inviting a psychopathic killer into our homes to see that we're living happily and wouldn't want anything done to disturb our pleasant way of life. Mr. K. and his coconspirators are dedicated to domination of the world and submission of us all to their wishes. That they haven't already taken military steps to achieve this is due only to the fact that they doubtlessly feel they cannot achieve it that way at this time.

What Mr. K.'s forthcoming visit will do is provide him with a juicy item for propaganda—to show the rest of the world that the rape of Poland and the murder of Hungary were sad accidents and that, after all is said and done, he's just a peace-loving man who'll travel across the globe if it will do anything to put out the fire which he helped start and upon which he has continued to heap fuel.

If it is not already too late to put a stop to this farce, we pray that every Member in Congress stand up and be counted as opposed to this visit—to prove to our people and to the world that a murderer of nations can find no welcome in the land of the free.

Meeting the Communist Challenge in Education; Admiral Rickover Reports

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. YARBOROUGH. Mr. President, Vice Adm. Hyman G. Rickover recently

visited in the Soviet Union and Poland and has returned with some interesting observations on the Communists' educational system.

In these days which, more than ever, try men's minds as well as their souls, we have come to realize how important education can be and how tragic the results may well be if we fail to provide the best training for our young people—to-morrow's leaders.

I ask unanimous consent to have printed in the Appendix of the RECORD an article by Leonard Buder which was printed in the New York Times for Sunday, August 9, 1959, entitled "Rickover Hails Reds' Education; Calls it Main Challenge to United States—Says His Tour of Soviet and Poland Showed Students Worked Hard and Long."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RICKOVER HAILS REDS' EDUCATION; CALLS IT MAIN CHALLENGE TO UNITED STATES—SAYS HIS TOUR OF SOVIET AND POLAND SHOWED STUDENTS WORKED HARD AND LONG

(By Leonard Buder)

WASHINGTON, August 8.—Vice Adm. Hyman G. Rickover said today that his recent visit to the Soviet Union and Poland had convinced him that "our really great race with the Soviet Union is in education."

"The nation that wins this race will be the potentially dominant power," he asserted in an interview. "Unless we in the United States can solve our educational problems, we will have difficulty in solving other problems."

Admiral Rickover, who is known as the father of the atomic submarine, was a member of the group that accompanied Vice President RICHARD M. NIXON on his 13-day visit to the Soviet Union and Poland. The group returned here last Wednesday.

Admiral Rickover reported that he had been greatly impressed by what he had seen and heard about Russian and Polish education.

"They are currently graduating more qualified scientists and engineers from their universities than we are," he said.

When Soviet students, who take the university-preparatory program, are graduated from high school at the age of 17 or 18, the admiral said, "they know as much as our students do at the end of 2 years of college."

All this, he went on, served to confirm his previous beliefs that there must be a vast upgrading of American education, with increased emphasis given to the basic arts and sciences.

The Navy nuclear scientist's frequent criticism of soft American school and college programs and his calls for a more rigorous system patterned after those in Europe have made him a controversial figure in education.

Admiral Rickover, who has often spoken out about what he considered frills in education, said today:

"I searched far and wide in Russia and Poland and could not find a single drum majorette. Nor did I hear of a single school where the principal was an ex-athletic coach."

Observing that both the Soviet Union and Poland were committed to demanding school programs, the admiral said that both educators and parents there regarded "teenhood as a period of preparation for adulthood and not as a period for just having a good time."

CITES SOVIET GRADUATES

In 1957, 1,600,000 secondary school graduates in Russia passed an examination, he asserted, "which only about 2 percent of

American high school graduates would have been able to pass."

American high schools graduated 1,639,000 students in 1959.

Education in the Soviet Union and Poland is provided free of cost to students, he noted.

"No student there is denied an education because of a lack of financial ability," the admiral said. "At the University of Moscow and elsewhere students receive living expenses as well as free tuition. The amounts given to students increase the longer they stay and the better they do in their studies."

Admiral Rickover said that he had been particularly impressed by the strong emphasis being placed on education in Poland.

"Here is a country that was devastated in war, which had 7 million people—25 percent of its population—killed," he said. "When the Germans marched in in 1939, they rounded up the leaders and the intellectual elite and sent them to concentration camps where many died."

"Yet, today," the admiral continued, "this country has its children going to school 6 hours a day, 6 days a week, 10 months a year."

Polish students, he said, work hard in school and have no free time or so-called study periods during the school day.

"They do not spend their time," he added, "collecting milk bottles or old newspapers or taking courses in 'How To Find a Mate.'"

LANGUAGE STUDY STRESSED

"Those who complete the 11-year course and are going on to the university," Admiral Rickover commented, "study one foreign language continuously for 6 years and another foreign language for 4 years. They also have had several years of physics, chemistry and mathematics."

Admiral Rickover asserted that "our educationists keep lulling the American people with the threadbare statement that 'our schools are the best in the world.'"

"They [the educationists] will not face facts, they will not answer questions," he said. "They simply malign those who take issue with them."

Admiral Rickover remarked that he was not advocating that "we copy the Soviet political system."

"But it seems to me," he declared, "that we in the United States who are so blessed with natural resources and have such a high standard of living certainly should be able to give the same emphasis to education that they do."

Mr. Nixon Merits Well Done

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union:

[From the San Diego Union, Aug. 7, 1959]
END OF A MISSION: MR. NIXON MERITS WELL DONE

Vice President Nixon's Russian visit was a success on all counts. It merits the "well done" he has received from President Eisenhower, his countrymen and a world thirsting for peace with honor.

It would be overstatement to say that Mr. Nixon's trip produced a big thaw in the cold war. But it is not amiss to say that his mission has produced a noticeable rise in

the room temperature of international relations.

Mr. Nixon's brass tacks diplomacy has cleared the air and given the world a breathing spell. True, the air can become befouled again and the straitjacket of tension can close in like claustrophobia. But if it does, it will be the fault of Nikita S. Khrushchev.

Mr. Nixon made it clear to Mr. Khrushchev and his people that we want peace, but not at the price of abandoning our principles. And he left no doubts as to the will of the United States to defend its interests, even at the risk of military force.

It must be remembered Mr. Khrushchev's shift to amiability means nothing in itself. He and his system are equipped with military, diplomatic, political, and economic automatic transmission for sudden changes. Now he smiles, now he blusters, now he frowns. The mood that suits his purpose is always the dominant one.

Mr. Nixon made a forceful exposition of this Nation's cold war objectives and policies. He gave the Russian people a true picture of our strengths, and the vitality of our political, economic and social system. He gave the Russians pause to reassess erroneous misconceptions about the United States and its people.

The big impression that Mr. Nixon left with his Russian hosts was that this Nation will always keep the door open for peace. We will talk together and try to understand each other. We have no reservations about pitting our system against the Soviet Union's in peaceful competition.

The Russians know more about us, for Mr. Nixon drew a lifesize picture. And we know more about them. All of this is useful in getting down to cases.

Nikita Khrushchev's impending visit to the United States will not shake his dedication to communism. It is too thoroughly ingrained. But it will serve to dramatize the facts that Mr. Nixon hammered home so brilliantly in Russia.

Mr. Nixon and Mr. Khrushchev understood each other because they are realists. If the Russians can transmit that realism to their international behavior, then perhaps there is a chance for peace.

They Foster Sound Farming

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. JOHNSON of Texas. Mr. President, an article from the Kaufman (Tex.) Herald of August 6, 1959, entitled, "They Foster Sound Farming," gives an excellent account of the value and importance of the typical farmer in America.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Kaufman (Tex.) Herald, Aug. 6, 1959]

FARMER OF THE MONTH: THEY FOSTER SOUND FARMING

Mr. and Mrs. W. H. Foster, Jr., and their son, William Paul, are active farm residents who are leaders in many phases of agriculture.

Mr. Foster has been chosen by the Agriculture Committee of the Kaufman Chamber of Commerce as the Farmer-of-the-Month for July.

He has been living and farming in the fine Becker community since 1930. He moved to Becker from Arcadia, and began farming for himself in 1936—the year of the Texas Centennial.

Mrs. Foster is the former Verna Hardy. They were married in 1939.

First a row crop farmer, Mr. Foster gradually went in to the livestock business. He owns 340 acres of native and improved pasture and rents 50 acres of cotton land.

Last year he sodded 25 acres to Bermuda grass and cleared brush off 20 acres. He plans more sodding and brush control activity so that he can eventually run 60 to 75 cows.

He now has 45 head of cows and a registered bull. Thirteen of the cows are registered and the rest are grade. He is saving his registered heifers for herd replacement and expansion.

Mr. Foster has been mowing open pasture to control weeds. Next year he plans to use a combination spray program and mowing to keep down weeds.

He has conducted a fertilization demonstration in cooperation with the Extension Service and the Tennessee Valley Authority.

He had the first pig parlor operation in the county and could feed 48 head at a time. He does not operate it now, however, since he quit growing his own grain.

Mrs. Foster is active in the work of the Becker Home Demonstration Club. She has served as chairman of the County Council of Home Demonstration Clubs, council delegate from Becker, and as a member of the county 4-H Club planning committee.

William Paul served the Becker 4-H Club as council delegate, secretary-treasurer, vice president, and president. He received awards in soil and water conservation and civil defense. He was a member of the entomology team that placed third in the district.

He has served the Methodist Youth Fellowship as president and is now secretary-treasurer.

Upon entering Kaufman High School in the fall of 1957, he joined the Kaufman Chapter of the Future Farmers of America. He was a member of the Greenhand Chapter conducting team which placed third in the district and worked with the livestock team that entered contests in Houston and Commerce.

The Fosters appropriately foster good farming techniques and are busy people.

Blast Home Rule Bill Loose

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. KASTENMEIER. Mr. Speaker, I call to the attention of the Members of the House a fine editorial which appeared in the August 1, 1959, issue of the Milwaukee Journal entitled "Blast Home Rule Bill Loose." It decries the fact that Washington residents have no voice in their government and points out that a discharge petition is currently being circulated to get the home rule bill out of committee.

The Milwaukee Journal is one of the many newspapers located in all parts of

the country which is lending its support to home rule legislation for the District of Columbia. I ask unanimous consent to insert this editorial in the CONGRESSIONAL RECORD.

[From the Milwaukee (Wis.) Journal, Aug. 1, 1959]

BLAST HOME RULE BILL LOOSE

It is good to see four Wisconsin Representatives leading in the campaign to get home rule for the District of Columbia at this session of Congress.

Democrats FLYNN, KASTENMEIER and REUSS, along with Republican O'KONSKI, joined 35 colleagues Thursday in publicly urging House Members to sign a discharge petition on a home rule bill.

Such a petition, signed by 219 House Members, is necessary to dynamite the bill (already approved by the Senate) out of a House district subcommittee. It is kept buried there by the chairman, DAVIS, Democrat, of Georgia. The same committee has killed off four separate home rule bills in the last 10 years by refusing to hold hearings on them and refusing to report them to the floor.

The discharge petition action is a drastic one, seldom resorted to. However, as the letter of the 39 Representatives stated: "Whenever a majority settlement is frustrated, we believe members of that majority have no choice . . ."

It is a disgrace that in Washington, the Capital of this democracy, residents have no say about their government, no vote for our national officials, no voice in local affairs. It is ridiculous that Congress wastes hours and hours of time acting as a city council for Washington.

Washington should have home rule.

Patriotism in Contemporary Times

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. THURMOND. Mr. President, as we have so recently witnessed in the Senate of the United States, patriotism is no longer the great and moving force that it was in the early days of our Republic. It is indeed refreshing when we find instances and examples of great patriotism in contemporary times. It is equally refreshing to find in print public utterances extolling the virtues of patriotism and recognizing the virtues of that trait of character. For these reasons, the television appearance of Maj. Gen. Charles K. Gailey, Jr., former Chief of the Office of Civil Affairs, Department of the Army, in Red Mountain, Ala., on Independence Day of this year, should be most encouraging to those who appreciate the virtue of patriotism. I ask unanimous consent that General Gailey's remarks be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. Mayor, distinguished guests, ladies and gentlemen, I deeply appreciate the privilege of being present with you on this Independence Day. This fine celebration is certainly in keeping with the words of John Adams

when he wrote, "I am apt to believe that it (Independence Day) will be celebrated by succeeding generations as a great anniversary festival. It ought to be commemorated as the day of deliverance, by solemn acts of devotion to God Almighty. It ought to be solemnized with pomp and parade, with shows, games, sports, guns, bells, bonfires, and illumination from one end of this continent to the other." I believe that Independence Day also ought to be a day on which each one of us reaffirms his love of country and rededicates himself to the guarding of our way of life. It is about these things that I wish to speak briefly this afternoon.

A hundred and eighty-three years have passed since our forefathers mutually pledged to each other their lives, fortunes, and sacred honor in the signing of the Declaration of Independence. During this time, many enemies have challenged our freedom, but through it all our basic precepts of human liberty and welfare have been protected and preserved by Americans who were willing to sacrifice their lives for them. Our Nation's history is replete with stories of these dedicated people.

It is fitting here to recall that the 167th is the linear descendant of the great 4th Alabama Regiment which fought so bravely on the battlefields of Manassas and whose commander, Brigadier General Bee, is credited by some historians as passing on to posterity that great expression "Look at Jackson standing there like a stone wall" and pointing at that great leader, Gen. Stonewall Jackson. Also, there are other Medal of Honor winners in the great State of Alabama. As a matter of fact, the city of Leeds, United States of America, is the home of two Medal of Honor winners.

The exploits of the men of Alabama's 167th Infantry in Europe during World War I and the (31st) Dixie Division in the South Pacific during World War II, as well as many others, tell an eloquent story of men who loved their country. Among these were some whose devotion extended far beyond the normal call of duty. Such a man was Corp. Sidney Manning of G Company, 167th Infantry, and winner of the Medal of Honor. Corporal Manning earned this special form of immortality in the annals of the American fight for freedom on the European battlefield of World War I. He took command of a platoon when his leaders became casualties—and though wounded nine times during the action, he led his platoon on to seize its objective, consolidate its position, and hold the line for our freedom in combat with the enemy on the 28th day of July 1918.

Today we find ourselves again in times that try men's souls—Tibet, China, West Berlin. We are face to face with the most ominous challenge of our time. The Communist conspiracy has made crystal clear its intention of destroying us and seizing control of the entire world. They are constantly increasing their land, sea, and air power. They are ready to resort to brute force whenever they decide the time is ripe to use it. This is only part of the danger. Of equal importance is the fiendish Communist doctrine of hate, atheism, and intellectual perversion which is being used by their masters in an attempt to sap men's moral stamina, weaken their minds, and destroy their souls. The Communists know that they must defeat America to accomplish their dastardly aim of world domination.

Our American life of freedom is under attack. Only through eternal vigilance and unrelenting effort, on the part of each of us, can it be kept secure. This freedom of ours is not a prize that can be won and locked away in a trophy case. It is a living thing that must be fed by the toil and sacrifice of dedicated people.

I feel that many of the old things which enabled us to withstand past challenges to our freedom and which made this country great are too often not receiving due reverence in American life. There are the old virtues of religious faith, integrity and whole truth, self-reliance, thrift, and individual liberty. There are the old virtues of patriotism, real love of country and willingness to sacrifice for it. These ideas are old but certainly they are not out-of-date and if we let them slip, our cloak of freedom can also slip from our shoulders.

We must strengthen ourselves for the months and years ahead if the freedom, won for us by the Corporal Mannings of the past, is to remain cloaked about us. We must become builders rather than critics. When the Declaration of Independence speaks of the right to "pursuit of happiness," it means just that, the right to work out our own destiny. It does not mean that we can avoid all the unpleasantness of life. In God's economy there is no attempt to protect man against difficulties. In fact, He permits difficulties in order to temper men's souls.

If America were to have a choice, she would ask for the gift of patriotism from each of us on her birthday. She would have us pledge again our loyalty and service. Our country's soldiers have received many medals for courage and performance on the battlefields of past wars. Each of these is the symbol of the highest reward of service, the true goal of patriotism, the privilege of saying "I was there. I stood up to be counted. I served."

America has a greater need today than ever before for men and women who think in terms of what they owe the country—not what the country owes them. Let us pledge once again our allegiance to our great and growing Nation, inspired in the knowledge that with each moment of toil we are serving our country, and our friends, with patriotism that is honor.

Poison in Your Water—No. 153

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Rochester (N.Y.) Democrat & Chronicle of June 11, 1959, entitled "Pollution Said Major Factor":

DURAND-EASTMAN BEACH GIVEN CHANCE TO REOPEN—POLLUTION SAID MAJOR FACTOR

(By Stephen Hammer)

First hint the Durand-Eastman Beach might someday be reopened came yesterday from City Parks Director Wilbur E. Wright as scores ignored the signs and the fence to play on the beach.

The beach, officially closed since 1942, would warrant "another look," with a view toward reopening it, once a serious pollution problem of the lake in that area has been corrected, Wright said. He expressed hope that the current massive antipollution program in the Genesee River would relieve the health hazards in the lake east of the river mouth.

A pollution abatement program, spelling out steps to abate the flow of untreated industrial and sanitary wastes into the Gene-

see, now is in preparation by the State water pollution control board. The city already has begun an \$18-million sewage treatment modernization program toward the same end.

FIRST ACKNOWLEDGMENT

It was the first time that pollution of the lake has been acknowledged as one of the reasons for the continued closing of the beach. While Wright would not estimate when the condition might have been remedied sufficiently to warrant reconsideration, health officials have predicted that the results of their program should begin to show in about 2 years.

Wright's comments on the facility's future grew out of his statement that the beach would not be officially open this year, although recent lowering of the lake has exposed a 30-foot strip of sand. Asked whether there was any chance that Durand-Eastman, once among the most popular swimming spots in the county, could ever be opened again, he said:

SCORES IGNORE WARNINGS

"Right now the water there is pretty badly polluted. But the condition of the river is being corrected; they're working on it constantly." It's already improved, and it's getting better all the time.

"When pollution has been reduced to the point where there is no longer a health hazard, we'll have to take another look at Durand Beach."

Even as he discussed the conditions and warned against public use, scores of bathers were using the beach to escape from the city heat. Oblivious to pollution warnings, many were in the water.

Wright acknowledged that the enforcement of this ban is an impossible task. There will be no attempt to keep the beach cleared, he said, because of the practical obstacles to such a program.

He warned that anyone using Durand-Eastman Beach is doing so at his own risk. In addition to the health hazards, he mentioned the absence of life guards and treacherous washouts in shallow water, which could cause a swimmer to injure himself.

How Houston Became a Port

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. JOHNSON of Texas. Mr. President, the Port of Houston magazine has published an article in its August 1959 issue, entitled, "How Houston Became a Port."

Because of the historical interest of this article, and because of the light it throws on the current difficulties of expanding urban areas, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Port of Houston magazine, Aug. 1959]

HOW HOUSTON BECAME A PORT

Mocking birds nesting in the tree top along the shady banks of Buffalo Bayou were flushed in terror as a sidewheel paddle boat, belching clouds of black smoke and making unheard of noises, invaded their solitary domain 50 miles from the Gulf of Mexico.

This venturesome boat nosed its way deep into virgin territory looking for a fabled town which had been named Houston in honor of the general who had led a small group of men to victory in battle to win freedom for the Republic of Texas.

As the sidewheeler *Laura* slowly plowed up the bayou, the captain and his crew, assisted by some of the passengers, were absorbed in a battle with the wild—pushing away alligators and blasting the matted limbs of willow trees which almost closed off the waterway. In their concentration, the town of Houston slipped by unseen on the port side.

The ship paddled noisily on and at the confluence of Buffalo Bayou and White Oak Bayou the water suddenly became shallow and the *Laura* went aground. The song of the mocking birds must have once more become happy as the ship's invasion was halted.

This was early in 1837, less than a year after Texas had won its independence at the historic battle of San Jacinto. Gall Borden, who later rose to fame in the milk business, surveyed and plotted the blocks and streets for a city on the land owned by the Allen brothers on Buffalo Bayou.

After laying out a city, the Allen brothers were anxious to sell their land, so they advertised far and wide about the big, new city being built on the banks of Buffalo Bayou in Texas. It sounded so prosperous that the owners of the *Laura* scheduled their ship to make a trip to Houston. The advertising had been so effective that the *Laura* was able to take on a full cargo as well as a complete list of passengers including Frank R. Lubbock, who was later to become a distinguished governor of Texas.

It's little wonder that the *Laura* passed up the "city," which was little more than a settlement of tents and a few hastily constructed wood buildings. But after going aground at White Oak Bayou, Captain Grayson turned his ship around and eased her downstream, searching the banks. This time they found their goal—Houston.

It was a great day for Houston because the *Laura* fired up the imagination of the Allen brothers. They knew that their city would grow if it could be served by ships. They were alone in their visions of making Houston a seaport, but they were also determined.

The owners of the seagoing steamer *Constitution*, which was in the commercial trade plying between Galveston, New Orleans, and Caribbean ports, was offered a bonus of \$1,000 by the Allens if they would bring the ship to Houston to prove the feasibility of making Houston a port.

On its next trip the *Constitution* was ordered up the Buffalo Bayou to Houston. This time the city of Houston was more easily located.

The *Constitution* proved the point for the Allen Brothers and in the years to follow many more ships worked their way up the narrow Buffalo Bayou to Houston. In moments of quiet, the crews on board could hear the beautiful song of the mocking birds which continued their singing as they became accustomed to civilization.

Although the *Laura* managed to reach Houston, it took many years of growth before the city of Houston could hope to support a port. After the Civil War, business in the Houston area started booming and on October 9, 1866, the Houston Direct Navigation Co. was organized for the purpose of improving navigation on Buffalo Bayou.

A contribution of \$200,000 from the city made it possible to have the bayou surveyed. Two years later it was decided to start dredging the bayou to a minimum depth of 9 feet. As a result, the Houston Ship Channel Co. was formed and capitalized at \$500,000. Controlling interest was held by the City of Houston and the remainder of the stock was sold to the citizens.

During this time, a strong agricultural economy was developing, based on cotton. In the season of 1868, a total of 150,000 bales moved from Houston into export.

One of the most ardent supporters for making Houston a port city was Commodore Charles Morgan, who had been bringing ships to Houston for years. He vociferously objected to the charges being made by the Port of Galveston so he had dredged a channel across Red Fish Reef in Galveston Bay to permit the entrance of his small ships.

With the backing of Houstonians, Commodore Morgan spent \$92,000 dredging a canal at the point where San Jacinto River ran into Galveston Bay. This has since been named Morgan's Point.

The first dredging was completed in 1876, and on September 23, the first ocean steamship moved up the ship channel. It was called the *Clinton* and appropriately it docked at Clinton to unload 60 carloads of freight from New York.

Commodore Morgan managed to gain control of the ship channel and to show his ownership he stretched a chain across the channel at Morgan's Point. Only after paying a toll would he permit ships to pass. He had selected this point because the U.S. Engineers had dredged the channel through Red Fish Reef to a depth of 18 feet in 1872. Commodore Morgan redug the channel even at that point in 1876 because its depth had been reduced by silting.

When Commodore Morgan died in 1878, the people of Houston regained control of the ship channel. Without a driving force, it was several years before the powers in Washington would listen to that voice from the wilderness of Texas. Finally on March 3, 1899, Congress approved a project calling for dredging the channel to a depth of 25 feet from the foot of Main Street to Bolivar Road in Galveston Bay.

The project was amended by Congress on February 20, 1900, calling for a depth of 18½ feet from Harrisburg to Bolivar Road. This did not satisfy the Houstonians who were demanding a deeper channel.

So enthusiastic was the local support that the Houstonians offered to split the cost of \$2,500,000 with the Federal Government if they would agree to a depth of 25 feet. The House Rivers and Harbors Committee and the Senate Commerce Committee had never received such a proposition before, but they decided to accept it and on June 25, 1910, Congress made its appropriation.

In the meantime, it was necessary to get the Texas legislature to pass an enabling act and the people of Harris County voted heavily on June 10, 1910, in favor of creating the Harris County Navigation District. The voters approved splitting the cost of dredging by a big vote in favor of a \$1,250,000 bond issue on June 1, 1911.

In December 1913, Mayor Ben Campbell named the first Harbor Board, a group of outstanding citizens who could advise the city government on how to get the port established. Jesse H. Jones was named chairman. Serving with him were John T. Scott and R. M. Farrar, bankers; C. G. Pillot, and N. F. Meador, businessmen.

The contract for dredging the channel to its 25-foot depth was let on June 12, 1912, and the job was completed on September 7, 1914.

The ship channel was formally opened on November 10, 1914, when President Woodrow Wilson pressed a button in the White House to fire a cannon to signal the opening of the Port of Houston. This was followed with a ceremony at the Turning Basin and big parade through the downtown area.

Now that Houston had a port, it had to go out after business. A group of Houstonians persuaded the Southern Steamship Co. to start a regularly scheduled service from

New York to Houston. The first ship to make the run was the *SS Satilla*, which was due on August 19, 1915, but due to a storm she was delayed until August 22, which we celebrate now as the date Houston became a port.

Republican View of the National Economic Policy

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Don Paarlberg:

REPUBLICAN VIEW OF THE NATIONAL ECONOMIC POLICY

(Address by Don Paarlberg, special assistant to the President, at a dinner meeting at the University of Michigan, Ann Arbor, Mich., before the 1959 Summer Institute in Practical Partisan Politics, Monday, July 27, 1959)

I am happy to be your guest at this Institute in Practical Partisan Politics. This institute is unique in that it brings together, on a cooperative basis, the central committees of the Republican and the Democratic Parties of the State of Michigan, in association with the University of Michigan and the Ford Foundation. It is thus an eloquent expression of the public interest in partisan politics, voted through a great university, a private foundation, and the two political parties directly concerned. I acclaim this constructive and cooperative recognition of the public stake in political affairs.

Also, I welcome the title that you have given to this institute—Practical Partisan Politics. It is good to recast these words in the public mind, as you are doing, to provide a better understanding of the manner in which the public business of the United States is conducted. The word "partisan" is not synonymous with contentious as some seem to think; rather it means the grouping of persons of like views to clarify the issues and pose the alternatives. "Politics" is not the lowest common denominator for public affairs, as some seem to feel. It is the art and science of helping to formulate and administer public decisions. These are two good words and I am happy to see this institute recognizing this fact. I assure you that I shall be frankly partisan in what I consider to be the best sense of that word, and that I shall treat with deep-felt respect the political institutions by which this country is governed.

I have been asked to speak on the Republican view of national economic policy. I shall endeavor to distinguish between the Republican view and the views of the various members of the Democratic Party.

But before I do that, I wish to outline certain views of national economic policy which I think can be shared by everyone. We are faced, during the foreseeable future, with meeting the challenge of international communism and advancing the level of living of our citizens. This is a formidable challenge, indeed. It will take faith, strength, ingenuity, imagination, resourcefulness, and perseverance to achieve these twin objectives.

There are three economic goals, useful in meeting the challenge of communism and advancing our living levels, which most

people would agree upon as desirable. There are: First, a satisfactory rate of economic growth; second, a high level of employment; and third, reasonable overall stability of prices.

The differences between the two parties come in the priorities given to one or another of these objectives and in the policies through which they would be attained.

The Republican view is that economic growth, high employment, and relative price stability are mutually compatible goals; indeed, over any length of time the attainment of each is necessary to the fullest achievement of all.

Opposed to this view is a broad spectrum of economic ideology which emanates from various spokesmen for the Democratic Party. The most vigorous and most persistent of these views is that these three goals are unequal in merit and incompatible in their very nature. This view would place priority on the objectives of high employment and rapid economic growth. It would place little faith in the ability of a free economy to achieve these objectives without strong Government intervention. It would intervene with massive Government programs, the incidence of which would admittedly tilt the price level upward. Thus the objective of overall price stability would be subordinated to the objectives of economic growth and high employment.

The difference between the Republican view and the opposition view is not merely, as some would have you think, the sparring for a political issue. It is a deep-seated matter that involves our whole attitude toward the role of government, toward the capability of the individual, and toward the economic institutions upon which our Nation is founded. Don't let anyone tell you the differences are minor or of small importance.

The high regard for the rights and responsibilities of the individual held by the Republican Party is as old as the party itself. Abraham Lincoln, the founder of the Republican Party, thus defined the respective roles of the government and the individual:

"The legitimate object of government is to do for a community of people whatever they need to have done but cannot do it all, or cannot so well do, for themselves in their separate and individual capacities. But in all that people individually do as well for themselves, government ought not to interfere."

The same view is expressed in the Republican platform of 1956 in these words:

"The Republican Party has as a primary concern the continued advancement of the well-being of the individual. This can be attained only in an economy that, as today, is sound, free and creative, ever building new wealth and new jobs for all the people."

President Eisenhower in his Economic Report to the Congress of January 20, 1959, thus phrased his view:

"Our objective must be to establish a firm foundation for extending economic growth with stable prices into the months and years ahead."

Underlying these views are certain attitudes and articles of faith which have characterized the Republican Party from the first. There is faith in the ability of the individual to make wise decisions if he has access to the facts. There is belief that wise individual decisions are, when summed up, generally compatible with the broad public interest. This article of faith counts the individual as being of great worth, as meriting the high regard of his government, as being the source of most economic, political and social progress, as deserving the best education, as a worthy steward of material possessions, as the true unit of political and economic freedom.

The opposing view casts the individual in a far lesser role. It would resolve all doubts in favor of government programs and against individual responsibility. Indeed, it sometimes seems to doubt the capacity of the individual to make wise decisions.

By some unfortunate mislabeling of signposts, the Republican view had come to be known in some quarters as "reactionary." The Republican view is not "reactionary." It is, in fact, forward-looking. The future has always belonged to those with a high regard for the worth of the individual.

By some equally unfortunate mislabeling, the Democratic view has become known as liberal. It is not liberal because it does not stand for liberty. It stands for restriction. The labels and the signposts have become so confused that we need a new vocabulary.

Related to the high regard in which the Republican Party holds the individual is the high regard it holds for the capacity, resourcefulness and resilience of the enterprise system. By the enterprise system I mean a system based on the enterprise of the individual person. Its cornerstones are the right to choose the way in which to earn one's livelihood, the right of access to the marketplace, and the right to own property. In this system, people cast their ballots in the marketplace in the form of bids for goods and services to determine what will be produced and what consumed. It is a free choice system; the people themselves choose what work they shall do. They decide whether to buy or to rent, to pay cash or buy on credit, whether to increase consumption or to make savings.

The basis of the enterprise system is the individual. If one has high faith in the individual, he is likely to have high faith in an economic system based on individual decisions. The enterprise system has given us a measure of individual freedom which is the admiration and envy of people in every quarter of the globe. It has given us the highest level of living ever enjoyed by any people of any nation at any time in history. One wonders at the vigor of the attack on so fruitful a system.

This system does have its shortcomings, true. It has its uncertainties. It sometimes rewards people in a manner not properly associated with their contribution. It sometimes fails to allocate resources in a desirable manner.

The Republican view does not overlook the shortcomings of this system. Rather, it would seek to repair such shortcomings as do in fact exist. It would strengthen the enterprise system where it is weak, but it would do this without altering the fundamental character of the system. It would enlighten the people so as to enhance the likelihood of wise individual decisions. It would prune the tree of enterprise rather than uproot it.

When an economic problem arises, the Republican attitude is to see whether this problem can be met within the enterprise system. If it cannot, the next question is whether the enterprise system can be appropriately amended or strengthened. If this cannot be done, if the need is substantial, and if public action gives reasonable hope of success, then a Government program will be developed.

This attitude naturally leads to increased Government activity in certain areas. For example, there is the rural development program, a cooperative effort of private and public agencies, introduced by this administration, to open wider the doors of opportunity for the million and a half farm families at the low end of the income scale.

On the other hand, the Republican attitude means less governmental activity in other areas. To take another example from the field of agriculture, it means less Government activity in supporting farm prices, piling up Government surpluses and telling individual farmers what crops to plant.

The opposition view is to resolve all doubts in favor of Government intervention. This would steadily enlarge Government programs at the expense of the private sector. As marginal decisions were resolved in favor of Government intervention, economic areas once wholly private would become first marginal and then public. It is not difficult to predict the ultimate consequence of this trend.

Much of the controversy regarding the respective role of Government and individual traces back to the great depression. During the decade of the 1930's, the enterprise system suffered from a grave and prolonged malady. The Republican view is that this period was an interlude of economic malfunctioning, the causes of which are not yet fully understood even by the most capable scholars. The 150 years of national existence which preceded this interlude and the 20 years which followed it are considered by Republicans to be more representative of the true nature of the economy than was the period itself.

We have now recovered from this disaster, Republicans feel, and we have developed useful tools for preventing its recurrence. We should not be continually looking back over our shoulders in fear of a repeat performance. The Republican economic faith should appeal to adventurous, young, energetic, optimistic, and enterprising people.

The opposition view seems to be that the decade of the thirties, with its stagnation and unemployment, was truly representative of the capacity of an enterprise economy. This is a frightened, apprehensive, and negative viewpoint. It holds in low esteem both the individual and the economic system upon which our country is based.

Despite the high levels of economic activity which have characterized the past two decades, there are some who see in every quaver of the economy, in every ripple on the graph, the possibility of returning to the dark days of a quarter of a century ago. These are the people who propose huge Government housing programs when private housing is operating at a high level, who would unbalance budgets during a time of prosperity, who offer inflationary programs in an effort to stimulate economic growth at a time when the gross national product is running 11 percent above a year ago.

If by the word "reactionary" we mean one who wishes to return to an older order, and that is the dictionary definition, then the true reactionaries are those who would use in the 1950's the same kind of programs that they used in the 1930's.

The Republican view of economic affairs is that the Government has responsibility for creating a favorable climate within which the economy can meet human needs. This means a climate favorable to investment and savings, a climate favorable to enterprise and innovation. It means a climate within which adjustments can readily be made. It means the full development of our human resources, and this means regard for individual responsibility as well as individual rights. It means a fair place for everyone at the starting line; it does not mean that everyone should breast the tape at the same instant. It means safeguarding the value of the dollar. In short, it means Government oriented toward releasing the creative power of the individual.

The past 6½ years have been a period marked by the highest level of living ever attained by the American people, an eloquent tribute to the capability of our system.

The Republican view of economic policy provides for Government intervention of substantial magnitude when that is appropriate. Twice during the present administration the economic barometer started dropping. But the disturbances which ensued were rather mild. With sound Government policies these storms soon blew themselves out.

The recession of 1953-54 was met by substantial Government programs, including the biggest tax reduction in history. The administration demonstrated a capability for action which was truly impressive and remarkably successful. This downturn was relatively moderate and was quickly reversed despite widespread concern on the part of those apprehensive people who felt that we were about to repeat the disastrous experience of the 1930's.

Similarly, the recent business cycle illustrates the willingness and the ability of the Republican administration to intervene in the economic picture when and if that becomes appropriate. Equally important, it illustrates the desire of the Republican administration to withdraw from massive Government programs when the need for intervention has terminated.

In fact, the contrasting economic policies of the two major parties are vividly illustrated by the experience of the past 2 years.

When the recession began late in 1957, there was a shift in economic policy on the part of the Republican administration toward more liberal credit and toward augmentation of Government programs already in existence. As the recession continued, substantial actions were taken, some of them by the Republican administration, some of them by the administration with the concurrence of the Congress.

Extended unemployment compensation was provided on a temporary basis through the leadership of the Republican administration, to meet the needs of those unemployed people who had exhausted their benefits under the regular Federal-State insurance program.

The housing program was stepped up, with leadership provided by the administration, through the provision of additional insured loans.

Built-in stabilizers provided additional dollars of consumer income and kept other dollars in the stream of private spending.

The magnitude of the antirecession measures is indicated by the fact that they resulted in a Federal deficit of \$12½ billion. On the basis of the record, Republicans have run budgetary deficits when this could be helpful. They don't believe in making a habit of running deficits, and they strenuously resist running a deficit when a surplus would be appropriate, as at present.

While these Government programs were put into operation, other proposed programs were avoided. Huge public works were proposed and rejected. Had these proposals been adopted, work on them would have come at the time when recovery had already occurred. The result would have been to widen rather than diminish the fluctuation of the cycle. With great resolution, the Republican administration withstood these unsound proposals.

The Republican Party held, throughout the recession period of 1957-58, a strong faith in the recuperative powers of our enterprise economy. The people, by their behavior, proved that this faith was well-founded. In fact, the real strength during this period lay in the people, who did not panic, and in those of their elected public servants who reflected the confidence of the people. The greatest harm was done by those who had little faith in our individual citizens and little faith in our economic institutions, who advocated massive Government programs to overcome the adverse psychology which they themselves generated.

The faith and confidence of the private citizens won out. Recovery came about. Employment began to rise. Investment, which had lagged, again moved forward. Industrial production advanced and a broadly based recovery got under way.

The events since the first of the year contrast even more sharply the divergent economic policies of the two political parties.

The President recognized the signs of recovery. These signs, coupled with his faith in the enterprise system, led him to recommend a legislative program and a Federal budget based on the prospect of an improving economic situation. He felt strongly that with the achievement of recovery there should be a termination of the emergency programs which had been adopted to bring about recovery. This meant a termination of temporary extended unemployment compensation. It meant a pay-as-you-go basis for the highway program. It meant a housing program which took account of the high level of private building. Above all, it meant a balanced budget to combat the threat of inflation arising in part from the pressures generated by the recovery.

When the President announced this program, there was a great clamor from the opposition. Those who were mentally attuned to recession did not quickly recognize the signs of recovery. Those who would rather spend than tax were reluctant to see the termination of the rationale for deficit financing. They were at a loss to know what to do or how to conduct themselves. Their very astonishment reflects their lack of faith in the people and in our enterprise system.

Half a year has elapsed since the President's budget was first offered and since his legislative program was first recommended. This half year has seen the full justification of the President's appraisal of the economic outlook. Recovery is a fact. More important, this half year has seen a growing public understanding of the issues.

What we now observe in the economic sector is truly a heartening scene. We see a lusty, growing economy with rising employment and advancing economic growth. We see the success of Government programs undertaken to bring about this recovery. Those who held faith in the sound judgment of the individual citizen and in the recuperative powers of our enterprise system see their faith rewarded. We see a citizenry which increasingly insists upon sound fiscal and monetary policy. We see a growing willingness to terminate emergency programs now that the emergency is over. We see the further retreat of the outmoded idea that any economic downturn must result in widespread disaster. We see, and I think I am reading the record objectively, a victory for the economic system which has made our country great.

As a Republican, I take a great deal of pride in the fact that the party of my choice has, over the years, demonstrated a high degree of confidence in our economic system. I hope that over the years ahead the Nation's faith in this system will grow rather than diminish. I hope that when the historian of the future writes the history of our present times, he will say that the institutions of freedom were put to the test at home and abroad, and emerged triumphant. If we are good stewards of those principles of economic and political science which have made this Nation great, that is what he will write.

Economic Miracle of Puerto Rico

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. JOHNSON of Texas. Mr. President, one of the great myths of Communist philosophy is that the United States is an imperialistic Nation which seeks

to exploit underdeveloped countries. And there is no myth which runs so directly contrary to the facts.

The distinguished and perceptive Washington commentator, Roscoe Drummond, has written an article on the economic miracle of Puerto Rico. He reviews the facts and finds that the hard work and initiative of the Puerto Ricans, combined with the understanding and sympathy of the United States, has produced a genuine showcase.

I ask unanimous consent that this fine article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Washington Post and Times Herald, Aug. 10, 1959]

ECONOMIC MIRACLE—PUERTO RICO SHOWS

WHAT CAN BE DONE

(By Roscoe Drummond)

SAN JUAN, P.R.—They said it couldn't be done—and Puerto Rico has done it.

Here is a little Caribbean island, much of its land unusable, overpopulated, underdeveloped, long neglected, and oppressed by some 450 years of Spanish colonialism—and today you have to see it to believe it.

Before Puerto Rico became a completely self-governing associated state in 1952, U.S. Senators used to come here regularly to investigate and glumly leave, convinced that this island's economic and social problems were impossible to solve. Even that inveterate planner and dreamer, Rexford Guy Tugwell, who served as governor here 13 years ago, held up his hands in despair.

They say that Puerto Rico has pulled itself up by its own bootstraps and they call its development program "Operation Bootstrap." The fact is, Puerto Rico didn't even have straps on its boots, but what it does have is the most antimanana complex you ever saw. What Puerto Ricans can't put off until afternoon, they add to what they do in the morning.

What they have done is to bring up their gross national products—all goods and services produced—300 percent since 1940. And over this same period, the island increased its net income by 286 percent.

If you are suspicious of percentages, then note that family income here is now over \$2,400 and that the average Puerto Rican family can buy nearly twice as much as it could 20 years ago. It is true that per capita income is still only half that of the poorest U.S. State, but it is the highest in the Caribbean area and the second highest in all Latin America, exceeded only by oil-rich Venezuela.

As the standards of living of the Puerto Rican people has advanced, the ability of their government to promote education and health and social welfare has expanded. Some 26 percent of the Commonwealth's budget goes to education. In 1940 Puerto Rico's schools could serve only 51 percent of the school aged; now they serve 84 percent.

When poverty and unemployment were rampant two decades ago, life expectancy was only 46 years; now it is 68 years—and the death rate is even lower than it is in continental United States. Bank deposits are up sixfold over 1940. The same with automobile registrations.

The most significant development is that in its effort to balance its economy, since farming couldn't possibly sustain its 2.3 million people, the Puerto Rican Economic Development Agency has brought about the establishment of slightly over 500 new manufacturing plants; most of these are now in private hands. Special tax exemption goes to manufacturing and tourism ventures which meet certain requirements. The government itself builds most of the new manu-

facturing plants and then either sells or rents them to private business.

It is for all of these reasons that Puerto Rico is today a radiant show-window of what an underdeveloped country can do.

It is a visible refutation of Soviet propaganda that America is imperialist, that American capitalism suffocates its friends, and communism is the only way an underdeveloped nation can rapidly improve its standard of living.

Puerto Rico chose its own relationship with the United States—sovereign self-government with common citizenship.

This island has completely free trade with the United States and each is the other's best customer. Both benefit.

Puerto Rico spends \$400,000 each year from its tiny budget to help others to see and believe—and to go and do likewise.

The Maytag Co.

EXTENSION OF REMARKS

OF

HON. STEVEN V. CARTER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. CARTER. Mr. Speaker, as you know, I have the privilege of representing the Fourth District of Iowa. Located at Newton in the heart of the district is the Maytag Co., the major independent producer of home laundry equipment. It is with justifiable pride that I submit for the Record a series of five articles about the Maytag Co. which appeared in the Christian Science Monitor beginning August 4. I feel it is significant that a newspaper such as the Monitor, long recognized as a leader in the field of journalism, should pay tribute to the Maytag Co., one of the front runners in the highly competitive appliance industry. Newton, a city of 13,000 persons, is one of the most highly industrialized areas for its size in the Nation, providing more than 5,000 industrial jobs. Even so, it continues to actively engage in a program to attract new industry—typical of the cities and towns of not only the fourth district but the entire State of Iowa. I believe the following articles serve to illustrate that Iowa truly is the land where farm and factory can share prosperity:

DRUDGERY WRUNG OUT

(By Bernice Stevens Decker)

NEWTON, IOWA.—This, the story of the Maytag Co., should have equal appeal for homemakers and businessmen.

The women should be interested in it as the story of a company that has developed one product after another to take the drudgery out of washday. This has gone all the way from calico and the problems of a farm woman with no electric power to the modern city dweller who builds her family wardrobe around wash and wear garments.

On the sound business side, it is an account of a revolutionary management policy which has proved very successful in today's troubled and sometimes controversial appliance industry.

This 66-year-old firm has remained an independent specialist in a highly competitive age dominated by giant corporations with highly diversified lines of appliances.

PIONEER ROLE CITED

The Maytag Co. has been a pioneer in the manufacture of home laundry equipment. It is known for many firsts. Yet, company management has long taken a stand against planned obsolescence. It has not brought out new models each year, while most of the major companies did so. Yet, last year, while the industry as a whole showed a drop in sales, Maytag forged ahead.

Maytag started out producing farm machinery. Today it remains the major independent producer of home laundry equipment. This is noteworthy, because many old-time companies have disappeared or merged with giant corporations.

INDUSTRIAL AREA NOTED

Fred Maytag II, the third generation to actively direct the business, heads the company.

It's a matter of about an hour's flight from Chicago's lake-front Meigs Airport to Newton, the heart of Iowa corn country. The contrast is sharp and impressive. Everything is surrounded by cornfields—the airport, the town, the sprawling No. 2 Maytag plant, now just over a decade old.

Iowa's economy is based on agriculture. Yet here, as in many other agricultural areas, industrial development supports a major share of local residents. Newton, with a population of 13,000, is one of the most highly industrialized areas for its size in the Nation. It provides more than 5,000 industrial jobs. Some 4,000 of them are supplied by Maytag, which ships the equivalent of more than 500 trainloads of appliances a year to all parts of the country.

Newton is also a center for advertising specialties produced by three major companies, and is the home of an earth-moving equipment company. It is actively seeking new industries.

This is considered the washing machine capital of the world. Three other well-known name brands once had their headquarters here. Thus, the history of home laundry equipment has been closely associated with Newton and Maytag.

This made it logical for Maytag to sponsor "The Tale of a Tub," a permanent exhibit of the story of home laundering at the Chicago Museum of Science and Industry.

No researcher, as of far as is known, has put a finger on the first successful washing machine. The fluted washing board has been traced to 1844. A tumbler, a barrel-like apparatus turned by hand, was patented in 1850.

DEVICES DEVELOPED

Godey's Ladies Book pictured one version. A scrubbing frame that imitated the hard-working hands of the housewife appeared in 1869. A copper boiling vat, patented in 1874, "percolated" the clothes. In 1882, corrugated rollers were developed to get mechanical scrubbing action. Just a year later came a washer that pounded the clothes with gear-operated paddles.

FARM SALES SEASONAL

By 1890, the up-to-date housewife was using a suction plunger on a stick, an item still sold in the United States today. By the turn of the century, hand-operated wooden dollies were used to pull the clothes through the water. These mechanical gadgets helped, but the job was still laborious—a full day's work.

The modern home appliance industry, however, began with the introduction of these first hand-operated wooden tub washers. Typical of these was the first Maytag washing machine, introduced in 1907. At that time it was a sideline for a prosperous farm equipment business.

Farm machinery production goes back to 1893. The late F. L. Maytag and three associates pooled \$2,400, created the Parsons

Band Cutter & Self Feeder Co., and leased an abandoned stove works.

Their product, a grain thresher accessory, was a band cutting, self-feeding attachment, which released men from the dangerous task of hand feeding. It was the first of its kind, and the beginning of many firsts for the company.

For the first year, this was a sideline to the founders' other occupations. Then Mr. Maytag was made manager and took over full time. Within a few years, 28 different concerns purchased and sold the attachment for their threshing machines. A corn husker and shredder and other farm equipment were added to the output.

Sales of farm equipment were seasonal. A washing machine was added as an extra to spread sales and employment throughout the year. But soon the firm turned from improving the lot of the farmer to making life easier for his wife. A few years later the name was changed to the Maytag Co.

MAYTAG DEVICES BLAZED TRAIL

(By Bernice Stevens Decker)

NEWTON, IOWA.—It didn't take long for washing machines to become of major importance to the thriving young Maytag Co. In less than 15 years after the firm's first model appeared, it was to become the top producer in the United States.

The first washer, the Pastime, had a hand-operated cypress tub with wooden dolly that dragged clothes against its corrugated sides. In 1909 came the Hired Girl model, with pulley attachment, so that both washer and wringer operated by power from an engine.

FIRST "FIRST" IN 1910

In 1910 Maytag brought out what is regarded as one of its major "firsts." This was a swinging, reversible wringer, which could be swung into position over the tub. It meant the housewife no longer needed to move the water-filled tubs into position for the wringer.

In 1911, with electricity used in many parts of the home, electric motors were attached to improved models. The electric washer brought a demand for power-equipped washers on farms and in small towns where electricity was not available. In 1914, a one-half horsepower gasoline engine known as the Multi-Motor, was attached to the washer, and became another "first."

For many years it was the only engine-equipped washer especially designed for homes without electricity. It has been sold to more than 1 million users. The firm became the world's largest manufacturer of this kind of engine.

MILLRACE PATTERN USED

In 1917 a cylinder-type washer, with a cast aluminum cylinder in an attractive metal cabinet was announced. Its action was patterned after the old millrace wheel. Projections or scoops on the outside of a revolving cylinder forced water through the tumbling clothes and loosened the dirt.

This model included another innovation, the divided wringer. Its instant tension release, wide separation of rolls, and quick, easy replacement positions were efficiency and safety features that made it immediately acceptable.

There was a brief venture into the automobile business from 1909 to 1911. F. L. Maytag organized a separate company to produce first a two-cylinder, then a four-cylinder automobile known as the Maytag Mason. Although this venture failed, the original investors were repaid years later by Mr. Maytag.

In 1919, the firm solved many longstanding problems and produced a cast aluminum tub. Work was done by Howard Snyder, a man who joined the company many

years before due to his ingenuity at repairing and developing farm equipment. The new tub was put into production in a new model, a trim washer with square cast aluminum tub with rounded corners. A convenient and efficient wringer was set low above water level so that heavy wet clothing need not be lifted high out of the water to be fed to the rolls. Inside the tub, a novel cast-aluminum dolly turned back and forth under a flat aluminum lid from which much of the usual machinery had been removed.

HEIGHT MADE ADJUSTABLE

The tub was wide, and, because of its cone-shaped bottom, particles of dirt washed from the clothes fell to the center and were not rewashed back through the clothing. A special feature was the fact that its height was adjustable to the housewife's convenience.

This vastly improved and changed model was the forerunner to a line that was to speed Maytag to a high point of leadership in the washer industry. Until the twenties, washing machines had corrugated tubs against which clothes were scrubbed by pegs of a dolly.

In 1921, as the result of the continued experiments of Mr. Snyder, the firm came out with its most important single development. This was the gyrofoam principle of washing. Mr. Snyder had inverted the dolly, and replaced pegs with blades. He came up with an aluminum agitator, later trade-named the gyrotator. This sent efficient currents of soapy water back and forth through the clothes, washing them by water action alone.

MAYTAG TOOK TO ROAD

Since it was so revolutionary, it had to be sold. Mr. Maytag himself took the first hand-built machine on the road. He announced he wouldn't be back until he received a carload order. He staged demonstrations in four major western cities, but wasn't successful until he reached Oakland, Calif. That first carload order was the beginning of a volume business.

Factory production of the new washer began in April 1922. Work on all other products was halted. The entire facilities of the factory on night and day shifts were used. Eleven months later the first solid trainload of the new gyrofoam washers was shipped. It went to Philadelphia for dealers in the eastern seaboard States. This was, so far as is known, the largest single shipment of any household appliance up to that time. Another trainload was shipped in July, followed by an order for three trainloads.

By this time the factory was oversold and orders of this size could not be handled. Within less than 2 years Maytag had spurred to a position of world leadership in washer production.

By March 1926, production had increased, so that trainload shipments could be resumed. They became numerous, and many records were broken. In May 1927, the factory dispatched what is believed to be the largest single shipment of merchandise ever made of any kind up until then—eight solid trainloads of gyrofoam washers, valued at \$2,750,000.

SHIFT TO WAR OUTPUT

Numerous improvements, culminated in 1939 in the Maytag Master. These featured an improved roller on the wringer, enlarged tub, and faster and more efficient washing action. There have been variations of this model and, with additional improvements, it has remained the basic design for the firm's conventional washer today.

In 1941 the plant turned to war production. At the peak, 97 percent of output was for war. The balance was for washing machine repair parts made in a small sec-

tion of the plant. This kept most of the existing Maytag washers in operation for the duration.

The plant was converted from highly standardized mass production to manufacture of a great variety of intricate parts and items. Initial work was on tank track pins, shell adaptors and machine shafts, pinions, worms, and gears for gyroscopes.

The aluminum section was converted to exclusive production of heat-treated aluminum aircraft castings.

NEW MODELS PRODUCED WHEN ADVANCES WARRANT

(By Bernice Stevens Decker)

NEWTON, IOWA.—The postwar period brought a pent-up market for products of the entire home laundry industry. It saw a revolution in equipment.

The automatic washer is almost solely a post-war product, since only 350,000 of them were sold before. The automatic drier and combination washer-driers are entirely post-war developments. Production has become as highly complicated in many respects as that in the automobile industry.

Many changes also took place at Maytag. Since 1946, the first full postwar year, the firm has introduced several radically new products, and sales have risen to more than four times the prewar level.

More than \$35 million have been invested in two new plants and in modernizing the old one. The manufacturing plants were converted to what is probably the highest degree of integration in the home laundry field.

Before the war, the firm purchased many components. Now, it produces just about everything that goes into its products except electric motors, timers and controls, molded plastic parts, and some die castings. Thus, the firm is in a position to exercise a high degree of quality control over components and achieve many manufacturing economies.

R. & D. UNIT HELPS

Closely related to this has been the expansion of its highly specialized research and development division. This department goes back to the early inventive genius of Howard Snyder. Its procedures are closely linked to dominant management policy.

Unlike many firms in the industry, Maytag does not produce yearly models. Changes, more often than not, have not coincided with introduction of new models by other companies. Officials estimate that while one company turned out 28 different models, Maytag in the same period introduced 6.

Each new Maytag product is required to contain radical improvements and developments. This is further explained by Fred Maytag, president:

"We believe that progress involves change, but that change alone does not necessarily involve progress."

Mr. Maytag showed what he meant by demonstrating a new feature, an improvement introduced for an existing automatic washer model. He emphasized that this was an added feature and that the model was otherwise unchanged.

CHANGES SUPERFICIAL

"The approach, which I term artificial obsolescence," he states, "is typified by the manufacturer who introduces new models annually, come what may. Sometimes these represent significant improvements, but most frequently they embody only superficial face lifting."

"This approach may have been attractive to many appliance manufacturers because it seemed to work so well in the automobile industry for so many years. It made its appearance in the appliance industry in the early 1950's, was widely adopted, and is very nearly a standard practice."

"The other approach to this problem, true obsolescence, is really quite different. It is strongly rooted in the philosophy that model changes should represent significant improvements in the product. These should provide the dealer with distinct and demonstrable advantages to the customer."

"This does not tie the introduction of new models to the calendar. Rather, it insures that new models will be introduced whenever a new and better way has been developed for the particular appliance to perform a job for the housewife."

CHAOS CAUSED

Mr. Maytag is firmly convinced that the practice of planned or psychological obsolescence has not served to benefit either the consumer, the dealer, or the manufacturer. "Quite to the contrary," he said, "I believe that it has contributed in a marked degree to the chaotic conditions which have existed in the appliance industry, particularly during the past few years."

He charged that emphasis on annual models has "turned the retail marketplace into an oriental bazaar and transformed a prospective customer into an avid, price-conscious bargain hunter."

He sees retail dealers as the biggest losers, since annual models quickly obsolete their inventories and place great strains on their sales forces and merchandising methods. High tooling cost of annual model changes by the manufacturer, he contends, must either be absorbed by him or passed on to the consumer or the dealer or both in the form of higher prices or smaller profit margins.

DESIGNS IMPROVED

Mr. Maytag hastens to emphasize that the company does produce new products. "Here at Maytag three kinds of development are constantly in progress. First of all, we are continually studying the modification of present designs in order to eliminate all causes of product failure in the home, to improve our manufacturing techniques, and to reduce the cost of manufacture."

"Secondly, we are continually concerned with the development of new models and new features to meet the changing needs of the consumer. And, finally, we are continually working for the development of new constructions and entirely new products. This is our long-range development program."

True obsolescence, Mr. Maytag insists, motivates the customer to buy. He cites the rapid public acceptance of manmade fabrics and growing acceptance of "wash and wear" garments.

There is at least one in every family and they comprise as much as 10 percent of some wardrobes. They have made it necessary for appliance manufacturers to develop new automatic washers and new driers designed specifically to provide proper laundering procedures. These needs make old machines that do not do the job obsolete.

In answer to this demand, the Maytag All-Fabric Washer in 1956 was the first to offer a combination of cold water and rinse with slow speed agitation and spin. This provided the housewife with proper washing procedure for all fabrics formerly requiring hand washing, including manmade fabrics, fine woolsens, and cashmeres.

MAYTAG SPINS IN MODERNITY

(By Bernice Stevens Decker)

NEWTON, IOWA.—Practically all major post-war construction and expansion at Maytag has centered around plant 2, devoted to production of automatic washers and driers. Built in an area of what was a cornfield, it has more than doubled in size since 1949.

Located on a tract of more than 100 acres, the plant has its own waste-treatment system comparable to any in some of the Nation's largest cities.

Within more than 1 million square feet of floorspace are a giant two-furnace, porcelain-enameling facility, ultramodern electroplating department, and a central-service warehouse. More than 12,500 freightcars and trucks are loaded from the terminal of this warehouse each year.

One of the country's most modern and efficient assembly lines makes it possible to receive raw steel at one end and turn out finished, crated products at the other.

There are 8½ miles of crossing and crisscrossing overhead trolleys and floor-level conveyors that carry parts, subassemblies, and finished washers and dryers from one end of the plant to the other.

LINES CROSS

At one point these lines cross in four directions. With washing machines above, in front, behind, and all around, it resembles the California freeways.

The many and complicated steps in assembly include a number of inspection checks of each machine. These are first for mechanical and electrical performance, then through a sound room for excessive noise, and a final complete test before being crated.

Several machines are picked at random daily to be run for a 24-hour check. Automatic packaging machines include their own gluepots and sealing apparatus. Each is capable of packaging 1,200 appliances in an 8-hour day or 2½ a minute.

In this day of automation, it may come as a surprise to learn that there are still some 800,000 wringer washers sold each year. Maytag, one of the few firms still producing wringer washers, makes about a third of them.

HISTORIC AREA USED

Wringer washers are manufactured at plant 1 in the area where the first Maytag washer was put together by hand over a half-century ago. The bulk of manufacturing operations is in a five-story building which houses machining, sheet metal, welding, assembly, heat treating, tooling, and other allied departments.

Six million of the company's washers had been produced here by October 1949, before automatic-washer production began. Wringer washers still comprise an important part of overall production.

Auxiliary operations are carried on in another factory at nearby Hampton. This plant also makes replacement parts of discontinued models.

Maytag has a rigid policy regarding servicing of its products. There is a heavy budget and extensive training program for this purpose.

Officials are proud of the fact that the company's mailing list carries nearly 20,000 names for service literature, but only 16,000 for sales material. Over 1¼ million parts are carried on inventory. A repair and service department is equipped to renovate and rebuild appliances as much as 30 years old.

DURABILITY STRESSED

"We aim to build products that do not need to be serviced," states Mr. Maytag. "It is our stated goal to deliver a product which can be installed in the customer's home with confidence that it will require no major repairs for 10 years."

"We have not yet achieved this objective, but we know that significant and steady strides are being made toward that goal." He points out that evidence indicates that service costs on Maytag products are the lowest in the industry.

The firm has an unusual distribution pattern. It sells directly to 15,000 retail dealers instead of using the conventional procedure of going through jobbers. It manufactures no private-label merchandise and is associated with no large chain organizations.

Work of the research and development division is far-reaching in the home-laundry

field and other industries. Several of the major washing-machine companies have licensing agreements with Maytag for use of the firm's inventions.

During the past 10 years over 100 patents have been granted to members of the development division and approximately another hundred are pending at present. The company has been granted 40 patents on sealing construction which are used in other brand washing machines, water faucets, soft-drink dispensers, and gas valves.

SALES LEAD RETAINED—MAYTAG SIGHTS ON FUTURE

(By Bernice Stevens Decker)

NEWTON, IOWA.—The Maytag Co. has tenaciously clung to its position as an independent manufacturer and specialist in home laundry equipment. It has retained this through the difficult postwar period that brought major changes to the industry.

Before the war, Maytag was the giant of the home laundry industry. That was before large corporations entered the field. It has maintained its lead and independence, however.

Since the war, nearly all other independent producers of laundry equipment have either gone out of business or been purchased by or merged with larger companies. The remaining few have diversified their lines to include other appliances.

Since 1917 there have been 215 companies in home laundry equipment at one time or another. Today there are only 25. Their business, which includes sales of washers, dryers, and ironers, totals \$1 billion a year.

MAYTAG RATED AT TOP

A major share of this business goes to Maytag, which is rated as the top earner. The firm is reported to have the highest ratio of operating income to sales in the industry, as well as a better return on sales. It did the best job of climbing out of the 1957 and 1958 recessions. While the industry as a whole showed a decline of 2 percent in 1958 Maytag sales showed an increase of 7.3 percent.

The firm has manufactured and sold about 11 million washers since 1907, more than half of them since World War II. Fred P. Maytag II, president since 1940, attributes this continued growth to a policy of consistent management. He is the third generation and fourth Maytag to head the firm, with two serving in the same generation.

The Maytag Co. Foundation is administered by company members and outsiders. It supports a college scholarship program, with no restrictions on study program, open to children of employees and graduates of the local high school. A teacher enrichment program aims at helping the city of Newton attract better teachers.

Nearly 3,000 of the 13,000 residents of Newton work at Maytag. But Maytag officials are anxious that this not be considered a company town. They are just as anxious as the chamber of commerce to attract new industry here. Mr. Maytag is well aware that the firm is part of an economic change.

Iowa is a leading agricultural State, but for continued growth it is necessary to stimulate industrial development. Many employees commute, some as much as 150 miles a day. Some are part-time farmers. They are dependent on industry, industry on them.

ISOLATION POSES PROBLEMS

Operating so far from highly industrialized areas, Maytag must meet sources of problems of supply and markets. The company has to maintain two small passenger planes which are in constant use. Mr. Maytag himself is a licensed pilot. A U.S. map in his office pinpoints every city in which he has landed his plane, and there are 122 pins.

Executives have to make frequent trips away from home.

Maytag, the fifth largest industrial employer in Iowa, expects to share in the coming growth. It looks for its own growth in its present specialty products, washers and dryers.

Mr. Maytag sees a gradual growth for the industry as a whole. Some of this will come from new family formation. However, a large part will come from replacements. The present saturation of washing machines is estimated at 87 percent of homes. Since about half of these are still wringer washers, they will eventually be replaced by automatics.

Actually, three out of every five wired homes still do not have automatic washers. Seven out of eight are without dryers. The early automatic washers sold from 1946 to 1949 are beginning to be eligible for replacement. With the rapid increase in sales of automatics since 1949, this replacement market should grow rapidly.

Let Justice Prevail

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. WILLIAMS of New Jersey. Mr. President, a subject of much concern to New Jersey has been the unfair tax burden which has been levied on New Jersey residents who work in another State. Clearly, the present situation wherein New Jersey residents who work in New York pay a heavier New York State income tax than New Yorkers is unjust and inequitable. It was encouraging, therefore, to note an editorial from the Newark Star-Ledger of August 9 that there now appears some basis for optimism that a remedy is in the offing. This encouraging news has to do with reports that New Jersey and New York are on the verge of entering into a compact. Such a compact would grant New Jerseyans several million dollars relief from discriminatory out-of-State taxation. In return, New Jersey would help New York collect taxes from New Yorkers.

The citizens of my State are eminently entitled to some measure of tax justice and I am hopeful that it will not be withheld too much longer.

I ask unanimous consent to have the editorial from the Newark Star-Ledger printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

[From the Newark (N.J.) Star-Ledger, Aug. 9, 1959]

LET JUSTICE PREVAIL

The thousands of Jerseyans who are victims of the New York State income tax gouge were treated to some encouraging news last week. It is reported that New Jersey and New York are on the verge of entering into a compact on taxes.

The compact—which also might be called a deal—would grant the Jerseyans several million dollars relief from discriminatory out-of-State taxation. In return, New Jer-

sey would help New York collect taxes from New Yorkers who work in New Jersey and are ducking their obligations to their home State.

The second part of this deal would soften the impact on the New York Treasury in giving relief to the Jerseyans.

The Jerseyans, who work in New York and pay a heavier New York State income tax than New Yorkers, have been the recipients of many expressions of sympathy. But these have not prevented the continuation of the tax—not an increase in the rates.

The new rates make it even more imperative that the Jerseyans get the tax justice to which they are so eminently entitled and which has been delayed so long.

The indication is that the amount of relief afforded the Jerseyans will be determined by how much New York can stand to lose. New York has a three-man committee working out the details of the relief plan. The approach seems to be to devise a formula which will produce a predetermined loss figure.

This could well mean that there will still be an inequity. But New York undoubtedly figures it would be granting enough relief to quiet most the complaints.

Tax justice, however, should not be computed on the basis of what the gouger can stand to lose. Justice involves principles which are independent of a State's need for funds. Anything which would leave Jerseyans paying more than New Yorkers with the same income and expenses would be an injustice.

Commendation on Service at Dearborn Veterans Hospital

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to call to the attention of my colleagues the following fine commendation by Mr. Edward Revolt of the treatment he received at the Veterans' Administration hospital in Dearborn, Mich., which is in the district I represent:

WAYNE, MICH., July 27, 1959.

HON. JOHN LESINSKI,
House of Representatives,
Washington, D.C.

DEAR MR. CONGRESSMAN: Recently I completed a 3-week confinement in the veterans' hospital at Dearborn, Mich. My case required certain tests, examinations, and surgery.

It was my first experience as a patient in an institution of this kind and I was pleasantly surprised at the excellent care and treatment I received.

Th doctors, without exception, impressed me with their patient interest, thoroughness, and professional skill.

The nurses and aids were solicitous, kind, helpful, and attentive.

The food was wholesome, well prepared, and tasty. The all-round efficiency, orderliness, and general conduct of affairs bespoke of excellent management and supervision.

It gives a taxpayer gratification and a feeling of pride that this much-needed Government agency is functioning on such a high standard of proficiency.

Respectfully yours,

EDWARD "TED" E. REVOLT.

One Modern Army

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. THURMOND. Mr. President, in this day when our Armed Forces command such a sizable portion of our national resources, and when our very existence depends to a major extent on the capabilities of the Armed Forces, clear expressions by professional soldiers on the needs of the Armed Forces, or a particular branch thereof, should be studied with care by all in a position to exercise an influence on the shaping of our Armed Forces. On August 3, Gen. Bruce C. Clarke, commanding general, U.S. Continental Army Command, addressed the Association of the United States Army on the subject "One Modern Army." I ask unanimous consent that the address of General Clarke be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS BY GEN. BRUCE C. CLARKE, COMMANDING GENERAL, U.S. CONTINENTAL ARMY COMMAND, TO THE ASSOCIATION OF THE UNITED STATES ARMY, WASHINGTON, D.C., AUGUST 3, 1959

It is indeed a great honor for me to address this annual meeting of the Association of the United States Army. In this audience are leaders of government and industry, distinguished soldiers of yesterday and military leaders of today and tomorrow. One of the principal objectives of this association is to insure power for peace through an adequate modern army. I support your purpose and commend your efforts.

My topic this afternoon is one which is very dear to me: The concept of "One Modern Army." Each word of this title is significant.

One, signifying unity and cohesiveness toward a common purpose—the will and skill to help defend the free world.

Modern. That vital element of military power so aptly covered by the Chief of Staff during the previous period, and

Army. That vital member of the triservice team in general war and the decisive element in limited war.

I shall cover three main headings:

What do we mean by one modern army?

Why do we need it?

How do we attain it?

WHAT DO WE MEAN BY ONE MODERN ARMY?

In battle there has never been anything but one Army. No victory in American military history has ever been won by a single arm, service or component of the Army. Victory in the field has always been the product of the combined efforts of Regulars, guardsmen, reservist, and Army civilians with all arms and services working as a combined arms team.

Ever since the French and Indian wars, the wars in which America has been engaged have fought primarily by civilian soldiers—the volunteers or draftees who were "in for the duration." Even today, a sizable proportion of our Active Army is made up of the noncareer soldiers who will return shortly to civilian life. It is, then, these "short timers" together with the Regular Army, the National Guard, and the Army reserve who make up our one modern Army.

To attain combat readiness we must weld these components together. The one Army concept must pervade all ranks. The ground soldier is not a guardsman, nor a Regular, nor a reservist, nor a selectee. He is simply the American fighting man on the one Army team.

Maj. George Fielding Eliot, in a recent article on this subject, stated this philosophy very well. He said " * * * the indispensable cement of a structure of military unity must be confidence and that confidence has its dwelling place in human minds and hearts. * * * It can be achieved when human beings * * * have a common feeling of belonging together, of sharing a common purpose and common ideals."

We must maintain a unity of purpose toward the common goal of preparedness. Within our modern Army there is no place for parochialism, jealousy, or friction. Defeat of our potential enemies requires the combined efforts of all branches and all components working together as a team. Every component, every arm and service, every element of civilian support—both within the Army and in industry—has a vital role to play before victory is attained.

That teamwork so necessary for victory has reached the highest point in peacetime history. There is yet more to be done.

The one Army concept will not be fully attained until:

Our Army is a force represented by the concentrated efforts of the Regular Army, the National Guard, and the Army Reserve.

Every member of that force considers himself as a member of that team.

Every member is trained and ready to fill his role, and

The Army is truly united in the eyes of the public as one cohesive whole.

WHY DO WE NEED ONE MODERN ARMY

The need for mutual comradeship, understanding and cooperation has never been greater. The announced intention of our potential enemies is world conquest. Their military capabilities for carrying out this intention are the strongest of any aggressor in history. Modern technology has sliced wafer thin our protective cushion of time and space. No longer do broad oceans and powerful allies grant us years to mobilize and train our forces. No longer do we have months to activate units and perfect teamwork within the Army after war begins. No longer do we have time to erase conflicting attitudes and complete the welding process before commitment to battle.

Selected divisions and supporting units of the National Guard and U.S. Army Reserve are earmarked and must be trained and ready for mobilization immediately following M-day. These forces are essential:

To replace without delay those Active Army forces moved abroad at the outset of hostilities.

To provide additional divisions—beyond those of the Active Army.

To fulfill our NATO commitments.

To man our air defense forces.

To enlarge our training establishments.

These units and individuals must maintain a high state of combat readiness. Combat knows no distinction whatsoever between combat ready units or individuals of the Active Army, the National Guard, or the Army Reserve. Granted there is a difference in the degree of combat readiness appropriate to a Reserve unit and an Active Army unit. But never has the difference been so small.

From the very outset of a shooting war—general or localized—all components and all arms and services will be involved. The unity of spirit and teamwork in performance so essential to combat readiness must exist throughout the Army before the first shot is fired. Today our Reserve components are

an integral part of our deterrent to aggression.

HOW CAN WE ATTAIN THE GOAL OF ONE MODERN ARMY

The first step in the attainment of such a goal is to insure that the concept of one modern Army pervades all ranks. There must be a realization on the part of each component of the vital role they and their teammates play in national security. There must be a profound respect by each component for their comrades in arms.

Our public information program must be based on the one-modern-army concept. The public must be informed of the vital role that Reserve components play in national security. They must realize that the Army is not a sect apart, but that the Army is truly a service of the people, provided by the people, and for the defense of the people. In the eyes of the public all Army personnel, regardless of component, must be considered as "soldiers" of the one modern army.

The second step in attainment of the one-modern-army goal is to increase the combat readiness of all our Reserve component forces. Each unit must be maintained at its maximum authorized peacetime strength with trained personnel. The Army Reserves must maintain a pool of trained individuals prepared to fill rapidly the vacancies in strategic forces and the training establishment. Each unit must maintain the plans and the ability to absorb these fillers and mold them into full-strength units with minimum delay. All commanders must be prepared to operate full-strength units. Commanders, staffs, and troops must be trained on modern equipment and in current concepts of operation. We must advance the tactical training of all components through the unit training phase.

The third step is to maintain this close mutual relationship between components of the Army. To achieve the required degree of combat readiness the same training and the same principles for guiding training must be applied to all. In addition, all components must be trained on the same types of equipment.

There must be an increased participation by all components in Active Army exercises and maneuvers. We must learn to work together and fight as a team.

More use must be made of the Active Army service schools and training courses by the Reserve components. Conversely such schools and training courses must consider the requirements of the Reserve components when preparing the scope and establishing the course lengths. Appropriate courses for commanders and staffs should be attended jointly by all components. Our commanders who are going to fight together must get to know and respect each other's capabilities.

There must be more participation by Reserve components in studies on reorganization and equipment, development, and research. Conversely, the special problems of the Reserve components must be thoroughly considered in such actions.

Finally, we should standardize, to the maximum extent practicable, our administrative procedures. We should strive for uniform and standard forms, reports, and evaluations.

These are difficult tasks.

I consider that we have made great progress toward attaining one modern army. The troop list of our National Guard and Reserve units has recently been revised to fill more adequately the force requirements for future combat. This was a major step in the right direction. These units are now being reorganized under the latest tables of organization and equipment.

The RFA program whereby the Active Army is training Reserve personnel for 6 months and returning them to their units is another big step. The Active Army

trained some 80,000 such personnel in fiscal year 1959.

Reserve component personnel and units are taking an increasingly active part in Active Army exercises, CPX's, training, and school courses.

Reserve component units have reached the highest peak of combat readiness in peacetime history.

But we still have a long way to go. The association and its individual members can assist in attaining this one modern Army. Congress must be made aware of the urgent requirement to provide all components with up-to-date facilities and equipment. Additional armories and weekend training sites must be provided. Units must be provided with modern and serviceable equipment to the extent that they can maintain it efficiently. We need the green light and the green cash.

We must impress upon the civic leaders and officials of every city and town the responsibility they have to support their local Reserve component units. Localities must take pride in these units. The units must be made attractive for the higher type of youths of the communities. The public must realize the vital part these units play in national security. They must be impressed that survival later depends upon preparedness now.

Again quoting from Major Elliot, "the illusion that hardware is everything and the soldier is a relic of Valley Forge and Gettysburg can destroy our country. No crystal ball . . . can tell us where, when, how big or how long lasting will be the next emergency our Army will have to meet. Of two things we may be sure—we will need ground combat soldiers and we must train them beforehand."

We must impress upon all members and components of the Army the serious nature of the duty they perform.

We must maintain high standards of efficiency in training and operation throughout all components of the Army. We must continually raise our standards, our educational level, and our technical proficiency.

We must weld all components of the Army together by mutual understanding and mutual respect. We must learn to work together so that all branches and all components of the Army are a balanced, cohesive entity whose continuing element is teamwork and whose ultimate objective is victory.

In short, our purpose is to approach unity and combat readiness of all components with the urgency appropriate to the gravity of the international situation. Our goal is to move all units faster toward combat readiness until all our components have become one modern Army—combat ready.

The American Predicament

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. REECE of Tennessee. Mr. Speaker, the Kiwanis magazine of May 1959 had an article "The American Predicament," by Dr. Perry Epler Gresham, president, Bethany College, Bethany, W. Va.

Dr. Gresham is one of the able educators in America, and he has a penetrating insight into the problems confronting our country. Bethany College,

of which he is president, is one of the most outstanding small colleges in the United States, and is the first church-affiliated school in the country, having been founded by Alexander Campbell who was the leading figure in the religious movement known as the Christian Churches. The original name of the school was Buffalo Seminary.

Bethany College emphasizes the building of character, along with training of the mind, and the success which this unique college has achieved is indicated by the large number of its graduates who have been successful in all walks of life—religious, business, and public. In addition, from the establishment of this small college sprang other colleges of similar types all over the country.

In order that the article by Dr. Gresham may be more widely available, I am placing it in the CONGRESSIONAL RECORD:

THE AMERICAN PREDICAMENT

(By Dr. Perry E. Gresham, president, Bethany College, Bethany, W. Va.)

A bronze tablet in Indianapolis records one of the wise and relevant remarks of a statesman and prophet: "Here February 11, 1861, Abraham Lincoln, on his way to Washington to assume the Presidency, in an address said: 'I appeal to you to constantly bear in mind that not with the politicians, not with the Presidents, not with the office seekers, but with you is the question: Shall the union and shall the liberties of this country be preserved to the latest generation?'"

This timely warning calls each responsible person to assess the nature of the present American predicament with an appraising eye and a clear head. Three massive facts appear. The State is already enormous and is continuing to grow. The individual is very small and growing smaller. Only a revolutionary action can recover the autonomy of the individual person and the values of private enterprise.

War multiplies the size and power of the State. National survival demands a dictatorship in a time of enemy attack or a time of international warfare. The two recent world wars have given most of us experience in totalitarian citizenship. The wake of World War II has continued the apparent necessity for powerful central authority to withstand the external threat of hostile communist powers. Consequently, the American State has taken on colossal proportions. Approximately four fifths of the enormous federal tax revenue goes to pay for wars past, present, and future. The Kremlin helps to enhance the size and power of the American Government.

Internal American strife has created larger and larger bureaus with more and more personnel spending more and more money. Big labor and big business require big government to serve as referee and arbitrator. Each time a labor union cries out for Federal help, as in the Wagner Act, a new bureau is formed with its retinue of vested interest career people and its bureaucratic needs. Each time an industry seeks special advantage through subsidy or legislation to improve its position for survival, or additional consideration in protection or profit from the various commissions, or seeks for regulation to avoid competition, new government agencies appear. As expenses mount, an army of tax collectors must be put in the field to divert funds from private to State use in order to meet the insatiable demands of Leviathan.

The state grows because it is committed "to promote the general welfare." This concept has come to mean a welfare state with

social security for the aged, unemployment compensation for the jobless, support and services for the indigent, and health services for the many. The needs of man outrun his supply, no matter how vast the provision. Pressure for more social security, more unemployment compensation, more pensions, more health services, and more secure and easy government jobs builds up until the Leviathan grows apace, whether his strange head resembles a pachyderm or a jackass.

Politicians must gain office and stay in office, or they are not politicians. The most inviting and the most venerable means of getting elected is to make promises. The exclusive formula for retaining office is either to keep the promises or to make bigger promises to obscure the failure of performance with reference to those already made. Since giveaway promises appear to get quick results, they occur to parties and candidates alike. The state grows in proportion to its programs of expenditure. With the colossal greed of military demands and the insatiable pressure for welfare programs, the state must arrogate to itself more and more functions, power, and proportions. Parties and persons who aspire to office out-promise each other in a race to feed the Leviathan.

Inflationary pressures encourage the growth of the state. Everybody wants inflation for himself, but not for anybody else. As pressure builds up for more and more wages, prices must go up. The same pressures build up with respect to profits. The parties pinched by inflation cry out for government help, and the sensitive politicians respond with the creation of new administrations, which involve more taxes, which require higher prices, which demand more wages; and the round repeats itself. The net result is more and more government.

Alexis de Tocqueville, noted French political scientist of the last century, described individualism as "a mature and calm feeling, which disposes each member of the community to sever himself from the mass of his fellow creatures; and to draw apart from his family and his friends, so that, after he has thus formed a circle of his own, he willingly leaves society at large to itself. Individualists owe nothing to any man, they expect nothing from any man; they acquire the habit of always considering themselves as standing alone, and they are apt to imagine that their whole destiny is in their own hands. Individualism is of democratic origin and threatens to spread in the same ratio as the quality of conditions." This creature of early American origin is little more than a museum piece. The individual features have become blurred in a collectivist world.

With "security" as a major aim for the earning motive and conformity as the principal consideration for the consuming motive, there is precious little individualism left. The virtues of Puritan American—honesty, industry, and frugality—are widely ignored as irrelevant. People who can attain security by belonging to the association, the union, or the party are not likely to knock themselves out by working and planning for it. Even wild birds prefer the feeder to the tent caterpillars in the forest. The responsibility to save for a rainy day has been turned over to Uncle Sam. Honesty, which once included payment of debts, has been delegated to posterity. The conditions of contemporary society do not encourage individual responsibility.

Keeping up with the Joneses has taken a new turn under the spell of mass media. It may be "keeping down with the Joneses," or "up," as the case may be, but it must be like the Joneses. Consequently, our coeds move their waistlines up or down, and our

cars get bigger and "finnier," or small and foreign. Our homes grow more automatic and our children grow more nervous in an effort to belong to the crowd. Deferred payments enable the newlyweds to conform to the pattern of their parents. Our music tastes level out to match our preferences in architecture, drama, and literature. We have variety without great difference. We prefer the organization man to the individualist. The dissenter, or the private thinker, is an inconvenience.

The individual is powerless against the political organization. Consequently the voter tends to join the consumer quest for the candidate who fits the norms of sincerity and federal generosity. Only the conformist can belong to the machine, and only the machine can elect. The responsible citizen is obscured. The campaign oratory becomes perfunctory and dull, since it has little bearing on the election returns.

The private enterpriser in learning has become lost in the crowd on the campus. The Benjamin Franklin formula of a lifetime of learning has been replaced with the "4 years and a degree" formula, with as little learning as possible. Individual thought on crucial issues is hard to come by. Executives read a few cult papers and a few mystery thrillers with very little else to stir up the neurons.

Even the last citadel of man—his religion—has become socialized. Instead of a vertical answer to God, man tends to give horizontal answers to the well-dressed and highly respectable congregation that has status. Private prayer has become beautifully professionalized. The multitudes huddle together in Jerusalem without much recollection of the lonely vigil on a mountaintop at midnight or the silent walk by the shores of Galilee.

As the state grows big, the individual becomes small. People huddle together to dispel their loneliness and increase their share in security and advantage. The family becomes weak as a social unit. The peer group outranks the parents in prestige for the young. The conditions that beget autonomous people have given way to conditions that encourage the mass society.

The recovery of private enterprise begins with religion. No person is an individual until he can say: "I must obey God rather than men." This is the moral basis for all private judgment. The individual human mind that operates in a divine influence transcends all society. This is no invitation to fanaticism or antisocial attitudes. It is rather the basis for autonomous self-realization and private enterprise in acts and letters, as well as in money management and citizenship. Robert Frost has a wise old Yankee farmer say: "I call you to a one-man revolution; the only revolution that is going to come."

The right to be wise is posted on the assumption that a person thinks privately. Education must be restored. Invention, creative art, new developments in the social order, and new ideas are the result of individual thought rather than educational conformity. The quest for wisdom is a highly individual matter. The appetite for learning is antecedent to intellectual achievement.

A one-man revolution in the economy begins when a laborer stands up against his union or an industrialist stands up against his association in behalf of some worthy moral principle. The man who resourcefully develops his business without running to Uncle Sam is a one-man revolution. The young man who earns what he can by hard work and spends what he can afford is a private individual. The young wife who buys what is practical and beautiful rather than what is popular is a true person. The executive or statesman who decides on the basis of

his best insight into the will of God rather than expediency has found himself.

The problem of the ever-growing state must be met if any sphere for individual initiative is to be maintained. There are two massive social forces that resist the encroachment of government. These are resentment against high taxes and resentment against the loss of individual liberties. The man of independent mind can encourage these forces by intelligent conversation and astute action. The employer has responsibility to make employees acutely aware of the tax that is diverted from his paycheck. He is responsible to dramatize the loss of liberty that comes with the overwhelming state. The intellectual, the clergyman, the worker, the homemaker, the common man in any vocation is involved in the struggle to recover the cherished concept of individual responsibility that is essential to personal fulfillment and the good society under God.

Need for Outstanding Personnel in Foreign Aid Program

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and searching letter about our foreign aid program, which was published on the editorial page of the New York Times for August 12, 1959.

Author of the letter is a warm personal friend of mine, Dr. Philip Selling of Portland, Oreg., who is presently assistant professor of medicine on the faculty of the University of Indonesia, at Jakarta, in that island nation.

I commend to my colleagues Dr. Selling's penetrating observations on the need for people of imagination, education, and originality to administer and operate our costly program of foreign aid, which is so vital to the future of the free world.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PLANNING FOREIGN AID—LATITUDE IN RUNNING PROGRAM HELD MORE IMPORTANT THAN ECONOMIES

TO THE EDITOR OF THE NEW YORK TIMES:

The current congressional interest in the managerial aspects of foreign aid programs is worthy of some comment. Foreign aid can and does work, and we all agree that it is necessary. However, if Congress proposes to put more stringent controls over the administration of that program, it may run afoul of its own good intentions.

Technically, more stringent controls mean more paperwork, more Washington supervision, more contact with the various other agencies of Government, and possibly more rigidity of opinion by the administrators themselves. All of this takes more time, and the delays in activating a specific project are already so long in many instances that the timeliness of a project may be lost.

Furthermore, it will be difficult to draw up stricter rules which must be applied to widely different nations and circumstances. Control also tends to lead to preoccupation

with big projects, since little ones do not always appear worthy of so much fuss and bother. Yet it is the little programs which often bring the biggest rewards.

Each project in every country is, in one sense, an experiment; and it is in a field where we have little previous experience to guide us. Inherent in these experiments is the element of risk—the risk of failure. Congress may interpret the failures as waste, but they are also part of the learning process. Let us waste more, but let us waste it wisely. Latitude in planning without so many rules, freedom from projectitis, the willingness to try many small experiments in foreign aid are far more important than saving a few million in a budget of several billion.

Actually, as has been pointed out many times in the last year, the problem is not in the program but in the man who runs it. Let him have a reasonable modicum of administrative intelligence. But let him also have imagination, an interest in the people and problems of his area; and, above all, let him have the latitude to try to help these countries the way they want us to.

PHILIP SELLING,

Assistant Professor of Medicine,
University of Indonesia,
JAKARTA, INDONESIA, August 3, 1959.

Oneonta Star Urges Services To Eliminate Any Servant-Master System Found To Exist

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. STRATTON. Mr. Speaker, a special subcommittee of the House Armed Services Committee under the chairmanship of the gentleman from Illinois [Mr. PRICE] of which I have the honor to be a member, has recently been examining the problem of manpower utilization and specifically certain charges that have been made that enlisted men have been used as servants for senior officers. If these charges are borne out as a result of the investigation, it is clear, Mr. Speaker, that the American people are opposed to such procedures and will insist that they be discontinued. Representative of the thinking of the American people on this issue is a thoughtful editorial which appeared recently in the *Oneonta* (N.Y.) *Star*, of July 28.

Under leave to extend my remarks, I insert the editorial for the information of my colleagues.

[From the *Oneonta* (N.Y.) *Star*, July 28, 1959]

ARMY'S SERVANT-MASTER SYSTEM NEEDS CHECKING

A lot has been said recently before the House Armed Services Committee about military officers using enlisted men as servants. There has been testimony that these enlisted men cut grass, baby sit, cook, and perform other menial tasks.

Assistant Defense Secretary Charles C. Finucane denies this. He told committee members that such men were assigned as "personal staff" people to relieve officers of "numerous administrative chores." Repre-

sentative FRANK KOWALSKI, of Connecticut, who started the investigation, questioned the word "assigned." He wanted to know how many men carried on the books as clerk-typists, and so forth, were actually working for officers as general handymen.

The issue here is not one of semantics. Either enlisted men are being assigned to work as servants for officers, or they are not. The Department of Defense should be able to come up with a simple, direct answer to a simple question. And if the answer is in the affirmative, then steps should be taken to change a servant-master system of which most Americans strongly disapprove.

East-West Trade: Advantages and Disadvantages

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. CHURCH. Mr. President, the question of expanding trade with the Soviet Union promises to grow larger and larger as the exchange of visits between Soviet and the United States becomes more frequent. It is well known that Russia is anxious for more trade markets in the west, as Mr. Mikoyan and Mr. Koslov made clear when they were here. The question is: Would greater trade with Russia be valuable and profitable for us?

A very well-reasoned discussion of this subject may be found in an article written for the May issue of *Tradescope* by the distinguished senior Senator from Minnesota [Mr. HUMPHREY] who concludes that increased trade can, if handled wisely, "be a net advantage for the United States and the free world."

I ask unanimous consent that the article, "East-West Trade: Advantages and Disadvantages," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From *Tradescope*, May 1959]

EAST-WEST TRADE: ADVANTAGES AND DISADVANTAGES

(By Senator HUBERT H. HUMPHREY)

Since earliest times the interchange of goods between nations has exerted a profound influence on the political relations of the trading partners. Political commitments have in turn cast their shadow over trade. This two-way impact is illustrated in the relationship between the Soviet bloc and the free world today. Until quite recently, the leaders of the Soviet Union have avoided extensive exchange of goods with the non-Socialist world economy. On the other hand, the free world has been able to develop only as much trade as the Soviet state-trading system was willing to permit.

During the past 5 years, however, there has been an increasing drive on the part of the Soviet bloc to enter the marketplace of the world. Because of its sudden emergence, it has often been suggested that the current Soviet economic offensive is merely a drive for political advantage with the ultimate aim of dividing the free world. Pre-

mier Khrushchev is reported to have said that "trade is not economics, it is power."

In assessing the advantages and disadvantages that might result increasing East-West trade, certain considerations should be noted.

Russia's monolithic trading mechanism with all its geographic subdivisions can concentrate with telling effects on strategic objectives and thus challenge the West, precisely because Russia is not concerned with profits or taxes. Its state trading monopoly is in a position not only to sell but also to buy vast quantities of goods or raw materials at a politically propitious moment because price is no object and all attendant costs, such as transportation, are absorbed by the state. Russia and the satellites, who are part of her economic orbit, are not concerned with the wage and price problems of the free enterprise system. This preponderant advantage is strengthened even more because the free world is composed of trading competitors who are also maneuvering for a more profitable share of the world markets. Operating as individual units, they are not fully equipped to meet massive Soviet competition.

Increasing shipments from the West have the effect of assisting the Soviets to overcome weaknesses and deficiencies, and thus inevitably to strengthen their war potential. In the past, however, our refusal to lift the embargo on strategic trade items with the Soviet Union has not proved wholly successful in containing Soviet economic advance. Although our efforts certainly slowed momentarily the economic advance of the Soviet Union, we have failed to deter her. In fact, our limited trade policies have often served to stimulate the Soviets to accelerate development and expand production. This is exactly what happened when we refused to sell aluminum to the Soviet Union immediately after World War II. By concentrated efforts, the Union was not only able to construct plants, but to produce aluminum at sufficient capacity that she was able to place a large volume on the world market last year and break the existing price structure.

The current drive for the easing of restrictions of East-West trade is more in the direction of strengthening the industrial, military, and economic prowess of the Communist bloc. What the Soviet trade agencies want above all, of course, is goods that are strategically important, yet whose export had hitherto been prohibited under our Battle Act. Several of our trading partners have long been under pressure by their business communities to sell such goods to Russia. Thus, ships, power generators, machine tools, presses, mining machinery, communications and transportation equipment are now being sent behind the Iron Curtain as a result of the gradual relaxation of controls. In return the Russians sell and ship grain, fish, and raw materials such as lead, zinc, copper, hides, and fur, plus a small amount of machinery. Underdeveloped areas can use the development equipment, but any deal with the industrialized West always includes a request for capital goods.

OBJECTIVES OF RUSSIA'S TRADE OFFENSIVE

It seems as if the aim of Russia's trade offensive is to attract the smaller nations (underdeveloped areas with major raw material exports) into its commercial orbit, while at the same time undermining the competitive position of Western trading nations. Thus Russia has had enormous success in buying up the pressing surpluses of Finland, Burma, Iceland, Egypt, Uruguay, and Argentina. The West has been unable to step up its own small programs of preclusive buying simply because of the Russian advantage whereby its trade monopoly can engineer deals without regard to the usual commercial terms, prices, or quality. This

initial advantage and the willingness to engage in such large-scale buying have been pressed to the point of establishing commercial dominance. In the countries where aggressive export campaigns have been waged, Russia has succeeded in capturing a large percentage of that country's import market, notably Afghanistan 30 percent, Finland 20 percent, Egypt 20 percent, and Iceland 22 percent.

Trading relations with the industrialized West are beginning to resemble increasingly the trade between Old Russia and Europe—fundamentally, the exchange of Russian foodstuffs and raw materials for manufactured goods. Her enormous industrialization plan necessitates increasingly larger supplies of specialized machinery—for example, the colossal extension of her chemical industry depends on Western machinery. Trade in these items cannot depend on barter deals, but requires hard currencies and gold. To earn the hard currency the Russians are concentrating on the supply and export in very specific sectors—like scientific instruments for schools—of a quality and at prices that cannot be met by the United States of America.

The West may be willing to trade with the Soviets, but certain difficulties have to be overcome. Notably foreign customers' unfamiliarity with Soviet products; the West's lack of knowledge of Soviet suppliers; the problem of service and spare parts; the known Russian stand against the extension of commercial credit to private foreign buyers; the dependability of performance on deliveries; and finally the question of whether trade relations may not be severed at will by the Russian political leaders if they wish to switch to more promising markets in line with their political objectives.

THE VOLUME OF SOVIET TRADE

The Soviet Union is now making a conspicuous effort to increase its commercial range outside the Communist bloc. By deliberate policy, three-fourths of all trade is reserved for its Communist trade partners. Since 1953, trade with the outside world has been gaining in volume. Measured by the extra-orbit portion of her trade, Russia is not a very important trading nation. To cite one figure, annual exports to all free countries at present amount to about \$1 billion. In terms of rank among trading nations, this puts her in our hemisphere somewhat ahead of Argentina but behind Brazil. In Europe, the size of Russia's annual volume of exports, excluding the bloc countries, places her somewhat between Austria and Denmark.

Russia's largest trade partners outside the bloc are the following six countries: Finland, United Kingdom, Egypt, West Germany, India, and France. To the first of this group, Finland, the value of annual exports in 1957 amounted to \$150 million; to the last, France, \$67 million. With the United States, the volume of trade conducted in a negligible affairs. Soviet exports to the United States amounted to only \$16 million in 1957.

The important thing to note is that the Soviet Government has undergone a change of heart toward trade. It no longer considers it a strategic liability. In recent years, it has been able to expand its trade all along the three main lines of geographic distribution, namely with the bloc nations, with the industrialized nations of the West, and with the underdeveloped countries. The latter, it is true, are, for the most part, a new element in Soviet trade. Yet, as mentioned above, two of Russia's principal trade partners outside the bloc are underdeveloped nations, Egypt and India.

ADVANTAGES OF EAST-WEST TRADE

An important fact to bear in mind is that the movement of trade between East and

West continued as a fairly active race during the worst years of the postwar period. The natural resources of the East have always exerted a strong commercial pull upon the West. This is especially true in Europe. The East possesses a variety of raw material needed in the West. Russia and her satellites are in a surplus position in forest products, fertilizer, fuels, flax, a number of minerals, and they regularly export a wide variety of foodstuffs, ranging from grain to eggs.

At the same time, the countries of the East have always served as an outlet for industrial products from the West. In many areas of technology, especially in the less strategic industries, Western producers have always appreciated the opportunity to broaden their market potential by keeping open the door to the East. True, it is an extremely unpredictable market. They buy at the margin, and they usually buy basic types of production equipment on a one-shot basis, but even a single sale of this sort, from the standpoint of the manufacturer, can be a large, profitable transaction. Above all, a channel for cooperation in a peaceful field.

One aspect of this problem is often overlooked. Rising living standards in the Soviet Union, resulting from increased trade, or other factors, may make a contribution to peace and may ultimately help to moderate the Communist dictatorship itself. As consumer aspirations are increasingly realized, it will become more difficult for the Soviet people to accept as valid the official image of the West as their mortal enemy. They will be more inclined to see the United States for what it is. A growing professional-managerial class may be a force for moderation as it balances the power of the military and political elites. I do not believe in economic determinism, but I do believe that economic factors influence the character of political institutions.

In conclusion, I support an increased volume of East-West trade because, if handled wisely, I believe it can be a net advantage for the United States and the free world. There is little risk in expanding the volume of nonstrategic trade. In addition to the mutual economic values deriving from such an exchange of goods there are certain non-economic byproducts which may be even more important. Trade always means person-to-person contact, and sometimes means idea-to-idea contact, among the trading partners. Such contact may lead to greater political understanding. We should neither underestimate nor overestimate the contribution of international commerce to international peace, but in these days of serious conflict let us not arbitrarily close any door to the greater exchange of goods, persons, or ideas.

Must We Tax the Railroads Out of Business?

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David A. Mackie, which appeared in the August 1959 issue of the Reader's Digest entitled "Must We Tax the Railroads Out of Business?"

MUST WE TAX THE RAILROADS OUT OF BUSINESS?

(By David I. Mackie, chairman, Eastern Railroad Presidents Conference)

On the edge of the Blackfeet Indian Reservation in Montana's Glacier County lies the town of Cut Bank, population 4,500. Surprisingly, this small community boasts a large and expensive airport; it cost about \$4 million of Federal Funds and it covers three times the area of New York's LaGuardia Airport. Only one carrier, Western Airlines, uses this field. In 1958 about two passengers a day boarded its planes there. But the townspeople feel an airport is so important that they are willing to pay for its maintenance by keeping its 1,703 acres off the tax rolls and assessing a special annual airport tax against local property owners.

On the face of it, this makes sense. If the citizens are willing to pay for an airport, well and good. But when you examine who paid what in this case, the logic becomes a little blurred. In 1958 the Great Northern Railroad, which runs through Cut Bank and is therefore a local taxpayer, was assessed \$2,530 as its share of the costs of this competing facility; in the same year Western Airlines paid \$41.17.

But if you should accuse Cut Bank of unfairness to the Great Northern, the city fathers could point out that in whacking the railroad hard with local taxes they were only following well-established practice. Some of our biggest cities—New York, Cleveland, Boston, Pittsburgh, to name just a few—are masters of this art, and thousands of smaller taxing bodies are also practicing it with a will. In 1958 the bills of all these State and local tax collectors added up to a railroad tax of \$400 million (in addition to \$550 million in Federal income and payroll taxes). More than any other single factor, it is this huge sum that is causing our railroads frantic concern over what a 1958 Senate report called the general decline of the railroads.

While the rails have seen their revenues increase less than 1 percent a year over the past decade, their State and local taxes have climbed at the rate of more than 3 percent annually. There are two reasons for the railroads' concern: the sheer size of the taxes, and the relationship between the railroads' taxes and those paid by their fast-growing competitors.

The first problem stems from the fact that the railroads are the largest industrial owners of real estate in the United States, with 386,000 miles of track taking them into 96 percent of our 3,067 counties. This means that their rails run through literally thousands of individual tax jurisdictions—States, cities, towns, villages and school districts—to which every year they must contribute. In New York State alone the railroads contribute to more than 6,000 taxing bodies.

If these taxes had some logical relationship to the railroads' earnings in each community, the system might make some sense. But there is no such relationship.

In New Jersey, the Pennsylvania Railroad paid \$5,800,000 in taxes last year while earning only \$700,000.

In Toledo, Ohio, the local newspapers and the chamber of commerce conducted a campaign to force the New York Central to build a new passenger station, though the old station was already running at a deficit. The Central did build a new terminal, at a cost of \$4,856,000, and the annual tax on it jumped from \$3,484 to \$48,799.

In Pittsburgh, the Pennsylvania Railroad spent \$9,500,000 in realigning its tracks and rebuilding its passenger shed as part of the city's Golden Triangle redevelopment program—and immediately got slapped with a

tax boost of \$31,000 annually on the improvement.

And whenever the construction of a new highway or the improvement of an old one necessitates building an overpass or changing a grade crossing—which happens hundreds of times every year—the railroad not only has to contribute to the construction bill but finds itself paying more in taxes for the improvement.

Exorbitant overvaluation of railroad facilities for tax purposes is a temptation that many local politicians cannot resist. Jersey City, N.J., a major rail center with vast yards, is a case in point. When one railroad serving this city sold 33 acres recently—just to cut down on its crushing tax burden—the land, assessed at \$621,296, sold for \$19,472.

One of the odd results of the multiplicity and overlapping of tax jurisdictions is that the railroad industry contributes more tax money directly to education than does any other private institution. Every year about 60 percent of the railroads' property taxes in Illinois go to education. In 1958, 45 percent of the Pennsylvania Railroad's \$32 million State and local taxes went to schools. In School District No. 7 of Lincoln County, Mont., the Great Northern pays 91.38 percent of all school taxes levied in the district—despite the fact that the railroad's property comprises only one-third of 1 percent of the land. Altogether, the railroads' State and local tax bill for education in 1958—an estimated \$140 million—was equal to almost a third of the Federal Government's contribution to the same school systems.

How the railroads' huge tax payments compare with those of their competitors is the other half of the picture. Here again the problem goes back to the fact that the railroads own so much real estate: stations in the hearts of cities, freight yards in their outskirts, and hundreds of thousands of miles of track from coast to coast. All this they build and maintain themselves, and on all of it they pay taxes.

But who builds, maintains, and owns the airports, the waterways, and the highways? By and large it is the Government, and the Government pays no tax. Nor, in any sense comparable to the railroads, do the airplanes, barges, and trucks that use these facilities.

The airlines and water carriers pay nothing at all toward the construction and maintenance of their rights-of-way and signaling systems. The trucking industry does pay taxes in the form of registration and mileage fees, and in fuel and equipment levies. But these are merely user charges, intended to do no more than contribute toward highway construction, maintenance, and administration costs. (In fact, the truckers insist that all Federal automotive excise taxes be earmarked exclusively for highway purposes.)

The railroads, on the other hand, without a cent of Government subsidy, pay the full costs of building, maintaining, and administering their rights-of-way, and it is the railroads, and the railroads alone, that must pay additional hundreds of millions of dollars toward the administrative costs of general government of the communities through which they run.

In New York City the railroads pay about \$9 million in taxes on their passenger facilities. How much of this goes to support the city's two giant airports, La Guardia and Idlewild, it is impossible to estimate. Certainly some does, since these two fields pay no taxes.

Boston's 2,000-acre Logan International Airport, which cost \$74 million of city, State, and Federal funds, is not taxed at all. But the New Haven Railroad's 31-acre South Station in downtown Boston pays the city over a million dollars every year in taxes—

about the same as the user fees paid by all the airlines using Logan.

In Illinois the railroads paid \$32 million in property taxes in 1955. The 244 trucklines doing business in the State, the 17 certificated airlines and the 65 barge and towing companies paid \$800,000.

The one encouraging glimmer of light for the railroads is the fact that more and more people are beginning to worry about this situation. Early this year a report to the governor of New York by his special assistant on transportation admitted that the State's treatment of the railroads was grossly unfair, and went on to say that this was actually costing the State money in the form of lost business and employment. As a result, the legislature has already enacted measures to alleviate the situation to some degree. In West Virginia railroad tax reform is likewise before the lawmakers.

At the Federal level Senator GEORGE A. SMATHERS of Florida has conducted long and deep-probing hearings into the rail situation. The report of his subcommittee recommends that State and local governments reexamine railroad taxes to correct the "inequitable tax situation."

The problem is such a pressing one that the air is suddenly full of suggested solutions. Some observers suggest that railroad property used in connection with passenger service should be exempted from taxation since it is easily demonstrable that the railroads lose money on passengers. Others favor some kind of Government subsidy for the railroads, to offset the subsidies their competitors get. There are even some who think that the solution lies in slapping heavier taxes on the railroads' competitors.

All these suggestions ignore one basic fact. It is our national policy to treat our so-called highways of commerce—roads, airways, canals—as precious national assets and to keep them free of taxation. Why, then, should this policy not apply to the railroads? Certainly, in terms of the tonnage they carry, these are the most important transportation arteries of all. Why must they pay any property taxes?

Despite the apparent logic of such reasoning, nobody has yet dared to voice this suggestion. Property taxes are traditionally the province of the States, and who wants to stand up in public and ask the States to cut down the tree that rains \$400 million into their treasuries every year?

But somebody will have to start talking in these stark terms soon. For this tax shakedown is inflicting such deep financial wounds that the railroads' very existence is threatened.

Report by Senator Saltonstall to People of Massachusetts

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. SALTONSTALL. Mr. President, the United States is a proud nation today—proud of its democracy, proud of its industry and especially proud of its people—of the rights of the individual.

Mr. President, we must remain ever on guard to see that this Nation remains interested in the individual and that we remain and grow as a nation of the thrifty and hard-working. Of recent interest has been the proposal to broaden

the number of those who are able to provide for their old age and declining years through their personal efforts rather than through Government means.

We now have industrial and corporate pension plans where in a perfectly proper way employers provide for the retirement of their employees—showing concern for them as individuals. But, Mr. President, we must show that same concern for those individuals not covered by corporate pension plans. Feeling as I do on this subject, Mr. President, I recently wrote a report to my constituents in Massachusetts. I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the report was ordered to be printed in the Record, as follows:

INDEPENDENCE—THE AMERICAN WAY

The foundation of the great democracy we enjoy in the United States is the respect our citizens hold for each other as individuals.

Starting with our Declaration of Independence representatives chosen by our people have sought to build upon that foundation.

Congress has always sought to keep the balance of equal respect for all individuals.

At the present time a source of unbalance is the law surrounding the ability of each individual to provide for his own security in later years.

The law now provides, for example, that employers may set up pension plans for their employees. An employer can deduct the annual payments as a business expense. The employee is not taxed until he receives the pension in later years. Thus the whole amount is not taxed to either employer or employee for an interim period. This legislation has led to the establishment of many corporate pension funds and even to a few set up by partnerships and individual employers.

But this law omits the person who works for himself. This man, independent and self-supporting, deserves equal treatment under the law, for his enterprise has contributed greatly to our country's growth.

Our self-employed persons are the backbone of the country. They include the highly trained professional people, many of the master mechanics, small businessmen who own their own commercial establishments, and some manufacturers. From these people come many of the ideas and efforts that help build our country.

At present they are not permitted tax deductions to set aside funds for their retirement even though they are, in essence, their own employers and might be doing it for their employees.

President Eisenhower recognized the problem when as a candidate in 1952 he said, "When this legislation was being considered, self-employed individuals were evidently forgotten, yet they get old and sick just as other people do." Later, in his state of the Union message in 1953, he stated that encouragement of pension plans for private individuals should be an important part of the legislative program.

Since then little has been done, unfortunately to put this request into effect.

A bill now before the Senate Finance Committee which passed the House of Representatives would correct a large part of this deficiency in the present law.

H.R. 10 provides that self-employed persons can set aside, in an irrevocable trust, up to \$2,500 per year. This amount will be deductible from gross income for purposes of income tax for the year the money was received, but will be considered taxable in-

come upon retirement. The rate of tax at retirement will probably be substantially less, since the individual will no longer have taxable earned income. The bill sets up certain conditions as to the type of fund into which the money is put and restrictions as to the conditions under which any of the funds thus set aside can be withdrawn.

The Senate Committee on Finance scheduled another hearing on this bill for August 11, and there is no way of determining at this time whether it or a similar bill will be reported by the Committee for Senate action. One reason for this has been the Treasury Department's opposition. The Treasury has been concerned that the tax relief offered will decrease the Federal revenue and put the budget out of balance.

It correctly believes that the inflation caused by the deficit financing arising from an unbalanced budget will in effect weaken the retirement programs of all of us—employed as well as self-employed.

I believe the Treasury must work to find a way whereby a positive approach can be taken to correct the inequity in our present law, as the legislation basically is extremely important and only fair to large numbers of our citizens. To avoid an unbalanced budget the Treasury Department must seek alternative revenue thereby avoiding deficit dangers.

The Treasury Department, in its opposition to H.R. 10 has stated that it believes: (1) that it might cost the Federal Government \$300 million in tax revenue the first year, (2) that the bill is not fairly written, for although it corrects some of the inequities in our present setup, it does not correct them all, (3) that if the inequities were corrected it might reduce Federal revenue as much as \$3 billion.

Advocates of the bill have stated that they believe it will reduce revenue by only \$100 million and that although it may not correct all of the inequities the opportunity to correct some of them should not be lost.

The principle of this legislation is too important to be lost through a difference over the way in which it should be put into effect. It may be possible that by judicious amendment of the present legislation much can be accomplished to correct many of the inequities.

As far as the loss of revenue to the Treasury is concerned, both sides are talking about substantial sums of money. To this a reasonable answer must be found. But since this matter has already dragged on for so many years, the best thing would be to get the principle of a self-employed retirement fund program established as soon as possible. The revenue loss to the Treasury could be arranged so that the Treasury would have a period of time to build up the alternative revenue sources.

The United States has too long depended upon its self-employed not to continue to encourage them today. The self-employed of this Nation are hardworking people. They will continue to be so but we must not discriminate against them.

I look forward to action on H.R. 10 or its equivalent, and hope that the Finance Committee can report a bill before the end of this session. Too much depends upon this matter of principle. The people have demanded it; an inequity exists that must be corrected.

The individual and individual opportunity have been part of our proudest heritage in this democracy. H.R. 10 helps fulfill this principle.

LEVERETT SALTONSTALL

We, the Public

EXTENSION OF REMARKS OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the remarks of Miss Mary L. Stevenson, of West Newton, Pa., who has written a very trenchant and timely speech entitled "We, the Public."

All too often in the complexities of political life a vast segment of our population known as the shareholders of corporations are overlooked. Their rights and the contributions they are making to the well-being of our society are inadvertently or purposely ignored.

In a capitalistic system such as ours the contributions which the shareholders of corporations are making to the total economy is important and significant. Without their equities there would be no expansion of business, no increase in jobs, no growth in our competitive system.

I regard myself as a friend of labor, and a strong supporter of labor's efforts, but we must not overlook or neglect the stockholder whose investments make possible capital expansion and the creation of more jobs.

The speech follows:

WE, THE PUBLIC—OUR RESPONSIBILITY IN POLITICS

(By Mary L. Stevenson, West Newton, Pa., delivered at the annual meeting of stockholders, Koppers Co., Inc., Pittsburgh, Pa., March 30, 1959)

I'd like to comment on some existing conditions and recent incidents which have been giving me grave concern. First, I want to make it quite definitely clear that I am not antilabor. Neither am I antimanagement. But I am becoming sick and tired of labor in capitals, as I am sick and tired of all pressure groups. I feel that divisive tactics aimed to advance power and prestige of individuals or the interest of a particular group they represent can be anything but salutary for the general welfare. In today's world, if we are even to continue to exist, we've got to maintain and foster all of the elements of strength within us. For stability and for survival we've got to get on a sound basis—moral, economic, political.

WHO IS THE PUBLIC?

Recently a prominent labor leader was quoted in the newspapers as demanding with a grin "Who is the public?" Did the grin mask a sneer? Did you feel affronted, as I did? In any event it would seem to be high time that we stockholders in this and other businesses, a very important segment of the public, find our voice, individual and collective, and let it be known to others than management, that we do exist. Let it be known that we have not only a stake, but a moral responsibility, a sincere concern for everything which makes and keeps America strong and true to the principles of our Founding Fathers. No flippant question as to our identity is going to cause us to disappear or to "lie down and play dead."

There are people who relegate "dividend" or "stock" to the category of dirty words. This I resent, even as I find grossly unfair the technical terminology of "unearned income" for dividends or interest.

I certainly worked for, earned, and saved the money with which I bought the first stock I ever owned. I was then, and have always been, proud to have even a small equity, a part ownership in the industry of America. I like to have even my limited share in furnishing the capital which "makes the wheels go 'round," which creates jobs, pioneers new fields, adds to our national wealth and strength.

EMPLOYEES AS STOCKHOLDERS

Employees are often also stockholders, and I think that is good, but all of us who own shares—individually and collectively—we are the real owners of our corporate industries.

The money we invest to buy machines, build plants, etc., is really risk capital. Any number of things may, and sometimes do, cause low profits or even loss or failure in some of our businesses. We invest with the hope of getting a reasonable return for the use of our capital, but we all know that when business is poor, dividends are reduced or "passed" completely.

Stockholders, as such, have no pensions, social security, unemployment insurance, "fringe benefits." Many older ones among us enjoy none of these things from other sources, yet if we have worked hard and saved, according to the good old accepted American way, if we have invested some of our earnings in order to yield us an income and remain independent, we so often find tax programs discriminatory against us.

PROFIT MISCONCEPTIONS

In this regard I think it most deplorable that there is such widespread misconception, such frequent misrepresentation, about profits. Many, many honest folk are confused, and their knowledge of economics does not go beyond the most elementary level. So profits for bargaining or bullying purposes, can become some sort of a whipping boy. We are told a corporation has made millions in profits, and to the unthinking this may appear as a big pie to be cut in little pieces and divided. Pie-in-the-sky, rather than realism, is the measure of too many present-day attitudes.

To make those millions, how many billions have gone into investment or capital outlay, how many billions of products turned out and sold in a strongly competitive market? But we will say that in spite of ever-increasing costs a corporation has still shown a profit. Along comes our Uncle Sam to pocket more than half in corporate taxes.

Please, Uncle, just use it wisely—defend us strongly, practice justice and humanity, but do not let the boys in Congress or elsewhere waste or cheapen our hard-earned dollars.

AUSTERITY IN GOVERNMENT

Some of your spendthrifts, Uncle, might be in better health for a small dose of austerity—and please, when it comes out of our pockets, we would like to know where our money goes. Won't you subject all your bureaus, bureaucrats, and Congress to strict accountability?

But to return to our assumption of some net profits left after taxes. Shall we pass it around and divide it all up, either among shareholders or between shareholders and employees? Who is so senseless or irresponsible as to advocate a regular binge of that sort for any small or large business which hopes to continue? There must be reserves set aside for a rainy day, to plow back for new plans, new tools, materials, etc., and

for research which becomes increasingly important—to find new uses, new methods, new products—which will mean new and continue! jobs in the production field.

Finally, our stockholder in a profitmaking corporation receives his dividend and is happy when he receives just a proper fair return on his investment. If he has ever thought of himself as the forgotten man he is soon disabused, because back comes Uncle for his income tax, there is frequently personal property tax at the local or county level, and the newly proposed tax program suggests a further considerable bite on personal property at the State level (Pennsylvania).

Where is our voice to protest prejudiced and discriminatory measures against our so-called unearned incomes?

STOCKHOLDERS BEAR TAX LOAD

Certainly the stockholders of business and industries, through invested capital, and taxes on the return thereon, are bearing their share of the load. While we are happy and proud to know this is so, we feel that anyone who does not know, or questions "Who is the public?" should be reminded that we are a segment of that public, that we have a considerable stake, not only in creation of production and employment, but in the best interests, not of a group or class, but of our whole country, its strength and continuance.

Another term which seems to have a dirty connotation or is the "boogey man" to some people, is automation. (Some 30 years ago there was technocracy.)

Automation exists. It is progress, but it may often be, at least temporarily, uncomfortable, or even seemingly a hostile or fearful force.

PAINFUL DISLOCATIONS

It seems to me we are living in a fluid period, one of change as was the early industrial revolution in England. There are some painful dislocations, and I believe both management and unions should share some responsibility to retrain and relocate displaced employees. (Two companies in which I had a small equity liquidated this year and I was very glad to note that one was making provision for carryover of job rights, pensions, etc., with the purchasing company.)

Man is the creator of machines, he tends and directs them, and he is still their master. While they can take over much that was tedious or routine, they open up new and varied avenues of employment. Research and training programs, by accepting the challenge, can pave the way to a better life.

There exists, in some quarters, a very real problem of unemployment, but it must be faced and worked out with both vision and realism, and to me it certainly seems no solution at all, simply to pay bigger wages or benefits to the lucky ones who are still employed. Higher and higher wages and salaries, unsupported by more productivity, more business, more real earnings, higher and higher prices, and still the two don't meet. And where do we go from here? And we so slap-happy, riding our spiral of inflation, that we are economically aiming for the moon and outer space, or can we keep our feet on the ground and anchor our present and future on sound values?

TRUST IN MANAGEMENT

We, as individuals or a group, do not sit around a bargaining table. We must and do delegate authority, and we must trust management. I believe that this management is trustworthy and that in general management today has an awakened social consciousness.

While we delegate authority, in management, in government, certain obligations and responsibilities remain vested in us as people, as citizens.

The wind of inflation can bear the seeds of disaster. When a Nation's currency becomes much cheapened by inflation, there seems so often a correlation with loss of moral integrity and stability, both on the part of individuals and governments. History gives us so many unpretty pictures of such decay in both ancient and modern times, and the unhappy fates of other lands are of record for us to heed.

Recent stories from Washington and elsewhere tell of waste and worse at the expense of citizens and taxpayers, and to the shame of all of us.

BUSINESS AND POLITICS

These things I have touched upon are of very real concern to everyone, and must be resolved with intelligence, reasonableness, integrity and courage.

And what do we do, we the public?

Current news stories relate proposals that, as labor is deeply involved, management too should become active in politics.

Whereas management, as a group, would doubtless become a target under such circumstances, we all, individually and collectively, should assume our responsibility in politics, which is the science of government.

I wonder whether we inform ourselves, seek and support worthy candidates, vote, make our wishes and displeasures known as they relate to our own interests, or the best interests of our country.

We are a part of the public which does exist and our role must be enlightened, active, honorable and responsible.

Hal Kelly Retires

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. JAVITS. Mr. President, Henry Hagans Kelly, a career public servant since 1923, is retiring from his post as director of the Office of International Travel, Department of Commerce. Mr. Kelly's record in behalf of travel and tourism, both domestic and international, is well and most favorably known. I ask unanimous consent that an article published in the July 20 issue of Holiday News Letter, paying tribute to Mr. Kelly and noting the loss to the Government's travel program, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

H. H. Kelly, the Government officer who in the last few years has come to be looked upon as the U.S. official representative at all international meetings involving travel, is retiring from his post as Director of the Office of International Travel in the Department of Commerce.

His retirement from Government, effective July 31, will come as a result of a cut for the fiscal year beginning this month in the congressional appropriation of that Department's Bureau of Foreign Commerce, under which the travel office functions. With the financial facilities available under the reduced budget, Mr. Kelly, officials said, felt he could do more good for travel outside of Government than by trying to carry on his program under the curtailments which will now be necessary.

The slash in the bureau's budget, it is understood, amounts to about 10 percent of the appropriation for the past year. So sizable was it that it will mean a cutback in all of the bureau's various programs, including trade promotion, investment promotion, and travel.

Faced with this drastic change, the Commerce Department has called a special meeting of its Travel Advisory Committee for July 22. At that time it will discuss a revised program for the bureau. Its chairman, Henry Kearns, Assistant Secretary of Commerce for International Affairs, will preside. The committee consists of about 30 executives of the U.S. transportation and travel industries. Mr. Kelly is the drafter of the program on which the travel office has been working for the last 4 years. His efforts to strengthen it during this period had not proved successful.

Backed by 30 years' experience in the international transportation and travel fields, Mr. Kelly's name has long been prominent in travel circles. He came to Commerce in 1955, after 8 years' work in the Department of State. Prior to that, he mapped out and headed new programs for the Office of Defense Transportation, Interstate Commerce Commission, and Bureau of Public Roads. He has been active for many years as U.S. representative in numerous international organizations, among them the International Union of Official Travel Organizations, Pacific Area Travel Association, Inter-American Travel Congresses, and units of the United Nations. He has signed for the U.S. Government three treaties on travel facilitation.

In taking over as director of the Office of International Travel, Mr. Kelly prepared a detailed program of work which was well received by cooperating industries, Government departments and international organizations. It proposed intensified attention by Federal Government to such matters as reduction of barriers to international travel, cooperation with numerous United States and international organizations, cooperative committee work, technical assistance projects, improved statistical and informational services, development of two-way travel to and from the United States, and an adequate legislative program designed to help travel in general. Meanwhile, Commerce will continue to have a travel office. It will still function as a part of the Bureau of Foreign Commerce, under the supervision of Assistant Secretary Kearns and Loring K. Macy, director of the bureau.

The Commerce Department's travel office has always operated on a small scale in comparison with those of most foreign governments, due to the fact that private enterprise bears virtually all of the international travel promotion burden in this country. It is understood its budget has been well under \$100,000 and, although Commerce recommended an increase this year, the economy-minded Congress was not favorably impressed. The Randall Commission, in its report submitted to Congress by the President last year, recommended \$250,000 as an annual budget.

Why Wheat?

EXTENSION OF REMARKS

OF

HON. DONALD F. MCGINLEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. MCGINLEY. Mr. Speaker, there are at least a few statements in this

much confused subject of agriculture and its present situation which can still be regarded as being axioms. One of them is that we presently have a tremendous surplus of wheat. Another is that of all the areas that raise wheat, western Nebraska is to be regarded modestly as being one of the best.

From time to time the theory is propounded that by reducing price, production will be reduced. It is a fine theory but does not work out in practice—not until the farmer's income is lowered to the degree that he is put out of business.

Why, then, does not the farmer switch to another crop which might be more profitable? The reason is that this wonderful land of western Nebraska is suited only to one crop—wheat.

In an attempt to learn if this usually accepted opinion is correct, the University of Nebraska College of Agriculture made an intensive study of the merits of raising only wheat compared to planting some other crops. This study not only produced an interesting answer to that question, it also provides proof that under the present situation, the best is none too good.

The result of this study was published in the Nebraska Farmer, a farm magazine now starting into its second century of publication; a fully responsible magazine dedicated to its namesake.

Mr. Speaker, I would like to submit this article and three very revealing tables for the consideration of my colleagues as an answer to their question, "Why wheat?"

Why do wheat farmers continue to grow wheat—in the face of a large wheat surplus—instead of grain sorghum, barley, or oats?

The reason is this—net returns per acre from wheat in southwestern Nebraska are higher than returns from any other crop.

According to a study made by R. D. Vlasin and A. W. Epp, agricultural economists with the U. S. Department of Agriculture and the Nebraska College of Agriculture, respectively, the wheat-fallow system brought superior returns to the operator for his labor and management than any other cropping systems tested. Assumed prices, costs, and yields were used.

Grain sorghum on both fallow and stubble showed the highest net return of the alternative crops. Ranking in order below grain sorghum were barley on stubble, proso hog millet on stubble, safflower on fallow, and oats on stubble.

Epp said the relative advantages of the various alternative crops as substitute for wheat are based on one set of prices and yields. He said relative prices and yields may differ in the future from those used in the study. Under conditions of changing price and yield relationships, the ability of alternative crops to compete with wheat is also subject to change. Farmers need to consider which crops will give the highest returns under these changing conditions.

NINETEEN HUNDRED AND SIXTY PRICES USED

The prices used in the study are the 1960 projected prices for Nebraska; wheat \$1.70 per bushel; grain sorghum, \$1.93 per hundred; oats, 70 cents per bushel; barley, \$1.06 per bushel; safflower, \$3.20 per hundred; and proso, 97 cents per bushel.

In order to estimate and compare the returns from wheat and from the alternative grain and seed crops, it was necessary to estimate the crop yields that reasonably can be expected.

A comparison between the estimated yields of grain crops for the study area and the averages of available county yields is shown in table 1. The area yields shown in this table were used in budgeting the alternative cropping systems.

The returns from wheat and from alternative cropping systems are compared by budgeting the various cropping systems. The budgets are indicated by numbers across the top line of table 2. Budget one is based on a wheat-fallow cropping system while budgets two through eight are based on wheat and alternative crops. The wheat in each of these budgets is produced on fallow. Grain sorghum and safflower are grown on both wheat stubble and fallowed land, while proso, barley, and oats are grown only on wheat stubble.

Each budget has a small idle acreage representative of the wasteland that cannot be farmed on this 1,440-acre unit. These budgets are compared for financial returns and for changes in the farm organization required in changing from the wheat-fallow system to each of the alternative cropping systems.

In budget one, the cropland was divided equally between winter wheat and summer fallow. This budget represents a situation of unrestricted wheat production. The farm organization in budget one was used as a basis for developing each budget for organizations containing an alternative crop. Changes were made in costs of production as changes were made in type and quantity of crops produced.

While some custom combining had to be hired to provide timely harvesting for the large wheat acreage in budget one, the reduction in wheat acreage in budgets two, three, and four is large enough to eliminate the need for custom combining. And the harvest periods for grain sorghums, proso, and safflower do not occur at the same time as the harvest for wheat. Therefore, the harvesting of these crops can also be completed with the owned line of machinery. However, there is a sizable increase in the operating costs for budgets two, three, and four as a result of the additional tillage and harvesting requirements for the alternative crop.

HARVEST CONFLICT

Although the wheat acreages in budgets five and six are also reduced, these cropping systems do not have the same advan-

tages as those in budgets two, three, and four. The harvest period for oats and barley may conflict with wheat harvesting in some years, which would require an increase in the amount of custom combining above that required in budget one. The operating costs in budgets five and six are increased as a result of the increased tillage requirements and custom combining.

In determining which of several cropping systems is best suited to farms in the southern Kimball County area, two things must be considered, the economists point out.

First, if possible, the cropping system chosen should give the largest average net returns.

PROTECTION AGAINST RISK

Second, the cropping system should provide some protection against the conditions of high risk in this area.

The financial returns from the cropping systems indicate that wheat production has an advantage over all other cropping systems tested. If, because of acreage restrictions, farmers are required to shift to one of the less profitable alternative crops, they should choose an alternative that will give the highest possible returns.

In order to realize the highest possible income, a farmer should try to choose an alternative crop that is not likely to drop drastically in price as more and more farmers begin to produce it. Any price adjustment will depend largely on the extent to which farmers shift from production of wheat to substitute crops. A widespread shift by Plains wheat farmers to any one of these alternative crops would probably have a sizable effect on the price of that crop. Minor adjustments by farmers probably would not seriously depress the price of the alternative crops.

In the case of safflower, one of the less profitable crops increased production might result in higher prices. Both the processors of safflower and the producers of safflower oil products are presently not sure of sufficient supplies to operate most efficiently and to provide consumers with a constant supply of safflower oil. Therefore, an increase in the supply of safflower might place it in a more favorable position as a substitute for wheat.

After budgeting the alternative cropping systems under one set of prices and yields for all grain and seed crops, a comparison of returns from wheat and from alternative crops was made under different prices and yields. A procedure was developed to determine the price and yield of an alternative crop necessary to give the same income as wheat at various wheat yields and prices. See table 3.

TABLE 1.—Crop yields used in budgeting alternative cropping systems for a 1,440-acre farm in southern Kimball County, compared with county average yields

Crop	Unit	Estimated yields for study area	County averages	
			Years	Yields
Wheat:				
On fallow.....	Bushel.....	14.0	1930-54	14.9
On stubble.....	do.....	7.6		
Grain sorghum:				
On fallow.....	do.....	20.3		
On stubble.....	do.....	11.0	1932-54	9.8
Safflower:				
On fallow.....	Hundredweight.....	5.01		
On stubble.....	do.....	2.76		
Oats on stubble.....	Bushel.....	13.2	1935-55	20.0
Barley on stubble.....	do.....	12.7	1935-55	14.5
Proso on stubble.....	do.....	11.2		

TABLE 2.—Estimated income and expenses with 1960 projected prices under various cropping systems, on a 1,440-acre farm, southern Kimball County¹

Budgets.....	1	2	3	4	5	6	7	8
	Acres							
Organization:								
Wheat.....	698	465	465	465	465	465	349	349
Fallow.....	698	465	465	465	465	465	698	698
Grain sorghum.....		465						349
Proso.....			465					
Safflower.....				465			349	
Oats.....					465			
Barley.....						465		
Idle.....	44	45	45	45	45	45	44	44
Total cash income.....	\$15,722	\$15,971	\$15,397	\$14,417	\$14,283	\$15,996	\$13,177	\$15,492
Total cash expense.....	5,686	6,594	6,564	6,354	7,171	7,166	5,418	5,696
Net cash income.....	10,036	9,377	8,833	8,063	7,112	8,830	7,759	9,796
Depreciation.....	1,919	2,006	2,016	2,006	1,958	1,958	1,958	2,006
Net farm income.....	8,107	7,371	6,817	6,057	5,154	6,872	5,801	7,790
Interest on investment, at 5 percent.....	4,405	4,423	4,426	4,423	4,413	4,413	4,413	4,423
Returns to labor and management.....	3,702	2,948	2,391	1,634	741	2,459	1,388	3,367

¹ Farm expenses have increased since the study was made. This would reduce the net income of all systems. It is not likely that this has changed the ranking of the cropping systems.

TABLE 3.—Price of alternative crops necessary to give the same labor and management income as wheat (yielding 14 bushels on fallow), at 3 levels of wheat prices, for a 1,440-acre farm in southern Kimball County

Crop	Yield used in budgeting	Unit for price	Necessary price of alternative crop with wheat price at—		
			\$2.30	\$2.00	\$1.70
Grain sorghum on fallow.....	20.3	Bushel.....	\$1.52	\$1.32	\$1.13
Grain sorghum after wheat.....	11.0	do.....	1.59	1.41	1.23
Barley after wheat.....	12.7	do.....	1.65	1.48	1.30

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. WILEY. Mr. President, during recent years the advancements of science and technology have changed tremendously the interrelationships between people and nations around the globe.

Jet planes, rocket-powered missiles, satellites, and other developments are rapidly reducing time and distances as obstacles or barriers to communication, understanding, and association among people.

As a result, the nations, and people of the world, more and more, are realizing the advantages of working more closely together—wherever possible—for resolving problems and promoting progress.

Today, a great many international programs are Government-sponsored. However, it is always particularly gratifying when individuals or nongovernmental organizations assume a responsible role in this field.

The August issue of the National Grange Monthly contained a detailed article by Jack Jackson entitled "Grange Projects, Like a Satellite, Circle the Globe and Influence the Lives of People Around the World."

The splendid article outlines the numerous ways in which the Grange, through its international program, is making a constructive and commendable effort to promote people-to-people understanding and progress.

Representative of the kind of constructive nongovernmental initiative needed to further activities in this field, I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the National Grange Monthly, August 1959]

GRANGE PROJECTS, LIKE A SATELLITE, CIRCLE THE GLOBE AND INFLUENCE THE LIVES OF PEOPLE AROUND THE WORLD

(By Jack Jackson)

What does your Grange have in common with a spaceship or satellite?

Spaceships and satellites are now circling the globe. They are a part of our program for encouraging world peace. They are helping keep the free world free.

The influence of the Grange also circles the globe. Through Grange projects, rural citizens of America influence the economic, political, and social lives of citizens around the world. Such projects contribute to world peace—they too help to keep the free world free.

What are some of these Grange projects? How do they operate? How do they influence the lives of peoples around the globe?

The international community service project, conducted in cooperation with the U.S. State Department, enables your Grange to act as host to visitors from many lands. A

group of from 5 to 20 visitors is assigned to each cooperating grange for a period of from 4 to 7 days. Guests may be agricultural leaders, educators, journalists, government officials, or from other walks of life. They may be from Europe, Asia, Africa, or Latin America.

Visitors are assigned by the host grange to homes of its members—one or two to a family. Guests become temporary members of the family, sharing in its everyday activities and obtaining firsthand experience in the American rural way of life.

Through this project, Granges of 12 States have served as hosts to 337 visitors from 71 countries.

State Department officials have indicated their interest in the project with promise to assist in making it possible for 800 foreign visitors to participate during the coming year. Granges interested in serving as hosts should contact their State master or Wilb Just, director of youth activities for the National Grange.

YOUNG FARMERS

The Grange's first international people-to-people type program was the young farmer's project, started in 1948. It was conducted in cooperation with the International Federation of Agricultural Producers, an international federation of farm organizations of the free world.

This project was for young farmers between 19 and 25 years of age. It was designed to give young farmers of other lands an opportunity to obtain first-hand experience with America's farming methods and with her farm, home, and community life.

One hundred and twenty-five men took advantage of this opportunity. They were from England, France, Germany, Switzerland, Norway, Denmark, Mexico, and Algeria.

TEENAGERS, TOO

The farm youth project was followed by a program for German rural teenagers. Through this program, the Grange, in cooperation with the U.S. State Department, afforded 374 farm boys and girls of Germany an opportunity to develop a better understanding of the American way of life. Each guest was assigned to a home with a teenager of about his own age, for 1 year. During his visit the guest shared all responsibilities and activities of his U.S. brother or sister. Thus, each participated in farm, home, school, church, youth organization, and other activities of a typical family of rural America.

ROME GRANGE

In cooperating with people-to-people type programs sponsored by the grange, members of Michigan's Rome Grange have served as hosts to 56 visitors from 27 countries. Chairman of the Rome committee arranging the visits was Ruby Yeutter, who is also chairman of the Michigan State Grange Youth Committee.

In recognition of her outstanding contribution to the exchange programs, members of her grange, this spring, awarded Ruby a 3-month tour of seven European countries. During the tour, she paid return visits to many of those who had been the guests of her grange.

JUVENILE GRANGERS HELP

In 1950, a project known as "the team" was initiated by the World Council of Churches in Greece. Operations of the team have since been expanded to other countries.

The team project encourages self-help by low-income families of remote European villages. Trained teams of young people from various countries and many church denominations live and work with the villagers. Members teach villagers to can, sew, cook, cultivate, select improved crop varieties, improve health and living standards, to use gifts from CROP and CARE to better

advantage, and otherwise to improve their family and community life.

LECTURERS CONTRIBUTE

Another people-to-people type program was initiated last year. The national lecturer obtained the names of several thousand foreign citizens interested in receiving letters and magazines from America. Through subordinate lecturers these names were offered grange members interested in corresponding with and providing copies of American magazines to citizens of other lands. The response was overwhelming. Thousands of grangers developed pen pal relationships with persons in many countries of the world.

Persons interested in participating should contact their local grange lecturer or National Lecturer Edward F. Holter.

NATIONAL GRANGE

Your National Grange is a charter member of the free world's only international federation of nongovernment farm organizations—the International Federation of Agricultural Producers.

Through this association, the grange encourages and influences the orderly discussions of international farm problems affecting the welfare of all people. Through such discussions the grange helps to improve the relationships between leaders of farm organizations throughout the free world—and may well influence programs and actions of other governments as well as our own. This is why your grange will be present at the annual meeting of IFAP in India this winter. It is why they will enter into orderly discussions of world farm problems with farm organization representatives from some three dozen other countries.

The National Grange also actively participates in the work of the food and agricultural organization of the United Nations and numerous other international organizations seeking to improve the social, economic, and spiritual lives of farmers around the world.

YOU AND YOUR GRANGE

Yes, there is a similarity of purpose between spaceships, satellites, and the grange. Each can serve to promote peace for the world.

The development of spaceships and satellites costs billions of dollars. Grange programs are developed by self-help style.

Many highly trained and skillful technicians are required to launch a spaceship or satellite—you can launch your grange on a program of service, the influence of which will circle the globe.

Old Glory Flies in Opening Battle of Ban on Flagpoles

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. TOLL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre (Pa.) Record of August 11, 1959:

OLD GLORY FLIES IN OPENING BATTLE OF BAN ON FLAGPOLES—JUSTICE MUSMANNO, ACTING AS VFW LEADER, SEEKS TO END RULING IN FAIRLESS HILLS

Old Glory fluttered briefly above Fairless Hills Post Office yesterday in the opening round of a battle by State Supreme Court

Justice Michael Musmanno against a ban on flagpoles and TV antennas.

The ban imposed by the builder of the 6-year-old community, in effect, has prevented flying of the American flag.

And that is what concerns Musmanno, who acted not in his role as judge but as a member of the Veterans of Foreign Wars.

"I deplore the apparent lessening of enthusiasm for flying the flag, the symbol of our country," he said.

Musmanno and several area VFW officials went to present a 49-star flag that has flown over the Nation's Capitol to Mrs. Catherine B. Wright, the local postmistress.

She referred him to Leroy V. Greene, regional post office operations director in Philadelphia.

Greene explained by telephone that in all Government-owned post offices, or in those located in buildings completely leased by the Government, the flag is flown. In Fairless Hills, the Government leases only part of a building for the post office.

Musmanno went to see the contractor's representative. He wasn't in.

Musmanno and his associates then took the flag to the post office roof and held it on a staff there for 10 minutes "to set a precedent."

Then the flag was presented to Mrs. Wright, to have on hand should Musmanno win his case. Mrs. Wright accepted, noting there already is a flag in the post office lobby.

The supreme court justice said that today he would meet in Pittsburgh with Benjamin Fairless, retired board chairman of United States Steel Corp. Fairless Hills is near United States Steel's Fairless Works and many of its residents are steelworkers.

Musmanno said he was sure Fairless wouldn't stand for such a situation in a community named for him.

The ban was not, in itself, unpatriotic. Its aim was to keep the architectural and esthetic beauty of the community.

But that wasn't the way it turned out, in Musmanno's view.

There is one flagpole in town, near the shopping center.

Musmanno said it didn't even have a rope on which to raise the flag until last week.

Maybe Musmanno has already driven a wedge into the line of opposition. As he was leaving town, a flag was being raised on the lonesome pole.

Justice Musmanno said the situation at Fairless Hills first came to his attention from a speech made by Representative DANIEL J. FLOOD in the House of Representatives several weeks ago. When Justice Musmanno learned of the Flood speech, he contacted Flood and Flood purchased a flag he had flown over the U.S. Capitol for the specific purpose of having the same flag eventually flown permanently over the Fairless Hills post office. The flag was sent from the Capitol to Justice Musmanno and this was the flag he took yesterday to Fairless Hills and flew for a short time on top of the post office building. It was presented to the postmaster with the intent it will be the permanent flag for Fairless Hills.

Is Civil Defense Possible?

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. YOUNG of Ohio. Mr. President, a recent editorial, "Is Civil Defense Pos-

sible?" which was published in the Columbus Citizen, a member of the Scripps-Howard league of newspapers, on August 9, 1959, is worthy of careful study.

It offers an exceedingly clear commentary on the waste of taxpayers' money on the utterly useless and vague program of the Office of Civil and Defense Mobilization.

Don E. Weaver, editor of the Columbus Citizen, is an outstanding editor of one of Ohio's great newspapers. His column points out the complete absurdity of present evacuation plans and the urgent need for a commonsense civil defense program. It is another link in a long record of excellent public service.

I ask the unanimous consent that his column be printed in the Appendix of the RECORD. I commend this to my colleagues in the Senate.

There being no objection, the column was ordered to be printed in the RECORD as follows:

IS CIVIL DEFENSE POSSIBLE?

(By Don E. Weaver)

We leafed through the 4½-pound manual issued by Civil Defense. It is a plan for evacuating a half million people from Columbus into 21 counties stretching from Delaware to the Ohio River, in event of atomic attack.

We can't make much sense out of it. After an educational campaign to be launched right away, each of us is supposed to know where to go when the alarm comes. Each one is supposed to head out the shortest way from wherever he is.

If papa is working at Westinghouse or Ternstedt he goes west. If mama and the kids are at home in, say, Linden, they are supposed to head northeast with whatever help neighbors can give.

What happens to the sick and infirm, the people in hospitals and prisons? We leave them here.

Presumably the bomb will fall at the center of the city, knocking out the central area and wreaking havoc in diminishing degree within a wide circle.

Civil Defense assumes a 2- or 3-hour notice to give us time to reach Athens or Zanesville or Chillicothe, out of harm's way. The theory is that the kindly people of the rural areas and smaller cities will do what they can to shelter and feed us.

The logistics of nuclear war and the qualities of human nature fall in our mind to fit any pattern of general evacuation. We feel that Papa will try to reach Mama and the kids, no matter where he is or where they are when the awful moment comes.

We feel, and hope, that a lot of us who have duties to perform will want to stay and perform them if we can. Are newspaper people, for instance, going to hit the pike for Zanesville in the face of the greatest news story of our time?

True, a bomb could well wipe out us and the presses too, in a flash. But if Columbus wasn't the target and nothing happened, we'd feel mighty foolish fighting our way back from Zanesville through the traffic to get back on the job.

How much gasoline is in your tank? If you were to start fleeing now, how far could you get? Buy gasoline? Perhaps. But suppose the gas station boys were evacuating too?

The normal morning and evening traffic is heavy. But it does not by far include all the cars in Columbus. Add all of them into a sudden mass evacuation, then multiply by the fright and panic of a real atom bomb threat.

The chaos makes us wonder whether joining an evacuation would be worthwhile, even if it were possible.

The Civil Defense traffic manual has every exit route meticulously listed. There probably are vehicles enough for everyone. Control posts, manned by previously instructed volunteers or police officers, would try to keep the evacuation flowing.

They might. But a collision could block a road for miles. A mass evacuation in itself would produce many casualties without counting the destruction a bomb would cause.

Human nature would express itself in many ways, if our community of half a million souls found itself in imminent danger of attack. The noble and unselfish would help others. The mean and delinquent would still be with us, foraging only for themselves.

If the Russians ever attacked us we can't believe a mass evacuation would help Columbus much. If a bomb hits Broad and High—or if a near miss hits Newark or Delaware instead—a lot of people will die. The trouble with mass evacuation is that you're never sure whether you're running in the right direction.

There are civil defense steps that could do a lot of good. Wherever a bomb hits, there is always a perimeter where its effect is less. If the center is total death and destruction, the edges are damage and injury that can and should be coped with.

Having predetermined plans, pretrained people, and preselected places for emergency aid makes sense. The general public has shown only monumental unconcern for civil defense plans so far. But medical and hospital people, police and sheriffs, and a few civilians who will pay attention could do a lot of good.

The trouble with civil defense is that we don't know when, or if, we will ever need it. It would be much easier to prepare for a known emergency next month or next year.

But the atomic emergency that civil defense is designed to meet may come anytime from tomorrow to never. And when it comes, evacuation plans may be as obsolete as the bucket of sand we learned to use in the last war to put out the kind of fire bombs rained on London in her hour of trial.

There Is Sorrow in the Valley

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Harry Golden which appeared in the Wilkes-Barre Sunday Independent on August 9, 1959, in which he discusses the distressed economic conditions in northeastern Pennsylvania, and particularly in Hazleton, a city in Luzerne County of some 30,000 population. Mr. Golden is the noted editor and writer of the bestseller, "Only In America":

THERE IS SORROW IN THE VALLEY

(By Harry Golden)

The country trembled when John L. Lewis sent the simple telegram, "Come up out of

the mines." It trembled when he wired the A.F. of L. man, William Green, "We disaffiliate." Gone, gone are those days when a telegram from John L. Lewis made the Nation sit up and take notice and led Congress to ask the President for direction.

Now John L. Lewis' power is in decline. It is in decline not because of any reaction on the part of the miners, or because the labor-management problems are solved. John L. Lewis is in decline because coal is no longer king. From a high production yield of 62 million tons, anthracite has slipped to about 18 million tons. And this is not the bottom. On a recent trip to Hazleton, Pa., I found the folks are all using oil burners, a phenomenon that could not even be imagined in this famous anthracite region 25 years ago. With this decline, we close the book on one of the most turbulent eras in American history—John L. Lewis and the United Mine Workers.

But the story is not that simple.

In the heart of Pennsylvania, in Scranton, Wilkes-Barre, and Hazleton, there are thousands of men unemployed, miners who have been unemployed for years, and not only have the mines closed but there is little other industry which can absorb them. These miners glumly suspect they will never go back into the mines. Almost all mining now is stripping—taking the coal from the surface.

The women talk and say, "It's a funny thing, Min. When the floods hit the valley everyone pitched in overnight to help us. Unemployment is worse than the floods and yet it just drags on for years and years."

David Dubinsky and ILGWU have tried to help. There are dozens of garment factories and sewing shops in the coal regions. But this only mutes the tragedy. Miners and their sons stand aside while their wives, mothers, and sisters earn the living for the family. For the miner who has spent 20 years in the pits, the chances for employment are scarce. Any available job goes to the younger man. If the unemployed miner has silicosis (miners' asthma), and most miners have it in varying degrees, no other industry will touch him. All that he has left is the hope that if he keeps up his union dues—\$1 a month if he is unemployed—he will collect pension benefits at age 60. Even here he is disillusioned since these benefits were cut in half, from \$100 a month to \$50.

The new garment industry tried to bring these men in. But the miners were embarrassed at sitting in front of a sewing machine and their gnarled hands were clumsy and their fingers could not manage the fine work of an unfamiliar trade. Thus in Scranton, Wilkes-Barre, and Hazleton we have ushered in a new society, similar to the society we once had in the South. The society of the milledaddy.

A man who once was master of the house, who earned good money, now sits on the porch and listens for the lunch whistle and he goes into the house and comes out with his wife's lunch and takes it to her at the factory. He will drive her to work in the morning and call for her at night, and he tries to hide his face from his fellow miners who are doing the same thing.

And the responsibility for this heartbreak and poignant degradation of a strong workingman's spirit can be laid at the door of the shortsighted coal operators of the 1920's who opposed the coming of other industry that would drain off from their own pool of workmen. Let us look toward the anthracite region of Pennsylvania. Big, strong Americans; Americans who gave much to our country are being degraded and humiliated.

Mayor Dilworth Champions Urban Renewal

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. PROXMIRE. Mr. President, the great mayor of Philadelphia, Richardson Dilworth, has a letter in this morning's Wall Street Journal explaining why Federal assistance for such purposes as urban renewal and slum clearance to our great cities is essential. This letter states the case so convincingly that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered printed in the Appendix of the RECORD as follows:

TROUBLES OF CITIES

EDITOR, THE WALL STREET JOURNAL:

I read with great interest the editorial "The Fable of Federal Aid" (July 29).

The theme of the editorial, as I understand it, is that the problems of the cities are their own, that there is no good reason for the Federal Government to help, as the bill still has to be paid by the taxpayers; and, that if some cities cannot solve their problems, those cities will simply have to wither on the vine.

Your editorial ignores a number of facts: First, the cities are not free agents. They are the creatures of the States and have only such taxing powers as the States allow them. It is notorious that the State legislatures are rurally dominated, and cling to that domination by various devices. The result is that the States not only severely limit the taxing powers of the cities, they also collect a disproportionate share of State taxes from the cities.

The Congress likewise collects a disproportionate share of the Federal taxes from the cities. What's more, the Federal Government has arrogated to itself the only taxes which can yield large revenues. Two world wars, tremendous defense needs, and the burdens of the cold war have resulted in the Federal Government taking better than 75 cents of every tax dollar paid by our citizens, whereas 40 years ago the Federal Government took only 25 cents, leaving the balance for the States and the cities.

Today, some 150 great urban areas where more than two-thirds of our people live and where 75 percent of the Nation's income is produced, have less than 10 cents of each tax dollar with which to support themselves.

Second, the policies of the Federal Government have directly contributed to the tremendous problems which today confront the cities. One such problem is its concentration of bigness in this machine-atomic age. In addition, not only do nearly all of the immigrants from foreign lands settle in our cities; our cities have also become the centers of migration for nonwhites from the South. Our cities must assimilate these people and we are doing so, but the added cost for so doing makes our burden even heavier.

This brings us to the question of whether cities are necessary. Conservatives, like the writer of your editorial, delight in dreaming of the United States as it was in the decades immediately following the Civil War, when pioneers were opening up the West, with

sturdy farmers homesteading right behind them, and we were still essentially an agrarian Nation. Those days have gone forever. Despite the urging of Federal planners to decentralize, 95 percent of the 15 million increase in our population since World War II has settled in our great urban areas. And, it is estimated by the Federal Government that by 1980 more than 80 percent of our people will live in these great urban areas, where they will produce better than 90 percent of our national income.

It is the city which is the frontier of our modern civilization. The challenge which confronts us is whether democracy can succeed in a highly industrialized, urban civilization. In fact, it is no exaggeration to say that it is in the cities that the cold war will be fought.

The cities are straining their own resources to the uttermost to achieve this goal. But the cities cannot do it alone under our system of Government and taxation any more than the farmers can do it alone or than the rest of the free world can do it alone. The cities are asking for only \$300 million a year in urban renewal funds (little more than the Federal Government spent last year to support the price of potatoes), as against a total of \$8 billion which is spent annually on farm and foreign aid.

One of our first problems is to overcome the stubborn refusal by the executive branch of our Federal Government to face up to the fact that we are, and will continue to be, an urban people. Our very success or failure in the cold war in a large measure depends upon national recognition of this fact, and the taking of conservative measures to meet it. So we're fighting the good fight by our insistence on an adequate housing bill.

RICHARDSON DILWORTH,
Mayor, City of Philadelphia.
PHILADELPHIA, PA.

Named a Papal Knight

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Wilkes-Barre Times Leader of Monday, August 10, 1959, which reports that Mr. Joseph H. O'Donnell, formerly of Sugar Notch, Wilkes-Barre, and now of Honolulu, T.H., has been named a knight commander of the Order of Pope St. Sylvester by Pope John XXIII for exceptional services to the Roman Catholic Church in Hawaii.

[From the Wilkes-Barre (Pa.) Times Leader, Aug. 10, 1959]

EX-SUGAR NOTCH MAN MADE PAPAL KNIGHT

A former Sugar Notch resident has been named a knight commander of the Order of Pope St. Sylvester by Pope John XXIII for exceptional services to the Roman Catholic Church in Hawaii.

Honored by the Pope was Joseph H. O'Donnell, business manager of the Diocese of Honolulu since 1946.

Mr. O'Donnell is one of two laymen in the Diocese of Honolulu to be named papal knights, the first time in the 18-year history of the diocese such an honor has been conferred.

The other recipient is Dr. John M. Felix.

An article about the conferring of the honor, accompanied by a picture of the two men displaying their medals of the order, appeared on the front page of the August 7 issue of the Hawaii Catholic Herald, diocesan newspaper.

Announcement and presentation of the decorations were made at novena services in honor of St. Joseph at the Cathedral of Our Lady of Peace by Most Rev. James J. Sweeney, Bishop of the Diocese. The emblems of the order are a gold cross and a silver medal inscribed with the image and seal of St. Sylvester.

For the last 13 years, Mr. O'Donnell has assisted Bishop Sweeney in building the comparatively new diocese. During this period, new churches and schools have been built and millions of dollars have been expended.

FORMER COLLIERY CLERK

Born in Sugar Notch, son of the late Mr. and Mrs. Patrick O'Donnell, he was the Sugar Notch correspondent for the Evening News. He enlisted in the Army in 1940 and was graduated from the Army War College in Washington, D.C., in 1941. He was assigned to military intelligence in Honolulu. Following his discharge from the Army, Mr. O'Donnell went to work for the diocese. Prior to joining the Army, he was the colliery clerk at Huber Colliery, Ashley.

A graduate of Sugar Notch High School and St. Bonaventure College, Bonaventure, N.Y., Mr. O'Donnell taught during the evening at the Honolulu Business College. He also is active in community affairs and is recognized as an outstanding speaker and master of ceremonies.

He is married to the former Eileen M. Clark, of Honolulu and they have two children, Eileen M., 14, and John Patrick, 5. The family lives at 3821 Mariposa Drive, Honolulu.

A brother, Rev. Charles O'Donnell, is assistant pastor of Our Lady of the Ascension Church, Williamsport. He also has two other brothers, Con, of Sugar Notch and William of Philadelphia and two sisters, Alice O'Donnell, former supervisor of nurses at Midtown Hospital, New York City, and Mrs. Richard Riley, both of Sugar Notch.

A Magnanimous Foreign Policy Backfires on U.S. Workers

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. THURMOND. Mr. President, the public demand continues to increase for favorable action by the administration on the petition filed with the Secretary of Agriculture by the National Cotton Council for relief under section 22 of the Agriculture Adjustment Act. Some of the demand is reviewed in a column entitled "A Magnanimous Foreign Policy Backfires on U.S. Workers," by Holmes Alexander, published in the Greenville News, of Greenville, S.C., on July 23, 1959. I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

A MAGNANIMOUS FOREIGN POLICY BACKFIRES ON U.S. WORKERS

(By Holmes Alexander)

WASHINGTON.—"I fail to see the necessity," reported Voltaire when told that a certain rather stupid fellow must, after all, be allowed to live. It is a quotation which often haunts your reporter as he ducks in and out of the hearing rooms of the debating halls of Capitol Hill. There are times when the stupidity of American policy is so dense that the Voltairean query is shouted aloud—Do we deserve to live through the periods and challenges of the mid-century?

For example:

A labor spokesman, Solomon Barkin of the Textile Workers, was imploring a Senate subcommittee (a very slumberous Senator was the only member present) to take a look at what we were doing to the industry which clothes our population.

American know-how went abroad, as everyone knows, for two purposes—to help the stricken nations in World War II to regain production and to help the "underdeveloped" nations to make better use of their raw materials, including their workers. But look what has happened. Has American know-how been confined to the revival of the war victims and to suiting up the loin-clothed peoples in modish apparel? Not at all. Our designers and technicians, taking advantage of cheap foreign labor and the newest machinery, are invading the American shores as no military conqueror has done since the War of 1812.

"Most large retail merchandising organizations," testified Solomon Barkin, an AFL-CIO factfinder, "have representatives abroad who are constantly searching for manufacturers who will produce items specifically for the American market. When necessary, they help in the design and evaluation to assure its appropriateness for the American market."

Mr. Barkin is not talking in a vacuum. He gave the subcommittee a list of almost 30 American textile-connected companies taking part in this invasion. He remarked that American-aided firms in Japan, Hong Kong, Italy, and other low wage areas are saturating our stores with scarves, shirts, blouses, children's dresses, men's suits, men's slacks, shoes, and Wilton carpets. He asked for legislation to set a safeguard level of American production and action by the U.S. Tariff Commission to stave off the American-aided foreign invasion of our markets.

An industry spokesman, Charles Stewart of the Machinery and Allied Products Institute, gave the same subcommittee some information from management's side of the street. During the Eisenhower era, according to Mr. Stewart's figures, U.S. direct investment abroad has gone up—but U.S. benefits on this investment have gone down. What a pretty kettle of fish.

It turns out, in Mr. Stewart's words, "we have taught the American industrial lesson very well." He might well have said too well, because this is exactly what has happened. We have trained foreign workers, financed foreign companies, provided foreign competitors with the best machinery and know-how. In addition to heaping these advantages upon Europeans, Asians, and Africans, we have handicapped ourselves with restrictive labor practices, wage-induced inflation and the most backward system of tax depreciation followed by any modern industrial nation. Whatever the idealism which has inspired us, "these are the industrial facts of life," the witness told the subcommittee.

It isn't often that labor and management go deeply into the same subject and come up with almost identical conclusions. So many of the upper crust labor leaders have gone highbrow on us that they sometimes argue

that foreign workers are more important than our own. Many industrialists have soothed their souls with love lyrics to mankind while grabbing off profits from the subsidized international trade. Far more culpable than labor and management, the American Congress has permitted itself to be brainwashed by the special pleaders for the level-down philosophy. Worst of all, I suppose, is the State Department. Under the past three Presidents it has misread the American Constitution to mean promoting the general welfare of the world rather than this Nation.

In any event, our policy on overseas investments is of a kind with so many other policies. We waste too much in agriculture, we work too little in industry, we talk too much in diplomacy and think too little in education. Sure we must survive, but if Voltaire were around I'm afraid he might say: "I fail to see the necessity."

Foreign Aid Is Breeding Inflation, Kemper Says

EXTENSION OF REMARKS OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. JOHANSEN. Mr. Speaker, the Honorable James S. Kemper, U.S. Ambassador to Brazil from 1953 to 1955 and an outstanding insurance executive and business leader of Chicago, recently wrote an excellent article on the inflationary effects of foreign aid.

This article, which appeared in the June 25 Chicago Sun Times, reflects views based on his experience in the diplomatic service and his sound understanding of basic economic principles.

Under permission to extend my remarks, I include the statement by Mr. Kemper:

FOREIGN AID IS BREEDING INFLATION, KEMPER SAYS

(By James S. Kemper)

The foreign-aid program as it now is set up adds to the inflationary pressures in the United States; it spends money we don't have to waste, and it is not making good friends for the United States.

As my wise Scotch grandfather often said, "Bad loans never make good friends." This is just as true between nations as between individuals.

Inflation is a deadly threat, and it should be controlled now. It destroys business because it forces a businessman to abandon the sound principles which should govern decisions, in favor of short-term measures designed to preserve as much as possible of his financial strength. Worse, it destroys the savings of our people.

When a man lives a thrifty life and saves his money for his old age and dependents, he is entitled to expect that the dollar he saves will buy approximately an equal value at the time he needs it. To save a dollar that will buy 2 bushels of potatoes at the time it is saved and then find that it will buy only 1 bushel of potatoes at the time it is used, is a cruel confiscation.

Not only does inflation destroy the savings our people have, but it destroys the will and desire to save. Personal savings are the very basis of our private enterprise system and the private enterprise system is the basis of a free society.

I say that foreign aid is spending money we "haven't got." That is obvious because, with taxes at top levels, we have had deficits in most years of this generation and we are facing new deficits under this year's program. Deficits mean that our Government must issue bonds. These are a lien on the present property and future earnings of our people.

You can't put a debt against people without automatically reducing the value of what they have. Since money is the measure of our property, each deficit is a reduction in the value of our money.

If our foreign-aid disbursements had been made with greater care and perspicacity there would have been no necessity to raise the debt limit. The corollary to this would have been a reduction in the taxes already overburdening the American taxpayer.

Some of our foreign aid goes to governments which actually are not friendly and in some instances are under communistic domination. Some of it is used to finance nationalization of business enterprises in friendly countries. Those countries won't thank us in the future for our hand in these projects. As we contribute to their socialization, we are guilty of assisting in their destruction.

According to T. Coleman Andrews, former Internal Revenue Commissioner, in 1957 it took an income of \$4,806 to match in purchasing power a 1939 income of \$2,000. It took an income of \$13,004 to match a 1939 income of \$5,000 and it took an income of \$30,971 to match a 1939 income of \$10,000. So, in less than 20 years we have seen the real value of our incomes cut in half.

The effect of foreign aid in countries that get it may be just as bad and inflationary for them as it is for us.

Foreign aid is justifiable as a temporary measure but no country can maintain its strength by gifts from without. We are undermining the morale of the leaders who otherwise would develop in every country with the capacity for working out their own difficulties and problems.

Much of our foreign aid has gone into the building of factories which compete with American industry. Our living standards and our wages provide markets which exist nowhere else. With the machinery we have given them and their low wages, other countries undersell us in our market, in foreign markets, and American workers lose their jobs.

Hundreds of American plants are closed because of foreign competition our foreign aid programs have financed. In order to meet this competition, many American manufacturers have found it necessary to establish foreign manufacturing subsidiaries. Automatically, this helps the economy of the countries in which the plant is located but results in a loss of employment here and a reduction in taxable income.

European countries are doing very well on their own these days. We have a great future in the Western Hemisphere. We have reliable friends in this Hemisphere. If we have money to spare, we well could use more of it in this area where it will produce results that will help us both in national security and in our business.

Much has been said about aid to underdeveloped countries. We can't possibly change the habits and traditions of a foreign country until the people there are ready for it and want it.

There is plenty of money for investment in a country that will support the instrumentalities of development provided those countries can produce stable governments which will respect property rights and obligations. That respect cannot be created by our gifts, and until it comes from within the people, a foreign country will continue to be underdeveloped no matter what we do.

The American people always have been generous and I hope they continue to be. The United States has much to do to maintain its vitality and to develop its economy in a way that will preserve personal and economic freedom in this country.

If we are able to maintain our leadership and our ability to assist in the protection of the free part of the world, we must first control inflation, reduce government waste and bureaucracy, reduce our debt and our taxes, and solve our domestic problems.

Foreign aid is one of the first places to start. We must reduce our foreign aid expenditures now, and eliminate them within a comparatively short time. Otherwise this expenditure of our savings will hasten the day when our own liberties and our free enterprise system will be threatened, and perhaps ultimately be exchanged for socialism or worse.

Discontinuance of Passenger Train Service Between Tulsa, Okla., and Dallas, Tex.

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. YARBOROUGH. Mr. President, the Sherman, Tex., Chamber of Commerce board of directors has passed a resolution opposing the abandonment of passenger train service between Tulsa, Okla., and Dallas, Tex., by the Frisco Lines.

I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the board of directors of the chamber of commerce at Sherman, Tex., on July 27, 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION PASSED BY THE SHERMAN CHAMBER OF COMMERCE BOARD OF DIRECTORS, JULY 27, 1959

Whereas the St. Louis-San Francisco Railway Co. and the St. Louis-San Francisco and Texas Railway Co. has filed an application with the Interstate Commerce Commission and the Railroad Commission, seeking to discontinue passenger train No. 517, southbound, and No. 518, northbound; and

Whereas the city of Sherman would be irreparably damaged by the discontinuance of such passenger train service; and

Whereas if the discontinuance of such passenger train service is allowed, the city of Sherman and its citizenship and a large area surrounding the city of Sherman would be left without any passenger train service whatsoever either north or south; and

Whereas the above railroads received a considerable amount of freight revenue from the citizens of Sherman; and

Whereas in view of the extensive income received from freight by the railroads from the citizens of Sherman, its industries, and business houses, the railroads should be willing to continue to give passenger service along with and in conjunction with its freight business: Now, therefore, be it

Resolved by the Board of Directors of the Chamber of Commerce of the City of Sherman, Tex., That the Interstate Commerce Commission in Washington and the Texas Railroad Commission in Austin be requested to deny the application of the above-named railroads for permission to discontinue the

operation of trains No. 517 and No. 518 (Black Gold); be it further

Resolved, That a copy of this resolution be sent to U.S. Senator LYNDON B. JOHNSON, U.S. Senator RALPH YARBOROUGH, and Speaker of the House SAM RAYBURN.

DAN H. POOLE, Jr.,
President, Sherman Chamber of Commerce.

DEWAYNE DAVIS,
Manager, Sherman Chamber of Commerce.

These Days, Money Talks

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. ALGER. Mr. Speaker, it is quite appropriate that during the labor debate now in the House, an earlier editorial by George E. Sokolsky should be remembered.

Therefore, I would like to present for the study of my colleagues the editorial entitled "These Days, Money Talks."

The protection needed now by the American consumer and business enterprise is that labor be placed under anti-trust laws to eliminate its present monopolistic power.

[From the Washington Post and Times Herald, May 29, 1959]

THESE DAYS, MONEY TALKS

(By George E. Sokolsky)

The reason that labor leaders are so haughty is that money talks. They have the money and they have the votes and the politicians are scared of the smallest of them. The hospital strike in New York is a case in point. The union demands recognition, which as a practical matter means enforced union dues, eventually the closed shop and the checkoff. Those who collect money for charity do not collect it to enrich labor leaders and to give them expense accounts. If the nonprofessional worker is underpaid, he should be paid more, but there is no need for shop stewards, labor leaders, and grafters.

Two courts issued injunctions against the union which ignored court orders. It is like James Hoffa's notice to Congress that if it passed legislation that displeased him, he would call a nationwide strike. After the threats had had enough time to accomplish whatever Hoffa desired them to accomplish, he withdrew his threats, denied that he had said them, and in the course of the denial obliquely made the same threats.

In effect, what Hoffa implies is that he is bigger and more powerful than the Congress of the United States. And it may be so. Again it is money that talks. It is votes that talk. So many Members of the of the Congress get their campaign support, above the table or under the table, from labor leaders and labor unions that they vote as they are told to vote just as in the early 20th century, there were U.S. Senators who obeyed J. P. Morgan and John D. Rockefeller, the two leaders of predatory businessmen.

And as these businessmen, in time, lost their heads, became too sure of themselves and encountered an aroused public opinion, so the new kind of labor leader, a selfish, predatory person, who manages a huge treasury and who fights to keep his membership in-

tact and the dues coming in, is losing his head, too. There is only one phrase which correctly characterizes these kinds of labor leaders: They are too fresh. They believe that they can dominate the whole American people. They will, of course, fail, as their prototypes in Wall Street have failed.

The danger is not so much that the labor leaders will succeed in dominating the United States as it is that we shall, in a most critical time in our history, become involved in dangerous strikes and contentions which can affect the course of events by making this a defenseless nation. The hospital strike in New York is dramatic, but a steel strike at the present time would be a tragedy.

Even the labor leaders need to worry about that before a sufficiently wicked inflation could drop the value of the dollar to the verge of worthlessness. Apparently, the labor leader's personal desire to remain in a lucrative office is so great that he takes risks which even peril that job. And in this unseemly and disastrous business, he is only too often supported by politicians whose only gift is the garrulosity of the extrovert. Inflation can bring here, as it has elsewhere in the world, the man on horseback, the politician who promises too much and thrives only by suppressing the rights of the people.

Such labor leaders as George Meany, Walter Reuther, David Dubinsky and other top men, must recognize what money riches has done to their movement. But they are helpless because of the frightening pressures of such men as James Hoffa who can control any union he chooses to control through the instrumentality of the strike. If Hoffa opposes a union, his truckmen will make deliveries, will cross picket lines, will thereby assist the employer in breaking a strike. If Hoffa wishes to refuse to cross a picket line or to conduct a secondary boycott, he can tie up an entire city. He and Harry Bridges can tie up the entire transportation system of this Nation, force every industry to stop work because they can hold up shipments into and out of all plants.

No human being in this country should have that much power and a government which tolerates abuse only paves the way for its own destruction.

Auerbach Will Be Missed

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. BRIDGES. Mr. President, FBI Agent Richard W. Auerbach has been appointed to take over the Federal Bureau of Investigation office in San Francisco.

After a most successful tour of duty as agent in charge of the Bureau's Chicago office since September 1959, and based upon his outstanding record with the Federal Bureau of Investigation under the able leadership of Mr. J. Edgar Hoover, Mr. Auerbach is well equipped to face his new duties and responsibilities in San Francisco, one of the most important FBI posts in the country.

I have known Richard Auerbach for over 21 years and I am delighted with his well-earned progress. I ask unani-

mous consent that an editorial from the Chicago-American of August 4, 1959, commenting on the service of Agent Auerbach, be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

AUERBACH WILL BE MISSED

Richard W. Auerbach, who has been agent in charge for the Federal Bureau of Investigation in Chicago since September 1957, has been ordered to take over the San Francisco office, and Chicagoans will hate to see him go.

He has been an energetic crime fighter, cooperating enthusiastically with State and local law enforcement agencies, and he has carried on a variety of campaigns of his own for improving law enforcement and preventing crime.

One of the most important of these was his campaign among Illinois bankers to cut down the number of raids on banks by robbers. Working with the Illinois Bankers Association and the Illinois Savings and Loan Association, he showed the bankers how to protect themselves, through better money-handling practices and the installation of protective devices, both against armed robberies and embezzlements.

Also he worked tirelessly against juvenile delinquency and the distribution of smut literature.

A top espionage agent in World War II, he did some of his most effective work in Rio de Janeiro, where he ran a brokerage house as a cover while checking up on Nazi and Japanese spies.

In the San Francisco FBI office, Auerbach will have new responsibilities and added authority. We join with the thousands of friends he has made in Chicago in wishing him every success.

Louisiana Champion, From Lafayette, Competing in National Teenage Safe Driving Road-e-o Here

EXTENSION OF REMARKS

OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. WILLIS. Mr. Speaker, I am justly proud of the fact that the Louisiana champion in this week's finals of the National Teenage Safe Driving Road-e-o, taking place here in Washington, is from my congressional district. He is 17-year-old Bill Young, son of Mr. and Mrs. Pierre Young, of Lafayette, La.

The winner of the Louisiana title is competing with representatives from the other States in the written and skill phases of this contest sponsored by the Junior Chamber of Commerce of the United States. Accompanying him to the Nation's Capital is Second Vice President Cary Moore, of the Lafayette Junior Chamber of Commerce, son of Mr. Guillian Moore, Sr., of that city. The Louisiana finals of the road-e-o were conducted in Jefferson Parish—county—where approximately 50 young people, winners in the local contests conducted

by the various junior chambers of commerce throughout the State participated.

The written tests this week have been given at the Statler-Hilton Hotel and the skill events staged at the National Guard Armory. First, second, and third place national winners will receive scholarships worth \$2,000, \$1,500, and \$1,000, respectively, during the presentation of awards at a banquet Thursday night.

Among the events arranged for the contestants during their stay here was a visit to the White House where Bill Young was photographed standing next to the President.

The Lafayette Junior Chamber of Commerce, with a membership of around 40 young men active in community affairs, sponsors numerous civic events in addition to the safe driving competition which is open to both boys and girls. The organization, formed several years ago, meets for a luncheon program on the first Wednesday of each month and gathers for a night meeting on the third Wednesday. The officers are headed by President Carroll Baudoin and the others, in addition to Cary Moore, are Alvin O'Fleruity, first vice president; Scotty Brane, treasurer; and Gerry Bush, secretary.

Needed: Overhaul of Federal Milk Order System

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. WILEY. Mr. President, the system of Federal milk orders, operating in 76 marketing areas throughout the country, I believe, needs an overhauling.

Over one-third of the milk sold wholesale by the Nation's farmers is priced under the Federal milk order system. However, unfortunately, there is a wide price range—too wide, I feel—for milk under this system. For example, milk prices range from \$5.65 per hundredweight in New England and \$6.63 in southeastern Florida, downward to \$3.38 per hundredweight in Chicago and \$3.34 per hundredweight in Milwaukee.

I am aware, of course, that the pricing system established for each order is established individually to fit the marketing conditions in each area.

The comparative prices, however, reveal that there is, in my judgment, too great a discrepancy between areas. I therefore believe that it is time we took a new look at the overall system of Federal milk orders. The goal would be to make adjustments in price formulas to assure fair treatment of all farmers throughout the country.

The August 1 edition of the Wisconsin Agriculturist contained an editorial entitled "Fluid Milk Pricing Formula Is Outdated."

The editorial constructively points out definite factors to illustrate that the present milk pricing formula definitely needs an overhauling.

I invite the attention of our colleagues on the Agriculture Committee to the editorial. In addition, I am forwarding the comments to the Secretary of Agriculture for his review.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FLUID MILK PRICING FORMULA IS OUTDATED

Economic pricing under Federal orders holds the attention of Midwest dairy leaders these days. That, in spite of USDA's recent turnaround on hearings to consider such a pricing formula for Chicago. The request was made by Pure Milk Association.

Under most Midwest Federal order pricing formulas, fluid milk prices—class I and class II milk—are based on manufacturing milk price plus a premium. Dairy men are growing more concerned about this formula. The price of manufacturing milk for several years now has not gone up with the general price level of things they buy.

Many dairy leaders feel that the demand for fluid milk is not very greatly related to the demand for manufactured dairy products. Fluid milk demand is tied more closely to consumer purchasing power. So they would like to see consumer purchasing power taken into account in the pricing formula for bottled milk.

Most of those who would like to see an economic pricing formula in order areas want consumer purchasing power, the general price level and cost of production to be used as a basis for pricing formula.

Boston and New York already have such a pricing formula. It has meant higher prices to farmers for milk going into fluid uses.

There is little question that today's pricing formula is outdated. Whether we like it or not, our order areas, general handling of milk, and support price policies have driven a real cleavage between milk going for fluid consumption and that used for manufactured dairy products.

Demand for fluid milk continues to grow with our increasing population and workers' higher purchasing power. The picture is quite different for milk going to manufactured uses.

Cheese demand may well be establishing somewhat the same pattern. But butter use has shrunk. And dry milk is so interwoven with Government support purchases and siphoning off surplus production that it has developed its own unique patterns.

You can expect to hear a lot about changing pricing formulas in the near future. And for good reasons.

The Long-Range Threat of Inflation

EXTENSION OF REMARKS OF

HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. MUMMA. Mr. Speaker, the coined phrase "It's a topsy-turvy world" takes on grave significance when you

stop and think about where ours is going if the American public and elective officials remain aloof to inflation and all its contributing factors.

The Washington Daily News for Monday, August 10, contained an enlightening analysis which is an attempt to show us in an understandable manner the long-range threat of inflation. Dr. Schaefer pulls no punches in discussing all the factors and undoubtedly treads on some toes in doing so.

Mr. Speaker, that newspaper article was an eye opener, and it was my feeling that all the Members would be interested in reading it. The article follows:

[From the Washington Daily News, Aug. 10, 1959]

THE LONG-RANGE THREAT OF INFLATION— FREE SOCIETY CAN ONLY STAND ON FIRM, DURABLE FOUNDATION

(By Dr. Alfred Schaefer)

The inflationary consequences of the French Revolution and of the First World War were destructive but short, and could be cured by appropriate drastic measures.

The creeping inflation of our days is more dangerous, because the economic power of the State and the volume of circulating money have increased enormously.

Modern inflation is not only an ethical and social problem—it seems to be embedded in the free economy, like a managerial disease. Like a sick organ in the human body, there is in the economy an organ which shows this cancer: the weakening money.

No solution can be based only on technical measures. The reconciliation of stable money and full employment is an unsolved problem, and full employment with perpetually rising wages is certainly the most risky experiment of our so-called free economy.

REACTION TO THE PUBLIC

The public is unorganized, inadequately informed, generally apathetic, confused by the disputes of economists and advisers. It could elect to public office men recognizing the value of stable money, ready to fight for it—but this is a pious hope. Everybody agrees on the perils of too rapid inflation. But too many believe that inflation is here to stay as part of modern life, that a 2-percent annual loss in the purchasing power of money is not so bad, forgetting that this means 50 percent in one generation and that sooner or later business will have to pay a correspondingly higher rate of interest.

It is true that until now long-term bond financing has gone on, that through custom and inertia "wolf" has been cried so often that when the real "wolf" appears few take any notice. This dangerous acceptance of slow inflation helps to create or intensifies the very consequences it fears.

DANGER SIGNS

Sooner or later the little man will realize these consequences, and then he could have accelerated currency troubles. The signs are increasing—even in the United States—and we are all under warning:

Soaring prices for shares.
Stock options as the only incentive to management.

Buying "growth" instead of "yield."
Interest for South African gold mine stocks.

High interest rates for bonds.
Preference for index-based bonds.
Flight into seemingly more stable money.

Investors, pension funds, trust funds are all investing 30 percent and more of their capital in stocks and other property—often regardless of the price. Soon there could be too little real saving—

No buying strike of the unorganized public against high prices for consumer goods seems possible, not even against the probably politically necessary, but economically scandalous worldwide agricultural price supports through subsidies and stockpiling.

MANAGEMENT REACTION

There is too much lip-service paid to the goal of monetary stability. Management partly accepts slow inflation and adjusts its plans accordingly.

Like the public, management is not much frightened any more about a slump—the welfare governments will help. During the last recession nobody dared to let the slump ride itself out, to accept a really corrective shake-out of the weaklings or a strike of the labor unions—everybody asked for subsidies, relief, Government orders, cheap money, tax reductions, credit injections.

HALFWAY THERE

We are therefore already half-way between a pure market economy and a centrally planned economy, in an economy which depends on the decisions of the state, of large-scale firms, groups, and other economic units.

We are all sinners against the very roots of our capitalistic society. We psychologically expect and accept the annual round of wage increases as our fate, we would consider ourselves as shylocks if we did not grant a little increase in salary or in fringe benefits to everybody every new year. Kindness is a human quality, softness is an economic mistake.

THE GREAT FICTION

Wages are the most important, the crucial problem of the capitalistic world of free enterprise. Wages are linked to retail prices, industrial prices to wages, farm prices to industrial prices, retail prices to farm prices—a rigid vicious circle of prices and earnings.

The compensation of workers in money has increased in the last 10 years at least twice as much as productivity.

Wages resisted even recessions. It should be borne in mind that, generally speaking, wage increases cannot reasonably be based on increases in the productivity of particular industries. Rather, they must be limited, at the most, to the average rise in productivity of the economy as a whole. In estimating the latter, it is well to remember that both agriculture and the service industries, particularly the latter, in the last 10 years have had average productivity growth rates of some one-half to 1 percent only.

Even in an especially progressive industry wages paid should not be geared to changes in productivity of that industry.

Such practices would almost force other industries whose productivity has risen less, to grant similar wage boosts lest they lose workers lured away by the higher incomes earned in the rapidly advancing industry. Escalator clauses in contracts—introduced on a large scale by the biggest industrial company in the world—set the pace for seemingly sacrosanct increases following every possible increase in the index of living costs, regardless of productivity.

Nobody therefore is much interested in fighting inflation, because he will soon catch up with higher prices.

High and prolonged unemployment compensation relieves the pressure on the individual to find another job or on the unions to reduce their excessive demands.

The labor unions are in danger of pricing their members out of the market, especially in the United States (hourly wage rate of steelworkers \$3 versus \$1-1.25 in Switzerland, 80-90 cents in Germany).

THE LEVER

Too much political power is in the hands of union leaders, but partly because management did not dare to resist the excessive wage demands which set in motion the

whole inflationary spiral: From fear of losing out to the competition of other firms, nobody dared to face a real showdown, to accept a prolonged strike.

In the long run no help from outside can reestablish a sound monetary balance. Higher taxes mean compulsory savings and are no remedy, because they will be spent by governments and finally passed on to the consumer in the form of higher prices—but the consumer will not accept a lower standard of living.

Since the war government expenses have everywhere increased through programs for housing, social security, highways, armament, atomic science, etc. Pressure groups push expansion of their own plans.

Everywhere there is a superstate with a superbudget, supertaxation, superwelfare—we cannot increase it without approaching dangerously near the Russian system.

Tax reforms are needed. The fiscal elephantiasis has partly destroyed the efficiency of the interest rate as an essential weapon for securing an equilibrium between money and goods. The interest rate as a factor in cost is less important than the tax burden. It is an absurdity that the tax angle is very often more important than any other consideration.

A serious restriction of money and credit and an increase of rates are immediately criticized—one has only to remember the accusations during the last few years, when the tightening of the money supply was in reality a very appropriate but feeble measure against an exaggerated credit expansion. And in order to make the policy effective, money must be made not only dear, but also short.

DEFLATION: NAUGHTY WORD

It is bad form to use the word "deflation." Since the thirties the fear of unemployment haunts everybody.

But full employment gave the labor unions their exaggerated bargaining power, brought the wage-inflation as a new danger.

The continuous increase in the supply of money and credit, the swelling of the stream of money at a rate faster than that of the stream of goods and services, must be stopped.

Individual savings and insurance, which produce the bulk of much-needed investment capital, must be based on the confidence that the value of money will remain more constant than it has been in the last 15 years. Otherwise inflation will strike at the roots of the economy of the free world, and our grandchildren perhaps could go hat in hand to Moscow.

We must make up our mind: Sound money and full employment and ever-increasing wages cannot go together.

We can count on and must encourage a conservative and courageous policy of the central banks, free of all political pressures. We must accept eventually a period of higher interest rates—dictated by the market—and we must insist on a balanced Government budget. But most of all should we frankly and categorically resist any further automatic wage increases, and abolish any short-term escalator clauses.

Higher productivity then will be able to keep prices down and money sound, provided that management will finally feel the moral responsibility to pass technical progress on to the consumer in the form of lower prices.

ROLE OF UNITED STATES

The United States has an international responsibility in this regard. The dollar has become the measuring stick for others. Between \$14 and \$16 billion of short-term money are kept by Europe in the United States. It can be assumed that most of the European industrial nations will not inflate faster than the United States.

The American balance of payments is passive. The dollar shortage does not exist any

more. Some gold has returned to Europe—more could flow out if it knew where it could safely go. American investors buy European stocks, partly because the buying power of the dollar is higher in Europe than in the United States.

U.S. competition abroad is cramped by high prices and wages. Import restrictions cannot be any longer a remedy in a climate of freer international give-and-take.

Increased wages for steel workers would put a major milestone on the road to further inflation. A general acceptance of the idea that a creeping inflation of 2 to 3 percent is inevitable would accentuate serious potential risks and endanger the dollar as the yardstick for the world's currencies.

The vanishing respect for private property is intimately related to our laxity about the integrity of money. A free society can only stand on firm and durable foundations.

In Memoriam to William S. Jennings, of Texas, Conservationist

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. YARBOROUGH. Mr. President, the preservation of this country's vital natural resources and wildlife is a fine and honorable dedication for a life. And one of the most outstanding examples of a dedicated conservationist was the late William S. Jennings, of Texas. His death was a deep loss to his State and Nation.

Although only 36, Bill Jennings had built a reputation as a wildlife conservationist. He loved his country and he worked to preserve her freedom as a P-38 fighter pilot in World War II and worked at other times to preserve her invaluable natural resources. His active life in the church also set a fine example.

About the last year of his life, Mr. Jennings showed extraordinary courage as he went about his work in behalf of conservation although doctors had told him he would soon die of leukemia.

The Lone Star State and the Nation will miss William S. Jennings, of Texas.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article by Russell Tinsley which was printed in his Outdoor Scene column in the Austin American for Tuesday, February 11, 1958, entitled "Lost Friend."

There being no objection, the article was ordered to be printed in the Record, as follows:

LOST FRIEND

(By Russell Tinsley)

Conservation lost a true friend when Wildlife Biologist William S. Jennings died last Sunday.

Bill Jennings was dedicated to the preservation and restoration of wildlife in Texas. And he was one of the bravest men I have ever known, too.

About a year ago Bill received a severe jolt, one that would have all but shattered the hopes of a man with less fortitude. Doctors told him he had dread leukemia and had only 2 years to live at the most.

Most people would have given up, then and there. But not Bill Jennings. No one would have guessed of the great burden that Bill carried around inside him unless he knew the story, for Bill never let on that he was dying. He didn't ask for sympathy.

Everyone admired Bill Jennings. Bill was cheerful until the last. He and I had planned a javelina hunt to south Texas later this month. He kept telling me about the new scope sight he received for Christmas, and his plans for next deer season. Bill didn't let his illness interfere with his plans for the future.

Bill Jennings had great courage. "But that's the way he did everything," admitted Howard Dodgen, executive secretary of the Game and Fish Commission.

Leukemia was unquestionably a lick below the belt to Bill, a healthy, husky fellow who served his country faithfully as a P-38 pilot during World War II. Yet he remained at his desk and worked unselfishly until the finish.

"Bill was one of the finest fellows we ever had at the commission," said Dodgen. "Nobody was ever more devoted to his work."

ENJOYED LIFE

The 36-year-old biologist was assistant director of wildlife restoration and, as commission information chief L. A. Wilke put it, "a fellow who enjoyed a good story and who got the most out of life."

Bill joined the game commission in November 1949, after graduating from Texas A. & M. College with his master's degree. Previously, he had attended Arkansas State Teachers College and received his bachelor of science in biology from the University of Texas.

He was raised in Texarkana, Ark. Bill first gained recognition with his work with whitening doves in the Rio Grande Valley. He came to Austin as assistant to Eugene A. Walker in March 1954.

"Bill Jennings was a capable and dedicated research worker and a man of high principle who had the strength of his convictions," explained Walker. "His leadership and efforts toward wildlife conservation will be sorely missed."

Margaret Louise Hill, president of the Travis Audubon Society, said: "Conservation suffered a great setback when Bill Jennings passed away."

Yes, Bill Jennings was not only a dedicated conservationist, but also a man of great moral strength who was a pillar of truth in his church work and a man of unparalleled courage. We'll all miss him.

Caribbean Tensions

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FLOOD. Mr. Speaker, among the many articles about the mounting tensions in the Caribbean was one by Thayer Waldo in the August 7, 1959, issue of the *Courier-Journal*, Louisville, Ky., which I include:

TENSIONS IN CARIBBEAN ARE TOO DEEP TO BE EASED BY THE O.A.S. MEETING

(By Thayer Waldo)

MEXICO CITY.—The prospects for any solid, far-reaching settlement at the Inter-American Foreign Ministers' Conference, opening August 12 at Santiago, Chile, are little better than they were for solving the Berlin issue in Geneva.

Foreign-policy executives of the 21 Western Hemisphere republics were summoned to this emergency session by the Organization of American States, in hopes of finding a way to ease present tensions in the Caribbean area.

But differences of outlook and approach among the governments directly involved in that critical situation are so basic and far-reaching that no compromise solution seems possible.

Not since the stormy 1942 gathering at Rio de Janeiro, a month after Pearl Harbor, has any Pan-American conference faced such explosive problems as those the ministers will be called upon to deal with in Santiago.

A RIFT INDICATED

The aftermath of that earlier meeting was a split in the inter-American organization that lasted 3 years, when Argentina refused to sever relations with the Axis Powers.

There are now strong indications that the meeting about to begin may end in a similar rift, on an even larger scale.

Lined up as chief antagonists for this showdown are Dominican Dictator Rafael Leonidas Trujillo against Cuba's Fidel Castro and President Romulo Betancourt of Venezuela.

Trujillo accuses the other two of plotting actively to overthrow his regime. He says he has abundant proof that two abortive invasions of the Dominican Republic during June were mounted in Cuba, with Venezuelan backing.

Castro and Betancourt—both of whom recently cut diplomatic ties with Trujillo—counter by charging that the Dominican strongman is training a force of 20,000 mercenaries for an all-out assault on Cuba, and has offered to finance an armed coup in Venezuela.

MERELY SYMPTOMS

If the whole dispute were limited to such overt claims, the foreign ministers might be able to weigh the evidence and come up with a clear-cut verdict—even with an acceptable peace-making formula.

However, the strident battle cries are merely symptoms of a much deeper and more dangerous conflict. Revolutionary zeal among thousands of exiles from Caribbean and Central American countries was fanned to white heat by Castro's guerrilla-war triumph over the well-equipped forces of Fulgencio Batista.

And there is no question that those elements have since received aid and comfort from Cuba's victorious rebels.

Originally, Castro proclaimed his intention to lead a crusade for elimination of all remaining dictatorships in the Americas. But grave domestic problems—plus stern warnings from abroad—gave him pause.

RAUL IS OUR MAN

No such constraint affected his brother, Raul, commander in chief of Cuba's reorganized armed forces and also officially designated as successor to the premiership, if Fidel should disappear.

The crucial fact here is that Raul Castro has been publicly identified by Soviet experts on Latin America as "our man" and a card-carrying Communist Party member.

Together with other top military commanders in Cuba, Raul helped organize and equip the two expeditions that tried to invade Panama and Nicaragua, respectively.

Neither foray was Communist-led. President Luis Somoza of Nicaragua described those who headed the rebels there as reactionaries. Several were sons of prominent and wealthy Nicaraguan families.

Best explanation for the support given them by Raul Castro and his cohorts is that it was hoped Somoza's national guard would kill some of these young men, thus promoting their infuriated relatives to back a second and larger invasion. One of the captured Nicaraguans told Government interro-

gators: "We came in to try to get ahead of the Reds, who are preparing a revolution."

As for the Panamanian adventure, it appears to have been chiefly an attempt to provoke intervention by U.S. security forces in the Canal Zone.

LONG-RANGE PURPOSE

Behind all this outwardly confused maneuvering, though, lay the long-range purpose of forcing the O.A.S. to call a full-dress conference. When Trujillo announced annihilation of Dominican exile contingents that landed in his country 2 months ago, the die for that was cast.

The vote to hold the meeting was unanimous—only because the two hostile factions had vastly different ideas of what should be discussed.

This cleavage came into sharp focus July 30, with a heated 5-hour wrangle over an agenda in the O.A.S. council. Trujillo and Somoza wanted it limited to recent events and the nonintervention principle.

Venezuela proposed a broad survey of representative democracy and respect for human rights throughout the Americas. This point—loaded with potential dynamite—was eventually included.

Then Cuba sought to inject a resolution dealing with economic underdevelopment as a cause of political unrest. On that, the United States and eight other countries abstained, four voted against it and eight in favor—three short of the absolute majority required to approve.

HOW THEY LINE UP

As the ministers head for Santiago and their ticklish task, here is the picture:

Cuba and Venezuela can count on down-the-line support only from little Honduras. But Trujillo cannot look for even that much assistance.

The rule-by-decree regimes of Somoza and Paraguay's General Alfredo Stroessner have much in common with that of the Dominican dictator—yet they are not about to make public cause with him at the conference table. They have too much to lose and nothing tangible to gain by it.

Sympathy toward the Cuban-Venezuelan position can be expected, in varying degrees, from Mexico, Colombia, Uruguay, Ecuador, and Bolivia. Their attitudes will be determined largely by how far Castro is willing to go in pledging himself to strict nonintervention from now on.

TEN GENERALLY NEUTRAL

The other 10 Latin republics are likely to be generally neutral, at least where the Caribbean quarrel itself is concerned. But if the ministers take up the democracy-and-human-rights issue seriously, representatives of Trujillo, Somoza, and Stroessner will find themselves on the defensive, with everyone else opposed.

That is when the major fireworks are likely to begin. Any demand for proof that these rights are "effectively exercised"—and the wording of the agenda clearly contemplates this—will see the Dominicans raising a cry of "interference in internal affairs."

A formal resolution on the matter is almost certain to bring a walkout by Trujillo's men—with Stroessner's, at least, probably following suit.

On the other hand, a proposal to condemn Red influence in Castro's regime and/or the Caribbean area as a whole could well prompt Cuba and Venezuela to bolt the conference. Both countries insist that their governments are non-Communist, but that they will sign no official anti-Communist declaration.

Finally, if Fidel Castro himself shows up at the conclave and addresses it—as he did in Buenos Aires last April—the effect on Pan-American solidarity cannot be predicted.

Ambassadors of Good Will

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial from the Paterson News of Friday, August 7, which cites impressive increases in the ranks of foreign students at U.S. colleges and universities over the past 10 years. From the Institute of International Education comes the report that 47,000 students from 131 countries registered here last year, representing the largest foreign student population in the world. This increasing percentage of foreign students attending our educational institutions has great significance, I think. As the article points out, these scholars, besides acquiring the knowledge needed in improving the economic life and health of their countries, can be invaluable ambassadors of good will between the United States and their homelands. They can take back an understanding of American concepts of freedom and respect for the individual that can be a persuasive force for stability and resistance to Communist inroads in their homelands. And this is so—because they have seen America first.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMBASSADORS OF GOOD WILL

The Institute of International Education reports an increase of nearly 90 percent in the ranks of foreign students at U.S. colleges and universities over the past 10 years. The 47,000 students from 131 countries registered here last year represent the largest foreign-student population in the world.

Even more impressive than the student totals are the trends indicating the countries represented by these young men and women, the subjects they are studying, and the record number of foreign professors visiting U.S. campuses.

In the past 5 years, the number of foreign professors has tripled. For the first time on record, U.S. colleges last year imported more teachers (1,937) than they exported (1,842). This is undoubtedly a reflection in part of the Nation's stress on science education. Almost half of the visiting professors were experts in the physical sciences—double the number in these fields who came here during the previous year.

As the institute notes, the status of science education on our campuses is reflected in the increasing percentage of foreign students attracted by courses in science or applied science. Engineering is the most popular subject, but the humanities is a close second. The popularity of engineering is understandable since many of those who enroll here have high hopes of landing engineering or technical jobs with overseas branches of American firms in their homelands.

The most interesting thing about the institute's survey is the changing origin of our student guests. For the first time last year, more students came here from the Middle East than from Europe. The Far East still sends the greatest number (15,823), with

Latin America second, the Middle East third, and Europe now fourth. And as might be expected, many of the new students from the Far and Middle East came to the United States to study the physical sciences.

These scholars from the Far and Middle East, besides acquiring the knowledge needed in improving the economic life and health of their countries, can be invaluable ambassadors of good will between the United States and their homelands. They can take back an understanding of American concepts of freedom and respect for the individual that can be a persuasive force for stability and resistance to Communist inroads in their homelands. And this is so because they have seen America firsthand.

Fallout Protection

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. OSTERTAG. Mr. Speaker, the crucial problem of fallout protection has become extremely important and deserves urgent and immediate action by all levels of government—Federal, State, and local. In connection with this, under leave to extend my remarks in the RECORD, I include the following resolution on civil defense unanimously adopted by the special committee on civil defense at the 51st annual Governors' conference at San Juan, P.R., August 5, 1959:

RESOLUTION ON CIVIL DEFENSE

Peace, with dignity, is the paramount concern of our Nation. But the maintenance of peace requires national strength. An essential element of this strength is the ability of our Nation to survive a nuclear attack.

Unfortunately, today, our people are not prepared to survive the fallout from a nuclear attack on our country. Yet, it is the fallout from nuclear weapons which will threaten every hamlet, city and farm in our Nation. It is fallout which will cause up to three times as many deaths as would result from the bursting of nuclear bombs on targets in our country. Deaths and sickness from fallout could make casualties of half the population of our country.

Protection against fallout, however, can be achieved and achieved by means which are within our reach as individuals and as States.

Without protection against fallout we are vulnerable to nuclear blackmail. But, if our citizens, as individuals, take protective action against the threat of fallout, it will be abundant notice to any potential enemy that we, as a people, are determined to survive and that we will not be forced by nuclear blackmail either to abandon our friends or to forsake our national interests at home or abroad.

As Governors we have a heavy personal and official responsibility for the safety and health of our citizens. So crucial is the problem of fallout to the maintenance of peace and the health of our people that we do hereby resolve that:

1. Each State initiate a vigorous and continuing campaign of education as to the nature of fallout, the extent of the danger, the fact that protection can be achieved, and the crucial importance of affirmative action by individual citizens as a protection

against nuclear blackmail and to increase the prospects for peace.

2. That the responsible Government officials—Federal, State, and local—take immediate steps to assist and encourage the people of this country to prepare themselves successfully to survive radioactive fallout and other aspects of an enemy nuclear attack on the United States, including such matters as adequate warning, shelters, radiation detectors and survival kits; and to that end, that an early meeting of the Governors Conference Committee on Civil Defense be held with the President of the United States, the national military leaders, and other official representatives of the executive and legislative branches of the Federal Government for an intensive review of the nature of the nuclear hazard and the cooperative steps which are available to government—Federal, State, and local—for the nuclear protection of our people.

3. That each State initiate a survey of all State owned or operated facilities to determine both their adequacy as fallout shelters and what steps are needed to provide fallout protection for their users, both regular and transient.

4. That each State develop a protected seat of State government which will assure the continuance of State government leadership and function during and after a nuclear attack.

Religious and Racial Discrimination Amendment to Mutual Security Appropriation Bill, H.R. 8385

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 12, 1959

Mr. MORSE. Mr. President, today I testified, together with the Senators from New York [Mr. JAVITS and Mr. KEATING], in support of my amendment to the mutual security appropriation bill, H.R. 8385. My amendment deals with the elimination of religious and racial discrimination on the part of any country which enters into mutual security agreements with the United States. As the debate on this matter previously showed, Saudi Arabia, Norway, and Iceland, for example, follow discriminatory practices against some Americans because of their race, religious faith, or color.

This matter was before the Senate when my amendment to the mutual security authorization bill was defeated by a vote of 47 to 43, although I am satisfied that a considerable number of Senators who voted against my amendment did so, as they have told me since, because they were not aware of the importance of the amendment.

I thought I owed it to the Committee on Appropriations—and the Senators from New York agreed with my position procedurally—to offer the amendment in committee for the committee's consideration, so that when it reached the floor later, if it were not adopted by the committee, the argument could not be raised that the amendment had not been offered in committee.

My testimony speaks for itself. I ask unanimous consent that the testimony I offered in the Committee on Appropriations in support of my amendment be printed in the Appendix of the Record.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. KUCHEL. While I was in the Committee on Interior and Insular Affairs this morning, and not in the Committee on Appropriations, at the time the able Senator from Oregon spoke, I did attend the latter part of the hearing before the Committee on Appropriations. I took occasion to read the printed comments of the Senator from Oregon. I think they present as excellent and as persuasive a document as I have read with respect to any given issue. I merely desired to have the Senator from Oregon know my reaction.

Mr. MORSE. I appreciate the remarks of the Senator from California very, very much.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT OF SENATOR WAYNE MORSE BEFORE SENATE APPROPRIATIONS COMMITTEE, AUGUST 12, 1959, ON RELIGIOUS AND RACIAL DISCRIMINATION AMENDMENT TO MUTUAL SECURITY APPROPRIATIONS BILL, H.R. 8385

Mr. Chairman and members of the committee, I appreciate this opportunity to appear before your committee to urge acceptance of an amendment to the mutual security appropriations bill which will put the Congress of the United States on record in opposition to any policy by our Government which acquiesces in discrimination against American citizens on the grounds of their race or religion.

The U.S. Senate is firmly opposed to such discriminatory practices. I am convinced. The question is whether this is the legislative time and place to raise this issue. My answer is that it is always appropriate to raise this issue, and it is especially appropriate when we are discussing a measure to strengthen the United States and the free world.

The adoption of the amendment I now propose will make for a stronger America. It will make clear to the world that we mean it when we say we are a Nation of free men dedicated to the preservation of human rights and the dignity of man.

The language of the amendment I ask you to adopt reads as follows:

"It is the sense of Congress that none of the funds appropriated or otherwise made available by this Act should be used for furnishing assistance to any nation which as a matter of declared policy or practice, as determined by the President, creates distinctions because of their race or religion among American citizens in the granting of personal or commercial access or any other rights otherwise available to United States citizens generally."

This amendment is modeled on the Lehman resolution which was unanimously adopted by the Senate on July 25, 1956. That resolution reads as follows:

"Whereas the protection of the integrity of United States citizenship and of the proper rights of United States citizens in their pursuit of lawful trade, travel, and other activities abroad is a principle of United States sovereignty; and

"Whereas it is a primary principle of our Nation that there shall be no distinction among United States citizens based on their individual religious affiliations and since any

attempt by foreign nations to create such distinctions among our citizens in the granting of personal or commercial access or any rights otherwise available to United States citizens generally is inconsistent with our principles: Now, therefore, be it

"Resolved, That it is the sense of the Senate that it regards any such distinctions directed against United States citizens as incompatible with the relations that should exist among friendly nations, and that in all negotiations between the United States and any foreign state every reasonable effort should be made to maintain this principle."

The Lehman resolution was adopted because of the widespread revulsion in this country against our Government's toleration of discriminatory practices by certain Near East countries against American Jews. There was particular concern over our agreement with Saudi Arabia which permitted that country to bar American soldiers of Jewish faith from a base which our country maintained at Dhahran.

All of you are familiar with these facts. I am confident that there is universal disapproval of this policy of exclusion and discrimination. Certainly no one in the administration or in the Congress would want to defend this policy on the ground of principle or morality.

It is interesting to note that after the Lehman resolution was adopted unanimously by the Senate in 1956, both the major political parties adopted strong planks on this issue at their national conventions in the summer of that year.

The Democrats said at Chicago:

"We oppose, as contrary to American principles, the practice of any government which discriminates against American citizens on grounds of race or religion. We will not countenance any arrangement or treaty with any government which by its terms or in its practical application would sanction such practices."

And the Republicans said at San Francisco:

"We approve appropriate action to oppose the imposition by foreign governments of discrimination against U.S. citizens, based on their religion or race."

The language of both statements is clear and forthright. It is regrettable that in too many instances those fine statements constitute mere words.

The U.S. agreement with Saudi Arabia, which was negotiated in 1952, was to expire early in 1957. There was every reason to hope, in view of the Senate resolution and the declaration of both the political parties, that the administration would say to the Saudi Arabian Government, firmly and honestly, that this was a reciprocal agreement conferring benefits on both parties; that it obligated each to respect the other, and that we could no longer accept an arrangement which contradicts the fundamental American principle that all Americans are entitled to the equal protection of the law in the United States. We hoped that we would tell Saudi Arabia that the United States could not permit any country to degrade any American into second-class citizenship.

King Saud came to Washington in 1957. He was given a most unusual welcome. President Eisenhower went to the airport to receive him personally. It is true, of course, that he did not receive a red carpet reception in New York City, a fact which displeased him, but which should not have surprised him too much since so many people who live in New York would not be allowed to enter Saudi Arabia on any kind of a carpet.

It is to be regretted that the agreement between the United States and Saudi Arabia in respect to the Dhahran Air Base extended

another 5 years without providing for the termination of these offensive anti-Jewish screening procedures. It has been stated that we made some protest to Saudi Arabia—but the King was in no mood to defer to our concern. As the late Secretary Dulles told the press at a conference on April 23, 1957:

"We brought up the matter . . . during the talks that took place when King Saud was here. I did not find his attitude at that moment very receptive, largely perhaps . . . because of the fact that he felt that he had not been given nondiscriminatory treatment himself in the city of New York."

But, the new agreement went much further than the old. For we now agreed to extend substantial economic and military aid to Saudi Arabia. We agreed to train Saudi Arabian pilots and naval personnel and to expand the port at Dammam.

In following this course of action, we renewed and confirmed an offensive and un-American arrangement. We made possible the practice of discrimination against Americans overseas and, in certain instances, the abridging of the rights of American citizens here in the United States.

This was an abysmal surrender of principle, an abasement unworthy of our country, repugnant to our Constitution, defamatory of our flag. We did this, apparently, because the administration believed that we had to surrender principle to convenience, because it was necessary to yield up the dignity of Americans for consideration of expediency. This degrading course of action was followed because some people thought, apparently, that it was in the best interests of U.S. foreign policy.

Mr. Chairman, I am vitally concerned about the security and defense of the United States. But I insist that there is not a single valid consideration which dictated or justified this course of action. It was expediency, nothing more nor less.

Is the base at Dhahran so essential to the defense of the United States that it must be maintained at the expense of precious human rights? Should we discriminate against our own fellow citizens by signing international agreements conceived in bigotry and born of shameful expediency? Should we accept the alibi that the security of the United States makes this base at Dhahran a vitally important one?

I deny this categorically. For the Dhahran base is not a military base.

I have the testimony of the late Secretary of State himself.

The Department of State Bulletin, August 26, 1957, page 348, quotes a remark made by Mr. Dulles during his August 6, 1956 press conference. He was asked about applying inspection procedures to bases in the Middle East. He replied:

"Answer. Well, we have no bases in the Middle East (addendum: excluding North Africa) unless you include Turkey, and that would be covered in this plan, I presume."

"Question. Dhahran?"

"Answer. That is not a military base."

"Question. Mr. Secretary, on another subject, don't you think that—"

"Answer. Excuse me. We have certain rights there but we do not—but that is not operated as a military base."

Mr. Thomas K. Finletter, former Secretary of the Air Force, believes that " . . . the value of the Dhahran base is relatively small and that it can be replaced, but that the value of the principle involved is high and cannot be replaced." He has stated:

"There has been much unfounded talk about the 'vital' necessity of the Dhahran airfield to the interests of the United States. I think I am reasonably aware of the importance of the base structure of our Air Force and I cannot agree with the idea that any one base such as Dhahran is vital. I happen to believe that our base structure

should be strengthened well beyond its present state but there are many places other than Dhahran where a substitute base for Dhahran and the additional bases which are needed could be located. I do not believe that the need for the Dhahran airbase in any way requires us to sacrifice the principles in which the American people believe."

Are we making this intolerable concession to expediency because of oil? Since oil was first discovered in Saudi Arabia, we have been warned periodically that the Arabian American Oil Co. might lose its advantageous position in Saudi Arabia unless our foreign policy conformed with that of King Saud. We heard this in 1948; we were then threatened with the loss of oil if we supported the United Nations resolution calling for the partition of Palestine. It turned out to be an empty threat then. It will always be empty as long as Saudi Arabia has no place to sell its oil except to the West and as long as oil reserves continue their enormous expansion. Saudi Arabia needs oil royalties just as much as Aramco needs oil. And let no one confuse the corporate and constitutional entities that are known as Aramco and the United States. They are not one and the same.

Will we lose Saudi Arabia as an ally? This question is predicated on illusion. I seriously question whether Saudi Arabia would ever consider itself an ally of the United States. This is not the place for an extended review of our policy. But I do want to place on record my view that our Government miscalculated in 1957. At that time, there was a belief in high quarters that King Saud would embrace the Middle East doctrine, which was then under debate, and that he might become the kingpin of our Middle East policy. This was the reason for the elaborate state visit and the lavish favors conferred on Saudi Arabia at that time. But within a few months, Saudi Arabia again insisted on being neutralist. It wanted no part of the Middle East doctrine. During the 1957 Syrian crisis, Saudi Arabia's U.N. delegate lashed at the United States and the West at the United Nations in language so intemperate and shocking that our Government was constrained to ask whether he was really expressing the views of his King. Was he? We have never found out. However, anyone who thinks the United States can ever count on the King of Saudi Arabia as an ally of the United States in the cause of freedom holds a view that I think is very questionable. The King of Saudi Arabia does not believe in democracy. He is no respecter of human rights. He is a tyrannical absolute monarch who still maintains a slave market. Human rights, human dignity, human liberty for the masses of the people are as foreign to his form of totalitarianism as is the case with communism.

Let us be clear on one major point. The United States will never succeed in establishing a strong and respected policy in the Middle East unless it is prepared to demonstrate its strength—and not its weakness. I am not talking about any fleet maneuver or military parade of might—I am talking about strength of conviction and loyalty to principle. I believe—and I know that many experts on the Near East have felt this way—that the peoples of the Arab world—indeed, the peoples of Asia and Africa—will have much more respect and admiration for us if we refuse to be deflected from our fundamental principles. Our loyalty to the guarantees of the Constitution of the United States is our great strength. When we retreat from the principle of equal citizenship for all of our citizens because of pressure from a foreign monarch who threatens to deny us airbase accommodations unless we surrender to expediency, we lose prestige and respect all over the world. The foreign

policy of the United States must be made in Washington, not in any foreign capital. It must be consistent with the equality of citizenship rights of the Constitution of the United States. It should strengthen the human rights goals of the Charter of the United Nations. It must not be trimmed or tortured to fit the prejudices and passions of other governments.

But instead of strength, we have shown weakness. Once a democratic government yields and retreats before the threats of prejudice and expediency in the formulation of international agreements, it becomes less and less able to resist undesirable diplomatic pressure and it subjects itself to further and more intolerable diplomatic impositions. It is no accident that the Arab boycott against American Jews grew in intensity after the renegotiation of the Saudi Arabia base. In early 1958, the leading American Jewish organizations submitted to this body a document in which they pointed out:

"The Arab blockade and boycott of Israel has now been extended by the Arab League to a systematic boycott and blacklisting of any American enterprise that maintains permanent business connections with Israel or with Israeli firms and indeed to a worldwide effort to boycott any business owned by Jews.

"The Arab League maintains a public blacklist of American and other companies that invest in Israel, maintain branches, assembly operations, or distribution outlets there, or that license patents for Israel use.

"American vessels that stop at Israeli ports are denied permission to make calls at Arab ports.

"American planes that land in Israel are forbidden to fly over Arab territories.

"No American is permitted to enter an Arab land from Israel except on official business.

"Americans who are Jews are a special target of the Arab boycott. Saudi Arabia, particularly, refuses to allow the Arabian-American Oil Co. or other concessionaires to employ Jews for work in Saudi Arabia. Most Arab League states refuse visas to Jewish travelers and some refuse to allow Jews to land even in transit. . . .

"The Arab League has been circulating questionnaires to chambers of commerce and individual companies throughout the world inquiring whether specified companies were controlled by Jews or employed Jews. . . .

"The United States has subsidized the export of wheat to (Arab) countries . . . out of tax funds supplied by all our citizens. The Arab League states refuse to ship their American wheat on blacklisted vessels or to buy wheat from American exporters who are Jews or who have dealings with Israel. . . . In effect, therefore, the United States submits to the operation of the Arab boycott and Americans are taxed for a wheat subsidy plan from which they are barred."

The Jewish organizations which submitted this memorandum declared:

"The Arab boycott of Americans is international intimidation; it thrives on appeasement and capitulation. We are confident that Americans deplore the Arab boycott and will want to resist this impairment of the rights and privileges of American citizenship. We are confident, too, that if the U.S. Government would strongly oppose this international blackmail and medieval bigotry, the Arab boycott against Americans inevitably would end.

"In the light of the foregoing, we, the undersigned, declare our repugnance of the Arab boycott and urge all commercial firms to resist it with every legal means at their command. At the same time, we express our firm hope that our own Government will prohibit racial or religious discrimination against American citizens in the administration of any treaties or executive agreements to which it affixes its signature."

Mr. Chairman, I wish to emphasize that my amendment is intended and designed by me to be universal in its application. I have not singled out Saudi Arabia or any other Arab country for singular or exceptional treatment. My amendment would apply to any and all foreign powers that insist on including in any international agreement with the United States discriminations between and among U.S. citizens based upon race, color, or religious faith.

It is true that the Government of Saudi Arabia has been a notorious offender in this matter because of the anti-Semitic policies toward American Jewish citizens which it has insisted must be acceded to by our Government in its international agreement with Saudi Arabia under the Dhahran Airbase. However, there are other instances of discriminatory practices against certain American citizens followed by other governments, and there is the constant danger that if we surrender our ideals in respect to this principle to one nation, other nations in diplomatic negotiations may use it as a bargaining threat.

I am informed that Norway still discriminates against American citizens who may be Jesuit clergymen. My amendment would apply to that situation, as well. I understand that Iceland discriminates against American citizens who may be Negroes. My amendment would cover that situation also.

Further, let me make clear that I do not argue in support of the proposition that we have any right to interfere with the sovereign right of a foreign government to determine for itself its own domestic public policy in regard to its attitude toward the people of any particular race, color, or religious faith. What I do argue is that in exercising our sovereign rights as a democratic government based upon the constitutional guarantee of equality of citizenship, we have the duty to make clear to any foreign sovereign power that we will not enter into a treaty or executive agreement with such a government unless it is willing to grant the same rights and privileges under that agreement to all American citizens irrespective of their race, color, or religious faith.

Mr. Chairman, I submit to you that the time has come to stop this abject accommodation to the hatreds and hostilities of others. I do not suggest that we should try to reform the world. I know, Mr. Chairman, that we are subject to the charge that our hands are not as clean as we should like them to be. Much can be said in criticism of our own failings on the domestic scene. And I do not believe that we can use the mutual security program as an instrument whereby we will persuade other governments to revise domestic practices with respect to their own citizens which seem inequitable to us. But I do insist, Mr. Chairman, that we must always resist any policies or practices by foreign governments which create distinctions between Americans, and which deny some of our citizens rights which are accorded to others. And certainly, we should not place our blessing on such intolerable affronts by subsidizing them with grants and loans provided by American taxpayers—even, ironically, by some who are the victims of these discriminations.

The history of American diplomacy is replete with many examples of a stirring and honorable stand taken by our Government in defense of the rights of the American people regardless of their race or creed. Secretary of State Lewis Cass declared that the object of our foreign policy is "not merely to protect a Catholic in a Protestant country, a Protestant in a Catholic country, a Jew in a Christian country, but an American in all countries." (Quoted in American Diplomacy, by J. B. Moore, p. 135; 1905.)

In 1885, when Austro-Hungary refused to accept an American minister-designate be-

cause his wife was Jewish, Secretary of State Thomas F. Bayard declared:

"Religious liberty is the chief cornerstone of the American system of government, and provisions for its security are imbedded in the written charter and interwoven in the moral fabric of its laws.

"Anything that tends to invade a right so essential and sacred must be carefully guarded against, and I am satisfied that my countrymen, ever mindful of the sufferings and sacrifices necessary to obtain it, will never consent to its impairment for any reason or under any pretext whatsoever.

"It is not believed by the President that a doctrine and practice so destructive of religious liberty and freedom of conscience, so devoid of catholicity, and so opposed to the spirit of the age in which we live, can for a moment be accepted by the great family of civilized nations or be allowed to control their diplomatic intercourse.

"Certainly it is, in my belief, be accepted by the people of the United States nor by any administration which represents their sentiments."

The United States refused at that time to support the Austro-Hungarian position. In his annual message to Congress, December 8, 1885, President Cleveland declared:

"Question has arisen with the Government of Austria-Hungary touching the representation of the United States at Vienna. Having under my constitutional prerogative, appointed an estimable citizen of unimpeachable probity and competence as Minister at that court, the Government of Austro-Hungary invited this Government to take cognizance of certain exceptions, based upon allegations against the personal acceptability of Mr. Kelley, the appointed envoy, asking that in view thereof, the appointment should be withdrawn. The reasons advanced were such as could not be acquiesced in, without violation of my oath of office and the precepts of the Constitution, since they necessarily involved a limitation in favor of a foreign government upon the right of selection by the Executive, and required such an application of a religious test as a qualification for office under the United States as would have resulted in the practical disfranchisement of a large class of our citizens and the abandonment of a vital principle in our Government. The Austro-Hungarian Government finally decided not to receive Mr. Kelley as the envoy of the United States, and that gentleman has since resigned his commission leaving the post vacant. I have made no new nomination, and the interests of this Government in Vienna are now in the care of the secretary of legation, acting as chargé d'affaires ad interim."

In 1880 an American Jew was expelled from Czarist Russia once his Jewish identity became known. This brought a sharp protest from John W. Foster, the American Minister to St. Petersburg and the grandfather of the late Secretary of State Dulles. Mr. Foster had the backing of the Department of State.

In 1908, in his speech of acceptance of the Republican nomination for the Presidency, William H. Taft noted:

In some countries . . . distinctions are made in respect to the treatment of our citizens traveling abroad and having passports of our executive, based on considerations which are repugnant to the principles of our Government and civilization.

He committed his party and administration "to make every endeavor to secure the solution of such distinctions which in our eyes are both needless and opprobrious."

On December 15, 1911, Secretary of State Philander C. Knox notified Russia that the United States had decided to abrogate the treaty between the United States and Russia of 1832 because Russia was refusing to honor American passports duly issued to American citizens on account of race or

religion. This action of our Government was strongly approved by the Republican National Convention in 1912, and in the same year by the Democratic National Convention and the Progressive Party Convention.

I offered my amendment to the Mutual Security Act on July 8 because this is the right place for us to make our stand.

This year, the Mutual Security Act contains a new statement of purpose. We say:

"It is the sense of Congress that peace in the world increasingly depends on wider recognition, both in principle and practice, of the dignity and interdependence of man, and that the survival of free institutions in the United States can best be assured in a worldwide atmosphere of expanded freedom."

If we believe this statement to be true, then I suggest, Mr. Chairman, that we should not allow a single American dollar to be used to confirm and subsidize policies which mock that high purpose.

If we believe in the dignity of man and in the survival of free institutions, and in expanding freedom, then let us back up our ideals with action which is consistent with those ideals. Let us take our stand, once and for all, against practices which dishonor men, which deny their equality, and which subvert free institutions. Let us not vote money which perpetuates these practices and which weaken America as the leader of the free world.

The amendment I offered on the floor of the Senate was defeated by a close vote, 47 to 43. I believe that some Members of the Senate may not have been fully informed of the issue involved when the roll was called, because some who voted "no" were among the sponsors or supporters of the original Lehman amendment. Accordingly, I announced my intention of pursuing this matter further. I have been greatly encouraged by the extraordinary decision which was handed down by the Supreme Court of New York State on July 15, when the court overruled a ruling by the New York State Commission against discrimination which had allowed Aramco to question job applicants about their religion, on the ground that Jews would not be allowed to enter Saudi Arabia.

The New York State Commission had granted Aramco an exemption from the operation of New York law after our Department of State had reported to the agency that denial of an exemption might affect American policy in the Middle East.

The New York Supreme Court said:

"If the enforcement of the public policy of New York State would embarrass the State Department in the Near East, then it should be said that the honor of American citizenship—if it remains for New York State to uphold it—will survive Aramco's fall from Arab grace."

In other words, Aramco has now been told that it may not violate New York law at the behest of a foreign government. It now remains for the Congress of the United States to tell our Department of State that it must not underwrite discriminatory practices against American citizens by any foreign government. The New York Supreme Court decision may mark a decisive turning point in this unpleasant controversy. The decision struck a long overdue blow against sacrificing equal rights of citizenship for all Americans in international agreements upon the altar of unconscionable expediency. I ask this committee to take a similar position. I believe that this is the right place to make this request because we are concerned here with a measure which should strengthen not weaken U.S. foreign policy and enable our country to continue in its place of high leadership in the free world. We cannot presume to lead the free world coalition in the defense of freedom if we are parties to its subversion.

Consumers Get Most Benefit

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. HOEVEN. Mr. Speaker, pursuant to my remarks in the RECORD of July 7, 8, 9, 20, and August 3, I include the sixth in a series of articles prepared by Mr. Alvin F. Bull, managing editor of Wallaces' Farmer, concerning the farm problem. This article will appear in the August 15, 1959, edition of Wallaces' Farmer:

CONSUMERS GET MOST BENEFIT

(By Al Bull)

Hybrid corn, stilbestrol, nitrogen fertilizer, four-row equipment—we hailed these amazing production boosters for their benefits to the farmer.

It's true that they have helped farm folks. But the consumer of food has benefited even more.

New technology in agriculture has a habit of doing that—helping the consumer more than the farmer in the end. Unfortunately, the consumer seldom recognizes this.

Let's take an imaginary example. Suppose the research workers in USDA find an inexpensive new hormone that enables sows to raise one more pig per litter.

The first folks who adopt it make a good profit from its use. They have more hogs to market with little additional expense.

This gives them a lower cost per pig, and the few extra hogs these early users send to market do not affect prices much. But then neighbors see how well the hormone works. So they try it and produce more pigs, too.

Demand for hogs is inelastic (a 1-percent increase in supply drops prices 2 to 3 percent). So the sizable increase in total supply drops prices enough to decrease producers' total income from hogs.

There's no benefit left for hog producers. But the consumer gets cheaper pork chops. And the hog-corn ratio settles a little lower to allow for the decrease in production costs.

The consumer buying pork chops for less probably doesn't realize that his saving is the result of new technology in agriculture. But he may have heard what a great thing the new hormone has been for farmers.

Often the consumer doesn't even see the saving. It may be soaked up in the processing and marketing channels. Still the consumer benefits. His pork chop price holds steady instead of rising to allow the bigger marketing margin.

This new technology situation is imaginary but typical. The first folks adopting a new cost-cutting practice make money from it. But when the bulk of farmers take it up, the benefit is passed on to the consumer (or processor).

Farmers now grab up new technology rapidly, trying to be one of the leaders who profit from the practice.

This is why the consumer, still spending about 25 percent of his income about 25 percent of his income for food, eats much better than in the past.

Last year, for example, the average consumer spent \$397 for food, 22.2 percent of his disposable income.

Had he purchased the same type and quantity of food as in 1935-39, the bill would have been only \$287—only 16 percent of his income.

The difference lies in extra services, better quality food, and the upgraded diet represented by the 1958 purchases.

New technology has been pouring into agriculture at an explosive rate. The production boom that resulted accounts for much of our farm surplus problem.

Antibiotics, new crop varieties, systemic insecticides and the rest of agriculture's new technology are no accident. We, as a Nation, planned it that way through more than the past 100 years.

It seemed wise planning, too. We had a growing population to feed. Folks that could be spared from food production were needed to make industrial goods for our growing economy.

So the Government endowed land grant colleges and USDA with generous funds for production research.

U.S. tax policies have encouraged commercial research, as well as the manufacture of items which increase farm production. Fertilizer is an example.

Government programs—reclamation, parts of SCS and ASC—still work primarily to expand production.

Farmers responded. Output per man-hour on the farm has more than doubled since 1940, for example. This record outstrips most industries.

Most of the benefit of these efforts went to consumers.

They have more food than they can eat. Never have they faced the threat of starvation which worries most of the world.

They buy their food with a smaller percentage of their incomes than in any other nation.

Many young workers have been raised on the farm but freed from food production to turn out luxury items that give the United States the highest standard of living in the world. One farmworker now produces food for 23 others.

Our farm technological revolution has spurred economic progress for the Nation. But it has not always brought equal benefits to farmers.

In a nutshell, new technology pouring into agriculture has built up the productivity of land, labor, and capital to where we are faced with surpluses.

This does not mean that we should call a halt to production-boosting research. Nor that we should outlaw the use of fertilizer, feed additives, or machinery.

Neither should we even be slow in seeking improved practices in the future. This would be turning our back on progress.

But a backlog of improved production practices in the hands of research folks almost guarantees that surplus problems will be with us for years to come.

This leaves farmers holding the bag. Unless, that is, we find an acceptable way to bring supply into balance with demand.

Cardinal Cushing Is Right

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely editorial which appeared in the Sunday Telegram-News, Lynn, Mass., for August 9, 1959:

CARDINAL CUSHING IS RIGHT

Richard Cardinal Cushing is right. Nikita Khrushchev, the Soviet Premier, should not

be allowed to put his foot on U.S. soil. It was edifying to learn that the archbishop of Boston is firmly opposed to the Red chief's visit here.

Congressman JOHN W. MCCORMACK, of Boston, the majority leader in the National House of Representatives, shares the same thought as the cardinal. He does not believe that Khrushchev should come to the United States either. By Papal decree, the highest honors of the Catholic church have been conferred upon the noted Democratic Congressman and his wife, Mrs. Harriett McCormack, a former opera singer of eminence.

Premier Khrushchev has the dubious reputation of ordering the killing of 2 million people in the Ukraine, and a later "indoor sport" of his was to put thousands of Hungarians to death. He allows one Catholic priest and one Protestant minister in the whole of Russia and carries out the destruction of synagogues, so that the Jews have no place to worship.

It is not known whether Khrushchev is a relative of the late Adolf Hitler, who murdered over 7 million Jews, and thousands upon thousands of Poles, and Czechoslovaks. But he certainly should be kept out of the United States.

Eliminate Legislative Detours on Highways

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hazleton (Pa.) Plain Speaker of Friday, August 7, 1959:

ELIMINATE LEGISLATIVE DETOURS ON HIGHWAYS

The communities which have been fighting for badly needed superhighways in northeastern Pennsylvania have cleared one roadblock after another in the past few years to get their fair share of the interstate road program.

But the legislative detour which a congressional committee threatens to impose at the very base of the entire program—the Federal financial base—might well turn out to be the straw which will break down all the hard won gains for a modern road system in this distressed area.

Certain Members of this same Congress, which votes multibillion foreign aid bills session after session, would, through what amounts to penny pinching, sabotage the entire road program. Proposals made by the House Ways and Means Committee would delay the construction timetable and cause most of the activity by the participating States to grind to a halt.

It is difficult to believe, but the evidence is at hand, that some Members of the Congress are so nearsighted that they cannot see the enormous scope of the Federal highways program. This is not just another porkbarrel project—but one on which the next era of economic and industrial development of this Nation hinges.

Just as the early canals and railroads enabled the continental concept of this Nation to materialize, so will the vast network of superhighways planned under the Federal Roads Act of 1956 be a network of lifelines for our rapidly expanding economy.

And areas such as Hazleton and its sister communities of northeastern Pennsylvania,

long outcasts and orphans as far as attention from the great white father at Washington is concerned, must have these new highways, and have them soon, if their self-help efforts to salvage their economies are to continue with any success.

Union Immunities

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. ALGER. Mr. Speaker, the Landrum-Griffin bill is the minimum protection needed against labor organizations' tremendous monopolistic power.

Actually the teeth that are needed in any labor bill can be provided by placing labor organizations under antitrust law, as my bill H.R. 8003 would do, as outlined on pages 14195-14198 CONGRESSIONAL RECORD August 3.

An editorial appearing in the Wall Street Journal April 11 entitled "Union Immunities," with reference to Dr. Roscoe Pound's book "Legal Immunities of Labor Unions," is certainly pertinent to the current labor debate, out of which will come labor reform, if any.

Under leave to extend my remarks in the RECORD, I include the above-mentioned article:

UNION IMMUNITIES

On this page today there is a letter from a reader who asks us to elaborate on the subject of organized labor's immunity from laws which affect all other Americans.

Several months ago this newspaper printed a condensation of a booklet entitled "Legal Immunities of Labor Unions," written by Dr. Roscoe Pound, former dean of Harvard Law School, and published by the American Enterprise Association, Inc., of Washington, D. C. In that essay Dr. Pound listed labor's immunities and noted how they endanger the rights of property of both employer and public.

In practice these immunities include: The reluctance of courts to look upon crimes—committed during labor disputes by labor operatives—as crimes, per se; the refusal of unions to become legally responsible organizations by incorporating and so becoming legally tangible entities; and the practice of committing all matters affecting labor organizations to an administrative agency instead of confining the agency's jurisdiction to matters involved in employer-employee relationships.

To illustrate such immunities, consider first the fact that no effective legal action can be secured against unions as such for interference by pickets with travel on streets and highways, destruction by pickets of property and other such common occurrences during strikes. As Dr. Pound writes, "The members of a union are not its agents and the union is not liable for the acts of its members in the course of a labor dispute." Yet, "the employer is held for what his agents and employees do in the course of their employment."

The legal irresponsibility of unions is exemplified by their ability to break contracts by striking for reopening of talks even though a provision in the contract prohibits it. In one case when this happened the company sued for damages. Yet the court held that the best interest of all parties

would be served if the question of damages for the 3 weeks' stoppage was eliminated, "to avoid the regeneration of antagonisms that finally have been dissipated." In other words, the union can break a contract with impunity in order that there will be no hard feelings.

The practice of turning over all kinds of cases affecting organized labor to an administrative agency, the National Labor Relations Board, has further strengthened unionism's power. Whereas other regulatory agencies are supposed to function to protect the public, the NLRB has habitually operated with the apparent aim of protecting organized labor alone.

But more than anything else, organized labor owes its unique position of power to its immunity from antitrust laws which prohibit monopolistic combinations and agreements in restraint of trade. It is just such combinations and agreements which provide big labor with its lethal punch.

Several unions, such as Walter Reuther's United Auto Workers, control the manpower in entire industries. For all practical purposes, one word from Mr. Reuther can close every auto factory in America. No human being outside the labor movement has such power. Even an attacking enemy would be hard put to so thoroughly cripple the Nation. That unions not only have this power but use it at will is exemplified by the industrywide steel strikes in recent years—one of which came at the height of the Korean war.

If organized labor were brought under antitrust laws could it still bargain effectively for the workers? It is obvious that it could. Local unions could still bring tremendous pressure on individual companies, and it could bring this pressure without jeopardizing whole industries and the national security.

As there is no question about the permanence of an articulate labor movement on the national scene, so there can be no doubt that excessive power in the hands of unionism is a threat to the well being of the Nation. The answer to the problem lies in action by Congress to limit that power. For it was Congress in the first place that permitted unions to menace the Nation's welfare by granting them immunity from the Nation's laws.

The Visit of Khrushchev

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following editorial from the Pittston (Pa.) Sunday Dispatch of August 9, 1959:

THE VISIT OF KHRUSHCHEV

Many pros and cons have developed in this region as well as throughout the country on the proposed visit of Nikita Khrushchev, the Soviet Premier, to this country.

Fact is, during the week there were several disturbances in local taprooms when tempers got hot as beer garden clients gave their views on the subject. In one case the city police were called to halt what was changing from words to fists—all because of the discussion on Khrushchev's visit.

Actually, we think it is a good thing—not the barroom fighting—the visit of the Soviet Premier.

When nations are talking, they are not fighting.

We believe it will impress Khrushchev when he sees the United States and realizes that here in the United States people have much to protect, and are willing to do just that when the chips are down.

Many top leaders and other have tagged Khrushchev as "the murderer of Hungary," etc., and as the head of the government that did those things; let's say the title suits him.

However, the point of his visit is not to be exonerated for his past actions, nor to coddle him in fearful fashion. The purpose is to create a friendlier attitude between nations that man end the cold war, ease tensions, and cancel out the fears of a world-destroying world war III.

The exchange of visits—Khrushchev to the United States, Eisenhower to Russia—may be just what is needed to bridge the gap between the two great powers. Certainly the United States doesn't want control over any other nation, and these exchange visits may convince Russia of that and at the same time show Russia the futility of oppression in European countries such as Hungary.

Now it may not work out that way. The Soviets may still continue past practices—but it is worth a gamble. War at any time is hell—but nuclear war would be deadly right in the kitchen of every home.

Exchange visits, talks, handshaking, negotiation, or what have you in the line of diplomacy can be irritating—but irritation is an inconsequential thing compared to what could happen if each country slammed the door on the other.

Blind Can Lead the Blind

EXTENSION OF REMARKS

OF

HON. JOSEPH M. MONTTOYA

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. MONTTOYA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article which appeared in the June 28, 1959, issue of the Albuquerque, N. Mex., Journal. This article, in my opinion, clearly demonstrates the tremendous courage which the blind people of our country have shown in the face of overwhelming odds. The blind do not want sympathy; all they ask is an opportunity to prove their worth:

FIVE HUNDRED DELEGATES MEETING IN SANTA FE BELIEVE BLIND CAN LEAD THE BLIND

SANTA FE.—About 500 persons meeting here this weekend believe emphatically that the blind can lead the blind.

They are delegates attending the annual convention of the National Federation of the Blind, an organization they quickly point out is of the blind not just for the blind.

The founder and president is Dr. Jacobus Tenbrook, 47, professor of speech and chairman of the department at the University of California at Berkeley.

Tenbrook has five degrees, mainly in law; has written three books on constitutional law and public welfare, and is married and the father of three active children.

FOUR THOUSAND MEMBERS

He has been blind since childhood, a fact he considers as much a nuisance as his Dutch ancestry.

All officials of the federation, which has chapters in 46 States, are blind. One dele-

gate laughingly said the only requirement for membership is to be blind and want to join.

Sighted persons may join but hold no office. There are about 40,000 members.

The blind have the right and the competence to speak for themselves through their own organizations and no outside group—however well-meaning has the right to presume to speak for them typifies the attitude of the group.

The federation also is interested in breaking down social barriers between the blind and sighted persons, so that the blind will be accepted as normal human beings, no better nor worse than the rest.

OPPOSE SPECIAL SHOPS

Asked what it means to be blind, members may reply with their own questions:

"Have you ever entered a room and felt an awkward hush come over those already there?"

"Was the person with you at dinner ever asked, 'Does he take cream in his coffee?'"

"Were you ever practically lifted on or off a bus?"

"Has anyone ever avoided the word 'see' in your presence?"

Citing the otherwise normalcy of the two-thirds out of 1,000 blind persons in the United States, delegates point out the group includes about 100 practicing lawyers as well as a prison convict—sentenced for check forging.

They object to special shops and "cages" for blind citizens and demand their right to work along with "their sighted fellows in the professions, common callings, skilled trades, and regular occupations."

BLEW HIS TOP

Jack Polston, a stocky, athletic-looking delegate from Costa Mesa, Calif., was blinded in 1955 in an accident while working at his trade as a journeyman electrician.

A roughish, self-reliant fellow, Polston blew his top when an agency worker suggested his wife get a job to help bring in money.

"I was a damned good electrician. I wasn't any different than before, except I just didn't have any eyes," Polston said.

Determined to support his family, he went to the Oakland orientation center for the blind, administered by Allen G. Jenkins.

"If you're looking for sympathy around here, you won't find it any place but in the dictionary," Jenkins, who has been blind since childhood, told Polston.

Polston recalls that during his 17 months in the center, the instructors, all blind, not only taught me how to get around, but an attitude—to accept the blindness and go on from there.

USUAL REPLY

Returning home, Polston convinced his union officials and they convinced contractors that he was still a journeyman electrician.

When contractors called the hiring hall for an electrician, the union expeditor would sometimes reply, "we got a good man here. There's only one thing you should know—he's blind."

Polston said the usual reply as he became better known was, "Hell, I don't care. If he can do the job, send him out."

There is the answer the federation is seeking for all the blind.

The federation, since organized 19 years ago, has set as its primary goals the destruction of the protective caretaker philosophy of agencies for the blind and on the other hand the assertion that—

"1. Blind people are essentially normal people and blindness is not in itself a mental or psychological handicap but only a physical nuisance.

"2. All discriminations against the blind—legal, economic, and social—which flow from the misconception of blindness as more than a physical disability must be abolished in

favor of the complete equality of opportunity for all who are blind."

SEEK PASSAGE

"3. The blind themselves are qualified to lead the way in solving their own problems because of their personal experience with blindness."

It is this final point upon which the federation has become most belligerent, and is now seeking passage of a Federal law to require Federal agencies for the blind to consult with the blind in making decisions.

Federation leaders also claim longtime political and private agencies for the blind have threatened economic reprisal to prevent the organization of self-governing local blind associations.

They testified in Washington, D.C., last March on behalf of the proposal they believe will protect the right of the blind to organize and to be consulted on matters concerning their welfare.

TWO REQUIREMENTS

Popularly known as the Baring-Kennedy bill, the measure was introduced by Senator JOHN KENNEDY, of Massachusetts, and Representative WALTER S. BARING, of Nevada.

The bill would require the Secretary of Health, Education, and Welfare to do two things:

1. To consult and advise with authorized representatives of organizations for the blind in the formulation, administration, and execution of programs for the aid and rehabilitation of the blind.

2. To enforce a prohibition against agencies supported by Federal funds from exerting official influence against the right of the blind to join organizations of the blind.

Witnesses for the bill at the hearing included a chemist, electrician, former member of two legislatures, a public utility commission executive, a schoolteacher, couple of lawyers, and others from every walk of life—all blind.

U.S. Olympic Committee Clarifies Position Relative to Recognition of Red China and Its Participation in Olympic Games

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. VAN ZANDT. Mr. Speaker, today the following letter was received from Mr. Kenneth L. Wilson, president of the U.S. Olympic Committee, in which he definitely clarifies the position of the International Olympic Committee regarding the recognition and admission to the Olympic games of Communist China. Attention is called to the third paragraph in Mr. Wilson's letter of August 10 in which he says:

Contrary to common opinion the action of the International Olympic Committee concerning Nationalist China was not influenced by the People's Republic of China, i.e., Communist China. Prior to the International Olympic Committee action Communist China had voluntarily withdrawn from Olympic competition and has shown no inclination to apply for readmission. Nor does it seem likely that she will be readmitted in the foreseeable future.

In plain words, Red China voluntarily withdrew from Olympic competition and has made no effort to apply for readmis-

sion. In view of the confusion and misunderstanding that has arisen, I urge the reading of Mr. Wilson's letters of July 31 and August 10, which follow:

U.S. OLYMPIC COMMITTEE,
New York, N.Y., August 10, 1959.

HON. JAMES E. VAN ZANDT,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN VAN ZANDT: We want you as a Member of the U.S. House of Representatives to know the steps the U.S. Olympic Committee has taken to have the International Olympic Committee recognize and admit to the Olympic games the Olympic Committee of Nationalist China under the name "Republic of China Olympic Committee."

We hope this will clear up in your mind any possible misunderstanding that has been generated by inaccurate publicity given this matter.

Contrary to common opinion, the action of the International Olympic Committee concerning Nationalist China was not influenced by the People's Republic of China, i.e., Communist China. Prior to the International Olympic Committee action Communist China had voluntarily withdrawn from Olympic competition and has shown no inclination to apply for readmission. Nor does it seem likely that she will be readmitted in the foreseeable future.

Yours very truly,

KENNETH L. WILSON,
President.

U.S. OLYMPIC COMMITTEE,
New York, N.Y., July 31, 1959.

The U.S. Olympic Committee met in Philadelphia, Pa., July 19-20, 1959, for an emergency session. After considerable discussion, the following statement was issued:

"The U.S. Olympic Committee strongly urges that the International Olympic Committee take immediate action to recognize the Nationalist Chinese under their rightful name—the Republic of China Olympic Committee. The U.S. Olympic Committee feels that immediate recognition of the Republic of China Olympic Committee can be accomplished in view of a statement made July 19 by the International Olympic Committee President Avery Brundage.

"Mr. Brundage said: 'The wording of the resolution adopted at the IOC meeting May 28, 1959, was unfortunate and certainly did not express the intent of the Munich meeting. The IOC action was merely a move to identify properly the athletes living on Taiwan (Formosa). The Formosa Chinese have now applied under the name of their country—the Republic of China Olympic Committee. I will recommend and support the recognition of this committee under this name.'

"The U.S. Olympic Committee is convinced that any delay in reinstating the Nationalist Chinese (Republic of China Olympic Committee) will seriously damage the Olympic movement in the United States.

"The U.S. Olympic Committee itself has no voice or vote in the affairs of the International Olympic Committee, and can only make recommendation to that body, as it is now doing.

"Because the United Nations headquarters are located here, and because the United Nations recognizes the Nationalist Chinese as the Republic of China, the American public view is understandable.

"This is a desperate situation and our hope is that the International Olympic Committee will help to correct it."

Sincerely yours,

KENNETH L. WILSON,
President.

ASA S. BUSINELL,
Secretary.

Labor Statesmanship

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. ALGER. Mr. Speaker, it is important that restrictive trade practices and restraint of trade as have grown up under the unions' monopolistic position should be restrained. Legislation placing unions under antitrust law is possible as I have explained during current debate on the labor bill. Price fixing is but one of the economic consequences of labor's monopolistic position. There are many others and labor's monopolistic position culminates in labor leader dictation to our Government.

An editorial entitled "Labor Statesmanship," by George E. Sokolsky, is rather thought provoking on this subject. Labor organizations should be placed under antitrust law. Nothing short of this will solve the problems confronting us.

The editorial follows:

[From the Washington Post, May 2, 1959]

LABOR STATESMANSHIP

(By George E. Sokolsky)

The outpricing of American commodities is, in a measure, due to the unstatesmanlike attitude of the labor leaders who stimulate inflation by demanding increases in wages which produce increases in prices.

As a result, the purchasing value of the dollar goes down. In a word, as compared with the dollar in 1940, the purchasing value of the dollar is now 48 cents. Higher wages can mean a lowered value for the dollar. This process can continue until the dollar is worth little or nothing.

Again one may use the automobile industry as an example. The price of the American car in 1957 and 1958 encountered resistance, resulting in sufficient unemployment in Michigan as to be a serious problem and at the same time an increased import of European cars in the United States which became a competitive factor in 1958. Fortunately, it now appears that the trend in both categories is not as severe in 1959. Nevertheless, outside of the United States American cars are outpriced and American automobile companies are increasing their investments in foreign countries.

The Government of the United States encourages private investments abroad wherever possible. This is done for political reasons, but it is unrelated to the unemployment problem in the United States which, if continuous and if the numbers increase, may have very serious social effects.

Some labor leaders when they call strikes avoid asking for direct wage increases, but prefer what is euphemistically called a package deal. This includes various fringe benefits which, by any calculation, amount to increased wages; but the payments are postponed. For instance, maternity benefits for women workers are a form of wages but they are paid out by other means than a weekly check. Similarly, increases in vacations with pay involve the cost of labor by other bookkeeping procedures than hourly wage payments.

All fringe benefits are calculated as costs of operations and go into the price which increases with each round of strikes or threats of strikes. To keep prices down, that is, to keep the cost of production down,

management adopts all sorts of labor-saving devices, reducing the manpower engaged in production.

Unless this manpower can be absorbed in other industries or in service operations, there must be unemployment.

The management of labor unions faces difficult problems. The thoughtful, conservative leadership which is headed by George Meany, president of the AFL-CIO, is always badgered by two groups, the ideological socialists, such as Walter Reuther, who usually have a good press, and the racketeers who cause trouble because they have made unionism a private business and operate without consideration for the welfare of the country.

A combination, for instance, of Harry Bridges, who has taken the fifth amendment as to his Communist affiliations, and Jimmy Hoffa, whose union has been expelled from the AFL-CIO for corruption, is a menace to the United States as great as any foreign foe. Harry Bridges recently impudently announced that he, and not the President or Congress, would determine what is the foreign policy of the United States. He said that no matter what the President, the Department of Defense, the State Department or the Congress decided as the policy between the United States and Formosa and the United States and Red China, he, Harry Bridges, private individual, of alien origin, would have to approve that policy so far as it could be implemented by the shipment of arms. In a word, he established a veto power for himself. This is an intolerable situation in any country for any individual. When Bridges and Hoffa combine, these two men could control the transportation operations of the entire Nation and could imperil the national defense.

It Will Help Region

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittston (Pa.) Sunday Dispatch of August 9, 1959:

IT WILL HELP REGION

Reports that the Glen Alden and Hudson Coal Co.'s may take over several pumping stations previously handled by the Lehigh Valley Coal Co. and the Pennsylvania Coal Co. serves as a shot in the arm for the hopes of the coal business in this region.

It will be a big blow against mine abandonment, and probably with some later cooperation from regional mineowners and some help from governmental agencies, the mines of Greater Pittston may become workable again.

There are many persons on the street who express the opinion that we should forget about spending any money on rehabilitating mines in the Pittston region. They cite many things—but one thing they do not cite is the fact that there are thousands of mine workers unemployed. These men worked all their adult lives in the mines and most of them are far past the age of 45. They cannot obtain other employment for two reasons—(1) there is little if any other employment to obtain in this region; (2) few employers will hire men over 45, particularly when it means breaking them in on unfamiliar jobs.

That's why it is important to all as neighbors and as beneficiaries from full employ-

ment to urge rehabilitation of regional mines. It is also the reason why the reports about the Glen Alden and Hudson Coal Co.'s stir confidence in our regional economic progress.

Why the States Don't Want United States To Give Back Rights

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond as it appeared in the New York Herald Tribune of August 5, 1959:

WHY THE STATES DON'T WANT UNITED STATES TO GIVE BACK RIGHTS

(By Roscoe Drummond)

SAN JUAN, P.R.—There is no better place and time than here and now, at this 51st annual Governors' conference, to give a report on what has happened to the noble experiment which President Eisenhower launched 2 years ago. He proposed to give back to the States some of the "States rights" which the Federal Government had preempted and to reverse the flow of power from the State capitals to Washington.

Question. What has happened? What have been the accomplishments?

Answer. Nothing has happened. There have been no accomplishments.

I don't mean that there haven't been some speeches, several resolutions, one or two modest proposals. Yes, all of that and some more of the same here this week.

But no Governor has arranged for his State to recover a single function which the Eisenhower administration has offered to give back.

You are familiar with the debate: How the Federal Government is constantly increasing its power and how the States are constantly losing their powers; and can't something be done about it? When the President addressed the Governors' Conference at Williamsburg in 1957, he proposed a commission of Federal officials and State Governors to cite some functions which could be returned to the States and some taxation which could be given up so that any State which so wished could take back both the function and the taxation.

Sounds made to order, doesn't it, for any Governor and any legislature wanting to begin to redress the balance of State-versus-Federal power? The commission suggested several modest starts like the vocational education-grant programs and small-scale natural disasters.

But no State has acted to take back a single function.

This Governors' Conference here in San Juan continues to debate "The States and the Nation," as it does again this week, but the States find more reasons for doing nothing than for doing anything about it.

There are reasons. I don't want to suggest that there aren't. The reasons are these:

1. The Governors of the more prosperous States have so much on their hands that they feel no Federal encroachment and are quite content to leave things as they are.

2. There are other Governors who theoretically would like to see certain functions recovered by the States but who cannot bring themselves to levy the State taxes to finance these functions even when the Federal Government abandons the same taxes.

3. There are also Governors who would rather have the States' rights issue to talk about than to solve it. They know that they can't recover a State right without recovering a State responsibility, and when they complain about the Federal Government performing a service which belongs to the States, they really don't want the service performed at all, either by the States or the Federal Government.

Underlying all of these resistances by the States to recovering functions which are performed by Washington is a weakness of every State government which, until it is corrected, will prevent any important redress of the balance. That weakness is the distorted representation of rural districts in the State legislatures.

The rural districts of every State in the Union have massively disproportionate legislative power and dominate the legislatures to the disadvantage of the underrepresented cities.

The mayors of the cities know they will get nowhere when they appeal to their own States for help, so they inevitably turn to the Federal Government as the only recourse.

A Letter From the White House: No Invitation to Chou En-lai

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following correspondence between myself and the President and a brief statement which I issued to the press today:

AUGUST 4, 1959.

THE PRESIDENT,

The White House.

DEAR MR. PRESIDENT: I agree with you that an exchange of visits between you and Premier Khrushchev may create better understanding between the United States and the Soviet Union and thereby promote the cause of peace. It seems to me that the cause of peace could be promoted for exactly the same reasons if you and Chou En-lai were to exchange visits.

China, like the Soviet Union, is more enemy than friend. China's internal hate campaign against the United States is well known, as are China's aggressions in Korea and against Taiwan. But surely, if better understanding might lead to peace between us and the Soviet Union, we should at least attempt better understanding through visitor exchanges with China, at all levels, to promote the cause of peace in this area.

Of course this involves recognition of China. This can be done without turning "soft." Recognition does not mean forgiveness or approval. William Macomber, Jr., Assistant Secretary of State, wrote me July 31, 1959:

"As I have mentioned in previous letters to you the fact that we maintain normal diplomatic relations with a particular country does not imply that we approve or disapprove of its internal policies or practices."

Your hopes and efforts, applauded by almost everyone, to achieve the end of nuclear tests require that we recognize China. No feasible inspection agreement can be concluded without the participation of China, the world's largest and most populous nation.

Considering your great responsibilities and the state of your health, your agreement to

go to Europe and to the Soviet Union may very well rule out a trip by you to China in the near future. With this in mind, and with deep admiration for your selfless decision to make the trips to Europe and the Soviet Union, I offer this alternative suggestion: That you encourage visitor exchange on other levels. I refer particularly to Members of Congress, journalists, national leaders, teachers, and students.

Such visitor exchanges with China might also lead to better understanding which would promote peaceful relations with China just as we are now trying to do with the Soviet Union.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

AUGUST 7, 1959.

The Honorable CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: Thank you for your letter. I am glad to have your suggestion that I exchange visits with Chou En-lai, as well as your view that we should afford recognition to Red China.

I cannot agree with you that it would be desirable for this country to give diplomatic recognition to Communist China or for me to invite Chou En-lai to visit this country. So long as the balance of advantage lies in maintaining our present policies in the Far East, I believe we should not change them. I believe these policies best serve the cause of peace.

With best wishes,

Sincerely,

DWIGHT D. EISENHOWER.

STATEMENT OF CONGRESSMAN CHARLES O. PORTER, DEMOCRAT, OF OREGON, AUGUST 12, 1959

I appreciate the President's personal attention to my letter. However, I regret that the only matter of substance was his flat assumption that "the balance of advantage lies in maintaining our present policies in the Far East." On the basis of this reasoning the President apparently believes that "the balance of advantage" has tipped the wrong way with respect to the Soviet Union. That is presumably why he has invited Khrushchev to visit us, but not Chou En-lai. In my opinion the President holds no such views but they would naturally follow from his letter to me.

The President did not comment on my statement that visitor exchanges at all levels with China could promote peace just as the existing and expanding visitor exchange program with the Soviet Union promotes better understanding and peace.

Nor does the President suggest how we can achieve an end to nuclear weapons testing unless China subscribes to the inspection agreement.

While it is virtually unique, as well as an honor and a pleasure, to receive a letter from the President, and while it is gratifying to know he has personally considered this important matter, I would rather have received a more responsive letter from one of his assistants. Disputed issues of this magnitude need responsive and responsible discussion.

Hoffa's Combine

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. ALGER. Mr. Speaker, many people throughout our great land both with-

in and outside the labor movement are alarmed over the monopolistic position of labor unions which are above and beyond antitrust law. This situation needs to be corrected.

Perhaps one of the best current studies showing the need for antitrust law can be found in the article by Roscoe Born which I would like to include for the attention of my colleagues during our labor debate:

HOFFA'S COMBINE—HE QUIETLY, INFORMALLY BUILDS POTENT ALLIANCE OF TRANSPORT UNIONS—TEAMSTERS AND MARITIME UNITS ARE CORE; FLIGHT ENGINEERS FRIENDLY, RAIL UNIONS SHY—WHAT WILL AFL-CIO DO?

(By Roscoe Born)

(Reprinted from the Wall Street Journal, Apr. 22, 1959)

WASHINGTON.—The grand alliance of transportation unions that Teamster President James R. Hoffa proclaimed last year, then appeared to abandon after outcries of alarm, has quietly become an all-but-accomplished fact.

Largely unnoticed, Mr. Hoffa and key collaborators have put together basic pieces of the combine—enough of them to indicate that an unprecedented Teamster-led monopoly is taking shape. The transport combine will have greater power to bargain, to organize and to strike than do its unions operating on their own. Whether or not this power is ever called into full play—as, say, in a national transportation strike—the mere fact of its existence will make the combine formidable for employers and for the public at large.

Here's the status of the assembly operation so far:

Mr. Hoffa's own truckdrivers are now firmly linked with longshoremen and seamen's unions on both coasts. These allies include Joe Curran's AFL-CIO National Maritime Union, with 40,000 members sailing out of Atlantic and gulf ports; Paul Hall's AFL-CIO Seafarers' International Union, with 75,000 members on both the Atlantic and Pacific coasts, as well as the Great Lakes; Harry Bridges' Independent International Longshoremen's and Warehousemen's Union, numbering 70,000 dockworkers and warehousemen on the Pacific coast and in Hawaii; and Capt. William Bradley's independent International Longshoremen's Association, with 52,000 dockhands on the Atlantic coast.

ANOTHER UNION BOXED IN

Another dock union, holding sway on the increasingly important Great Lakes, is boxed in to the point where it may have to join the Hoffa league or be squeezed out of business.

Mr. Hoffa has built a strong tie with one air transport union, the 5,000-man flight engineers, and is flirting with the airline stewardesses union; he also has tasted success in a drive to enlist in the Teamsters the men who work in and around the Nation's biggest airports.

And within 2 years, one top truck union strategist predicts, the growing power of this combine will attract at least some of the stand-offish railroad brotherhoods—despite the rail unions' steadfast denials. "They know there's not a ghost of a chance that we'd go along with them," insists one railroad union official.

What has developed so far may not be a complete conference on transportation unity on the 50-union scale envisioned last year, but it's close enough to convince Mr. Hoffa that success can't elude him.

"We already have the nucleus set up with the Teamsters and the maritime unions," he declares. "Eventually, the others—including rail and air—will see the advantages of this cooperation and they'll want in, too. It may never be formally proclaimed the

way C.T.U. was announced last year, but it will exist and will be just as effective as what we had planned for the C.T.U." Although Mr. Hoffa had first mentioned the idea of an alliance of transportation unions some months earlier—in mid-1957—congressional and AFL-CIO reaction to last July's formal C.T.U. announcement was so violent that he backed off.

HOFFA SCOFFS AT NATIONAL TIEUP

Even now, without the railroad unions, the combined power of the unions already allied is enough to halt the flow of much of the Nation's commerce if they all decided to strike simultaneously. If the combine reaches full flower, this paralytic power would become complete. Mr. Hoffa naturally scoffs at any such possibility: "Talk of a national transportation tieup is nonsense," he snaps. The Teamster chief argues such a step would be self-destructive, figuring Congress would ram through legislation to stop the strike.

As a practical matter, anyway, Mr. Hoffa and his allies expect to achieve their ends without having to resort to such extremes. Local or regional tieups would be more likely. The combine might, say, close down the port of New York or cut off supplies to the island of Puerto Rico to back up demands of one union. Or it might merely move against a single employer group at a time in any one area. "The only way to win a strike," contends the Teamster chief, "is to shut one group down and let potential competitors operate."

As of now, the transport unions' capacity for united strike action is limited; because contracts expire on varying dates, the unions can't all walk out at once without risking costly lawsuits. But most of them can and will refuse, under contract provisions, to cross other transport unions' picket lines. And the wealthy Teamsters can extend financial help to less prosperous striking unions. Furthermore, the transport unions are working toward common contract expiration dates, which would make simultaneous strike action possible.

Such strategy aims basically, of course, to strengthen union hands at the bargaining table. The Teamsters already are mapping joint bargaining strategy with friendly dock unions; each knows in advance what the other will demand from employers that two or more of them deal with. While the transport combine may never adopt a complete uniform slate of contract goals, Mr. Hoffa can at least be expected to work out common demands for fringe benefits, such as pensions, and to stand firm against contract proposals he considers too gentle. And the allies will work to minimize the impact of automation on transport unions, notably in warehouses and on the waterfront.

"Full coordination of bargaining demands is a good sound policy and essential to the well-being of all our members," says Teddy Gleason, general organizer of the International Longshoremen's Association, after a visit to Mr. Bridges' west coast dock union.

More effective organizing is another target of the combine. "We'll work to eliminate jurisdictional problems," asserts Mr. Hoffa. As a clue to what may be in store, it's noteworthy that the Teamsters already are collaborating with the ILA and the National Maritime Union to sign up workers along the Canadian side of the St. Lawrence Seaway.

These varied goals may lead the transport unions to a more formal organization than now is envisioned. A Teamster official says the combine will be interested in legislation, as well as bargaining and organizing. "If we're going into these matters," he adds, "that means we'll have to set up a research department. And if we're going to have that, we'll have to have a per capita tax from each union."

Mr. Hoffa's recent gains have been achieved in relative silence, thus avoiding

the uproar that greeted his proclamation of a permanent conference on transportation unity last July. So violent was the reaction then—both in Congress and in the AFL-CIO—that Mr. Hoffa never held a heralded meeting of an estimated 50 union presidents to perfect his C.T.U.

QUIETLY RESUMED WORKING

Then, while the epidemic of Hoffaphobia died down, the persistent little Teamster leader started working more quietly toward the same goal. Just the other day, when he met in New York with 13 other union chiefs, notably bosses of dock and seamen's unions, there were earnest denials that transportation unity was afoot. But as Mr. Hoffa left the meeting, one of his top aids whispered, "There's your C.T.U.," and Jimmy grinned in agreement.

The current steps toward a transport combine, however quietly and informally taken, seem likely sooner or later to kick up a storm on Capitol Hill, just as last summer's announcement of the original plan did—especially since the plan then and now includes Mr. Bridges, leftwing leader of the west coast longshoremen.

At that time Senator EASTLAND, Mississippi Democrat who heads the Senate Internal Security Subcommittee, called such an alliance a threat to national security. Arkansas' Democratic Senator McLELLAN, chairman of the Special Senate Investigating Committee, declared "the welding of Hoffa's powers with those inherent in these other organizations has grave implications for the destiny of our national economy." Chimed in GOP Representative HOFFMAN from Mr. Hoffa's home State of Michigan: "If such a federation calls a strike they could starve us into submission in 6 days."

Also incensed was the AFL-CIO. Only months earlier it had expelled the Teamsters on grounds of corruption. The old AFL had kicked out the International Longshoremen's Association in 1953 as a gangster-dominated union and the old CIO booted Harry Bridges' union in 1950 as Communist dominated.

MEANY'S ORDER

The presence of the Teamsters and the ILA in the group's list of sponsors "could very well be the start for what you might call a birds-of-a-feather federation," Mr. Meany declared. What was worse, to federation officials, was the fact that AFL-CIO unions—including that of Joe Curran, National Maritime Union president and a vice president of the AFL-CIO—were joining up. Mr. Meany and his colleagues promptly ordered all federation affiliates to cancel formal pacts with expelled unions.

Then something happened to brighten Mr. Hoffa's hopes. Last December Mr. Curran, of the NMU, and Mr. Hall, president of the rival Seafarers' International Union, forgot a lengthy feud in order to promote a 4-day worldwide boycott by many transport unions of ships flying "flags of convenience." These are U.S.-owned vessels sailing under flags of Panama, Liberia, Honduras, and Costa Rica to avoid high labor costs and taxes in the United States. Labor officials say the boycott tied up 160 vessels in 19 ports, but was really effective only in the United States where Mr. Hoffa's Teamsters cooperated.

More cooperation grew out of this 4-day effort. The following month, Mr. Hall and Mr. Curran signed a formal peace treaty ending their feud. Both agreed to drop lawsuits, charges of unfair labor practices and other disputes. It was Mr. Hoffa who, his aids claim, helped bring the rivals together.

TEAMSTERS, BRIDGES' UNION JOIN HANDS

Other Hoffa efforts began to bear fruit. On the west coast, the Teamsters and Mr. Bridges' International Longshoremen & Warehousemen's Union, also foes for many years, joined hands. They set up a perma-

nent committee of five members from each union to bring jurisdictional peace and cooperation on common problems.

Mr. Hoffa's chief of staff, Harold J. Gibbons, meanwhile went to London for conferences with officials of the International Transport Workers Federation, an organization maintained by unions in 62 nations. Mr. Gibbons carried assurances that the Teamsters would cooperate again in any new boycott of convenience ships. A week later, Mr. Hall and Mr. Curran went to London, too, to work on the boycott plans. It's expected now that the unions will select two shipping companies as sample target's and apply a permanent boycott.

It was new boycott plans that drew Mr. Hoffa and other transport union chiefs to New York earlier this month. There officials of 14 unions set up a steering committee to cooperate on any problems that confront the participating unions.

"Right now, it's just the boycott," says one union official who attended the meeting. "But it's easy to see what's on their minds. They pop up with stuff about automation and jurisdiction."

Among those at the meeting was Larry Long, president of the International Brotherhood of Longshoremen, a dock union created by the AFL to compete with the expelled International Longshoremen's Association. Though the IBL and the ILA have been enemies from the start, their leaders met on friendly terms, and some maritime union officials think a pact between them is sure to come.

Mr. Long's union dominates Great Lakes docks, but with the opening of the St. Lawrence Seaway faces a possible challenge from the ILA. The east coast union has contracts with some employers who expect to move inland along the seaway. They'll bring ILA contracts with them, labor sources note. With Mr. Hoffa backing Captain Bradley's ILA, the inland dock union would be hard pressed to hold ground.

"Long either goes along with the new group, or he gets shut out," a Teamster official forecasts.

While Mr. Hoffa has been working out ties with sea and dock unions, he has been solidifying his relations with the Flight Engineers. When the Engineers engaged Eastern Air Lines in a long strike late last year, they found the Teamsters willing to post collateral for a \$200,000 loan to keep them going. The loan has been repaid now, and the Flight Engineers feel deeply grateful.

"We're not about to break with the Teamsters," confides one Flight Engineer official. "We have no place else to go. The federation isn't too interested in us."

Still unsettled is the Flight Engineer feud with the Air Line Pilots' Association over which union gets jurisdiction over the third crewman in jet aircraft cabins. Engineers believe this fight threatens the existence of their union, and that the federation has refused to act to protect their jurisdiction. If the Flight Engineers should strike again over this issue, they believe pilots may try to keep the airliners flying without engineers.

"We might need the Teamsters again," says an Engineer source, recalling that truck union officials were prepared last December to halt deliveries of fuel and other supplies to Engineer-struck airlines.

AID PACT STILL IN EFFECT

Still in effect, despite AFL-CIO orders, is a mutual assistance pact between the Flight Engineers and the Teamsters; it rather vaguely promises aid by each union to the other in any emergency. An Engineer source says: "The idea of further association with the Teamster officials predict the Engineers may join the transport combine, and one Engineer privately agrees—even if the alliance includes Harry Bridges.

"We couldn't say we're willing to accept the Teamsters but not their friends," he reasons. "We have to buy the whole package."

With the Flight Engineers in the transport league, it wouldn't be necessary to get the pilots' union, Mr. Hoffa's advisers figure. But the Teamsters are definitely eyeing a dissident segment of the pilots' union, the Air Line Stewards' and Stewardesses' Association. At the recent convention of the association in Chicago, the truck union's Mr. Gibbons was a convention-long observer and "he wasn't there just because he likes pretty girls," one labor official notes.

To help entrench his strength in the air transport field, Mr. Hoffa is pushing a drive to sign up workers in and around the airports in 22 big cities. The Teamster chief says air freight is about to blossom into a real competitor of surface shipping, and therefore the Teamsters can't ignore the airlines.

In February, Mr. Hoffa won his first round in this campaign. Pan American World Airways' stock clerks voted nearly 2 to 1 in favor of the Teamsters in an election conducted by the National Mediation Board. Teamsters thus won the right to represent 861 Pan Am employees who handle freight the airline hauls.

This still leaves the rail unions outside the Hoffa sphere, and one railway labor source insists: "Among our chiefs there isn't one that would lean that way at the present time." After reflecting a bit, he adds: "Times do change, but I just can't see our people going into any transportation council."

Nonetheless, Teamsters claim economic necessity will force some railroad unions into the alliance eventually, possibly within 2 years. According to Teamster reasoning, railroads must offer lower rates to compete with other forms of transport, notably St. Lawrence Seaway shipping, and so must try harder to keep labor costs down. That pressure will make railroad workers more interested in a broader base of bargaining strength, Teamsters contend. They point to a recent request by railroads that train unions accept a 15-cent hourly pay cut in new contracts to be negotiated by November 1. The unions were expecting to win 12-percent wage increases.

It's worth noting, too, that the railroad unions' total membership has been declining in recent years. And railroads are gradually diversifying into other forms of transportation, notably trucking and pipeline operations, in which nonrail unions have long since staked out jurisdictional claims. As a possible basis for coalition, the Teamsters already negotiate with many of the same employers that railroad brotherhoods deal with: the Hoffa union represents drivers for the trucking subsidiaries of the Santa Fe, New York Central, and Pennsylvania railroads, to name just a few.

How will George Meany and the AFL-CIO react to the developing transport combine? Some transportation unionists argue it doesn't make any difference what the federation says now. Some unions with Teamster pacts ignored last summer's AFL-CIO edict to cancel them, they say, and the federation hasn't done anything more about it. Joe Curran, whose participation in Mr. Hoffa's CTU prompted the federation order, is still consorting with Teamsters. And now he's been joined by Mr. Hall, who is president of the AFL-CIO Maritime Trades Department, as well as president of his own Seafarers' Union. So far, this fraternization, with banished unions hasn't brought any new blast from Mr. Meany.

On the other hand, Mr. Meany made such a point of outlawing pacts with expelled unions that he can hardly ignore these new developments, some federation officials say.

The issue undoubtedly will come up at the next AFL-CIO executive council meeting in Washington, May 18. At that time, too, the council may consider whether to readmit the expelled ILA. If the longshore union is welcomed back, after trafficking with Mr. Hoffa, it would be taken as a sign that the AFL-CIO no longer objects to such behavior.

Congressman Philbin and the Polish Cause

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. PHILBIN. Mr. Speaker, last month my good friend, Francis Mieczko of Webster, Mass., gave a courageous and forceful speech on the Polish cause over Radio Station WESO in Southbridge, Mass.

In his eloquent remarks, Mr. Mieczko touched upon my humble efforts over the years in behalf of the gallant Polish people and their fight for freedom and liberation. I am indeed thankful to him.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the text of Mr. Mieczko's address over WESO on June 7, 1959.

The material follows:

CONGRESSMAN PHILBIN AND THE POLISH CAUSE

Ignace Paderewski, the excellent Polish statesman and world renowned pianist, with his political wisdom and with his enchanting music, exerted tremendous influence on President Woodrow Wilson during First World War and also after its conclusion. Under the influence of Paderewski's music, President Woodrow Wilson constantly pondered in his mind the Polish villages and cities, which were drowning in tears and blood under the burden of years of bondage, devastated with sword and fire by their greedy and selfish neighbors: Prussia, Austria, and Russia.

Sensitive of human plight, President Woodrow Wilson, a statesman with a just and noble heart, learned about the country of our forefathers and grandfathers, and, when the time of decision arrived, he gave his friend Paderewski and his countrymen the greatest of all gifts: Poland—free and independent Poland. He guaranteed the freedom and independence of Poland in the Versailles Treaty in the famous 13th paragraph reintroducing Poland into the international arena after well over 100 years of bondage. President Woodrow Wilson became the idol of the Polish people. Faith in historical justice and the deep confidence that all evil someday will find its end, finally triumphed. Every Polish child of school age had a great admiration for the American Nation and everlasting esteem and honor for its great and noble President. President Woodrow Wilson had occasion to visit the capital of Poland, Warsaw. The result of his visit was material help and food from the United States of America so vital to Poland's continued existence in the world of free nations.

After 20 years of fantastic rehabilitation, the young Polish state once again was subjected to humiliation by the same greedy and selfish neighbors, Germany and Russia. In 1939 Poland was again crucified and ferocious ravens tore her flesh swiftly even as her last breath of life was ebbing.

The epic of the tortured Polish nation immensely impressed President Roosevelt. President Roosevelt, in his manifesto calling for mobilization of all powers against Teutonic tyranny and barbarism, declared Poland the inspiration of all nations and asserted that such a nation cannot perish. Unfortunately, after a few years the greatest drama, the greatest tragedy in world history took place. The same President, for reasons, which only history will read, either under the burden of his sickness or under the influence of his ill-advised White House staff, failed to realize the greed and rapacity of Stalin and, disregarding the fact that the Polish soldiers fought valiantly in all sections of the front, allowed Poland to be seized once again by the Red communistic hand of Stalin.

Therefore, we are looking today to the friends devoted to Poland, friends who could achieve an insight into her situation as well as into the situation of other countries in Europe, similarly occupied by Russia, and who could in the right moment follow the example of President Woodrow Wilson.

Our researchers are at constant work. We scrutinize every word spoken in defense of Poland by individual Senators and Congressmen.

With pleasure we state that among the proven and warm friends of Poland we can rely on our Congressman from Massachusetts, PHILIP J. PHILBIN.

Congressman PHILBIN, well known from numerous movements in the Polish cause during World War II, does not stop his work for Poland's welfare and on every possible occasion gives deep understanding of the exceptional situation in which the Polish nation now exists. What is more, he sees clearly the injustices which the Allies have done to their truest and most faithful partner.

During the past few weeks, Congressman PHILBIN asserted himself honorably on two occasions on the floor of Congress for the Polish cause.

By his speech in the House of Representatives he saved from deportation 60 Polish sailors who, 4 years ago, escaped from a Polish ship to Formosa and then found asylum in United States of America. This year all these seamen were notified about pending deportation to Poland because of the present progressive improvement in the general situation, because of the so-called communistic thaw in Poland after October 1956.

Congressman PHILBIN, as an experienced statesman, demonstrated in his speech the communistic government imposed upon Poland, upon the Polish people known for their love of peace. In that speech he pointed out that the individual living conditions in Poland are deteriorating from day to day, contrary to the news spread by false propaganda. Individual rights, which are so jealously guarded here by the Constitution are there brutally and ruthlessly trodden upon. Here the highest law is the Constitution; over there the law of the mailed fist. He recalled among other things: (1) The recent unprecedented raid on Jasna Gora, the monastery of the Pauline Fathers in Czestochowa, (2) the ban to distribute by church auspices the gift packages received from America from the National Catholic Welfare Council, (3) the removal of crucifixes from schools and public buildings, (4) the suppression of rights of speech and press.

As a truly great friend of Poland, Congressman PHILBIN concluded his remarks with a unusually strong appeal to the President of the United States of America and to the Government to abandon threats and proceedings about deportation of the Polish sailors and to continue the principle of offering asylum for the brave and unfortunate people of oppressed nations.

The day May 18 is a great day for all Poles scattered all over the world. It is a

day on which the Polish soldier conquered the seemingly unconquerable German fortress on Monte Cassino in Italy 15 years ago. Congressman PHILBIN kept that in mind, too. On that day he delivered a flaming speech in the House of Representatives. He reminded all Congressmen that, thanks to the sacrifices of the Polish soldier, the final victory over the Germans was accelerated, but Poland herself went from one bondage to another.

Congressman PHILBIN in his daily work helps individual Poles in an apparent and friendly way. A wise philosopher says: "The friend in need is the friend indeed." Congressman PHILBIN has proved to be a true friend, indeed. Moreover, his frequent efforts in the Polish cause encourage us to feel that Congressman PHILBIN, like President Woodrow Wilson, in his nobility and righteousness, has before his eyes the vision of a free and independent Poland.

May the Almighty God bestow upon him health and give him inspiration in his valiant fight for the righteous cause of Poland.

May God grant him wisdom and courage so that he may continue in his efforts to curb these cruel injustices against God and humanity.

National Library Week Activities in New Hampshire

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein the summary of the National Library Week activities in New Hampshire, compiled by Dr. William R. Lansberg, executive director:

NATIONAL LIBRARY WEEK IN NEW HAMPSHIRE (By William R. Lansberg, executive director)

New Hampshire, which opened the first free public library in the Nation at Peterborough in April 1833, can well be proud of the many varied activities which marked the State's observance of National Library Week in April 1959.

Statewide planning for National Library Week in New Hampshire was developed by a State committee of over 60 members under the chairmanship of Edward J. Gallagher, editor of the Laconia Evening Citizen. This writer served the committee as executive director. Cochairmen of the important local activities committee were William T. Weitzel, librarian of the Manchester Public Library, and Siri Andrews, librarian of the Concord Public Library; chairman of the statewide special events committee was Raymond T. Holden, North Newport author, poet, critic, and 1958 NLW State committee chairman; Emil W. Allen, Jr., assistant State librarian, served as chairman of the statewide promotion committee.

To encourage local participation in New Hampshire, the State committee planned a contest which we believe will prove to be one of the most unusual NLW devices used in any of the 50 States. A special award of a complete set of the "Encyclopedia Americana" and other prizes were to be presented to the New Hampshire libraries, large or small, which put on the most original observances of National Library Week. As the week of April 12-18 approached, reports indicated that many libraries in the State had become somewhat secretive about their

plans, in order to insure protection for their entry in the most original contest.

We want to say a word about three other activities sponsored by the State committee.

Walt Kelly, creator of "Pogo," contributed a special "Pogo" cartoon to help carry the National Library Week message "Wake Up and Read" to all Americans in every walk of life. Twenty thousand copies of the "Pogo" leaflet were printed and distributed in New Hampshire—in restaurants, supermarkets, and libraries.

The week before National Library Week, Robert S. Monahan, a member of the Hanover delegation in the State house of representatives, offered a joint resolution to the New Hampshire Legislature, which was passed unanimously on a voice vote.

In addition to the joint resolution of the State legislature Governor Powell himself wrote a National Library Week proclamation.

We have already described the planning behind the contest for the most original observances of National Library Week by New Hampshire libraries. Encouraged by the contest, more libraries participated this year than in 1958. We received excellent coverage on New Hampshire activities in the press and on radio and TV.

To select only a few from the great number and variety of New Hampshire programs, special library events included plays by puppets for moppets and a panel discussion on "The Arts" for parents at the Concord Public Library; the Bedford Library showed townspeople its newly redecorated quarters; a hobby show was scheduled at Rumney, featuring afghans, paintings, decorated cakes, jewelry, and lampshades, all tied in with books on these subjects; Pease Air Force Base in Portsmouth, like many other New Hampshire libraries, held open house all week long; the Laconia Library called attention to its outstanding collection of Indian artifacts with exhibits and a talk by Solon Colby, of Meredith. Baker Library at Dartmouth College held a book sale during the week, and displayed two exhibits: "Notable Books of 1958" and "Notable Recent Acquisitions."

One of the most original observances of National Library Week occurred in March at Bow, where the library put on its Library Week show a month early at town meeting time with a special display for voters in the new Community Building. Mrs. Harold W. Howe, the librarian, reported many new customers in the library as a direct result. There was also a benefit to tempers during town meeting: the books gave voters a chance to browse—and cool off—between items in the warrant.

NEW HAMPSHIRE'S MOST ORIGINAL CONTEST

More than 100 New Hampshire libraries put on special programs for National Library Week; 40 of these libraries submitted entries in the contest for the most original observances of National Library Week by New Hampshire libraries. The judges agreed that a wonderful job was done by all, making it most difficult to pick the winners.

Judging the contest was a committee under the chairmanship of Miss Shirley Barker, author, of Derry. Other members included Mrs. Joseph F. Culick, president of the New Hampshire Federation of Women's Clubs; Miss Mary C. MacNeil, vice president of the Business and Professional Women's Clubs of New Hampshire; and William R. Lansberg, director of acquisitions at the Dartmouth College Library and executive director of National Library Week in New Hampshire.

Four prizes were awarded as a highlight of the annual meeting of the New Hampshire Library Trustees Association in Concord on April 30.

The grand prize for the most outstanding program judged from every aspect went to Marlboro. The judges felt that, considering the size of the community (population

1,561) and the resources with which the library had to work, this was a most worthy winner. As we have already mentioned, the grand prize consisted of a complete set of the "Encyclopedia Americana," presented by the publisher.

The prize awarded to the New Hampshire rural library with the most outstanding program during National Library Week was presented to Wilmot (population 380). This prize, which was presented by the State librarian, consisted of three books to be selected by the winning library.

The library having the most outstanding program for children was also a small town—Gilsum (population 568). Their prize, three "Landmark" books, was presented by the judges. The Gilsum entry in the National Library Week contest opened as follows: "The week's challenge to 'Wake Up and Read' did not catch Gilsum trustees napping."

Winner of the contest for the city library having the most outstanding program for National Library Week was Concord. The prize, presented by the New Hampshire Library Association, included the following volumes: "American Panorama" edited by Eric Larrabee; "A Passion for Books," by Lawrence Clark Powell; and the magnificent novel "Islandia," by Austin Tappan Wright, a native of Hanover.

CONGRATULATIONS

On the second day of National Library Week, Monday, April 13, we received the following telegram from national headquarters in New York:

"Second National Library Week has made good start in New York with press, radio, and TV support. Steering committee would appreciate having by return wire your own brief report of your library week. Include comments on press coverage and community activities."

"Thanks and best wishes."

Being an economical New Englander, we replied by night letter as follows:

"New Hampshire observance includes proclamation written by Governor, joint resolution passed by State legislature, contest for most original observances by New Hampshire libraries. More libraries participating, excellent press, radio, and television coverage. Practically complete coverage in State publications of civic, fraternal, religious, and other groups through representation on large State committee. All kinds of library programs being presented, probably topped by speech in French on De Gaulle and the new France by Baron Charles De Pampelonne, French consul general in Boston, at Nashua public library next Thursday evening."

A week later we received this reply:

"Thanks for splendid news in your wire last week concerning Library Week success in New Hampshire. Congratulations on variety and extent of program, the total picture looks bigger and better than ever."

"EMERSON GREENAWAY,

"President, American Library Association."

"WHITNEY NORTH SEYMOUR,

"Chairman, National Book Committee."

About the same time, we received this letter from the national director of NLW:

"DEAR BILL: Well, I take my hat off to you up in New Hampshire. This is darn good work. I am impressed with what the house of representatives did and your use of 'Pogo' material is excellent. All in all, you have done a very sound job indeed. Our sincere congratulations."

Cordially,

"JOHN S. ROBLING,

"Director, National Library Week."

"P.S.—How many 'Pogo' booklets did you print? I had not heard about your contest for the most original observances. This is a new idea indeed. Let us know the results. Perhaps we can use this in our handbook for 1960."

Finally, a month after National Library Week, we received the following note, also from John S. Robling:

"Cheers and congratulations to you for the wonderful material on your most original contest. I hope very much that what you did there this year can become a national pattern, and we intend to use this story in the national report."

Additional Cleveland Views on Khrushchev Visit

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mrs. BOLTON. Mr. Speaker, the announcement of Soviet Premier Khrushchev's impending visit to the United States has evoked varied reactions in the city of Cleveland, as indeed has been the case throughout the country. On the one hand the hope is expressed that his visit may lead to a reduction in cold war tensions between our two nations, while the other view suggests that nothing more than Communist propaganda purposes will be served by the invitation.

The wide divergence of opinion relative to Mr. Khrushchev's approaching visit is well reflected in the editorial comment of Cleveland newspapers. So that the officials charged with the responsibility for arranging his itinerary may give consideration to all published viewpoints, I include the Cleveland Plain Dealer editorial of August 4 and the Cleveland Press editorial of August 5 with my remarks:

[From the Cleveland Press, Aug. 5, 1959]

SHOW HIM THE WORKS

The major objective of Americans during the forthcoming visit of Nikita Khrushchev should be that he see as much of the United States as possible. We should not be too finicky about what he sees—as long as it is a great deal of the tremendous variety that adds up to U.S.A.

Those of us who have been traveling about this country recently, on business or vacation, return to our desks tremendously impressed with this land and its people—its wealth and richness, its strength and vitality, its growth and change.

This is reflected in myriad ways—by the great superhighway developments, by the mushrooming of huge suburban shopping areas, by the number of new schools, churches, and other public buildings—not to mention uncountable new factories and residences.

Seeing them will help Khrushchev estimate how quickly he can match and surpass the Americans.

He should get a good picture of the American standard of living and our great desire not to have it destroyed by war or subversion.

And, lest he miscalculate American strength he should have a chance to inspect the nonsecret aspects of our Military Establishment.

Among the places Khrushchev should see if his tour of the country is to be complete, is Cleveland.

Cleveland typifies so much of the strength of America—vast productive capacity, rich cultural resources, and people of countless nationality backgrounds working and living together.

Naturally, to Clevelanders who fled the Iron Curtain countries, or who still have relatives living unhappily beyond the curtain, he will not be a welcome visitor.

He typifies the iron hand which still grips the great nations of central Europe, and the attitude of these folks is understandable.

But they should remember that the most realistic hope for these nations to shed the yoke of Russian domination is an easing of the terrible tensions in the world.

It was the hope of easing these tensions that led President Eisenhower to agree to this exchange of visits.

Thus no one should place obstacles in the way of gaining the greatest possible benefits from Khrushchev's tour.

And the greatest benefits will come only if he sees as much as possible of this vast and busy country.

[From the Cleveland Plain Dealer, Aug. 4, 1959]

KHRUSHCHEV TO SEE AMERICA

The highest possible official person-to-person exchange was initiated yesterday when President Dwight D. Eisenhower invited Prime Minister Nikita Khrushchev of the Soviet Union to visit Washington for informal discussions of world issues and to tour the United States next month.

Sometime this fall President Eisenhower will return the call and visit the Soviet Union. At the same time, in announcing Khrushchev's coming, the Chief Executive revealed his plan to call personally on Prime Minister Macmillan of Britain, President de Gaulle of France, and Chancellor Adenauer of West Germany before the Russian arrives.

This exchange could be one of the most momentous historical developments of our time.

Khrushchev has long made known his desire to visit America. Yesterday's formal invitation was accepted with alacrity. The trip has long been under consideration. Before he left on his Russian visit Vice President RICHARD M. NIXON knew the invitation was pending. The whole proposal was started by the President weeks ago. It is a brave and forthright gesture to mollify the stresses and strains in Russo-American relations. There is talk that it might even lead to a formal summit conference despite the failure of Geneva, although at his special press conference the Chief Executive brushed aside a question on that point as premature.

Khrushchev's desire to visit the New World will open up a new world to him in more than the geographic sense. In their televised discussion the Russian chief told Nixon he knew nothing about communism. This was not true. Nixon knows and understands a great deal about the political ideology of the Russians and their followers. But it has long been evident from the statements made by Khrushchev that he really knows nothing about American capitalism. His notions appear to have been taken out of Karl Marx's book, more than a century out of date, and from the mythological propaganda of the Communist Party.

His appetite to see America for himself was whetted by the reports brought back by Mikoyan and Kozlov. Now he will get the opportunity.

For 2 or 3 days Khrushchev will be entertained in Washington. He will have informal talks with the President that in no way will be construed as negotiation. Then for 10 days the Russian visitor will be taken around the country. Frankly we hope that they will be the 10 days that shook Khrushchev. He should, being an intelligent and observant man, be divested of some of his silly preconceptions. He should get a new picture of American living standards and attitudes, of this country's productive power and the virility of the capitalism he so lightly

downgrades. To translate and paraphrase a famous Latin saying, we hope he will come and see and be conquered.

Certainly this exchange means that the Berlin crisis will be shelved, at least for a while. It means that the President, who had met Khrushchev only casually at the summit conference in 1955, will be able better to take the measure of the man and get over some points that it is only in his power to do. If Khrushchev is unimpressed nothing has been lost from the American viewpoint. If he comprehends what he sees a new and possibly constructive turn may be given to East-West relations.

Contentious Concept

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. ALGER. Mr. Speaker, implicit, but not mentioned in the current labor debate on labor reform legislation, is the struggle that has been long going on within labor unions between labor leaders and the union members themselves.

I believe local unions should have control of their own affairs, not as subordinates to the national union which dictates and activates. My bill, H.R. 8003, places unions under antitrust law provided the protection needed by local unions and union members from their own dictatorial leaders. Naturally this will be strenuously opposed by these national leaders. Nevertheless, I believe union members deserve this protection. Otherwise, they will have little, if any, voice in their own union affairs.

An interesting study by Robert D. Novak entitled "Contentious Concept: AFL-CIO Fights the Idea Government Must Guard Workers From Union Leaders," I found authoritative and explanatory of the situation now existing within labor unions and I submit it for the RECORD for others interested in this controversial matter:

CONTENTIOUS CONCEPT: AFL-CIO FIGHTS THE IDEA GOVERNMENT MUST GUARD WORKERS FROM UNION LEADERS

(By Robert D. Novak)

WASHINGTON.—In its struggle against the Senate-passed Kennedy labor reform bill, organized labor is battling a concept rather than anything tangible which would cripple its power.

It is opposing the concept that the Government must intervene to protect the worker from the union just as the union once intervened to protect the worker from the employer. After gradually picking up momentum over the past 10 years, this concept is now the focal point of labor legislation.

That is why the AFL-CIO has concentrated its heaviest fire against the bill of rights for union members added to the Kennedy bill on the Senate floor. This attempts to safeguard the rights of rank-and-file union members, and, as such, affects the relationship between a union and its members to a far greater extent than existing laws.

No longer is this struggle merely a matter of determining the balance between union power and employer power. It is also now a struggle between the power of union leadership and the power of union membership. And it is just such a theoretical separation of leadership and membership that makes the bill of rights unpalatable to labor leaders.

OLD ALIGNMENT

Furthermore, the fact that the bill of rights was approved by the most liberal Senate since New Deal days shows that the old liberal versus conservative alignment on labor matters is no longer totally valid. Liberals who back labor on everything else oppose it on the matter of guaranteeing rights for union members.

These liberals, and conservatives as well, believe such protection is needed because of the power amassed by labor chiefs in this generation—partly through the aid of friendly Federal legislation. More important, they believe that unions can no longer be called voluntary organizations because of widespread union shop agreements which require union membership of employees. On the other hand, labor leaders fear that this trend might lead to the dreaded creation of a two-party system within unions.

The Kennedy bill's seemingly innocuous bill of rights asserts equal political rights within unions for all members, freedom of speech and assembly, freedom from arbitrary dues and assessments, protection of the union member's rights to sue, and safeguards against improper disciplinary action. A union member could go to court to protect these rights. Violation could bring a jail sentence for the offending union official.

Although organized labor claims that these provisions would hamstring union operations and breed an epidemic of lawsuits, most lawyers believe that the bill of rights would not infringe on union power very much. A watered-down version, substituted for an earlier proposal of Arkansas' Senator McCLELLAN, provides several safety hatches for unions.

The freedom of speech guarantee, for example, is modified by a provision that unions may enforce reasonable rules in conducting union meetings. Furthermore, a proposal that the Secretary of Labor be empowered to go to court to enforce these rights was rejected, leaving the burden to individual union members who probably would hesitate before going to the time and expense of legal action.

Clearly, then, labor is battling most of all symbolic intrusion into what it considers as its private domain. AFL-CIO President George Meany told a House Labor subcommittee: " . . . it is one thing to include such rights and safeguards in a union's constitution . . . and quite another thing to incorporate them into a Federal statute." In other words, the duty to protect workers' rights lies with the union itself.

The Meany statement is strikingly reminiscent of the more flamboyant words of George F. Baer, one of the anthracite operators at the time of the great 1902 coal strike: "The rights and interests of the laboring man will be protected and cared for, not by labor agitators, but by the Christian men to whom God in His infinite wisdom has given the control of the property interests of the country." In other words, the duty to protect the workers' interests lies with the employer, not the union.

BALANCE OF POWER

Mr. Baer's philosophy, widely shared by employers of his day, was all but obliterated by such legislation of the early 1930's as the Norris-LaGuardia Act barring antiunion injunctions and the Wagner Act requiring recognition of unions. It was not until pas-

sage of the Taft-Hartley Act in 1947 that a desire for additional laws protecting union members from their officers became apparent.

Basically, Taft-Hartley was an attempt to alter the balance of labor-management power in favor of management; it provided some safeguards for the worker, but this was a byproduct, not the main goal. Even then, however, the House version of the bill contained a bill of rights, later stripped from the measure by the Senate. Democratic Senator KENNEDY, of Massachusetts, now the chief sponsor of labor legislation but then a young House Member, declared that something should be done about "democratizing election procedures and administration" though he opposed the House bill.

The movement for Federal protection of union members as an issue separate from the struggle between labor and management did not shift into high gear until the Senate's McClellan committee began its investigation of union abuses in 1957. In some ways, the flood of mail from rank-and-file unionists complaining about their leaders was more of an eye-opener than the testimony in open session.

Labor leaders call the entire drive a cynical attempt by ultra-conservative employers to destroy unions by acting as protectors of the workers. "This is no more than a try to split workers from the union leaders," contends Democratic Senator McNAMARA, of Michigan, one of labor's staunchest friends in Congress.

Actually, many employers are lukewarm about the bill of rights. They are far more concerned about stricter curbs against picketing and the secondary boycott technique by which a union pressures a neutral employer into ceasing business with a strike-bound employer—issues that fit into the old labor versus management power struggle. Moreover, some industrialists privately oppose the bill of rights concept on the ground that it might weaken union stability and make workers less tractable, leading perhaps to unauthorized strikes.

Backers of the bill of rights, who fear too much public employer support as a kiss of political death, are delighted by this. They have been so anxious to keep management out of this fight that a provision of the bill of rights bars a union member from borrowing money from an interested employer to go to court against the union leadership.

The support of the protection of union members' rights comes in large part from the liberal intelligentsia, once so firmly allied with the labor chieftains but gradually drifting away since the end of World War II.

This disaffection is typified by a 1957 Fund for the Republic pamphlet written by Clark Kerr, chancellor of the University of California and a prominent labor economist. Dr. Kerr declared: "It is said, by some, that only the unions can scrutinize themselves; that it is not the proper business of anybody else . . . the corporations said this once, too, and they were scrutinized. And the unions will be, too."

Archibald Cox, Harvard law professor and Senator KENNEDY's labor braintrust, told Congress last year that Government should insure internal union democracy. "The Government has this duty because labor unions enjoy their present power by virtue of Federal statutes," he declared.

This philosophy has wide adherence among liberal Democratic Senators; the views of Mr. McNAMARA are the exception rather than the rule in the Senate. In the House, the sentiment is much weaker. Congressmen from heavy industrial districts are backing the AFL-CIO stand to the letter. Significantly, most students of Congress believe the Senate has been better attuned to public opinion than the House in recent years.

NEED FOR REGULATION

Even liberal lawmakers who see the need for Federal regulation have a dilemma. They fear any intervention in internal union affairs may weaken labor's power somewhat, though the effect of the current bill of rights would be minimal. Consequently, these liberals worry about the prospect of unwittingly bolstering employer power every time they strengthen safeguards for rank-and-file unionists.

One solution they see to the dilemma would be grants of more economic advantages for unions as compensation for weakening their monolithic internal structure. To some extent, this has been done in the Kennedy bill with the addition of union-desired changes in the Taft-Hartley law, such as one giving strikers the right to vote in union recognition elections even though they have been displaced on the job by non-union workers. But these sweeteners were more in the nature of an attempt to gain labor's support for the bill than any conscious attempt to maintain the current labor-management power balance.

To be sure, the movement to insure internal union democracy has not totally obscured the now-familiar legislative struggle between labor and management. The AFL-CIO opposes the Kennedy bill because of provisions in the latter field, such as mild limitations of picketing, as well as because of the bill of rights.

But no startling changes that would drastically alter the current labor-management balance are now very likely—aside, possibly, from some stiffer curbs eventually in the picketing and secondary boycott fields. The widely voiced plea by employers to place unions under the antitrust laws probably will go unheeded.

The significant legislation in years to come probably will fall in a different field. If no bill of rights is passed by this Congress, the issue will be renewed next year. If it does pass, more stringent regulations will be offered some time in the future. "The unions are simply going to have to accept it. After all, they're public utilities," asserts an Eastern liberal Democratic Senator.

It should be remembered, however, that employers retreated from Mr. Baer's philosophy only after three decades of turmoil and violence. It cannot be expected that labor's retreat from the philosophy expressed to the House subcommittee by Mr. Meany will be any more graceful.

A Formula for Reliability

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. FULTON. Mr. Speaker, my good friend, John D. Paulers, director of public relations at the Allegheny Ludlum Steel Corp., has forwarded me two articles from Missiles and Rockets magazine, which I believe should be called to the attention of my colleagues in Congress and the good people of America:

FIRST THINGS FIRST: A FORMULA FOR RELIABILITY—AN EXPERT DECRIES OUR MISPLACED EMPHASIS ON PERFECTING ASSEMBLIES AND URGES PRIORITY FOR MATERIALS
(By John N. Dick, colonel USAF, retired)

WASHINGTON.—A new word has made its way to the top of the vocabulary of modern weapon systems—the word "reliability."

The concept of reliability as applied to military materiel is not new, of course, but with the coming of everyday missile firing and the approach of manned space travel, the word has assumed new importance. Contributing to awareness of the vital importance of component reliability have been:

Serious and substantial failures of critical aircraft, rocket and missile missions, including some repeated failures of missiles considered to be operational.

Recognition that the failure of one small and perhaps inexpensive part can abort a mission costing millions of dollars.

The tremendously high costs of modern systems and equipment, including both astronomical initial cost and continuing high costs of maintenance.

Recognition of the necessity for reliability goes beyond the military, of course. Intense national interest has developed as a result of some spectacular and highly publicized missile failures, and as a natural byproduct of the international race in space travel. As a result of this interest, accompanied by some concern and doubt as to our scientific and production capabilities, Congress has looked into these areas.

As their awareness of the critical nature of component reliability has grown, military materials suppliers have come to recognize reliability as a functional responsibility of organization.

Although reliability problems have been better defined and some praiseworthy efforts made to solve them, on the whole these efforts have been too sophisticated for complete success. The basic flaw is that the primary effort to insure reliability is applied at the wrong end of the complex weapons system program. Too much engineering time and attention have been devoted to perfecting an assembly of complicated components, and not enough to perfecting individual parts and—even more important—the basic materials themselves.

How effective is it to require 100 percent testing of component parts for reliability without fully appreciating and perfecting the specifications of the basic materials from which they are produced?

Misplaced emphasis: Because of the knowledge, ability, and experience of top-flight aeronautical designers, the emphasis in missile design has been on sophisticated performance of very complex systems; not enough attention has been given to development of materials capable of such performance. A byproduct of this misplaced emphasis is that much research and development effort is expended not in the laboratory but on the shop or factory floor—the least efficient and most expensive place for research and development.

Despite the excellent technical advice and assistance which commercial suppliers can provide the military in areas of metals, ceramics, chemicals, and other materials and services, the systems designer and operator often have the impression that they must work only with whatever materials are in being. Except in the laboratories of some progressive suppliers, the concept of vigorous and thorough basic research and development of new materials, designed for specific and exacting performance requirements, is not well established. The resultant "fire-fighting" system of stamping out weaknesses and "crash programs" directed at troublesome areas boost materials costs and subtract from the overall quality which could be obtained with available funds.

If a broad solution to the problem is to be found, policy thinking about defense will have to be reoriented. Basic research will be required to get a better perspective on the systems of the future.

Present and future: Immediate solutions to the practical problems of reliability will demand more attention (and surely more funds) for:

More thorough study of the materials now in use in systems and components.

Determination of their strengths and weaknesses, their full capabilities and their shortcomings.

Determination of the precise qualities required to make the materials more useful and the systems more reliable.

Determination of which materials are most likely to succeed as hardware and fuel in the space age.

An aggressive research program in those most likely to succeed, flexible enough to change direction and emphasis in the future.

Future solutions will require:

Constant review of weapons and defense systems—those in being, those in design and even those that are just a wild gleam in some designer's eye.

Determination of extreme requirements of environment, involving temperature, stress, erosion, corrosion, radiation, shock, friction, acoustical elements, and expectable life of materials.

Continuous review of all known materials which show promise of resolving any of the problems raised by these environmental factors. Major research effort should be applied in this direction.

A wedding of materials research with fabrication research in order to achieve maximum results in both areas.

Prospecting for new areas of materials research, keeping uppermost in mind the environmental problems and the directors of progress indicated by accomplished research.

By putting first things first, by reorienting our thinking to give a high priority to basic materials research, we should eventually make it possible for the systems designer to specify his materials requirements and fabrication methods, and incorporate these tailor-made materials into his gimmick of tomorrow with a much higher degree of reliability than he can achieve today.

COMPONENTS RELIABILITY: WHAT'S NEEDED?

(By Don Perry)

The velocity of change in the exploding fields of missiles and their related technology is so great that each day's effort brings new concepts, new designs, and new developments.

Still there apparently never seems to be a lack of such choice phrases as: "Let's advance the state-of-the-art," or "we have to beat them to it" and you name the astronomical position, etc.

This is all well and good because this Nation advances when there's a sense of urgency in the prodding. But it occurs that there's still lethargy in one important area: components reliability.

On page 14 of this issue of Missiles and Research, a guest writer makes the point that "too much engineering time and attention has been devoted to perfecting an assembly of complicated components, and not enough to perfecting individual parts and—even more important—the basic materials themselves." He says that a by-product of this misplaced emphasis is that much research and development effort is expended not in the laboratory but on the shop or factory floor—the least efficient and most expensive place for research and development.

To this we would like to add another tragic fact: Too many thousands of components going into missile systems are not designed specifically for the particular missile involved. In far too many instances they're off-the-shelf components usually designed for a variety of applications which too often are either modified or put beyond

their performance parameters to fit into a missile system. Missile failures frequently are the costly result.

Let's cite some statistics pertaining to the Nike-Hercules. The system consists of approximately 1,500,000 individual parts, ranging in weight from the smallest fraction of an ounce to hundreds of pounds. It contains one-quarter of a million feet of wire, 2,000 vacuum tubes, and a host of functional components, such as gyroscopes, servomechanisms, and electronic computers. Approximately 80,000 engineering drawings are required to depict the system on paper. The prime contractor utilizes 3,300 subcontractors and suppliers scattered across the country. The system alone uses—directly or indirectly—practically every raw material used by American industry, and provides work to some extent for nearly every type of industry in the country.

With so many subcontractors and suppliers it is virtually impossible for the prime, military, or major sums, to specify in precise detail the performance parameters for each component. What usually happens is that in known critical systems areas, great reliability attention is paid to some components, while other components that might be subjected to the same vibration, shock, and g-forces go practically unnoticed. The choice phrase, "random" failure, is then offered to the public.

There is the argument that missile systems would be priced out of the pocketbook of the American taxpayer if each component were designed for a specific missile application. Components manufacturers themselves are reluctant to fire up assembly lines and produce for a specific application. "Why should we," many say, "when we can make one item and sell it to many customers?"

But as man prepares for space, Government and industry are becoming more cognizant that he is too valuable a commodity to risk on a 98.2 percent reliability factor. More will be required to satisfy an American public which will become irate and aroused when the first life is lost.

Won't it be a little bit too late then to explain why more emphasis was not placed on this field? This fact should be told now: the reliability standards necessary for man in space will entail far more Government action and fund support than has ever been evidenced in the past decade of missile development.

To say that it will be costly is an understatement. But you don't build a high-speed racing car that wins high-performance races by revamping an existing 65-horsepower engine. In the same way, you don't develop highly reliable spacecraft by using the same parts that are in the home television set.

What do we do about all this? First, it will be up to Government to strengthen its present, mostly inadequate reliability requirements to such a par—as the enviable standards being achieved with fuzing and arming. Next, Government must furnish the financial incentive to components manufacturers to start designing parts from the ground up. We must insure that components are given the most thorough testing in the laboratory—not in the shop or at a firing range—before they are wedded into the subsystems picture.

Then and only then will we see a marked improvement in reliability. Maybe then the scientists can quit sending up missiles with just prayers and hopes. We'll have something we know will work. This is as the science of rocketry should be.

Midsummer Love: Democratic Workers Give AFL-CIO an Assist With Welfare Petitions

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by John C. Calpin which appeared in the Philadelphia Bulletin on Sunday, August 2, 1959.

[From the Philadelphia Bulletin, Aug. 2, 1959]

MIDSUMMER LOVE—DEMOCRATIC WORKERS GIVE AFL-CIO AN ASSIST WITH WELFARE PETITIONS

(By John C. Calpin)

Over the years, labor has often lamented that the politicians only love them for their money and voting aid at election time. In the other months, they are not consulted about appointments of consequence and have to go with hat in hand to get minor appointments.

The local Democrats are out to show the AFL and CIO that they love them now, too.

Every one of the 3,000 Democratic committeemen has been supplied with petitions, prepared by political arms of the labor movement, urging Congress to expand unemployment compensation and social security benefits.

They are taking the petitions around as they make their pre-election canvass to spur registration, and getting signatures from the citizenry. They get some benefits, too, so it is not entirely an unselfish move.

GREEN SENDS LETTER

Congressman WILLIAM J. GREEN, JR., the Democratic city chairman, sent a letter to each committeeman, suggesting that the party workers talk to every working man and woman about the changes.

The petitions ask that Congress extend unemployment compensation benefits for 39 weeks' duration. Also, they want weekly payments raised to 50 percent of the average weekly wage or two-thirds of the State's average wage, which would approximate \$50 a week.

Social security changes deal with Representative AIME FORAND's House Resolution 4700 which asks for 60 days' hospitalization for those on old-age security pensions and also supply surgical and dental services and nursing care for 120 days minus the 60 days' hospitalization.

Green told his committeemen that the solid Democratic delegation from Philadelphia is fighting hard for the legislation, in alliance with the AFL's Labor League for Political Education and the Political Action Committee of the CIO.

AUGUST 15 DEADLINE

Each petition carries places for 136 names and the Democrats are to try to get as many signed up as possible. Petitions are to be turned in to ward leaders who will give them to Green. August 15 is the deadline set.

Similar action on a smaller scale was tried during the primary election period when petitions calling upon Congress for a minimum wage law of \$1.25 were circulated.

About 71,000 signatures were obtained and sent to Congress, both by labor leaders and the political workers. Petitions are still being circulated.

One of the reasons the Democrats have accepted the petitions for distribution could be a selfish one, although not in a derogatory way.

The petitions have been a door opener and selling point enabling Democrats to get into houses to make their political spiels and to get people to register.

Labor union members are more likely to be amenable to those who can say to them "I have here a petition by the AFL-CIO * * * than to someone asking them for money or aid of some other kind.

The Forand bill on social security pensioners had a hearing last week before the House Ways and Means Committee.

Testimony was presented to show that it will cost about \$1 billion a year, to be paid for by a proposed one-quarter of 1 percent contribution by employee and employer on wages up to \$4,800 a year, and by three-eighths of 1 percent by self-employed. The average cost would be \$1 a month.

Costs of hospital care is figured at \$904,900,000, and surgical bills at \$80 million.

Advocates of the bill say that people over 65 spend twice as many days in hospitals as younger persons and that their medical bills are half again as much as their juniors.

MEDICAL COSTS

Cost of medical aid is mounting faster than any other price in the Consumer Index, it was testified. Medical insurance for the aged is so expensive that it is practically nonexistent or hedged with exceptions.

The bill would spell out that those already on social security pensions and their legal dependents would be covered but that those who have been pensioned as permanently disabled would be excluded.

Surgical bills would be paid but not the ordinary medical bills. Semiprivate accommodations and all hospital services ordinarily provided would be paid for, up to 60 days, in any year.

Unusual Reaction

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MOSS. Mr. Speaker, the President's unusual reaction to normal questions at a recent press conference indicates either lack of understanding of the facts behind the questions or, possibly, a feeling that maybe there is something, after all, to the repeated complaints against executive secrecy.

The President's reaction—telling a reporter to sit down in a parade ground drill sergeant's manner—came after the President was asked to comment on House action limiting mutual security funds if the Congress is refused information about the mutual security program. The absurdity of the administration's anti-information position is set forth clearly in the following editorial which appeared in the Hartford (Conn.) Courant of August 3, 1959.

[From the Hartford (Conn.) Courant, Aug. 3, 1959]

DON'T YOU SIT DOWN, MR. MOLLENHOFF

An unusual incident took place at the last Presidential press conference. President Eisenhower, who has been unusually generous and open with the press, had started to answer a question concerning a House amendment to the foreign-aid bill. The provision would cut off aid funds if the administration persisted in withholding from Congress, and the General Accounting Office, evaluation reports and other documents that showed how the program was doing. "You start your question with an implied fact that is not a fact," said the President, adding with some heat that there was no such thing as administration secrecy policies. When the questioning reporter, Clark R. Mollenhoff of the Des Moines Register and Tribune, rose to say something the President inserted in his remarks a brusque "Please sit down," and went right on to say that his administration withheld information only when the national security and national interest were involved.

The background of this exchange, as of the House's amendment, was the fact that the Comptroller General and congressional committees, having heard that there was waste and inefficiency in the foreign-aid program for Laos, and elsewhere, had been told by the International Cooperation Administration (which runs the program) that it was none of their business.

The President's position on this issue reflects an attitude he has shown before, one that is difficult to interpret as anything but an incomplete understanding of the necessity, in free representative government, for all kinds of information so that the whole tripartite system can function. One reason is that the President has had a number of advisers who themselves do not understand the need for this information, and the principle called freedom of information or the public's right to know.

The President rested his position chiefly on an Attorney General's opinion of 5 years ago defending what is known as executive privilege. It is indeed widely accepted, sometimes even by newspaper people who should know better, that Presidents from George Washington down have always refused information to Congress or the people when they felt like it, because this is the constitutional way. Actually there is no such doctrine in the Constitution, and it is one that has never been tested in court. But Supreme Court decisions approaching this issue indicate that such privilege, if it exists, is limited.

Naturally, there must be protection of the executive department from congressional fishing expeditions into matters that are none of Congress' business. But that is hardly at issue in this foreign-aid provision. What possible infringement of executive authority is there in finding facts about the aid program? What possible justification is there for withholding from the appropriating body information on how the appropriations are used?

Essence of America

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mrs. BOLTON. Mr. Speaker, the foreign visitor to America's shores is cer-

tain to be greatly impressed by the vast material abundance that is encountered on every hand. Wherever one goes in this great country, a picture of health and prosperity emerges. Yet the visitor would be seriously misled if he were to conclude that the essence of America lay in its material wealth. Indeed, many of our most priceless assets lie in the less-tangible areas of cherished values and ideals, located in the hearts and minds of our people.

In its editorial of August 9 entitled "Essence of America," the New York Times appropriately reminds us of the central place that these values occupy in the life of the Nation. As this editorial articulately conveys certain of these basic values, I ask that it be included with my remarks.

[From the New York Times, Aug. 9, 1959]

ESSENCE OF AMERICA

What is the essence of our society, of our civilization? The question arises naturally as we contemplate Premier Khrushchev's scheduled visit here next month and the hopes that have been expressed that this visit might correct the Premier's obviously great misconceptions about our Nation.

Those who express such hopes usually imply that they think the essence of America is its material wealth and the widespread distribution of that wealth among our people. Put most crudely, the argument seems to be that if only Khrushchev can see with his own eyes the throng of automobiles on every factory parking lot, the abundance of goods in our supermarkets and the like, he will immediately realize the error of his ways and radically alter the picture of our Nation in his mind. Hopes based on this kind of reasoning are, we suspect, an illusion and an insult to Premier Khrushchev's intelligence. There is very reason to suppose that he knows even better than the average American the number of automobiles, television sets and perhaps even dishwashers produced here annually. If he prefers to talk about our unemployed and our slums, that is because he is first and foremost a skilled propagandist mindful of his propaganda obligations every time he opens his mouth.

But the essence of America is not its wealth. We were far poorer than we are today in the 17th, 18th, and 19th centuries, yet increasing millions flocked here from foreign soil. There was not an automobile or a television set or a refrigerator in our entire land when Emma Lazarus, 76 years ago, captured some of the essence of our Nation in her immortal lines for the Statue of Liberty:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free.

The wretched refuse of your teeming shore."

America is a nation of men and women who yearn "to breathe free." If he could only understand this, Premier Khrushchev would know more about the essence of America than all the physical evidence of our wealth could ever tell him. From pioneer days the American dream has always been of a nation whose members decide their own fates and who are subject to no arbitrary power that stands higher than the law or public opinion. It is no accident that our Constitution provides for a government of checks and balances, that our corporations are hemmed in by antitrust laws, and that a struggle now rages about what limitations should be placed on the leaders of our powerful labor unions.

Frankly, we don't expect Premier Khrushchev to grasp this essence of America while he is here. His mind is too cluttered

up by the Marxist fairy tales about how the capitalist state is the dictatorship of the rich to understand the complex reality that will unfold before his eyes while he is here. But at least let's try our best to give him some inkling of what democracy at work is really like. After all, it's our freedom and democracy that make our way of life better than his, not our automobiles and our television sets.

The President Demands All-or-Nothing Labor Reform

EXTENSION OF REMARKS
OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I would like to include the following editorial from the Providence (R.I.) Sunday Journal; dated August 9, 1959:

[From the Providence (R.I.) Sunday Journal, Aug. 9, 1959]

THE PRESIDENT DEMANDS ALL-OR-NOTHING LABOR REFORM

With his vigorous appeal for a strong labor reform bill, President Eisenhower has placed the prestige of his office and of his personality squarely on the side of drastic reform.

He brushed aside any mild reform as useless. He dismissed the various moderate reform proposals as ineffective. Only a far-reaching measure, he insisted, will satisfy the overwhelming national demand for reform, curb the crooks and racketeers, stop the racketeering, corruption and abuses of power, and eliminate what he described as a national disgrace.

Four elements of reform were cited by the President as indispensable. A proper measure, he declared, must outlaw blackmail picketing, ban the secondary boycott, eliminate the "no man's land" between Federal and State jurisdictions, and guarantee free elections within the unions with full disclosure of union finances. "Unless it does these things," the President declared, "it is not a reform bill at all."

There is room to differ with this sweeping pronouncement. Even granting that all the reforms the President has advocated are desirable, the realities of the situation suggest that in demanding so much on an all-or-nothing basis, the President is running the risk that this year, as last, no reform bill at all will be adopted.

The bans he proposes on picketing and on secondary boycotts are extremely complicated and highly controversial. They are not nearly as simple and as black and white as the President made them appear with his examples; and they are bitterly opposed even by the honest and responsible leaders on the labor side. The "no man's land" reform, though eminently desirable, is a side issue with no bearing on the major aim of eliminating racketeering and corruption from the labor movement.

Only with his fourth point—the guarantee of free elections within the unions with full disclosure of union finances—does the President strike to the heart of the matter.

This is where the corruption starts. This is where the racketeers muscle in. This is the source of the trouble from which most of the other troubles arise. It is the loose election practices within the unions which permit the hoodlums to move in and take over. It is loose financial practices which permit the hoodlums, once in control, to extend their corruptive influence.

It is important to bear in mind that the need for this vital reform within the unions is acknowledged on all sides. It is not a matter in serious controversy. Conservatives like Senator GOLDWATER are for it. Responsible labor leaders like Mr. Meany and Mr. Reuther are for it. Senator McCLELLAN and Senator KENNEDY and all of the moderates are for it to a man. If Congress were forced to act for or against this single reform alone, it would be approved in a breeze.

The trouble is that the various bills now under consideration in Congress go various distances beyond this basic reform—and the further they go, the more controversial they become. Of the three bills now before the House, the one the President singled out as a good start toward a real labor reform bill happens to be the one that goes furthest into the area of bitter controversy.

The reactions to the President's appeal were about as expected. The National Association of Manufacturers was thoroughly pleased. Walter Reuther was thoroughly displeased. (The President, he said, had been taken in by labor's foes and given a few catch phrases to support legislation he didn't understand.) Senator KENNEDY took quick exception to the President's remark that the Kennedy bill (which passed the Senate 90 to 1) and similar bills in the House were wholly ineffective.

The President has taken a gamble by throwing all the force of his influence on the conservative side of the debate. We must now wait to see whether this is sufficient to swing the tide and produce a sweeping reform, or whether the action merely adds fuel to the controversy and results in no reform bill at all.

The United States and the Challenge of the Underdeveloped Areas of the World—Part II

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. FULTON. Mr. Speaker, as a Member of the Congress and of the Foreign Affairs Committee of the House of Representatives, I realize that much of the future lies in the underdeveloped areas of the world. The Honorable Francis O. Wilcox, Assistant Secretary of State for International Organization Affairs, made an excellent speech on this subject in Detroit, Mich., on May 1, 1959.

Under leave to extend my remarks, I am including part II of this speech which contains good material for the Congress and the people of the United States:

ANSWERS TO THE CHALLENGE: ASSISTANCE THROUGH INTERNATIONAL ORGANIZATIONS

We would all agree, of course, that the United Nations' primary responsibility is the maintenance of international peace and security. Active support of the United Nations as an instrument through which we strive to build a more effective system of law and order among nations is a cornerstone of our foreign policy. It is only natural that we should think of the United Nations first of all as a political instrument of peace. If it should be unable to prevent the holocaust of nuclear war, all the efforts peace-loving countries are making in economic development would be completely futile.

However, the efforts of the United Nations and its specialized agencies in the economic

and social fields are laying the foundations for a more lasting peace in the political field. These efforts are carried on with an absence of fanfare. They seldom make the headlines. But, in their persistent efforts to raise the standards of living of peoples throughout the world, they have achieved the greatest degree of international economic and social cooperation the world has ever known.

UNITED NATIONS EXPANDED PROGRAM OF TECHNICAL ASSISTANCE

That is a broad statement. Let me illustrate it by reference to the United Nations expanded program of technical assistance, since technical skills are the bedrock of economic development. This program is carried out by the United Nations, its eight specialized agencies, and the new International Atomic Energy Agency.

Since its initiation in 1950, the expanded program has grown steadily to its present great geographical scope. Ninety-six countries and territories are being assisted in some form this year. To these countries will be sent 2,500 expert technicians, and from them will come 2,200 fellowship students for study abroad. The fields of expert assistance and of study by fellows cover virtually every conceivable skill and technique that can contribute to the economic development of these areas. The striking nature of the international cooperation involved is demonstrated by the fact that the experts in 1958 came from 60 different countries, and that most countries are both givers and recipients of assistance. India, for example, which had the largest country program, also sent out 82 of its nationals to work in areas where their particular aptitudes and skills are important.

Again, the broad nature of the cooperation involved is reflected in the fact that the voluntary contributions of some 80 countries support the expanded program of technical assistance. As the initiator of that program, and consistent with our overall policy, we have taken the leading part in its support. However, its truly multilateral nature may be demonstrated by pointing out that a number of states contribute substantially more per capita than does the United States. These include Denmark, Canada, Norway, Sweden, and the Netherlands. This is a point which is either unknown or else deliberately forgotten by those who complain that we contribute too much to the United Nations.

A NEW VENTURE: UNITED NATIONS SPECIAL FUND

From the wide experience gained in the expanded program, and the knowledge that countries' needs for technical assistance greatly exceeded the resources of that program, has come a new United Nations body, the special fund, which came into existence last January. It is headed by a distinguished American, Mr. Paul Hoffman. The special fund will concentrate on larger projects of technical assistance than the expanded program has been able to do. It will also make possible a larger volume of supplies and equipment for each project—although it is not a capital development fund.

For example, it can finance a technical survey needed for the development of a Far Eastern harbor. The engineering study thus financed could lead to an investment of capital from some other source to develop the harbor's facilities. Or it may finance a general survey to determine a developing country's power needs and potentialities. Or it may undertake to establish a training institute for industrial instructors. There, teachers could be trained who would, in turn, pass of their knowledge and skills in order that industry may be developed at a quicker pace.

Since it was created in part to facilitate the conditions for new capital investments, the special fund is expected to work closely with another United Nations specialized agency, the International Bank for Reconstruction and Development. It will also work

closely with the other specialized agencies and with other sources, public and private, of potential investment capital. The United States was the initiator of the new special fund, and we look forward confidently to its making a significant contribution to the development of the less advanced economies.

INTERNATIONAL BANK AND MONETARY FUND

If technical skills are the bedrock of economic development, they obviously must be accompanied by a sufficient volume of capital to produce tangible economic progress. The United States has joined with other countries in establishing two multilateral institutions whose tremendous significance for the economic development and monetary stability of countries has been—outside the Sino-Soviet bloc—universally acclaimed. I refer to the International Bank and the International Monetary Fund.

Even the traditional critics of foreign aid and of the United Nations appear to recognize the important contribution made by these agencies. The International Bank has been an increasingly important source of capital, a mobilizer of private funds, and a source of technical aid. Since 1946, the Bank has made 215 loans to 49 countries and territories. These loans total over \$4 billion. While the early loans of the Bank were for postwar reconstruction in Europe, its emphasis has since been on the less developed areas. Asia is the region with the largest amount of Bank loans: \$1,195 million. Latin America has received \$878 million; and Africa's increasing importance is reflected in total loans of \$518 million.

The total authorized capital of the International Bank amounts to \$10 billion—an immense amount but not so immense either when considered in conjunction with the immense capital needs of the underdeveloped areas. These needs are so great that the Bank has recommended an increase in its authorized capital to \$21 billion. Congress has approved this recommendation and the United States is now prepared to join with other members to make this increase possible. Our share of the new total authorization would be slightly over \$6 billion.

But even this is not enough. In a good many cases the Bank has had to turn down applications for loans, not because the development projects involved were without merit, but because repayment of the loans in hard currency would have placed undue strain on the borrowing countries. It follows that if a new institution, affiliated with the Bank, could make loans repayable in softer currencies, projects such as these might well become feasible. Consequently, the United States is actively studying ways in which an International Development Association might operate, and has had informal conversations with other Governments on this subject. It is essential to the success of such an institution that it receive broad financial support from the industrialized countries which are members of the International Bank. We hope that such support will be forthcoming.

Similarly, the United States is taking an imaginative approach to the needs of the International Monetary Fund for additional resources. The Fund has been an effective instrument for promoting international monetary cooperation and sound foreign exchange practices. It has provided timely assistance to member countries faced with temporary balance of payments difficulties including many of the less developed countries like India, Indonesia, Turkey, and Burma. Very recently Congress acted favorably on President Eisenhower's request for an increase in the U.S. quota in the Monetary Fund from \$2,750 million to \$4,125 million.

REGIONAL DEVELOPMENT PROGRAMS

You can see that the United States has taken the initiative with great vigor to increase the ability of multilateral agencies to meet the needs of the underdeveloped areas.

This is revealed also in connection with regional development programs and lending agencies. We have just finished negotiating with the countries of Latin America, the charter of an inter-American banking institution. Its purpose will be to provide capital and technical assistance to promote the economic growth of Latin American countries.

Last August, President Eisenhower announced to the United Nations General Assembly that we would be prepared to support a development institution for the Arab States. Among the conditions for our support was that the Arab States agree on the usefulness of such a regional institution and that they be prepared to support it with their own resources. Only time will tell the extent to which the Arab States take advantage of this opportunity.

What I have been discussing with you of our actions to promote the economic growth of the underdeveloped areas through the United Nations and other international organizations is by no means an exhaustive account.

It does not include, for example, the important work which the U.N. specialized agencies are doing in virtually every field of human endeavor—agriculture, health, labor, education, and atomic energy to mention only a few. I hope, however, that I have reminded you of the extent of the multilateral programs through which we pursue our objectives. The records of each United Nations General Assembly, of its Economic and Social Council, and of the governing bodies of the various specialized agencies, all underline the importance which members of the United Nations attribute to the crucial problem of raising the standards of living in the poorer areas of the world.

The actions the United States has taken to initiate the special fund, to further regional development plans and agencies, to increase the capacities of the International Bank and the Monetary Fund, signalize an increased emphasis on the values of the international approach to the problems of economic development.

BILATERAL VERSUS MULTILATERAL AID: WHICH IS BETTER?

I am frequently asked the question, "Why doesn't the United States work more through the United Nations? Why don't we provide more of our foreign aid on a multilateral basis?" I have a particular responsibility in the Department of State for our participation in international organizations. So I suppose there is a natural tendency to expect the reply that we should use multilateral channels exclusively. I have tried to make clear my firm convictions about the usefulness of multilateral instruments of economic development—rather, the necessity of using them to the fullest possible extent. But I would not go so far as to advocate their exclusive use.

Our bilateral programs have the advantage of being very closely related one to another; the programs of economic aid in the form of defense support, for example, are directly related to our programs of military assistance in such countries as Korea and the Republic of China. Also bilateral programs can be gotten underway with more speed where time is of the essence. Moreover, our especially close ties with some countries, such as the Philippines, would seem to constitute sufficient justification for bilateral arrangements.

On the other side of the fence, the use of multilateral aid channels has its own advantages for the United States. Multilateral aid, by definition, means that other countries bear part of the cost and frequently more than half of it. There would seem to be no real reason why the heavy burden of foreign aid should be placed exclusively on the shoulders of the American taxpayer. Furthermore, the United States has no monopoly of skills, nor have we an unlimited

supply of trained men and women ready to go overseas to share their knowledge.

The utilization of the great pool of manpower and training resources offered by the United Nations member countries helps speed the pace of peaceful economic development, our basic objective.

An additional advantage is the readiness of countries to benefit from the advice of international organizations in domestically sensitive fields such as fiscal and monetary policy where advice from a foreign government might be misinterpreted. In these fields, governments often find it easier to accept the counsel of an impartial and highly competent international organization than the advice of other governments, no matter how good or well intentioned the latter may be.

I think this whole question of bilateral and multilateral instruments was well summarized by the Secretary General of the United Nations, Mr. Dag Hammarskjöld, when he spoke on April 7 to the Economic and Social Council of the United Nations. "I would hope," he said, "that all false dilemmas of multilateral or bilateral solutions, solutions inside or outside the United Nations, can be avoided. Call it what you may, regional solutions in a multilateral framework, multilateral approaches based on regional organs, or something else—these are but different ways of indicating elements which will be mixed in every constructive international approach to today's problems."

In one word, there need be no conflict between bilateral and multilateral aid. Each has proven its value in helping raise the living standards of the underdeveloped areas. Together, they constitute a powerful force in enabling those areas to achieve a momentum of economic progress which will make it possible for them to go forward in self-reliant growth.

WHAT MORE NEEDS TO BE DONE?

There are some critics of our aid programs who contend that we are not doing enough. They insist, in view of the serious threat that confronts the free world, that we should redouble our efforts.

Whatever one's view on this point may be, certainly no one should accuse the United States of pinching pennies. In fact, many of us may not fully appreciate the extent of our foreign aid during the post-war period. Only a few weeks ago I looked up the latest figures. If we were to add to the Marshall plan and the mutual security program the contributions we have made through the Export-Import Bank, the World Bank, the Monetary Fund, and various other types of assistance, our total foreign aid would run to something like \$72 billion since 1945. This figure serves as clear proof of our deep interest in helping to build a stable and a peaceful world.

It is our clear answer to those who feel that we have the option of assisting or not assisting in the economic development of the underdeveloped areas. We do have that option, but it is about as meaningful as the option between life and death.

Economic progress in the underdeveloped areas will not, I fear, assure the maintenance of freedom and democracy in those areas. But I am absolutely convinced that the absence of economic progress—and by that I mean a sufficient rate of economic growth to meet the aspirations of their peoples—will mortally endanger the survival of their freedom and democracy. Let us then choose, as we must, to assist them in full and generous measure along the road of economic progress.

In making this choice it is pertinent to ask whether there are not ways in which we can make our aid more effective. We may also ask whether there are things the underdeveloped areas can do to help speed up their economic progress. I think there is room for improvement on both sides.

Speaking about ourselves, may I say just a word about the "Ugly American." In my judgment, this book, by exaggeration and by focusing attention on isolated examples, has belittled the character and capacity of our representatives abroad.

Now, obviously, most Americans who serve abroad are something less than perfect. No human beings are perfect. Some may not represent this country with the ability and the distinction which you and I would like. Some do not speak foreign languages with any degree of fluency. Some may not adjust very well to the customs and traditions of the people where they are stationed.

The point I wish to make, however, is this: The "Ugly American" has done a gross injustice to thousands of able Americans who have done an outstanding job in foreign lands. Many of them are making real sacrifices for their country. Often they are called upon to work and live in hardship posts where health hazards are constant and where the school facilities for their children are quite inadequate. And in the vast majority of cases they have learned to fit well into a new and strange environment.

Again, this does not mean that we are perfect. Many of our citizens going abroad do, indeed, lack the language skills which could bring them into a closer understanding of other peoples' ways of life and thinking. This is true of tourists as well as some of our official representatives. It is a national deficiency, not that of a segment of our population. We in the Government are working hard and effectively to solve our part of this language problem. But the American people, and particularly our schools and universities, will ultimately have to be responsible for its solution.

Moreover, many of us in this country tend to think that our own customs and mores should be embraced by people in other lands. We find it difficult to understand why in India the cow is treated as a sacred animal even though it is very often a great economic burden. Now, the Indians are aware of this problem and are handling it in their own way. We must be tolerant of other peoples' ways of life, of which this is just one example.

On the side of the underdeveloped areas, much more remains to be done in creating the conditions necessary to encourage a freer flow of private capital. Public agencies—bilateral or multilateral—cannot do the job of providing sufficient external capital by themselves. The underdeveloped areas have a heavy responsibility to encourage the inflow of private investment under terms equitable to them and the investor. I mention this one example because it is crucial to economic growth in the underdeveloped areas.

Finally, let us recall the awful burden of world armament expenditures and the great opportunities for development activities if this burden could be lifted from our shoulders. In the next 10 years, the nations of the world may well spend in excess of \$1,000 billion on armaments. What could we not accomplish if some of these expenditures could be used for more constructive purposes? On our part, we have told the world that when sufficient progress has been made toward internationally supervised disarmament, the U.S. Government stands ready to ask its people to join with others in devoting a portion of the savings from such disarmament to a multilateral development fund. Somehow, the nations of the world must find a way to divert their wealth from arms to economic and social development—their own and that of their less developed neighbors.

The road ahead is not an easy or short one—least of all for the peoples and governments of the underdeveloped areas—but as their courage, determination and willingness to sacrifice are great, so must be our faith in their ultimate triumph. We have no choice but to dedicate ourselves—as they dedicate themselves—to the maintenance of free and

democratic institutions under conditions of economic progress.

As Tom Paine said almost two centuries ago: "Those who expect to reap the blessings of freedom must, like men, undergo the fatigue of supporting it."

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever

possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee)." His remarks will appear hereafter in the Appendix, and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CONGRESSIONAL RECORD

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building,
Washington, D. C.

Majority Leader Johnson's Record

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. MANSFIELD. Mr. President, not many daily sessions of the 86th Congress have gone by in the past several months without some reference being made as to the record of the Democratic Congress or the batting average of administration proposals. I have always felt and continue to feel that the record of the 86th Congress is a good record. There have been many accomplishments and there will be more in the next several weeks as this session of the 86th Congress draws to a close.

This record is the result of a cooperative effort put forth by Senate and House to enact sound and worthy legislation which will meet the needs of our country and our international obligations. The one person who has been the most responsible for this record is our majority leader, the distinguished senior Senator from Texas [Mr. JOHNSON].

The August 9 issue of the St. Louis Post-Dispatch carries an interview with Majority Leader JOHNSON as written by Edward Woods. This article gives a fine insight into the leadership qualities of the majority leader and discusses in some detail the accomplishments of this Congress and what he expects to accomplish before we adjourn.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

JOHNSON DEPENDING ON CONGRESS ACTION IN FIVE AREAS TO ADD TO LUSTER OF DEMOCRATIC RECORD—SENATE LEADER'S HOME-STRETCH PROGRAM AIMED AT DEMOLISHING REPUBLICAN ATTEMPT TO FASTEN "WON'T DO" LABEL ON MAJORITY PARTY

(By Edward F. Woods)

WASHINGTON, August 8.—LYNDON B. JOHNSON is depending on favorable congressional action in five major areas in the closing weeks of the first session of the 86th Congress to add luster to what he considers an already brilliant legislative record chalked up by the topheavy Democratic majorities in both houses.

Bills on which the Senate majority leader is pinning his hopes for demolishing charges by Republicans and some Democrats that his is a "won't do" majority relate to labor reform, housing, civil rights, shoring up the inflation-battered highway program, and raising the minimum wage to \$1.25 an hour with coverage extended to millions of additional workers.

There are many more projects JOHNSON would like to see dealt with before Congress,

now looking toward adjournment around Labor Day, packs up for a recess until next January.

Hence, the legislative proposals getting JOHNSON's attention at the moment do not represent his total objective. Rather, he has selected them because he believes they are attainable goals, even with time running out.

For example, a bill to provide Federal funds for school construction and to improve teachers' salaries is one which has his support. But it is so snarled up by divergent opinions as to its scope and the degree of Federal control it might impose on public education that JOHNSON apparently sees little chance of passage at this session. He would prefer to devote his energy and skill to legislation which has a chance of passage.

All of the issues involved in the JOHNSON homestretch program are seedbeds of political controversy, particularly so since 1960 is a presidential election year. Also, JOHNSON is always faced with the threat of Presidential veto, which Mr. Eisenhower has exercised four times this year on major bills favored by the Democratic majority.

Curiously, while JOHNSON is being berated by Republicans with charges that he pushes legislation which he knows Mr. Eisenhower will not sign, thus giving the Democrats a political issue, some members of the Texan's own party complain that he is too moderate in his approach to national problems and leans backward to accommodate himself to the veto threat by fashioning legislation with attractive labels but insufficient substance.

Discussing the record of the first session of Congress thus far, JOHNSON, with an almost aggressive display of pride, told a Post-Dispatch reporter:

"This has been one of the most constructive and productive years in the history of Congress."

Leafing through a long typewritten list of Senate actions, JOHNSON said, "During this 1st session of the 86th Congress we have passed a total of 589 measures, including 192 private bills, and confirmed 37,137 administration nominations."

"Why, we passed a statehood bill for Hawaii that they've been talking about around here for 40 years. We've initiated the entire program on space."

In assessing the Senate actions, an observer would find it difficult to separate entirely those measures advanced by the Eisenhower administration and those initiated by the Democratic leadership.

But it appears that in those areas where there was dual action on the part of the administration and the Democratic-controlled Congress, the Senate, under JOHNSON's guidance, has increased the scope of the programs even though they might later be whittled down somewhat in the House. A coalition of southern Democrats and conservative northern Republicans functions more effectively in the House than in the Senate.

A bill providing Federal loans and grants to help depressed areas rehabilitate themselves is a case in point. The administration requested \$53 million this year for this purpose. The Senate passed the bill after increasing the proposed fund to \$385 million. The House approved it but reduced the amount to \$283 million.

The Senator was reminded that Mr. Eisenhower had been criticizing Congress for what is called backdoor spending, a term applied

to passage of a bill carrying no specific appropriation but authorizing the Treasury to pay the bills out of debt revenue when the funds are needed. It was pointed out that some critics say JOHNSON had been accused of being too much concerned with trying to pass "veto-proof" legislation.

JOHNSON was scornful and visibly irritated. "We've never done any 'backdoor' financing the President didn't approve or request," he said. "As for veto-proofing legislation, we've had vetoes—four of them—and we don't have the votes to override one of them. We are going to do what we think is right, just as we've been doing all along. Who wants to be a billy goat and butt his head against a stone wall?"

Referring to critics in his own party, JOHNSON observed:

"All this talk about vetoproofing comes from people who would like to have an issue. I want progressive legislation even if it can't satisfy everybody."

What did the Senator consider the most important accomplishments of the Senate this year?

"Everything we've done this year is important," he replied. "A depressed areas bill is important in some areas. Extension of the \$63 million-a-year airport construction program is important in others. A labor reform bill is important to everybody. Creating an independent agency to find new uses for coal is certainly important to people in Pennsylvania and other coal-producing States."

JOHNSON ticked off other bills passed by the Senate, some of which are still awaiting House action: Raising the school milk fund to \$78 million, extension of corporate tax rates and certain excise taxes, home rule for the District of Columbia ("people ought to have a right to vote on who runs their government"), plugging a tax loophole to bring the Treasury about \$180 million more revenue from insurance companies, raising the public debt limit, supporting programs to accelerate atomic energy development for peacetime use, liberalizing the Senate cloture rule, and taking many steps to implement foreign relations through the World Bank and Monetary Fund, Inter-American Bank and a \$50 million health for peace program.

"We've carried out this program while at the same time going under the President's budget request this year by hundreds of millions of dollars," JOHNSON said. "Since 1955 we've cut under the President's budget requests in the first session by a total of about \$10 billion."

What some Members of the Congress think is the most potentially explosive issue, labor reform, is out of JOHNSON's hands. JOHNSON was instrumental in getting a corrective bill through the Senate, 88 to 1.

The House goes into battle next week with Republicans and northern Democrats lined up with President Eisenhower behind a bill which organized labor regards as too harsh. The union lobbyists are pressuring liberal and middle-of-the-road Representatives to support a bill which Mr. Eisenhower regards as even less effective than the Senate bill sponsored by Senator JOHN F. KENNEDY, Democrat, of Massachusetts.

Hence, the result of the House fight, no matter which way it goes, is likely to have far-reaching political consequences in next year's elections.

Civil rights legislation, now also being considered in the House, is certain to tax the majority leader's skill in accommodating fiercely divergent points of view in his own party. His formula generally follows the line of convincing one side or the other that it is licked and better make the best deal possible.

JOHNSON has a moderate bill in the hopper, which would set up a conciliation service to function in areas of racial difficulties, outlaw flight across State lines to escape prosecution for bombings, require preservation of voting records and extend for 2 years the life of the Civil Rights Commission investigating discrimination.

The plight of the highway program is another item worrying the Democratic majority. It is not politically feasible for Congress to leave here with the highway trust fund in the red and the program bogging down. Having rejected a proposal by the President to meet higher construction costs with a boost in the Federal gasoline tax of 1½ cents, the Congress is going to have to find the necessary additional funds some place. But that, for the time being, is the House Ways and Means Committee's problem.

JOHNSON relies a great deal on grassroots opinion in evaluating the moderate course he follows. Rifling through clippings of the results of one of the major public opinion polls, he seems to find ample satisfaction that his is the right course.

Headlines over the poll results read like this: "Democrats Given Edge on Holding Down Prices"; "Republican Vote Strength Found Below November 4 Level"; "Democrats Show Gains Since Election"; "Poll Develops No Sign of Republican Upturn," and so on.

Senator Hartke, of Indiana

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. JOHNSON of Texas. Mr. President, there are very few men who have made such an early and favorable impression as a freshman upon, his Senate colleagues than the junior Senator from Indiana [Mr. HARTKE]. It is gratifying to know that his merits are so well recognized in his native State of Indiana.

Senator HARTKE came to Washington backed by the largest margin of votes ever given to any Indiana candidate for a statewide office. The people of Indiana recognized a good man when they saw him.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Fort Wayne Journal Gazette, carried on July 27, entitled "Hartke Justifies Voters' Confidence."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARTKE JUSTIFIES VOTERS' CONFIDENCE

VANCE HARTKE was elected to the U.S. Senate last November by the largest margin of votes ever given to an Indiana candidate for any office.

His election followed an active campaign in which he went to every part of the State to let the people know who he was, what he believed, and what he stood for.

His official majority of 242,001 indicated that the voters liked what they saw and heard.

They gave him a tremendous endorsement. Less than 7 months have passed since he took his oath of office in Washington, yet it can be safely said that during this time he has measured up to great confidence which his fellow Hoosiers reposed in him last November.

He impressed congressional leaders from the very day he arrived in the National Capital.

This was shown by the fact that he received three major committee assignments.

Senator HARTKE was placed on the Finance Committee, one of the most powerful in the Senate. It handles all tax and tariff legislation. Its members carry unusual weight with other Senators.

He was also assigned to the Interstate and Foreign Commerce Committee and the District of Columbia Committee.

To the duties of these assignments and to his Senate responsibilities in general, Senator HARTKE has brought intelligence, experience, sincerity, commonsense, and great energy.

He has worked long hours in the Senate and in his office and has kept in touch with the folks back home.

He has worked closely and harmoniously with the able leadership of Senator LYNDON JOHNSON and Senator MIKE MANSFIELD, yet he is his own man who follows the dictates of his conscience and his own sound judgment.

Whatever he does, he has a reason for it and is able to state that reason with clarity and conviction.

Senator HARTKE is devoted to the interests of his own State and the welfare of the Nation at large.

He is vigorously opposed to extravagance and waste in Government. He stands for every economy consistent with the progressive growth and the security of America.

At the age of 40, Indiana's junior Senator is launched upon a career of public service which promises to be one of the most useful and brilliant in the entire Nation.

Every citizen of Indiana can take pride in his achievements.

Japanese Congressman's Open Mind on Race Cheers South Under Fire

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, those of us who voted to make Hawaii a State have been vindicated—that is, those of us who voted for it with possible reluctance and conceivable misgivings. I voted to make Hawaii a State. The election to Congress of Representative D. K. INOUE demonstrates to the world that Hawaii is made up of people who reflect the finest traditions of the magic in the word, American. At one of his first press conferences in America, this fine and patriotic soldier of World War II was asked his stand on the most inflammatory questions before this Congress, one, suffrage for the District of Columbia, and the other integration. In answer to both of these questions he was

forthright, firm, and unequivocal. On both of these questions he took the sensible stand which is, in substance, that he is determined not to prejudge any question. Being of a minority race, he understands what it means for the minority to be heard. He understands that the people in the South are a minority group and that their story should be told to the Nation and to the world. This is all we ask.

Mr. Speaker, everybody in Congress knows that the Representative-elect from Hawaii fought with one of the most gallant divisions ever to bear the American flag. In that division, his regiment was known as the Go-for-Broke. His division was known as the Division of the Purple Heart. His gallantry earned him 15 battle stars and cost him his right arm. What else could a man do for his country? Mr. Speaker, my newspaper, the oldest daily in the South, the most outspoken and fairminded paper in the Nation, has seen fit to write about this fine American of Japanese origin under date of August 12. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an article entitled "Japanese Congressman's Open Mind on Race Cheers South Under Fire."

Mr. Speaker, I am glad I voted to make Hawaii a State so that this man might take his place in the Congress of the United States.

The article follows:

[From the Charleston (S.C.) News and Courier, Aug. 12, 1959]

JAPANESE CONGRESSMAN'S OPEN MIND ON RACE CHEERS SOUTH UNDER FIRE

Remarks of the new Congressman from Hawaii, a man of Japanese ancestry, have given fresh encouragement to southerners because they indicate an open mind.

"I believe the people of the South have a story to tell," said Representative-elect D. K. INOUE at a press conference in Washington, "and I would like to listen to their story."

Another remark that was quoted by our Washington correspondent as making "a hit with southern Congressmen" was this statement:

"I don't believe integration in itself is a solution to the problem of civil rights."

Just what significance may be attached to these statements we cannot now predict. Perhaps they are the diplomatic remarks of a man who has not yet even been sworn in as a Member of the House of Representatives and who rightly enters with caution. Surely they cannot be construed as out-and-out embrace of the white southerner's belief in separation of races.

It is ironic that southerners, accustomed to vicious attack from race mixers, find comfort in any reasonable and courteous approach to the race problem.

Representative INOUE (pronounced, we have heard, In-oh-way) is an especially interesting spokesman on the subject of race. He will be the first Japanese to sit in the U.S. Congress. As readers know, the News and Courier opposed admission of Hawaii to statehood both on the grounds of distance from the mainland and the large proportion of oriental population.

When Mr. INOUE was elected to the House and a Chinese Hawaiian to the U.S. Senate, we commented gloomily on introduction of Asian influence to the lawmaking body. These things having been done over our protest, we shall look eagerly if not hopefully

for any positive values that may be forthcoming. Perhaps Mr. INOUE has furnished a ray of light.

Japanese are proud people. They have a keen feeling for racial integrity. They seldom mix in marriage with other races.

They are disciplined people. Not only did the famous Nisei regimental combat team recruited in Hawaii win more combat decorations than any other World War II unit, but also it had the best conduct record and the smallest number of absences without leave.

Japanese students, we have been informed, have the best average scholastic records in Hawaiian schools. Chinese are second, whites third and Hawaiians last. Japanese also have the lowest incidence of crime.

In contemplating the South's Negro problem, Japanese may come closer to sympathy than white northerners grant people of their own color. If that is the case Representative INOUE may turn out to be a valuable ally for southerners struggling to preserve their civilization against attacks in the falsely invoked name of civil rights. His words have set an example that Caucasian lawmakers might closely study. We would not reject a Japanese guide to return of local self-government in this Federal Republic.

Lake Michigan Water Diversion

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. WILEY. Mr. President, I ask unanimous consent that my remarks on Lake Michigan water diversion, delivered before a subcommittee of the Committee on Public Works, on August 7, 1959, be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

LAKE MICHIGAN WATER DIVERSION

(Remarks by U.S. Senator ALEXANDER WILEY, Republican, of Wisconsin, before subcommittee of the Committee on Public Works August 7, 1959)

Mr. Chairman, coming before this subcommittee to discuss water diversion is not a new experience for me, because I have seen this issue dragged from Supreme Court to special master, from Joint International Commission to Senate committees and from there to the full Senate in a fashion somewhat reminiscent of the man who, not being satisfied with one judge's determination, sets out on a shopping expedition to find a judge that would agree with him. Neither is the presentation of the facts and issues of this case completely devoid of theatrical makeup and ever-changing window dressing. The title of H.R. 1 reads "An act to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois waterway for navigation, and for other purposes." Then on July 13, Senator DOUGLAS—appearing before this subcommittee—not even once referred to navigation problems and all throughout his testimony he insisted that "all we ask is that this matter of Chicago's waste disposal be studied by a competent body." In his testimony on July 27, Norval E. Anderson, engineer of the Sanitary District of Chicago, confirmed that this was the

purpose. If there are any navigation purposes attached to this proposed diversion—authorizing the Department of Health, Education, and Welfare to conduct the study would certainly not provide us with the desired information on navigation needs. Moreover, it is now even uncertain whether all this diversion is really intended for pollution abatement. Mr. Milton P. Adams, engineering adviser to the attorney general of Michigan, appearing before this committee, advised it that he had some "reason to believe that Chicago's continuing demands for additional diversion, is due in part at least, to increased public utility needs for more cooling water from the canals rather than for district sanitation." Now, there is nothing in the Supreme Court decision controlling the present diversion at Chicago, nor in any subsequent act of Congress, which would permit a substantial portion of these waters to be used for condensing purposes in connection with private utility steamplant power generation.

I therefore urge that we depart from diversionary and discredited tactics and that we look at the actual facts and issues.

THE FACTS AND FIGURES OF THE CHICAGO DIVERSION

I previously filed with each member of the committee a very short brief, primarily raising the international issue, Canada having objected in no uncertain terms.

Today, I shall follow through with the other issues.

Of course, the basic question is as follows: Is it the responsibility of the Federal Government to clear up a local sewage problem which Chicago's neglect has created?

Is it good national policy or good foreign policy, or good constitutional law, for the Federal Congress to attempt to take the resources, in scope, from some sovereign States, for the benefit of a district of another State?

If any diversion by Chicago is to be permitted, it is our humble opinion that Chicago should be required to return the domestic pumpage, after purification, to Lake Michigan.

We contend that, because of the issue raised by Canada, the bill should be, if it is not tabled, referred to the Senate Foreign Relations Committee.

I need not stress what this committee already knows, that the Supreme Court has had jurisdiction, and is retaining jurisdiction of this very issue. As a matter of fact, the master appointed by the Supreme Court has held his first meeting with all concerned this Tuesday, August 4, in Philadelphia.

Now, before we examine the law and equity in this case, let us recapitulate the facts:

First, the bill provides that the Metropolitan Sanitary District of Chicago has the authority to increase by 1,000 cubic feet per second its water take from Lake Michigan—this to be in addition to all domestic pumpage and the 1,500 cubic feet per second already authorized.

The district already has been authorized to take 1,500 cubic feet. It wants to be able, in dry weather, to take a flow of 5,000 cubic feet per second; and in wet weather, taking nothing, just so long as it doesn't exceed the annual average of 2,500 cubic feet per second.

If the bill should become law, it would raise the issue as to whether the Supreme Court's jurisdiction has been done away with, and if so it would do away with the issue before the Court of any return of domestic pumpage in purified form to Lake Michigan.

Let me say that Chicago has already diverted three streams which formerly flowed into the lake; and the lake level is down 7 feet now.

What is that due to? There is a difference of opinion about it. But engineers say that

an additional 1,000 cubic feet would reduce the lake level a fraction of an inch.

When you realize that water has for years been continuously taken, and none given or returned by Chicago, this dangerous lowering of the level clearly shows the necessity for no more diversion.

In Milwaukee, sewage is purified up to 95 percent and Milorganite is created and sold for fertilizer.

I think the facts are conclusive on this: that Chicago doesn't want to spend any extra money, so to speak, to do the job that Milwaukee is doing.

FAILURE OF PROOF

The supporters of this bill have failed to make out a case. The undisputed evidence shows that the city has created the situation; has failed to remedy it by failing to extend its sanitary works.

This admission comes out of the mouth of H. P. Ramey, the Chicago Sanitary District chief engineer, as follows:

"Ramey said the district in recent years has had a good reputation and was credited with treating all sewage to the highest degree possible, or 90 percent removal of solids. Actually, Ramey said, this was not the case.

"Sewage treatment in the plants of the sanitary district has declined from a general average of 93 percent in 1951-52 to 87 percent or less in 1955-56.

"The lapse in sewage treatment has occurred at the west-southwest treatment plant, the plant which was cited in 1955 as one of the 7 modern wonders of civil engineering in the United States."

This went into the RECORD last year and was quoted in the Chicago Tribune, September 4, 1957, and the Chicago Daily News of the same date.

Last year, we showed what a poor job the Chicago plant had been doing for itself. In 1952, its purification was tops. In succeeding years, it has dropped miserably, and that is due to the fact that, while it has taken on an additional acreage in sewage, it has not increased the facilities of its sewage plants.

The purity of the effluent from the sewage plants of Chicago dropped from a peak of 93.6 in 1952, to a low of 85.6 in 1957.

The removal of the sewage solids from the liquid, which at one time, in 1952, was as high as 91.1 percent, had dropped by 1957 to 80.6 percent.

It is well to note that Milwaukee's purification efficiency remains at a high of 96 percent.

As indicated above, the Chicago Sanitary District figures show that between the years 1952 and 1957 the percentage of solids removable decreased from 91.1 to 80.6, or 10.5 percent, clearly indicating the inefficiency of the sanitary district.

The information shown above was brought from Chicago by Mr. Gordon McCallum, Chief of the Division of Water Pollution of the Department of Health, Education, and Welfare, at the specific insistence of myself.

Let me also read from the Supreme Court's opinion of 1929, which was in the RECORD last year, which language is applicable to the present situation:

"The sanitary district authorities, relying on the argument with reference to the health of its people, have much too long delayed the needed substitution of suitable sewage plants as a means of avoiding the diversion in the future. Therefore, they cannot now complain if an immediately heavy burden is placed upon the district because of their attitude and course. The situation requires the district to devise proper methods for providing sufficient money and to construct and put in operation with all reasonable expedition adequate plants for the disposition of the sewage through other means than the lake diversion."

Again this year your subcommittee had before it the testimony of Michigan Associates Consulting Engineers which most clearly proves, through actual photographs, that the Chicago Sanitary District is failing to do what the Supreme Court required them to do—that is to collect and treat its sewage in such a fashion that it could take care of the sewage disposal requirements of the area by means other than diversion.

The observations of the Michigan consulting engineers are confirmed by a 2-day survey made by the U.S. Public Health Service on October 27 and 28, 1958. Both surveys show (1) that portions of the waterway are grossly polluted; (2) that raw sewage and industrial waste are allowed to be discharged into the waterway without prior treatment; (3) that a large quantity of sewage is found in the canal—indicating either that the district's sewage disposal plants are not operated efficiently or that they are bypassed; and (4) that the district maintains an extensive number of sludge lagoons, which overflow and discharge into the canal without prior treatment.

Although the district brought here a whole battery of experts on July 27, in an attempt to refute these findings—they have certainly failed to negate even one point. At most they have shown that these deplorable practices do not take place every day of the week, but are regulated by the district, so that more favorable pictures could be taken during the off days.

Now, from all of this, it must appear that more water is not the solution, but more and better plants are.

EQUITIES

Let me summarize the equities:

1. Chicago needs more and better sewage plants to handle the growing volume of its sewage.

2. The overloading of the sewage plants, I have already shown.

3. Chicago has no health problem, and any diversion is not related to its health. The Supreme Court special master, in 1941, found that even a low of 54 percent purification level did not endanger health. Senator PROXMIRE demonstrated that fact when he read from the Health Commission's report in Chicago.

4. Neither Chicago nor the Illinois waterways have a navigation problem. There was a temporary problem, but it was solved when the Public Works Committee approved an authorization for water retaining works at Alton, Ill.

5. Chicago is luring industry by low taxes and unmetered high water use, whereas other lake cities are metering the use of water and solving their own sewage problems.

6. The bill originally provided for a 3-year diversion. Now, they want a 1-year diversion which will inch away the levels of the Great Lakes, to the damage of other States rights, transportation, harbor operation, and the operation of utilities on the St. Lawrence.

7. I repeat: The prime purpose of the bill is to save Chicago money in its sewage operations, it having allowed purification to slump, as indicated above.

8. The witnesses for the Army Engineers admit that there is no navigation issue involved, unless what we are talking about is the damage to be caused by additional diversion to the navigation on the lakes.

9. The Great Lakes States all have a legal ownership interest in the waters of the Great Lakes, subject only to the Federal Government's limited jurisdiction over commerce and navigation—this being evidenced by the President's veto messages of 1954 and 1956, in which he said as follows:

"(a) Existing diversions are adequate for navigation on the Illinois Waterways and Mississippi River.

"(b) All methods of control of lake levels and protection of property on the Great Lakes should be considered before arbitrary proceedings with the proposed increased diversion.

"(c) The diversion should not be authorized without reference to negotiations with Canada.

"(d) The legitimate interests of other States affected by the diversion would be adversely affected."

10. A new objection has recently come into being—the St. Lawrence-Great Lakes Waterway is completed and must not be damaged. This bill, I say, would undermine confidence in the future reliability of the St. Lawrence Seaway.

11. Illinois has only 57 miles of lake front, and the other States have about 500 miles. Canada has 3,772 miles of the Great Lakes, and the U.S. frontage is 2,278 miles.

THE GAINS TO CHICAGO AND THE LOSSES TO ALL OTHERS

I should like to stress again that the opposition to the diversion by Chicago is not based merely on Chicago's failure to solve its own domestic problem—it is based on the damages that such diversion would produce to the other States. For as the mayor of Cleveland stated: "To permit Chicago, or any other municipality, to extract large quantities of water from the Great Lakes watershed would constitute a subsidy just as surely as though Chicago was being handed a sum of dollars. To the degree that Chicago is benefited, others down the line will be injured to the same extent." But the evidence produced before this subcommittee has proven more than that—it has proven that Chicago's gain will be more than offset by the resultant losses to all other States.

The statistics provided by the State of New York Power Authority show that the annual loss to the authority in revenues from a 1,000 cubic feet per second diversion, would be over \$1 million a year. The total revenue loss, if such diversion was authorized to continue during the term of the license of the Niagara and St. Lawrence plants would amount to \$51 million.

The statement by the Lake Carriers' Association demonstrates the effect of the diversion on Great Lakes shipping. With the present permitted diversion, plus domestic pumpage of about 2,000 cubic feet per second, the city of Chicago is already depressing the Lake levels about 3 inches below what they would be otherwise. As the study by the Corps of Engineers has determined, a further diversion of 1,000 cubic feet per second will further lower the level approximately 1 inch and the level of Lakes Erie and Ontario by somewhat less amount. Such a lowering, it is estimated, would mean a total loss of approximately 1½ million tons of vessel carrying capacity by the combined United States and Canadian fleets of the Great Lakes vessel during a season. This is a loss to transportation companies alone of about \$2½ million. And now that the St. Lawrence Seaway is fully open, larger ocean vessels are trading in the Great Lakes, and these vessels, too, will suffer a loss in carrying capacity, as well as an increase in navigation hazards.

The mayor of Cleveland, further, testified that a 1-inch drop in the lake level would result in a reduction of the potential capacity at the Cleveland plants and that a million dollar's worth of plant supply would be lost.

What else would this diversion do to the interests of the Great Lakes States? What about the damage to the beaches and resorts, the harbors and the docks, now too high above water; what about the lower levels in the St. Lawrence Seaway canals? What about the future of the seaway?

The U.S. Department of Health, Education, and Welfare, has reported to this com-

mittee that the sanitary district could solve its sewage treatment problem without the diversion by means of chlorination and aeration at a cost of about \$1 million per year. I submit that if further diversion is authorized the losses to the many other interested States and businesses would far exceed the costs of such better and more permanent system by Chicago. Where, therefore, I ask, is the equity and economic soundness of Chicago's case?

Is it really expected that monetary benefits that H.R. 1 would give to Chicago should be paid by the citizens of Wisconsin and Michigan, Indiana, Ohio, and New York?

And, furthermore, the problem is not merely that of the unjust enrichment of the city of Chicago. It is also the problem of the wise utilization of the waters of the Great Lakes, and any water resources expert will challenge the economic soundness of using and committing these good waters for the flushing of sewage.

THE LAW THAT PERTAINS TO THESE WATERS

The Great Lakes are international waters. They are a national asset, and they make up the Great Lakes watershed.

I doubt very much whether Congress has the authority under the Constitution to pass bills that would authorize the transfer of large quantities of water from the Great Lakes-St. Lawrence watershed to the Mississippi watershed, with substantial damage to the Great Lakes, the municipalities on the Great Lakes and the people with property bordering the Great Lakes.

The authority of the Federal Government to divert water from one watershed to another for the exclusive needs of sewage treatment, is certainly very questionable. It is amusing, therefore, to observe the pathetic effort made by the Chicago Sanitary District to stretch inapplicable court cases in order to "prove" that the plenary power of the Federal Government over navigable waters "includes the power of diversion from one waterway to another." To buttress their position the district cites a recent *amicus curiae* by the Solicitor General of the United States (in *Wisconsin et al. v. Illinois et al.*, October term 1958) to the effect that: "The plenary power of Congress over navigable waters empowers it to deny the privilege of obstructing them, or to impose terms on a grant of the privilege." This is certainly a very correct statement of the Government's duty to protect the navigability of streams, but one that totally fails to establish the power of the Government to enrich some States at the cost of others through the authorization of diversion for purposes totally unrelated to navigation.

In the leading case of *U.S. v. Appalachian Power Co.* (311 U.S. 377), the Supreme Court held that: " . . . it cannot be properly said that the constitutional power of the United States over its waters is limited to control for navigation. . . . In truth the authority of the United States is the regulation of commerce on its waters. . . . The authority is as broad as the needs of commerce." Again in *Wisconsin v. Illinois and Sanitary District of Chicago* (278 U.S. 367), which is the landmark in the diversion controversy, the Court restated its position that Congress, in the exercise of its Constitutional power to regulate commerce, may adopt any means having some positive relation to the control of navigation and not otherwise inconsistent with the Constitution. A very strong statement was again made in a recent opinion by Justice Douglas to the effect that "It is not for courts, however, to substitute their judgments for congressional decisions on what is or is not necessary for the improvement or protection of navigation. . . . If the interests of navigation are served, it is constitutionally irrelevant that other purposes may also be advanced." (*United States v. Twin City Power Co.* (350 U.S. 222, 224).)

This, I submit, is a very correct and constitutionally sound position. But it is only this far and not further that we can go, and I submit again that H.R. 1 has nothing whatsoever to do with navigation or commerce. Any endeavor, therefore, to defend diversion for sewage flushing purposes, from the Great Lakes Basin to the Mississippi Basin, as coming within the realm of commerce, makes a sham of our law.

I submit, also, that to the extent that the issue involved in this diversion is not one of national commerce but of a conflict between the several States as to waters that are commonly shared—this is an issue for the courts. For as the Supreme Court said in *Wyoming v. Colorado* (259 U.S. 419, 464): " * * * a controversy between two States over the diversion and use of waters of a stream passing from one to the other 'makes a matter for investigation and determination by this Court' in the exercise of its original jurisdiction," and again "the upper State on such a stream does not have such ownership or control of the waters flowing therein as entitled her to divert and use them regardless of any injury or prejudice to the rights of the lower State in the stream."

THE FACTS OF THE CANADIAN DIVERSION

In the brief that was submitted by the district, there are references to waters that have been diverted from the whole system by Canada. My understanding is that in every instance, that was pursuant to agreement between our country and Canada, and these diversions were made before the St. Lawrence development, that is, before these two countries have put into the same \$1 billion.

Now let me refer to the specifics of brief filed by the district and let me set the record straight:

1. There never has been any diversion of water by Canada that was not pursuant to treaty or agreement.

2. Although Canada has had the use of an extra 16,000 cubic feet of water at Niagara for power purposes, the Niagara Treaty of 1950 provides that we and Canada should have the right to take the same amount of water for our powerplants.

3. Canada has contributed water by diverting Long Lac and Ogokie Rivers into the Great Lakes Basin, some 5,000 additional cubic feet per second.

4. Nothing has been said about the fact that every drop of the water taken at Niagara was and is returned to the lake resulting with damage to nobody.

We are perfectly willing that Chicago have additional water if it will return what it takes to the lake in purified condition, the same as Milwaukee does.

There is one point we must not forget, and that is that a large portion of the power generated in the early days in the Canadian powerplants at Niagara was allotted to industries on the U.S. side. Later, recognizing American power needs, the United States refused to allow its industry to be deprived of the power allotted to it under the agreements between the countries, and Canada had to dim-out to conserve power to meet its obligations. One of the principal reasons for negotiating the 1950 treaty was to resolve this conflict.

And let me stress again: The Chicago diversion is a real diversion in the sense that it diverts three rivers and approximately 3,300 cubic feet of water per second from the Great Lakes Basin to the Mississippi Basin. That water that Canada uses and reuses at Niagara is really a detour because it detours the water through its plants and returns it to the river and the lake.

It must be plain from the record in this case that the letter of 1958 by Assistant Secretary Macomber, which was cited by the bill's proponents, doesn't state the fact.

My previous brief in the matter, which I filed with each member of the committee, set forth Canada's position in no uncertain terms. It also clearly indicates that after the visit of Messrs. Douglas and Yates to Canada for the purpose of enlightening the Prime Minister that the Prime Minister was not "enlightened" and that he told the Canadian Parliament that he enjoyed the visit but that they had not established any reason for the Canadian Government to change its position.

If, as contended by the district, that for 40 years under the 1909 treaty, Canada had available some 16,000 cubic feet, that is a matter, not between Illinois and Canada, but between the Government of the United States and Canada.

And finally, after the 1950 treaty, the rights of the two countries were established to be equal.

IS AN ADDITIONAL STUDY NOW NECESSARY?

What is the purpose of this new proposed study?

The bill's title is a misnomer describing it as a study of navigation. The contents of the bill are more honest, saying that the purpose of the bill is to study the effect of diversion on Lake Michigan and on the Illinois Waterway. An amendment that was offered by the Chicago Sanitary District on July 27 would extend this study also to include pollution, the treatment of industrial waste, the flows of water throughout the southern part of Lake Michigan, and sundry other topics.

I submit, however, that any such studies are not needed at this time. The major part of this study has already been made and is contained in Senate Document No. 28, 85th Congress, 1st session, entitled "Effects of an Additional Diversion of Water From Lake Michigan at Chicago." The document sets forth in unquestionable terms that the present authorized diversion is adequate to meet the water requirements for navigation on the Illinois Waterway, and shows that losses would result from an increase in the diversion to navigation, power development, and shore property interests. The effect of such diversion would also be to increase power production at the sanitary district's plant at Lockport on the Illinois Waterway and save the sanitary district the money it would otherwise have to spend to solve its domestic sanitation problems.

Another study at this time would appear to be simply a waste of time and money, and the only possible reason for its institution would be in the fact that such study would offer an excuse for starting more diversion.

It has been said that such study, if authorized, would not interfere with the duties of the master, appointed by the Supreme Court, to look into this complex situation, but would, instead, provide him with additional data. I say this in response: About 30 years have passed since Justice Hughes, the previous master, has studied this problem; why not give the new master the opportunity to decide for himself what possible new information or studies he may require? And since one study was already conducted in 1957 and the new master commenced his own fact gathering this week—there is certainly no need to hasten and conduct a brandnew costly survey for his benefit, and without his collaboration.

CONCLUSION

1. The evidence shows that the Chicago district is to blame for its own predicament in that its sewage disposal plant, which was efficient years ago, has not been kept up-to-date as Chicago has grown.

2. It has diverted three rivers which formerly flowed into Lake Michigan; it has been taking some 3,300 cubic feet per second

from Lake Michigan, and has not returned a drop thereof.

3. The argument that Canada has up to 1950 had 16,000 cubic feet extra water, falls by its own weight:

(a) Because every drop of the water was returned to the river and the lake.

(b) It was pursuant to agreement with the United States.

4. Illinois has some 57 miles of frontage on Lake Michigan, and the other States have 500. Lake Michigan is part of the Lake-St. Lawrence watershed, and none of the other States have agreed to this diversion by the Chicago district.

5. Now that the St. Lawrence Seaway is a reality the port projects must not be jeopardized by this unreasonable demand. Chicago "the wonder city," has spent less per capita for sewage treatment, and has a lower tax rate than other cities. She should not expect to take from the other States. Her job, as the court has suggested, is to clean up her own house.

6. The Chicago district has no basis for relief by Congress since this is not a navigation or commerce problem. Congress has no authority to divert water for the sole purpose of stultifying Chicago's sewage down the Illinois River (*Wisconsin v. Illinois* (278 U.S. 367).)

7. The Chicago district has no basis for relief in law or equity:

(a) A temporary diversion would mean lower lake levels, which would lower harbor and canal depths, decrease safe shipping drafts and reduce tonnage carried. Lake shore property would be impaired, dock pilings would become exposed.

(b) Canada has repeatedly voiced its opposition to a unilateral diversion. Under the 1909 Boundary Waters Treaty, article II "It is understood, however, that neither of the high contracting parties intends by the foregoing provision to surrender any right which it may have to object to any interference with or diversion of waters on the other side of the boundary, the effect of which would be productive of material injury to the navigation interest on its own side of the boundary." As stated by Justice Holmes in *Sanitary District v. U.S.* (266 U.S. 405, 426), it is the duty of the United States to carry out its treaty obligations to Canada, which borders on the Great Lakes, and furthermore, the 1909 treaty "expressly provides against uses 'affecting the level or natural flow of boundary waters' without the authority" of the United States, the Dominion of Canada and the Joint International Commission.

I therefore submit that no diversion should be undertaken by any one of the two Governments without consultation and agreement with the other.

(c) While continuously pleading for an increased diversion from Lake Michigan—in order to meet existing sanitary needs—the Chicago Sanitary District has also followed in recent years a tremendous territorial expansion program which by necessity would make its present plants inadequate. From some 508 square miles in 1954, the district, through annexation grew to more than 920 square miles in 1958, an increase of 81 percent.

It is during this same period that the efficiency of the Chicago sewage treatment fell dramatically. I submit therefore that it is partly because of this expansion program, and the resultant fall in sanitary efficiency, that Chicago wants more water, and is now coming to Congress for aid. But it is presumptuous for Chicago to believe that the expansion program of the sanitary district, however meritorious it may be, should be financed by the other Lake States.

Mr. Chairman, and members of the subcommittee, let me say this in conclusion: Additional diversion of Lake Michigan waters has no justification either in law or

in equity; it is contrary to the interests of the other Lake States and contrary to the tradition of close and friendly relation with our Canadian neighbors; and finally, such diversion for the treatment of sewage is certainly, from a scientific and water resources point of view which must consider not only the needs of today but also the demands of tomorrow, a very uneconomic and unsound utilization of this generous gift of nature—the waters of the Great Lakes.

Tax Loopholes for Sale

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. HARRISON. Mr. Speaker, everyone pays lip service, at least, to the principle of equality in taxation, but our Federal tax pattern has developed, through the years, into a patchwork of inequities.

It is understandable, perhaps, that the tremendous and growing pressures of the national tax burden should have spurred the ingenuities of those taxpayers having the resources and incentives to develop mechanisms of individualized relief. Many of these devices have acquired legislative and administrative acceptance because, when viewed singly, they gave forth the color of equity.

Any careful and nonopinionated appraisal of the overall Federal tax structure, however, cannot but produce a recognition of sharp disparities in the treatment of various classes of taxpayers.

This fall, in the relative calm of congressional adjournment, there will be opportunity for a dispassionate examination of our tax laws, and for real progress toward an equitable apportionment of the taxload. The opportunity will come in the hearings announced to begin November 2 before the Committee on Ways and Means.

Our distinguished, discerning, and conscientious chairman, the Honorable WILBUR MILLS, of Arkansas, has provided this forum for serious-minded students of tax philosophy to exchange views and seek guideposts toward a rationalized tax system. Mr. MILLS knows that he has offered tax specialists a broad and stern challenge. He knows, too, that this challenge must be taken up in good spirit if ever we are to plug obvious tax loopholes and apportion the tax burden fairly and without favor among our citizens.

The average-salaried citizen would profit little from the retention, for a fee, of a skilled loophole sleuth, but the need for a general tax survey, such as Chairman MILLS contemplates, is nowhere more sharply emphasized than in the promotional material of those in the business of finding escape hatches for those facing heavy tax liability under the basic rates. As an example, Mr. Speaker, I include, under leave to extend my remarks in the Appendix, a circular received from Prentiss-Hall, leading distributor of tax publications:

HOW TO USE TAX-FREE INCOME TO KEEP MORE OF YOUR EARNINGS FOR YOURSELF—A NEW REPORT OF SPECIAL INTEREST TO MEN IN THE HIGHLY TAXED \$15,000 TO \$100,000 BRACKETS

The most effective way for a man with substantial income to keep more cash for himself is to tap today's nine big sources of tax-free income.

This goes far beyond the ordinary concept of savings taxes. For dollars earned on this tax-free basis can be 100 percent yours to keep.

Here is how tax-free boosts your actual income at various income levels:

If your income is—	You keep (without tax-free income)	You keep (with 10 percent of your income tax-free)	You keep (with 20 percent of your income tax-free)	You keep (with 30 percent of your income tax-free)
\$100,000.....	\$46,360	\$53,590	\$60,520	\$67,180
\$50,000.....	\$29,700	\$32,650	\$35,480	\$38,100
\$25,000.....	\$17,770	\$18,770	\$19,720	\$20,570
\$15,000.....	\$11,380	\$11,380	\$12,280	\$12,670

And you needn't stop there. The more tax-free income you get, the more money you keep for yourself.

This method of reducing taxes is so effective that in 1958 more people used it than any other major tax method.

To help you use this method for 1959 we have prepared a special 40-page handbook on the subject. This handbook will come to you at once without cost if you will simply place your advance reservation for the new 1960 Federal tax course which comes out in the fall.

Your complimentary handbook, "How To Get Tax-Free Income—Now," explains the following big close-at-hand sources of tax-free income for executives:

1. It explains an arrangement under which a portion of each year's company profits can be credited to the executives' individual accounts—tax-deductible by the company and tax-free to them.

2. It tells you how to get dividends from certain stocks completely tax-free (these need not be reported as income).

3. It shows you under what circumstances an executive can (under sec. 105(d) of the code) eliminate the tax on certain salary payments.

4. It explains how the company can now provide for your personal insurance costs (including life insurance), vacations, recreation throughout the year, country club memberships, overseas travel—and more, all tax-deductible by the company and tax-free to you.

5. It tells under what circumstances the company can give executives gifts and presents—tax-free to them.

6. It explains how the company can now set up a survivor benefit plan to provide tax-free payments for an executive's wife (and other family members).

7. It tells you how to have other people make improvements on your real estate—which they pay for—and which are tax-free to you.

8. It explains how to build a sizable tax-free investment income, whether you put your cash in real estate, stocks, bonds, or in a group of today's most tax-sheltered businesses.

9. It explains how to sell one's residence without paying a tax—even if you show a whopping profit.

These are just nine of the methods explained in this brandnew 40-page handbook, "How To Get Tax-Free Income—Now." They offer at last a solution to the executive's toughest personal problem: how to find relief from the ever-tightening squeeze of high tax rates and cheapening dollars.

How to get this new 40-page handbook

without cost. Simply return the card attached to the next page. The handbook will come to you at once with our compliments and we will enter your advance reservation for the new 1960 Federal tax course which comes out in the fall.

Just a word about the Federal tax course. Each year it is used by more company executives than any other tax work in America. Here is why the great new 1960 course will be so valuable to you:

1. It will feature more than 500 worked-out examples showing you how to handle virtually every kind of personal and company tax question you'll run into.

2. Every bit of material it contains will be up-to-the-minute on the latest tax setup.

3. It will spotlight more than 175 tax savings.

4. It will give you more than 200 pages on deductions alone.

5. It will comprise more than 1,400 pages of information all expertly tabbed and indexed.

6. It will give you filled-in specimen tax returns to follow for maximum tax savings.

7. It will cost only \$24.50—its tax-deductible expense—and there is nothing to pay until the new 1960 tax course is delivered to you in October.

Just return the enclosed card today. You'll receive without cost the special 40-page handbook "How To Get Tax-Free Income—Now" by return mail and the 1960 Federal tax course when it's released to the business world in October.

Tribute to Dr. Walter Prescott Webb

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. JOHNSON of Texas. Mr. President, Time magazine this week paid tribute to one of this country's most distinguished scholars and past president of the American Historical Association, Dr. Walter Prescott Webb.

Dr. Webb has been for a long time a professor at the University of Texas in Austin, and I am proud and grateful that on many occasions I have had the benefit of Dr. Webb's advice and counsel.

I ask unanimous consent that an article from Time magazine of August 17, 1959, be printed in the Appendix of the RECORD:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Time magazine, Aug. 17, 1959]

"PLAINS" TALKER

Shambling through downtown streets like a man in plowed ground leathery little Walter Prescott Webb looks every bit his part, a shrewd real estate trader in Austin, Tex. But Walter Webb, raised in the alkali flats of west Texas, schooled in the saddle and for 40 years a professor at the University of Texas, is also his generation's foremost philosopher of the frontier, and the leading historian ("The Great Plains," "The Texas Rangers") of the American West. At 71, he has been made the hero of a sort of plainsman's festival of letters—a collection of his occasional essays ("An Honest Preface," Houghton Mifflin; \$3.75), trimmed with the personal tributes of his Texas friends. Says his old friend and cultural sparring partner, J. Frank Dobie, the famed Western folk-

lorist ("The Mustangs," "The Voice of the Coyote"); "Webb is one historian who never lets the evidence stand in the way of the truth—as he sees it."

HAVE GUN, CAN TRAVEL

In his inaugural address as president of the American Historical Association, included in *An Honest Preface*, Webb admits that "I am one of the few persons who did not have to leave home to get a job. I am an example of institutional inbreeding which frightens all universities except the two that practice it most, Harvard and Oxford."

As historian of the plains, Webb follows in the tradition of the great Frederick Jackson Turner, who first formulated the frontier theory of U.S. history in 1893: "The existence of an area of free land and the advance of American settlement westward explain American development." To write his history of the Texas Rangers, says Webb, "Like Parkman I went to all the places where things had happened," and finally "I stumbled on one of the few original ideas I ever had." The idea, "What I saw was that when Stephen F. Austin brought his colonists to Texas, he brought them to the edge of one environment, the Eastern woodland, and to the border of another environment, the Great Plains. The Texas Rangers were called into existence primarily to defend the settlements against Indians on horseback. While the conflict between the Rangers and the Comanches was at its height, Samuel Colt invented the revolver, the ideal weapon for a man on horseback."

"In that flash of insight," says Webb, "I sensed that something very important happened when the American people emerged from the woodland, and the revolver [was] an adaptation to the needs of the new situation."

THE SOUTHERN CENTURY

As the years stiffen his knee joints, notes Doble, Webb's "intellectual movements" become ever more "flexible and limber." Two years ago in a Harper's magazine piece titled "The American West: Perpetual Mirage," Webb pointed out the "one overwhelming fact which 17 States have been trying to hide for the last century" "The Heart of the West is a desert"—both geographically and culturally.

Historian Webb sees the country's next frontier in the South. "Forget the misfortune and injustice of the past," he told the Texas Council for Social Studies last June. "If I could, I would convince the Southern people that their future is brighter than it has ever been in history. The South is the one region whose resources have been largely undeveloped and unexploited. It is not only possible but it is also probable that this next century will belong to the South."

News Reporter Snared in a Red Intrigue on Nixon Russ Trip

EXTENSION OF REMARKS OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DULSKI. Mr. Speaker, Mr. Nat Finney, Washington correspondent of the Buffalo Evening News, was a key figure in an interesting incident which occurred in Sverdlovsk, Russia, while he was a member of the press corps accompanying Vice President Nixon.

Under leave to extend my remarks, I include Mr. Finney's account of the incident:

NEWS REPORTER SNARED IN A RED INTRIGUE ON NIXON RUSS TRIP

(By Nat Finney)

WASHINGTON, August 8.—I had never expected it to happen to me but while I was in Russia covering Vice President Nixon's recent trip the Communists in cloak-and-dagger fashion tried to make me the fall guy for a bitter attack on the American press. It happened in Sverdlovsk.

The American newspaper-radio group was being briefed on the next day's activities in a second-floor lounge of the Bolshoi Urals Hotel when Paul Nevin of CBS radio and I were called out of the meeting.

Mr. Nevin wasn't present, so I stepped out of the briefing session and was confronted by a pair of formidable-looking, middle-aged Russian women, well enough dressed to prove they belonged to Russia's Communist apparatus.

One of them, English speaking and dressed in a pale blue frock, ordered me to come with them to my room, which was No. 219 at the back of the hotel. I asked why, but was given no explanation.

With the two women I marched to my room, where I sat on the bed and they took the two chairs. The woman in the blue frock announced—it was no introduction—that the other woman, who was wearing a print dress, was the directress of the hotel.

After fixing me with a hard stare, the directress proceeded to read in Russian from a two-page document. I gathered from her tone of voice the document was serious, but knowing little Russian, could form no notion what it was all about.

The directress clutched two Lincoln pennies in her left hand as she read, and at one point slapped them down on a night stand in a gesture that suggested she was proving some point.

The document having been read in Russian, the directress handed it over to the woman in blue, who I had gathered by this time was an interpreter. She read it in fair if somewhat awkward English.

I had been denounced, along with Mr. Nevin, by the residents of house No. 4, allegedly adjacent to the back of the hotel, for twice throwing fruit and American coins out the window to children, and then snapping pictures of the children as they picked up the fruit and coins.

This denunciation had been sent to the Sverdlovsk municipal council, a part of the local Communist apparatus, and the local first secretary of the party had taken cognizance of the denunciation and would protest to Vice President Nixon if I did not immediately hand over the films I was supposed to have made of the children picking up fruit and coins.

I told the women in blue who spoke English that there must be some mistake because not only had I thrown no fruit and coins to children from my window, or taken any snapshots, but I had never opened the window. I explained that I couldn't hand over something I didn't have, and went on to explain, in the hope it might help, why I had never opened the window despite the fact the room was an oven at midday.

"There's no screen on it, and I spent 15 minutes killing the flies already in the room," I said.

I inquired how the Russians who denounced me could be so sure fruit and pennies had been thrown from my window.

The woman in blue gave me a story about how I had first thrown things from the window and taken snapshots at 8 o'clock the night before, and that the parents of the children, living in house No. 4, had caught the youngsters in the very act of picking up fruit and coins and letting themselves be snapped.

The children had pointed out the windows, mine of the second floor and Paul Nevin's on the fourth floor, so there could

be no mistake and I was told I must hand over the film forthwith.

This had gone far enough for me so I barged out the door despite the attempts of the woman in blue to intercept me, and located Herbert Klein, the Vice President's press assistant, and Richard Davies, Mr. Nixon's aid on loan from the State Department. I was telling them the strange story when Mr. Nevin arrived.

The immediate analysis of the accusation and the way it had been made was that the Sverdlovsk and quite possible the Moscow newspapers planned to blast Mr. Nixon's American press entourage. Earlier incidents suggested something of the sort was afoot.

So Mr. Klein, Mr. Davies, Mr. Nevin, and myself immediately called on Assistant Press Ministry Director Popoff, who was traveling with the Nixon entourage, in his room.

He attempted to pass the thing off by saying there is an old Russian proverb that where there is smoke there's fire, and that when the films were developed everything would be cleared up.

Mr. Klein inquired whether there was likely to be a story in the Sverdlovsk newspapers the next morning, but Mr. Popoff shrugged that off with a remark that he had nothing to do with the local newspapers.

When we left Mr. Popoff's office, I went to my room, picked up all the exposed film in my bags and handed it over to Mr. Klein. If the Communists were about to forge a picture they weren't going to have my film in their possession.

Mr. Klein next contacted the Vice President, and after talking with him went back to Mr. Popoff. He told Mr. Popoff that the denunciation of me read by the woman was a total fabrication, and that if it appeared in the Russian press, the Vice President would have to consider mentioning it in his TV-radio speech in Moscow on Saturday night.

There was nothing about the incident in the Sverdlovsk or Moscow newspapers the next day. The Russian secret police, we all knew, continued to burrow for material for a manufactured blast against the American newspapermen, but up to the time we crossed the Polish border, nothing had appeared except Premier Khrushchev's canard against U.S. television.

Why I got tapped for the frameup in Sverdlovsk I don't know, and probably never shall know.

The Interstate Highway Program

EXTENSION OF REMARKS OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. HENNINGS. Mr. President, there is, as I have pointed out before, a growing concern in the State of Missouri over the failure of the Congress to provide legislation to assure the steady continuance of the interstate highway program. Illustrative of this concern are many editorials which have appeared in Missouri newspapers. I ask unanimous consent to have printed in the Appendix of the Record several of these editorials.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Joplin (Mo.) Globe, May 28, 1959]

THE FEDERAL HIGHWAY DILEMMA

Congress faces a real dilemma in deciding what to do about future financing of the

Federal interstate road program. It comes up to a crisis at the start of the new fiscal year, July 1.

The choice is between full speed ahead in giving the Nation a superhighway system, and a slowdown. The problem, of course, is money.

The Federal Government pays 90 percent of the cost of the Interstate System and 50 percent of major State roads. And the Federal trust fund set up to finance it with gasoline, diesel fuel, and certain other taxes is proving inadequate as the program moves to a level of \$8 billion in expenditures. Most States have used up their allocations, or will this year and want more in order to continue. Missouri is in this category.

There are several alternatives. President Eisenhower wants to up the Federal gasoline and diesel fuel taxes $1\frac{1}{2}$ cents a gallon to $4\frac{1}{2}$ cents to keep the program on a pay-as-you-go basis, as originally planned. Congress is balking at this. Some Congressmen want to dip into the Federal Treasury again, which means more deficit financing and an unbalanced budget. Others advocate issuing Federal road building bonds, which is just another way of deficit financing at more interest cost to the taxpayers. It also opens up a new area of Federal financing, which could go off in all directions in any number of bond funds, a dangerous policy.

Of course, the program could be stretched out several years beyond the present target date of 1972 for completion of the Interstate System, but we are warned this could be costly in lives as population and traffic increase.

Some way to keep the road program on a pay-as-you-go basis, or nearly so, seems desirable. One suggestion is to sound out the people on accepting Federal car stamps, or licenses, in lieu of saddling motor fuel with a larger tax, or otherwise levying the cost against car owners.

Any way you look at it, the problem is extremely troublesome. We need the roads for the sake of the economy and the public safety. But we don't like more taxes.

[From the Kansas City (Mo.) Star, July 30, 1959]

CONGRESS PLAYS TO PUBLIC APATHY ON HIGHWAYS

As of now, at least, Congress has detected no great public demand for action on modern highways. Congressmen appear to be more impressed with public resistance to a proposed increase in the Federal gasoline tax. As a result, a majority of the House Ways and Means Committee has voted to make drastic cuts in the Federal program.

Of course the Members of Congress are supposed to be more than sounding boards of the more vocal opinions back home. They are paid for a full-time job. They should have time to get more information on problems and to give them more thought than is possible for the average voter.

But, as a practical matter, many congressmen will invariably take what appears to be the way of least resistance. The public attitude on the highway program is a very important factor. And, the public opinion polls indicate that a majority of people think they would prefer a slow-down of highway construction to any increase in the gasoline tax.

Of course neither the polls nor the mail can tell the timid Congressmen what the public reaction will be after the collapse of the program. The average person reacts according to the impulses of the moment. He can't be expected to look ahead to the consequences of congressional action or inaction. That's the business of the Congressmen.

A general shutdown of the Federal program would affect most of the people in the United States. It would wipe out jobs on

highway projects and in all the industries that supply material or machinery for highways. Directly affected would be the employees of cement plants and steel mills.

A shutdown would stop highway department work all the way from the big city freeways to the rural farm-to-market roads. Without additional money the Federal Government will be unable to make contributions to any State highway projects next year. A reduced program of the type proposed by the Ways and Means Committee would be different from a shutdown only in degree.

The average motorist would receive very little tax saving as compensation for a highway disaster. The proposed gasoline tax increase to keep the program moving is only $1\frac{1}{2}$ cents a gallon. For a motorist who drives 10,000 miles a year and gets 12 miles to the gallon the tax would add only about \$12.50 a year. It is nothing compared with the benefits in rural roads, major highways and city expressways.

True enough, the average motorist doesn't visualize the highways that could be built in the future. For use of an existing turnpike he is ready to pay an average charge of around $1\frac{1}{2}$ cents a mile. A driver who gets 12 miles to the gallon of gas pays a toll equivalent to a tax of 18 cents a gallon. The turnpike saves the motorist far more than the cost. But the man who will pay a high price for something he can use now may be only vaguely interested in the highway he could have for tax money in 1965.

Unfortunately the tax needed to build the highway would have to be a clear-cut fact years ahead of the highway. And timid Congressmen visualize motorists aroused to a frenzy over another $1\frac{1}{2}$ cents. There is no question that this is a period of widespread resistance to new taxes of all kinds.

But we have a higher opinion of the intelligence and ultimate judgment of the voters than seems to be held by most Congressmen. While people might snarl briefly over the most inconsequential tax, we believe they are capable of seeing the purpose. Some sections of modern freeways are being completed and they will give the public a demonstration of what the program means. We can't imagine many people carrying a long grudge against Congressmen who voted to build highways.

We wonder whether some Congressmen aren't more concerned over the opposition of the oil companies, many trucklines and other large special interests that think they would be hurt by a tax increase.

This highway program was launched as the biggest construction job in the history of man. The public resistance to a tax increase doesn't appear to be half as serious as the consequence of failure.

[From the Columbia Missourian, Aug. 3, 1959]

INTERSTATE ROADS

Congress finds itself on the horns of a dilemma when it comes to discussion and action on the interstate highway program.

The House Ways and Means Committee voted to extend the program over a longer period of time to lift the burden of immediate financing. Rather than vote an unpopular increase in the Federal gasoline tax to take care of the costs, the committee reported out a plan to issue highway revenue bonds and extend the termination date of the highway system for 4 years, until 1972.

The Federal Government takes care of 90 percent of the cost of the system while the individual States pay 10 percent.

Typical of probably many other States is Missouri's situation. Ready to let contracts and planning on the Federal money, Missouri has had to postpone bidding, and approximately 3,500 employees will be let out of their jobs during the next 2 months.

So Congress will be faced with these two situations: Slow down the construction, have a rise in unemployment and some inflation with the issuance of bonds, or increase the consumer's tax on gasoline from 3 to 4.5 cents and keep the program going with the employees working. One must remember the highways have to be paid for sometime.

For an election year coming up, Congress is faced with a politically injurious situation. What will be done eventually is anybody's guess.

Congress should allocate what highway money is now coming in to projects such as this rather than putting it into the general fund.

In any case, if a person is sufficiently interested (if he drives an automobile, he should be interested), a letter to one's Congressman or Senator could do much to influence his representative's decision one way or the other.

Nobody is out and out for increases in taxes, but if we are to be intellectually honest, we ought to be willing to pay for something if we want it. It may be, as with so many things in these days of installment buying, that we would prefer buying it now but not starting our payments until next year or trying to defer them indefinitely.

[From the Jefferson City (Mo.) Sunday News and Tribune, Aug. 2, 1959]

ONE WAY TO END HIGHWAY BUILDING PROGRAM DILEMMA

Any way you twist the dial, the blame for the present slowdown of the roadbuilding program in Missouri and other States must be laid squarely at the doors of Congress.

There appears to be only one solution to the problem—a major letter-writing campaign by voters to Congress to get the interstate highway construction program back on schedule.

Caught in the snarl created by Congress' inaction are such primary and urban projects as Jefferson City's Highway 50 east expressway segments and a number of other roadbuilding programs in the capital city area.

Other than the interstate projects such as Route 40 the setbacks will be only temporary.

But in the case of Jefferson City and other areas the delay will cause inconvenience and continued blight. The numerous shells of homes along the Highway 50 east expressway from the West End Fire Station to Vetter's Lane will remain at least until November.

Had the flow of Federal funds not been disrupted, this segment undoubtedly would have been under construction late this month. Bids on the project were to be opened last Thursday.

Rex Whitton, chief engineer of the State Highway Department, says his best guess is that letting of bids on the first segment will be accomplished in October. That would push the start of construction back to November.

Nor will the slowdown have any longtime effect on the second segment—running from Vetter's Lane to the present Route 50 near the Moreau River bridge.

Mr. Whitton had no alternative but to put a stop order on letting of new construction contracts. Federal funds will taper off by the end of September and until this situation stabilizes and the State knows just what funds it will receive, the dilemma will continue to exist.

Missouri's chief engineer, rated among the best in the Nation, believes the State will be able to catch up on its primary and urban roadbuilding schedule by next March.

But the interstate program is another matter.

If Congress doesn't come up with a suitable financing program, Missouri's inter-

state construction schedule will be set back seriously.

The House Ways and Means Committee has voted for a slowdown in the nationwide program. The plan, if adopted by Congress, would slash scheduled allocations to State from \$2½ billion to \$600 million in the 1961 fiscal year starting next July 1. Allocations for ensuing years would be reduced sharply below the present figures.

Part of the present Interstate Highway System financing dilemma is of Congress' own making. It voted a speedup in the program last year because of the recession. Because of this and other factors the fund faces a \$500 million deficit by spring.

Congress thus far has turned a cold shoulder toward a number of recommendations which would permit the interstate construction schedule to be carried out as at present.

The interstate highway program was advanced originally to meet not only existing and future traffic needs but to assure the Nation an adequate network of freeways in the event of war.

Obviously, Congress is not treating the program in this light at present. The House Ways and Means Committee proposal would set back the completion date 4 years at least.

If mid-Missourians and other's don't act, such a situation is likely to develop.

Mid-Missourians would do well to pepper their Congressmen immediately with letters urging a quick and sound solution to the interstate highway financing problem.

Reform Can Be Overdone

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. PUCINSKI. Mr. Speaker, I should like to call attention of my colleagues to an editorial which appeared in the Northern Virginia Sun on August 12 which soberly reflects on the proposition that not all unions in this country are corrupt and that reform in the labor-management field can be overdone.

I believe that the publisher of this newspaper, Mr. Clayton Fritchey, is to be congratulated for having the courage to face up to this problem in a fair and objective manner, particularly when the overwhelming majority of the American press has gone overboard in its editorial comment in demands for legislation which clearly goes beyond the scope of antiracketeering reforms in the labor-management field.

I believe that this penetrating editorial puts the entire question of reform legislation in its proper perspective.

The editorial follows:

[From the Northern Virginia Sun, Aug. 12, 1959]

ALL UNIONS AREN'T CORRUPT: REFORM CAN BE OVERDONE

The labor bill that is the subject of the current free-for-all, no-amendments-barred debate in the House, acquires most of its urgency and impetus from the revelations by the Senate Rackets Investigating Committee of labor corruption on the part of a few unions.

For months, the headlines have focused the public's attention on the misuse of union funds by corrupt officials, on rigged union elections, on threats, intimidation, and strong-arm tactics. The normal activities of legitimate unions, not being headline worthy, have not enjoyed the same attention.

Thus, the labor bill comes up for consideration at a time when the general public is down on labor as a whole, even though the abuses have been concentrated in a small minority of unions representing but a fraction of total union membership. The public is likely to forget the steps that legitimate labor has taken to clean house, the most remarkable of which is the expulsion from the AFL-CIO of a full 10 percent of its membership because of corruption in certain unions.

As the House debates the labor bill, the cry is for reform—the elimination of the abuses and corruption disclosed by the McClellan committee. But in the antilabor atmosphere that prevails, there will inevitably be a tendency to try, in the name of reform, to enact provisions which may be aimed more at curbing the power of the legitimate unions than of the corrupt unions.

As a matter of fact, this is largely true of the three principal points of difference between the two opposing labor measures, which have to do with secondary boycotts, picketing in an effort to get management to recognize a union, and the jurisdictional no-man's land between the States and the Federal Government. Changes in the existing law on all three of these subjects have been desired by management long before and quite apart from the rackets investigation and its revelations.

These changes may be wise and needed, but they should not, in all fairness, wear the disguise of reform measures. In order not to confuse them with the true reform provisions of the labor bill on which every one can agree (those having to do with control of union funds and the democratization of union elections) the other provisions really should have been considered as a totally separate bill and debated on their own merits.

But it is too late for that now. All one can hope the House will do will be to realize that the major differences between the two competing bills before it do not deal strictly with reform, or with the corrupt unions alone. They deal with the basic labor-management power balance, and apply to all unions, the clean and the corrupt alike.

It would be tragic if a hopeless tangle over these issues were to result in a scuttling of the true reform provisions on which all might readily agree.

Recognition of Scholastic Attainment

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. JOHNSON of Texas. Mr. President, a recent magazine editorial has brought to light an imaginative and sound proposal for encouraging educational achievement at the secondary school level.

For some months now there has been extensive discussion of ways to attain the objective of a higher level of scholastic effort, and I believe that this pro-

posal to give academic achievement the same recognition that athletic achievement now receives will be of interest to all Members of Congress.

Mr. President, I ask unanimous consent that an editorial from the Saturday Evening Post of August 8, 1959, entitled, "Some Schools Award Letters for Brains as Well as Brawn," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post, Aug. 8, 1959]

SOME SCHOOLS AWARD LETTERS FOR BRAINS AS WELL AS BRAUN

Would it encourage interest in scholarship if students could earn a letter in the classroom as well as on the athletic field? This idea is being considered in the search for ways to stimulate scholastic attainment in the high schools, and a few schools over the country are trying out this idea. One with a long enough experience to justify some conclusions is the Sharon Springs (Kans.) High School. Sharon Springs has given scholarship letters for the last 6 years.

The scholastic letter is identical with those awarded to athletes except that it is inlaid with a small lamp representing the "lamp of learning." It is tougher to earn than those won by a halfback or tackle; a student must make all A's for a semester to win one. The four-letter man must be a rare phenomenon, although Sharon Springs seems to have produced several.

The idea is no longer regarded as an experiment. "We feel that giving the scholarship letter has definitely created more interest in scholarship," says Principal William P. Seigle, of Sharon Springs. The record bears him out. Two of last year's 25 graduating seniors were in the finals of the National Merit Scholarship Contest. In the last five annual State competitions for Kansas class B schools, Sharon Springs finished first four times and second once. Of the 94 students enrolled this year 7 boys and 2 girls earned letters for all A's the first semester. Six of the seven awards to boys went to athletes. There need be no antagonism between brain and muscle.

A more favorable attitude toward scholarship in our secondary schools is certainly needed, and, if this can be achieved by letting the students wear their grades on their sweaters, what's wrong with that?

Cotton Dilemma

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times-Picayune of August 11, 1959:

COTTON DILEMMA

U.S. agricultural officials have offered to meet with officials of the New Orleans Cotton Exchange to discuss what, if anything, may be done about the decline in cotton future trading.

Offer of the meeting probably is not overly considerate of the Department since the Government has put cotton exchanges in

this country practically out of business. Not a single futures sale was made on the New Orleans Exchange last Wednesday—the first such experience on record. Congress, it seems to us, should be in on the discussion, since it passed the business-killing legislation.

There is hardly such a thing as a free cotton market in the United States any more. Prices move along a nearly straight line from day to day, held up by the Government support price. With a large carryover at the beginning of the season August 1 and a big crop coming on, prices won't move much above the Government floor. Mills do not need to hedge their purchases (price insurance) since they know the price level will hardly change.

Since the Government takes over most of the cotton, it also holds a virtual monopoly in the export business. To get rid of excess cotton, it sells in foreign markets at about 8 cents a pound below the domestic floor price, thus making cheap cotton available to foreign mills who make cheap cloth for the world markets. Our mills can hardly compete for cloth orders abroad. Losses on the foreign sales of the raw cotton are paid by the taxpayers in general.

Congress has done a job of socialization on the cotton industry. Mr. Khrushchev probably would say the system is too cumbersome, too roundabout and expensive, and has discriminated against several segments of the industry. Having done a poor job, Congress ought to be ready to get back to the law of supply and demand, and a free market. So far, however, nothing indicates that it is ready to start undoing the damage that has been done.

The Time To Save Our Seashores Is Now

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. YARBOROUGH, Mr. President, just over 10 years ago, Miami Beach, Fla., boasted several miles of open shoreline for the enjoyment of the public. Then came a building boom and the construction of a large number of hotels.

Today, about 2 miles of Miami Beach's 7½ miles of ocean front is open to the public. The rest is blocked off for private owners—the hotels and their guests.

Padre Island in Texas could well come to a similar fate if we do not act now. And even if the actual beaches were not fenced off, private development would ruin one of this Nation's few remaining stretches of virgin shoreline.

The people of America need a national seashore area, particularly along this section of our coast. Private development has already started at both ends of this great island. The bill I have introduced to create a national seashore park on Padre Island would not push off this private development, but it would preserve for future generations the major part of this area so rich in recreational opportunities, color, history, and legend.

Anyone who doubts what could happen needs only to visit other parts of America's coastline and see how the beaches have been used.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article by Pat Murphy which was printed in the Houston Chronicle for Sunday, August 2, 1959, entitled "Beaches Shut Off—Dizzy Hotel Boom Haunts South Florida."

There being no objection, the article was ordered to be printed in the Record, as follows:

BEACHES SHUT OFF—DIZZY HOTEL BOOM HAUNTS SOUTH FLORIDA

(By Pat Murphy)

MIAMI, FLA.—As gold coast south Florida's sun-loving population pours over the million mark, the ghost of a costly postwar blunder has cropped up to do some timely haunting.

This is the big beach giveaway of 1948, the year Miami Beach shook off its World War II khaki tunic and embarked on a helter-skelter hotel-building spree.

From the starry-eyed tourist's view, the staggering results—a glittering concrete cliff of breathtaking resort hotels stacked along the wave-washed shore—are magnificent.

MORE APPALLING

But to taxpayers, the sight is often more appalling than appealing.

With nothing more than building permits, builders threw up an impregnable wall along the beach, virtually barring the public from using it.

Along the 7½ miles of Miami Beach oceanfront, all but 2 miles is taken up by hotels and their private cabana clubs, swimming pools, and overhanging additions.

And the tide of concrete would have kept moving seaward had not a bitter—and sometime fantastic—controversy been touched off by a coterie of angered community leaders.

SWAMP TO PARADISE

To understand the story of Miami Beach's disappearing public beaches, one must go back to the days of Carl Fisher, the intrepid and heady visionary who transformed Miami Beach from a mangrove swamp into a paradise.

In the dizzying boom days of the 1920's, Fisher began promoting lots along the then-scattered beach areas, and offered land to those who—in those days—would dare build a hotel on the wasteland.

For the next 15 years, hotels sprouted with no apparent danger to the public's stake in the beaches. Hotels were needed to attract tourists for the benefit of the area's economy, it was argued.

On the south end of the beach, 10-block Lummus Park was built—a seaside amalgam of sand, surf and beautiful landscaping for public use.

HOTEL MADNESS

But by the end of World War II, after hundreds of thousands of GI's had discovered the beach during training days here and began flocking back, hotel madness hit.

Nowhere along Florida's 1,398 miles of coastline—longest in the Nation—did postwar building hit such a stride.

Mammoth, neon-lit hostelrys sprouted like wild vine, foundations dug deeply into the sand and clinging to the high-tide mark.

The Miami Beach City Council granted permits for the hotels to plant bulkheads just above the high water mark on their own property, ostensibly to prevent erosion of the hotels' property by the surf.

EXTENSIONS IN SEA

Then the council floated a huge bond issue at public expense and built at intervals

along the entire hotel row a series of groynes, long, narrow, pier-like extension of steel and concrete which reached from the shore to as much as 250 feet into the ocean.

Engineeringwise, these appendages were to grab sand and reclaim more beach area. But as the building spree gathered steam, and more bulkheads and groynes sprouted, it was apparent that the public was being cut off from use of the beaches.

One of the first to attack was Beach Councilman Melvin J. Richard, a young lawyer and tough political fighter who contended a land grab was being pulled on John Q. Public by fellow councilmen.

WAR DECLARED

Others joined Richard and war was declared.

Richard reached into Florida antiquity for laws under the Spanish tidal grants of two centuries ago, and contemporary laws. What he found was like a bombshell. State law was being violated, he contended.

Said the law: "Lands between ordinary high and low water marks are the property of the State or of the people of the State. They are held, not for sale, or conversion into other values . . . but for use of all the people of the State."

CARRIED TO COURTS

Richard and others carried the issue to the courts. He found that hotels and palatial residences alike had erected walls, posted no trespassing signs and had built additions to block public use between the high water mark—owned privately—and the water—owned by the public.

During the court fight, three attorneys were even jailed by a circuit judge for attempting to take the matter over his head to the Supreme Court.

The beach's city attorney at the time washed his hands of the matter and said it was a State matter to decide, despite existing law.

REFUSED TO ACT

The south Florida area's State's attorney refused to act, and would not enter the court fight as the public's representative.

Florida Gov. Fuller Warren also turned his back when asked to intervene after an injunction to prevent further absorption of the beach was filed before circuit judge Charles A. Carron in Miami.

By then, in 1950, all but a few patches of the beach had been gobbled up by hotel development, and the other was privately held property with price tags reaching as high as \$2,000 a front foot.

As a public beach, most of Miami Beach was lost, except for the few spots earmarked for public use.

ACCESS BLOCKED

Access to hotel beaches was blocked by groynes, walls or hotels themselves.

One feeble remedy was engineered: Small public beaches—some as small as 50 wide—were built at the ends of public streets between the hotels.

But by the time Judge Carroll issued a ruling that hotels had no right to public portions of the beaches where construction had been carried out, the beaches were lost. No attempt was made to have the costly architecture torn down.

The bitter fight aroused the community and the same mistakes aren't being repeated.

But public swimming areas are at a premium in this area which depends on surf-side attractions for its tourism.

PUBLIC IN A BIND

Guests at dozens of lower-priced hotels off the ocean are left to seek swimming areas far from where they might have found them.

County officials, reeling under public demands and criticism from economic forecasters, are in a bind to provide more bathing

facilities. Involved is the staggering cost of buying private land in undeveloped ocean-front areas to gain access to otherwise publicly owned beaches.

Recently, Miami Beach had to cough up nearly \$500,000 for a 450-foot chunk.

In contrast, other parts of the State planned differently and prevented a takeover of the beach areas.

FOLLOWED LAWS

Just north of Miami Beach is booming Fort Lauderdale, for example, city fathers followed the high and low water laws strictly and outlawed any hotel building anywhere on the beachside of its ocean highway.

Thus, hotels are away from the ocean, and the entire 6-miles strip of Lauderdale beach is publicly maintained and dedicated. The same is true of other east and west coast resorts.

As a civic leader recently grumbled: "Our troubles today can be traced to a failure early in our growth to make profits yield to public rights."

Forewarned Is Forearmed

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent letter which I received from Mrs. John F. Stevens, Jr., of Brooklyn, N.Y., in which she presents her views concerning relations between the United States and the Republic of Panama. Mrs. Stevens, a member of a distinguished family, is the daughter-in-law of the late John F. Stevens, who was the chief architect of the Panama Canal and a man of exceptional talents and ability in other fields of endeavor:

BROOKLYN, N.Y., August 7, 1959.

HON. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR MR. FLOOD: I cannot let another day go by without thanking and complimenting you on your fine speech and eloquent plea for an immediate awakening, recorded in the CONGRESSIONAL RECORD of July 29, which I personally consider your clearest analysis and strongest appeal to date to the people of this country for recognition of the impending danger and threat proposed by the people of Panama for a so-called occupation of the Canal Zone, to take place November 3 of this year.

There is a saying to the effect that "to be forewarned is to be forearmed." Do the people of this country thing this an idle threat, to be more or less disregarded as impossible and therefore not to be taken seriously? Do they really understand its implications and to what it might lead if not prevented?

November is very close at hand and this is a very serious situation. Surely Congress must recognize the earnest and timely warning in your speech and, as you say, "declare itself upon the question of U.S. sovereignty over the Panama Canal and Canal Zone" at once, before it is too late. You are a valiant warrior and doing a wonderful job, but this battle should not be left longer for you to worry about and fight alone.

With admiration and best wishes,

Sincerely,

HARRIETTE L. STEVENS

Mrs. John F. Stevens, Jr.

Distribution of Obscene Literature Through the Mails

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. JOHNSTON of South Carolina, Mr. President, the Post Office Department, through the Postmaster General, has stepped up its never-ending campaign against the distribution of obscene and pornographic literature through the mails.

Not long ago I met with the Postmaster General on this problem, and together we went over the various materials and methods used by peddlers of filth material. We reached the conclusion that enlightenment of the people as to what to do when this material comes to light is the best way we can fight this evil.

I personally began a campaign several weeks ago to help stamp out pornographic material by taking to the radio and television, and by means of statements through the press and in the mails. I am happy to say this campaign is paying off. I have already been able to turn over to the Post Office Department evidence which will help postal officials track down and apprehend the offenders who, for a few dollars, would warp the minds of our children with their filth and propaganda.

In this respect I wish to bring to the attention of the Senate an editorial from the Capital Baptist, a publication of the Baptist Church here in Washington. In this editorial the editor praises the Postmaster General, Mr. Summerfield, and postal officials for their fight against the obscene and pornographic materials mail-order business.

I think this is a great example of how we can reach the people and tell them what to do when they come across pornographic materials in the mails, and thus stamp it out.

I ask unanimous consent that this editorial from the Capital Baptist, issue of June 11, 1959, entitled "Your Help Solicited," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUR HELP SOLICITED

At the recent meeting of the Southern Baptist Convention a strong resolution was adopted commending Postmaster General Arthur E. Summerfield and other postal officials for their courageous fight against the mail order business in obscene and pornographic materials.

Last month in a major address Postmaster General Summerfield set forth some of the dangers that confront America's children, and also some of the problems involved in fighting this battle.

This is a problem that Washington Baptists need to be greatly concerned about, and so we would like to share some of the statements that were made in the following paragraphs.

"There is flourishing in this country today a vile racket of huge proportions about which the public is not too well informed.

This racket involves the use of the U.S. mails for the wholesale promotion and conduct of mail order business in obscene and pornographic materials. I say it is huge advisedly. We can estimate at present that the sale of these materials through the mails is running at more than \$500 million a year.

"The especially vicious aspect of this racket is the fact that these purveyors of filth are aiming their attention more and more at the Nation's children—teenage boys and girls, and even younger. With complete arrogance, they are violating the homes of the Nation in defiance of the Federal Government.

"They are dumping pornographic sewage into the hands of hundreds of thousands of our children, through the family mail box—most of it material that has not been ordered—material intended to solicit the sale of utterly obscene pictures, slides, films, and related trash.

"How do these merchants of filth obtain the names and addresses of children? They have any number of ways. One of the most common is to offer, in a legitimate ad in a normal publication, the sale of a product of interest to a boy or girl. This would be stamps, or model airplanes, or doll clothes, and the like. These items are frequently offered at bargain prices. The child, usually with the parent's assistance, sends for and receives the item. Now the smut dealer has the name on his list, and soon the child is receiving lewd solicitations through the mail. These racketeers also buy prepared mailing lists of children's names, of which there are many. They even go to the extent of gathering up high school year books, from which they take names and match them up with addresses in city telephone books. If you were to read some of the solicitation material that these debauched persons send to the children, I believe you would be sickened.

"Consider this, if you will, in the light of a recent report on delinquency by a Senate subcommittee. The report states that one out of every 5 boys in this country, of ages 10 to 17, has a record, charged with breaking the law. Again and again, in the investigations of armed robbery, extortion, embezzlement, and forgery, authorities find that those guilty of these crimes were early collectors of obscene pictures and films. And it is well known that almost all sex criminals and sex murderers prove to have a long record of addiction to pornographic and sadistic material. Your children may never be exposed to this material, but they could be victims of sex criminals who have been exposed to it.

"Congress, as far back as 1865, made it a Federal offense to mail obscene matter. The Post Office has lent its fullest support to all such legislation, but, nevertheless, commercialized pornography has continued to grow. It has expanded tremendously since World War II. It has doubled in just the past 5 years alone.

"Especially, as I have pointed out the effort has been to expand the market through sales to children. There appear to be two basic reasons for this rapidly growing volume: First, the huge profits realized from a relatively small capital investment; and second, the very broad definition of obscenity handed down by certain courts, notably in Los Angeles and New York, where the great bulk of the mail-order business in obscenity and pornography originates.

"These liberal rulings have established, over a period of time, virtual sanctuaries in which dealers of obscenity have operated with impunity and in defiance of justice. We in the Post Office for several years have strongly urged legislation which would permit prosecution not only on the points of mailing of obscene material, but in the communities where it is received—where the real damage is done—and where citizens have an opportunity to express their standards of morality and decency. Such legislation was

passed by the 85th Congress and signed into law by President Eisenhower last year. It is, we believe, among the most important legislation adopted in recent years.

"To make full use of this new legal weapon, however, the Post Office must have the cooperation of parents and decent-minded citizens everywhere. Without such cooperation on a broad and resolute scale, we are under great handicap. As you know, the absolute privacy of the mail is one of our basic American rights. The Post Office Department cannot, and will not, violate this right, even when it has strong evidence that the mail is being used for unlawful purpose. I, for one, believe fully in this right. The Post Office, therefore, can legally identify and take action against violators of the mails only on the complaints of citizens who receive such material.

"Let me repeat that point: We can act only after the recipient of obscene mail has opened that mail, and the material has been forwarded to the local postmaster as evidence. To achieve this cooperation on the largest possible scale, our intensified program for action is fourfold:

"1. To draw maximum public attention to the menace of this racket;

"2. To urge parents to help us apprehend the mailers of filth to their children;

"3. To help mobilize community support behind adequate law enforcement of local ordinances or State laws when these purveyors are apprehended and brought to court;

"4. To rally public opinion behind new and stiffer legislation on obscenity.

"Help us to alert parents across the country. Help us through your organizations, and your publications, and by your individual efforts. Let the parents of America know what to do on any day that obscene mail arrives in their homes. The process is very simple: First, parents should save all materials received, including the envelopes and all enclosures. Second, parents should report the material immediately to their local postmaster and turn the materials over to him, either in person or by mail.

"Finally, all citizens, whether or not their children have been touched with this filth, can help by backing up Members of Congress and local officials in their growing efforts to stamp out this evil."

A Bill To Amend the Internal Revenue Code With Respect to Scholarships

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. PUCINSKI. Mr. Speaker, I call attention of the Members of the House to a bill I have introduced today that is designed to remedy a glaring inequity in the treatment of academic scholarships under the present tax structure.

Much has been said recently about our Nation's urgent need for more and better education. It is also generally realized that improved utilization of this country's potential manpower depends to a large extent on scholarships and fellowships. Yet, under our current tax laws, such financial assistance to students is still regarded as income for certain tax purposes, to the detriment of the recipients of scholarships and their families.

The bill I have introduced would eliminate this inequity and smooth the way for students who have demonstrated sufficient promise and application to have been awarded scholarships and fellowships.

Effectiveness of Foreign Aid Program in South Vietnam

EXTENSION OF REMARKS

OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. LAUSCHE. Mr. President, I recently had the opportunity to read an article by Mr. Albert V. Dix, who is an official of the Dix Newspapers with publications in Wooster, Ravenna, Kent, Belaire, and Defiance, Ohio, giving his views on the effectiveness of our foreign aid program in South Vietnam.

Mr. Dix has visited South Vietnam on four different occasions during the past 5 years, and is well qualified to judge from personal observation whether or not our program has been helpful or utterly useless and wasteful.

Mr. President, in my opinion, the article by Mr. Dix is so enlightening that others should have the opportunity to read it. I ask unanimous consent that the article by Mr. Dix be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The Senate Foreign Relations Committee currently has under investigation the administration of foreign aid in South Vietnam.

The probe is the result of charges by a roving newspaper reporter of maladministration, graft, and so forth. The reporter, according, at least, to a televised report of his testimony before the committee, does not even know the correct pronunciation of the name of the president of South Vietnam, Ngo Dinh Diem.

It would be easy for anybody making a quick tour of Vietnam to get an erroneous impression. It would be easy for any newspaper correspondent, frequently frustrated in contacts with high Vietnamese officials, unskilled in and uncomprehending of the importance of good public relations, to become browned off with the place in general and to begin hunting flaws. To realize what our foreign aid, even with all the admitted mistakes we have made in its administration, has accomplished there, it would be necessary to have actually seen conditions there over the past 5 years.

Less than 5 years ago utter chaos reigned in South Vietnam.

Hundreds of thousands of refugees were pouring into already overcrowded Saigon every week from Haiphong in the north.

Terrorists still roamed the countryside and it was only with extreme danger that one ventured outside the city limits of Saigon.

The Hoa Hao and the Cao Dai, two religious sects hostile to the established government in Saigon, still had large, well-equipped armies.

There was no assurance that the Communist armies of Ho Chi Minh would not pour down over the 17th parallel, the demarcation

line set by the Geneva Treaty after the Communists defeated the French.

The French were still in Saigon. They hated the new government, and vice versa. They also hated the Americans who had come in to attempt the seemingly impossible task of establishing in Saigon a government capable of setting up some kind of order.

I first saw Saigon in the spring of 1955. I got there right at the tail end of the Binh Xuyen trouble when an army of Communist-inspired river pirates under Le Van Vien tried abortively to oust the government of President Ngo.

When I arrived the Binh Xuyen still held the building in which the central police station was located and some of their terrorists were still in the city and had the nasty habit of almost nightly tossing hand grenades into the open doors of crowded restaurants, hotels, and even residences.

Refugees filled the streets and sidewalks where every night old people died and babies were born.

Most veteran observers to whom I talked didn't give Vietnam much of a chance. Frankly, I didn't either but hoped I was wrong.

We gave our full backing to Ngo Dinh Diem. He knew nothing of the science of government and less of practical economics. But he had more than his share of courage. He was—and is—personally honest and he hated all that communism and Ho Chi Minh stood for. He had killed some of President Ngo's family. The story is he had them buried alive.

But our investment of confidence in Ngo Dinh Diem paid off.

He smashed the Binh Xuyen, captured, and executed Ba Cut thus breaking up the Hoa Hao as a strong unit, and forced the surrender and dispersal of most of the Cao Dai. Those of the Cao Dai who didn't surrender, along with their "pope," are in exile in Cambodia.

I have been in Vietnam three times since the spring of 1955.

In that relatively brief period, unbelievable progress has been made. All the hundreds of thousands of refugees have been resettled in new little communities where they are self-sufficient on small farms.

The standard of living of the people has been raised, a thing most necessary to prevent them from turning to the Communists for something better.

And a great measure of security throughout the country—except for isolated pockets—has been established.

Many other things have been done there, including establishment of better roads, better communications, better schools and better transportation.

Much remains to be done and it has now reached the stage where much of it can be accomplished and financed by Vietnam itself, with some expert technical advice.

I know of no finer, abler, or more honest gentleman in the foreign aid branch of our foreign service than Leland Barrows, head of the mission in Vietnam. Or for that matter, D. C. Laverne, his erstwhile assistant who has been sent into Laos to clean up a mess there.

Along with me, he will be the first to admit there were mistakes made. But at the outset, it was necessary to do something, even if it was wrong.

And while we are thinking this one over let's indulge in a little personal introspection.

The Republic of South Vietnam was actually born with the crushing of the Binh Xuyen in the spring of 1955. It is actually less than 5 years old. How many mistakes did we in America make in, say the first 100 years of our history.

It is well for the Senate to go into the Vietnam situation. They should familiar-

ize themselves with it, but thoroughly. I think they will agree with me that, in view of the almost hopeless task that appeared at the outset, real miracles have been accomplished.

Donald Comer Writes Daily News Record

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. HUDDLESTON. Mr. Speaker, Mr. Donald Comer is one of the most outstanding leaders in the American cotton textile industry. A past president of the American Cotton Manufacturers Institute, he is chairman of the executive committee of Avondale Mills, whose main offices are in Birmingham, my district, and chairman of the board of directors of Cowikee Mills, also principally an Alabama concern. With all of us who are familiar with the cotton economy, Mr. Comer is very anxious lest the continued excessive importation of oriental textile products, manufactured by use of cheap labor and thus which can be sold at cheap prices, should make continued serious inroads into the well-being of our domestic cotton industry and all those associated with it, either directly or indirectly.

In a recent letter to the Daily News Record, Mr. Comer endorses the petition of the National Cotton Council to the Secretary of Agriculture to take steps to curb these excessive imports. He also names those groups who are in opposition to the petition and raises questions as to why these groups should object to the petition. Believing that this whole problem is one in which the Congress should interest itself and, in fact, one in which a great many of my colleagues do take an interest, I am pleased to include this letter in the CONGRESSIONAL RECORD, under leave heretofore granted.

AUGUST 7, 1959.

DAILY NEWS RECORD,
New York, N.Y.

GENTLEMEN: In your issue of August 5, I notice that there are six groups that are opposing the petition of the National Cotton Council for relief, under section 22 of the AAA, of unfair imports of cotton goods. This petition is signed by all of us who are primarily interested in cotton—the farmer, the warehouseman, the cotton merchants, the cottonseed crusher, the ginner, and the spinner.

I can't think that people who are opposing the National Cotton Council's petition understand what the problem is. Our Government pays the cotton farmer a parity price on the cotton he raises. The American spinner pays this price for some 9 million bales of the crop. The other 5 million bales are to be offered to our foreign competitors at 8 cents a pound less, which is presumed to be about the world price. The Government pays the farmers a parity price for this cotton and sells it at a loss of 8 cents a pound and the taxpayers of America, of which I am one, has to make up this loss. We of the National Cotton Council are asking that the foreign spinner not be able to take his low wages and this low price cotton

and flood our markets with goods manufactured under these unfair conditions.

Your article lists six groups who have written the Secretary of Agriculture opposing our petition. They are—

United States-Japan Trade Council. In their business of exporting they do not seem to think for a minute of the injury to a neighbor.

U.S. Council of the International Chamber of Commerce. This association has refused right along to recognize our danger and seem to be among that group who think that our industry should be expended.

Committee for a national trade policy. I would like to remind them that Secretary Hull, the father of this reciprocal trade program, said his idea was for every nation to swap with the other nations what each had in overabundance that the other nations needed.

National Retail Merchants Association. I know that some of our retail distributors are in the Orient with their buyers seeking what I presume they consider bargains for their customers over here. Of course, right now they are customers and we are not disposed to fuss with a customer, but I would like to remind them that it is our wages that buys all they sell whether it is from across the ocean or whether it is from home and if our plants are shut down whose wages will buy what they have to sell even though it comes from across the water and is cheap.

American Association of University Women. I don't know who speaks for the American Association of University Women. It certainly does not speak for my wife or my daughters, and I can't help but wonder where this decision came from, or why.

American Veterans Committee. I don't understand this group. I am a veteran. Our employees are veterans and I know that whoever spoke for the veterans does not represent us so I can't help but wonder where the authority came from for such a position, or why.

I had hoped that when the Cotton Council which represents all of us had agreed on a procedure that we would get the relief that we are entitled to from the Secretary of Agriculture. I sent you a copy of a recent letter I wrote to Assistant Secretary of Commerce Kearns in which I reminded him that back in 1933 the American mills had to pay a processing tax of 4 cents a pound which put us out of competition and broke some of us and crippled others until the Supreme Court declared the law unconstitutional. I suggested to him that we might have to go to the Supreme Court today to get rid of this 8 cents a pound discrimination which is double the original tax of 4 cents.

Yours truly,

DONALD COMER,
Chairman, Executive Committee,
Avondale Mills, Birmingham, Ala.;
Chairman of the Board, Cowikee
Mills, Eufaula, Ala.

The Army's Thesis

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important and timely editorial entitled "The Army's Thesis," which appeared in the August 12, 1959, issue of the Times and Democrat of Orangeburg, S.C. The editorial supports Gen. Lyman L. Lem-

nitzer's fight to obtain the essentials for a modern army. The Congress, by its actions on the defense appropriations bill this year, has indicated its willingness to provide some of the funds needed to accomplish this end. I hope that with the support of such able editors and publishers as Mr. Edward H. Sims and Mr. J. L. Sims of the Times and Democrat that Secretary Brucker, General Lemnitzer, and all others interested in providing our country with a strong defense posture for all eventualities will be able to convince the Congress to do even better in the next session.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Orangeburg (S.C.) Times and Democrat, Aug. 12, 1959]

THE ARMY'S THESIS

Gen. Lyman L. Lemnitzer, Chief of Staff of the U.S. Army, recently sounded a note on military strategy which is highly significant. It concerned the possibility that military operations will have to be conducted—in the future—without resort to nuclear weapons.

As the reader probably knows, our strategy in most areas of the world, especially in Europe, has been that we would use nuclear weapons if trouble arose.

Meanwhile, talks on limiting nuclear weapons and on banning the testing of nuclear weapons have continued, intermittently, between the United States, Russia, and Great Britain. Also, there is the ultimate possibility that a ban on the use of nuclear weapons will be imposed.

This ban does not exist today; nevertheless, Lemnitzer and the U.S. Army believe that we need strong conventional forces, and should not rely too much on mass-destruction weapons, which might never be used. Certainly, they have not been used since World War II, and there have been some brush-fire wars since that time.

It is probably true that we have relied too heavily on mass-destruction weapons in recent years. Our military commanders abroad have stated that they would use these weapons in case of aggression against any of the NATO countries, for example. Yet we come to the case of Germany, and wonder what would happen if the East Germans and West Germans got into a border war.

If this occurred, and the East Germans invaded West Germany, our military commanders would then be faced with the necessity of using nuclear weapons—according to our stated strategy. Just where would we drop nuclear weapons? On East Germany?

In other words, while we cannot hope to match Soviet ground forces in Europe, it is highly questionable whether we would use nuclear weapons in all circumstances involving brush-fire wars, or limited wars.

For that reason, we agree with the Army Chief of Staff that we need a modern Army, as well as a modern Navy and Air Force. The Army, after all, bears the brunt of the burden—as far as the dying is concerned—in all of the wars.

Federal Highway Construction Program

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. WIER. Mr. Speaker, under permission granted me to extend my re-

marks in the Record, I wish to insert a telegram I have just received from the Associated General Contractors and highway and heavy local unions of the State of Minnesota who, at a joint meeting, adopted a resolution urging Congress to take immediate action to provide financing for the Federal highway construction program and thus maintain the program at its present level:

MINNEAPOLIS, MINN.,
August 12, 1959.

Hon. Roy W. Wier,
House Office Building,
Washington, D.C.:

Following resolution adopted at joint meeting of Associated General Contractors and highway and heavy local unions in State of Minnesota, signed as below.

"Be it resolved by members of this conference assembled at the Radisson Hotel, Minneapolis, Tuesday, August 11, 1959, That Congress take immediate action to provide financing of the Highway Trust Fund by placing all road user taxes into the Highway Trust Fund in order to maintain the highway construction program at the present level."

It is imperative that Congress, at this session, take action to see that the program is continued.

It would seriously affect the economy of the State of Minnesota and the Nation if this action is not taken.

Abe H. Johnson, vice president, Associated General Contractors Highway Division; business agents and officers of unions as follows: L. J. Gough, Operating Engineers No. 49, St. Paul; Stan Olson, Drivers Local No. 1208, St. Paul; A. P. Eberly, Drivers Local No. 221, Minneapolis; Frank Demeria, Drivers Local No. 346, Duluth; Ernest R. Lee, Carpenters No. 951-1429, Brainerd and Little Falls; Harold Veal, Laborers No. 563, Minneapolis; Victor E. Lapacko, Laborers No. 132, St. Paul; Raymond Landkamer, Drivers Local No. 487, Mankato; Richard Schmidt, Carpenters No. 1464, Mankato; Eugene Topness, State Council of Carpenters; John E. Swedberg, Laborers Local No. 563, Minneapolis; W. H. Meyers, Laborers Local No. 132, Mankato; N. K. Long, Carpenters Local No. 87, St. Paul; Leo Ruberto, Laborers Local No. 132, St. Paul; Fred J. Bauer, Laborers Local No. 132, St. Paul; Orville J. Evenson, Cement Masons No. 557, Minneapolis; John F. Horbach, Cement Masons No. 560, St. Paul; Robert Penning, Cement Masons No. 557, Minneapolis; Herbert F. Kortz, Carpenters No. 1644, Minneapolis; Joe E. Oil Industry Centennial

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. JOHNSON of Texas. Mr. President, the oil industry is celebrating its centennial this year. The industry is and has been of incalculable importance to the progress of this country and it plays a major role in our defense program.

On August 9, 1959, the San Angelo (Tex.) Standard-Times published an article describing the significance of west Texas in the history of oil development. I ask unanimous consent that this article entitled, "West Texas Holds Big Role in Oil Centennial," be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the San Angelo (Tex.) Standard-Times, Aug. 9, 1959]

TITUSVILLE GETS SHOW, BUT—WEST TEXAS HOLDS BIG ROLE IN OIL CENTENNIAL

(By Grady Hill)

A sleepy western Pennsylvania town of 9,000 expects to play host to perhaps 50,000 people on August 27 when the oil industry celebrates its centennial.

The big show that day will be at Titusville, Pa., where Col. Edwin L. Drake on August 27, 1859, drilled in the world's first commercial oil well.

But that will be mostly a case of "queen for a day." The world-shaking petroleum "first" wrought by Colonel Drake has moved beyond Pennsylvania and even the boundaries of the United States in the ensuing century.

BIG WEST TEXAS PAYROLL

Today much of the centennial observance could well be centered in west Texas, which over the last three decades has held a major share of the spotlight in American oil development. (The Standard-Times will observe the centennial with an oil section on Sunday, Aug. 23.)

In 35 counties surrounding San Angelo the exploration, production, servicing and maintenance branches of the oil industry (aside from the refining and service station end of the immense enterprise) last year contributed 38.1 percent of that south and west Texas area's nonagricultural payroll.

Approximately \$1 out of every \$3 paid out in salaries and wages (aside from that for farm and ranch help) went to oil and gas workers.

PAYROLL \$167,497,000 IN AREA

The official figures compiled by the Texas Employment Commission district office here put it this way:

"Of the total of \$439,929,332 in calculated total nonagricultural payroll, based on required reports from employers of four or more persons, the oil industry payroll provided \$167,497,000."

The TEC also confirmed that in the actual exploration and drilling field activity current is better than it was this time last year. Over the Permian Basin (which extends into

New Mexico) there were 370 rotary rigs working last week, a higher figure than at the start of the seventh month of 1958.

Oil industry trade associations report that west Texas itself tops all other sections of the State in crude oil production today. In fact, it provided 399 million barrels of crude (and 952 billion cubic feet of natural gas) in 1958. That was 44 percent of Texas' oil output.

WEST TEXAS TOPS CALIFORNIA

The production figure, in fact, puts west Texas well ahead of California, the Nation's second largest oil producing State.

All of the development has occurred since the first west Texas commercial producer was brought in in Mitchell County in 1921 (the big strike which really sent Texas ahead came in 1923 with the Santa Rita gusher opening the Big Lake field in Reagan County just west of San Angelo).

But for the moment the spotlight turns back a century and eastward across the continent to Titusville, Pa. Thousands of west Texans have received invitations to the centennial.

TEXANS TO CENTENNIAL

Many Texans will go up for the affair, following a testimonial pig bearing messages from the Governors of 33 oil and gas States which started a trip through a pipeline last spring from Corsicana, Tex., to Titusville.

A feature will be the drilling of a new Drake test starting Monday on grounds adjacent to Drake Well Park. Drilling is scheduled to continue until August 24 when the new well will be shot. The next day the rig will move to a nearby location to remain in operation throughout the August 23-29 centennial celebration.

The Interstate Road Crisis

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. WOLF. Mr. Speaker, next to the question of the labor union racketeer bills, nothing has captured the concern and worry of the American people as much as the present situation affecting the interstate roadbuilding program. Thousands of people in my district alone are out of work because of the present economic crisis in this industry I was happy to join Mr. CLARK, of Pennsylvania, in his remarks on the floor last Tuesday, and hope that his program will be given early consideration by both the Public Works Committee and the Ways and Means Committee. Because of the high interest in this problem, and because of some of the facts contained in the following press release, I thought that it might be of value to other Members of the House:

WOLF CRITICIZES ADMINISTRATION FOR MISLEADING COST ESTIMATES ON THE HIGHWAY PROGRAM

Congressman LEN WOLF, Democrat of Iowa, said in Washington today, "I cannot believe that a 40 percent miscalculation by the ad-

ministration in the costs of the highway program was a simple, technical error."

WOLF said that the administration told Congress in 1956 that the total cost of the highway program would be \$25 billion. Now we are told that the costs will be over \$36 billion.

In his remarks WOLF proposed a plan which would make possible a continuation of the Interstate Highway System without increasing gas taxes at this time. WOLF pointed out that the present difficulty of the interstate highway program is a temporary one which can be corrected by using more of the revenue gained from autos, auto accessories and tires than are now being used directly for the highway trust fund. He said, "total receipts collected from excise taxes on highway road collected items are \$3.6 billion whereas only \$2.2 billion find their way into the highway fund. Over \$1.4 billion collected from excise taxes could be used to make up the deficit which the administration says will exist in the highway fund. It is sound fiscal policy to use revenues gained from a particular area of the economy to improve that area. I hope that an intelligent re-evaluation of assigning tax moneys will be undertaken by the administration."

WOLF also pointed out that the Bureau of Public Roads is presently making a comprehensive revenue and tax study of our road system which will be completed and enacted into law in 1961 and, consequently, "we should not be hasty in instituting new tax measures without the benefit of this study."

WOLF stated that he was opposed to any tax increase to make up the temporary deficit because "as is well known, it is almost impossible to remove taxes after they have once been levied. Experience teaches us that levying a tax is not a temporary fiscal measure."

"What is needed to solve the present dilemma of the highway program," he said, "is greater tax benefits derived from auto and truck receipts going directly into the highway fund during the next few years, and the enactment of the comprehensive suggestions of the Bureau of Public Roads on highway users tax in 1961."

United States-Soviet Debates on Freedom Versus Communism

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Thursday, August 13, 1959

Mr. WILEY. Mr. President, today the country and the world looks forward with mixed expectations to the exchange visits by the President and Premier Khrushchev.

Realistically, we recognize that the visits may, or may not, contribute to a lessening of tensions and to ironing out East-West differences. In all likelihood, the settlement of such differences, if accomplished at all, will be a long-term challenge. While hoping for the best from the exchange visits, I believe we must not expect overnight changes in Communist tactics. Rather, we must look ahead to see what else can be done to resolve problems, reduce tensions, and lessen the possibility of war.

As one way of accomplishing these objectives, I believe that a series of college-level debates between teams representing

the United States and the Soviet Union would be useful. The debates would be on the theme, "Our Free Way of Life Against the Communist Way of Life," and would cover government, economics, religion, and other major topics that represent differences between our systems.

I ask unanimous consent that a proposed program, relating to the debates, be printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD as follows:

The proposed debates envision:

1. Agreement between the United States and Soviet governments for the exchange of college teams to debate the comparative values of freedom versus communism;
2. Selection of a United States debate team (or teams) on a competitive basis;
3. Nongovernmental sponsorship for the program, with guidance by educational leadership; and
4. Selection of specific institutions (perhaps ten) within the United States and the Soviet Union for the debates.

TEARING DOWN THE IRON CURTAIN

The goals would be: (1) to combat the distortions spread about us by the Communist propaganda machine; (2) to give the Soviet people a realistic comparison of the values, objectives, methods, and achievements of the U.S. system and Soviet systems; (3) provide the American people with a clearer concept of Soviet ideas, beliefs, and other factors to better enable us to understand and attempt to resolve East-West differences.

Among the greatest benefit of such an exchange, I believe, would be the opportunity to again expose the Russian people to an un-distorted picture of the American way of life, goals, ideas, and policies of peace.

The exchange of debate teams—as a follow-up to the trip of Vice President Nixon and the Eisenhower-Khrushchev visits—too, would help to tear down the Iron Curtain. If allowed to stand, this curtain will only increase, rather than diminish, tension, fear, and the possibility of war.

REFUTING KHRUSHCHEV'S BRAGGING ABOUT SOCIALISM

Mr. Khrushchev has challenged the United States to a battle of ideas. Let's take on the Communists. I am confident we will be the victors.

The Soviet Premier has often bragged that our own system has outlived its purpose and that our grandchildren would like under socialism (in the Soviet Union, a false front for Communist dictatorship). I believe that our college debate teams can not only effectively refute this oft-repeated falsehood, but also would be able to impress upon the Russians that we—and our children—are dedicated to democratic processes, capitalism and freedom voluntarily—not through coercion of a 4-6 percent minority—such as that by which the Communist Party now dominates Russia.

VICTORY WILL BE BASED ON KNOWLEDGE, NOT IGNORANCE

I am aware, of course, that there will be those who would criticize the idea of Soviet exponents of communism coming to this country. Senator WILEY continued. However, we cannot fight an ideology through ignorance. Although we recognize that the Communists—even the leaders—do not know much of our way of life, we must also candidly admit that we, also, are too little aware of Russia's progress in recent years.

FREEDOM WILL TRIUMPH

To effectively combat this atheistic ideology, we must accept its challenges head on, analyze it, show up its weaknesses, and

provide a comparative set of facts, figures, principles, ideas and ideals by which the Russians—and the world—can make a well-reasoned judgment as to which system—in the long run—will provide the best kind of life for its people.

I am confident that our system and its ideals will triumph.

In view of the devastating effect which nuclear-missile warfare would have on the whole world, it is wiser to take the existing opportunity to debate them on ideological grounds, than ultimately meet them on battlefields.

We must realistically recognize, of course, that the cold war—even through a broader East-West exchange of ideas—is not likely to turn overnight into an era of sweetness and light. For, as yet, Mr. Khrushchev has made no sign that he is ready and willing to supplement his words of peace with real deeds.

Consequently, we must continue to remain alert, vigilant, open to negotiations, but not willing to make unilateral concessions—and keep our powder dry.

Donald Comer Writes Assistant Secretary of Commerce Kearns

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. HUDDLESTON. Mr. Speaker, Mr. Donald Comer is chairman of the executive committee, Avondale Mills, and chairman of the board of directors, Cowikee Mills, and a leader on the American textile manufacturing scene. In a recent letter to Assistant Secretary of Commerce Henry Kearns, he has pointed up graphically the problems now being encountered by farmers, ginners, warehousemen, merchants, cottonseed crushers, spinners, and men engaged in many related trades, because of the continued importation of cheap foreign textile products in excessive amounts. Believing this letter will be of great interest to my colleagues here in Congress, I am pleased to insert it in the CONGRESSIONAL RECORD, under leave heretofore granted:

JULY 27, 1959.

MR. HENRY KEARNS,
Assistant Secretary of Commerce,
Washington, D.C.

DEAR MR. KEARNS: My principal excuse for writing you again is to call your attention to the fact that the National Cotton Council composed of farmers, ginners, warehousemen, merchants, cottonseed crushers, and spinners have all asked the Secretary of Agriculture for protection against unfair cotton-good imports under the provision of section 22 of the Agriculture Act and to ask the assistance of the Commerce Department in this effort. While writing I would also like to call to your attention that ever since the AAA legislation our Government has been trying to put a sales tax on cotton in order to help pay promised farm subsidies.

At first they let cotton sell at the world market but required American mills to pay 4 cents per pound extra which they called a processing tax. This immediately put our cotton goods in an unfair competitive position with every substitute and every competitive fiber. The mills complained bitterly

and long over their growing hurt. There were some failures—two in Alabama that I know of. One in Ozard and one in Enterprise. These two mills because of inability to pay the accumulated tax were put in bankruptcy by the Federal Government and sold at auction. This situation was only cleared by the Supreme Court declaring the tax unconstitutional. Today the Government has changed their tactics. They have fixed a so-called parity price for cotton which the American mills have been paying. The foreign mills largely refused to pay this price and millions of bales of cotton accumulated in our warehouses.

In those early days the foreign mills had to have about half of their wants supplied by American cotton but because the parity price was considerably higher than the world price the foreign demand for American cotton has shrunk to about one-seventh. This artificial high price for American cotton is not only killing the foreign market but is encouraging the growing of cotton in every other country in the world. The Department recently has been offering our accumulated cotton to the rest of the world about 6½ cents under the parity price. They are proposing now to make this 8 cents beginning August 1, and they are not protecting the American spinner from the return in this country of goods made from this cheaper cotton to say nothing of his cheaper wages.

By some hocus-pocus we are now burdened with 8 cents instead of 4 cents. Instead of taxing me 4 cents they give my competitors a bonus of 8 cents. Since the Supreme Court threw out the 4-cent law it seems to me we should go to them now for our rescue from this second double threat to our life. Could your Department suggest the best way to start such a procedure?

Yours very truly,

DONALD COMER.

Excerpts From Address of Dr. Mordecai W. Johnson, President of Howard University

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. HART. Mr. President, on February 12 of this year, Dr. Mordecai Johnson, president of Howard University, made the Lincoln's birthday address before the joint convention of the Michigan Legislature.

There is no man living better qualified to speak of Abraham Lincoln than Dr. Mordecai Johnson. The son of slave parents he, like Lincoln, has devoted his life to all the people of this country. He has been teacher, preacher, YMCA worker, and educator. In 1922, when he was only 32 years old, he delivered a commencement address at Harvard University, which is still remembered. Its title was "The Faith of the American Negro."

It gives me pleasure to offer for printing in the Appendix of the Record excerpts from Dr. Johnson's Lincoln's Birthday address of 1959. The whole speech should be included, for it was a magnificent one. Space problems alone have forced me to excerpt from it.

Mr. President, I ask unanimous consent that excerpts from Dr. Johnson's speech be printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

AN ADDRESS ON ABRAHAM LINCOLN BY DR. MORDECAI W. JOHNSON, PRESIDENT OF HOWARD UNIVERSITY, WASHINGTON, D.C., BEFORE JOINT CONVENTION OF THE MICHIGAN LEGISLATURE, FEBRUARY 12, 1959

Mr. President, Mr. Speaker, Mr. Cramton, distinguished members of the senate and house of the great State of Michigan, I am deeply grateful to you for the privilege which you give me today of joining you in meditative appreciation of our great leader, Abraham Lincoln—the man whose name is the greatest of all names connected with popular government in the history of the world. I have come to you today, bearing in my heart a deep sense of personal indebtedness to this man, for I am a child of slaves. My father was a slave and my mother was born a slave. Both of them were set free by Abraham Lincoln. Along with the deep sense of debt which I bear in my heart toward him is another which is akin to it, namely, the sense of debt which I bear toward you and for your kindred in this State who, under the leadership of Abraham Lincoln, made so very large an investment of devotion and suffering in that cause which made it possible for us to be free. I know that if that humble minority to which I belong could be aware that I am here today they would want me to tell you that they will never forget these things. They will remember the name of Abraham Lincoln and the citizens of these free States as long as they live, and they will cherish these revered memories and hand them down to their children and their children's children until the end of time.

I want to thank the members of this senate and house because your interest in this minority is still vibrantly alive. In recent years you have responded in a wonderful manner to the leadership of the Honorable Louis C. Cramton in the house, by crossing all party lines to establish a Fair Employment Practices Act in this State, which undertakes to provide an open door of economic opportunity for every citizen, regardless of his race, creed, color, or national origin. Several years ago I had the privilege of coming here to attend a banquet which was given in honor of Mr. Cramton, at which time outstanding members of this body and your distinguished Governor heaped honors upon him for his diligent and unwearied devotion to the passage of this Fair Employment Practices Act and for the outstanding character of his devotion to the public good. My heart throbbed with joy at this banquet, for I have known and loved Mr. Cramton for 32 years. He is the best living example of Abraham Lincoln whom I know of in this world.

In undertaking to talk with you about Abraham Lincoln today I must approach him from that angle of his life which interests me most deeply. I am a teacher of young men and women. Among my graduates who give me greatest pride are a few who have become distinguished servants of humanity in the field of the public life. I am always searching for those qualities in men of distinction which have proved effective in the public life, hoping to be able to speak with my students about those qualities in such wise as to cause them to study and to reflect upon them, with the purpose of making these qualities a part of the basic ingredients of their lives. Of all the men in the public life of the world who have deeply impressed me in this respect, Abraham Lincoln is one who grows on my affections year

by year. The qualities of his heart and mind are remarkable, beyond measure, in their fitness and power to sustain and to transform the institutions of the democratic public life. Now if you will remember that this is a schoolteacher and a child of slaves talking with you, having perhaps a bigger message in his heart than he is able fully to articulate, you will try to think with me as I speak. In this way your own intuitions will supplement what I have to say and may turn an otherwise stumbling effort into a matter of power.

THE FIRST PERIOD OF LINCOLN'S LIFE, 1809 TO 1854

The great work of emancipating the slaves and the preservation of the Union, for which Abraham Lincoln will be remembered throughout the ages, was done in the last of the three periods from 1861 to 1865, and the decisive political events preceding this great work were brought to pass in the period from 1854 to 1860. It has been customary to pass over this first period of 45 years in a cursory manner as if it were really of very little importance. It appears that Abraham Lincoln himself rather thought of it in this way. He was a man who spent very little time thinking about the days of his boyhood and early manhood. When people tried to make a great deal of it, he said, "Why, it is a great folly to attempt to make anything out of me or my early life. It can all be condensed into a single sentence, and that sentence you will find in Gray's Elegy—"The short and simple annals of the poor."

But there was a whole lot more to the life of Abraham Lincoln in those first 45 years than he himself took time to mention. For in those 45 years this man developed by his own efforts one of the most powerful groups of qualifications for political leadership ever to be found in history. These are the qualities which made him the power that he was from 1854 to 1861, when he became President of the United States, and which led him in the years 1861 to 1865 to become the emancipator of the slaves and the preserver of the Union.

A VIVID AND POWERFUL ETHICAL DISPOSITION

Now what are these qualities? First of all, Abraham Lincoln developed in those early years a vivid and powerful ethical disposition which he made radically applicable to every human being whom he touched—whatever his race, color, creed, sex or national origin—and he extended it even to animals. He was especially sensitive in the presence of cruelty, either to men or animals, and often found it impossible to pass by an animal in distress.

This was no quality merely given to him. Maybe the greatest part—the instinctive part—was given to him, but he cultivated the rest of it deliberately and thoughtfully. He had the same experience that most of us have when we pass by a man or an animal suffering from cruelty or distress. He got a message from his heart, which told him: "This is your kinsman and he is hurt. Are you going to help him?" Again and again in his life he tried to pass by, but again and again he would come back deliberately, thoughtfully, and help that man or help that animal. He kept this up constantly until it became an habitual disposition of his life, and it never weakened until the day he died. He was never able to look on cruelty complacently. He was never able to look at men and women who suffered from any unjust cause without feeling identified with them. This is where he got his great conviction that slavery was wrong, that the cruelty connected with slavery was wrong, that a cruel thing like this had no business to exist on this earth, and that somehow or other it ought to be done away with. There is no place on record where he never said anything different from that. He said it over and over again, because it was a considered judgment,

arising from the heart, confirmed by the reflections of deliberate intelligence, and nourished as a part of his life.

A THOROUGH ACCEPTANCE OF THE DECLARATION OF INDEPENDENCE

In the second place, Abraham Lincoln was a man who had a thorough grasp of the meaning of the Declaration of Independence, and he accepted the radically transitive universal ethics of that Declaration of Independence with all his heart. I do not mean merely that he accepted it intellectually. He accepted it as a part of his very being. Abraham Lincoln had one of the most precious habits that a man can have in this world—the habit of prolonged aloneness in meditation and in thought. Being impressed by the language of the Declaration of Independence for example, he would go off with it by himself, or he would sit alone by the fire when there was no one at home but himself or when other people were sleeping. Then, wrapping his long legs around the chair and putting his arms on the back of the chair, he would read the words alone, asking himself, "Now, just what was it that these men had in mind when they wrote these words? Of all the politically significant words written on paper, these were the most precious to him:

"We hold these truths to be self-evident: That all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter it or to abolish it, and to institute a new government."

These words he turned over and over in his mind until the spirit of them possessed him through and through, and until he felt the electric possibilities of them in all the aspects of his being—intellectual, moral, and spiritual. Of these words he said, "I have never had a feeling politically that did not spring from the sentiments embodied in the Declaration of Independence . . . which gave liberty, not alone to the people of this country, but I hope to the world, for all future time. It was that which gave promise that in due time the weight would be lifted from the shoulders of all men."

Whenever you hear him speak about "The Union" this is what he is talking about. He is never talking merely about the physical union of men in the physical territory of the United States. He is talking about that Union "conceived in liberty and dedicated to the proposition that all men are created equal"—the most hopeful community of life, the most powerful community of life, the most creative community of life in the world. And when he said that, above all things, he wished to preserve the Union, this is what he meant. He felt that these words of the Declaration of Independence were the electric cord sweeping through the entire Declaration of Independence, the foundation and inspiration of the Constitution of the United States, and that there was no cruelty, no evil, no neglect of human rights or human welfare that could long endure in the presence of their moving and cleansing power.

A MASTERFUL POWER OF COMMUNICATION

In the third place, Abraham Lincoln acquired in early life a masterful power of communication. In all the history of public political speech there is no man in this country who ever had a greater power than Abraham Lincoln. It was an intellectual power, because he was a thoughtful man who gathered his facts and arranged his arguments with great care. He carefully studied grammar. He studied the language of the Bible and pondered it and absorbed it in his system. He studied mathematics, not in order

that he might become a mathematician, but that he might reason precisely, consecutively and with a clear and powerful relatedness. But there was something more than intellectual power in his speaking. There was a moral power and often persuasive moral beauty in what he said. He respected and loved the people to whom he was speaking. He believed in the capacity of the most ordinary man to understand the most profound ethical and political truths, if he needed them for his life. And when he spoke to such men he was not making an oration of words. He was speaking what he deeply believed. He was speaking directly and simply as if the fate of the world were depending upon his being understood. Sometimes when he spoke his rugged, melancholy face would light up like a lamp and throw a glow of persuasive beauty to the very ends of the auditorium. People loved him, believed in him, flocked to him because he bought their allegiance with the gold of sincerity and clarity that came to them from a pure heart.

HABITUALLY SIMPLE AND TRUTHFUL IN INDIVIDUAL RELATIONS

Another of his great qualities—the fourth—was his habituation of himself in his actions to simple and truthful relationships with individual human beings. You can see this nowhere better than in his practice of the law. If a client had a crooked or an unjust case, he would not take it if he knew it beforehand. If he took the case and found out afterwards that the cause was crooked or unjust, he would do everything consistent with the law to get out of it. He was helpless to use his best powers in the presence of the necessity to defend cruelty or crookedness. But if you had an honest case, very often the first thing he would try to do was to see whether he could adjust it without going into court, and especially if the case involved cruelty and injustice, he would put his whole life and soul into that case. He would address himself to the jury in simple, direct and unadorned speech, and when he came to the cruelty involved, his language would sometimes burn with a fire of indignation as if to scorch the very ground on which he stood. And when he had finished, what did he charge you? Just about what it would take to buy the groceries and to take care of the most ordinary expenses of living. He did not take your case for the accumulation of money. He took it for the joy of setting things right, for the privilege of being vehicular toward the establishment of justice.

A SENSE OF HAVING GREAT UNSPENT POWER

Along toward the end of this preparatory period of his life, the fifth quality developed within him, which is remarkable to think about: he developed a sense of having great unspent power and a sense of melancholy distress because that power in him had never had a chance to be used up fully in some great cause. He walked about conscious of that power and with the feeling that some day the occasion would arise when he would use it for everything that he had in him. He respected that occasion and looked toward it, afar off, with melancholy hope, and because he respected that far off occasion, he never would sell his powers cheaply. He would not sell them for money. He was a poor man and the powers he had could have made him a great corporation lawyer and could have gotten him riches quickly, if he had gone to the big city; but he knew that what he had was too precious for money and he would not sell it so. He would not sell it either in order to cheat people out of their votes. In the first election in which he ever sought office, he said simply, "I am humble Abraham Lincoln. I have been solicited by my friends to become a candidate for the legislature. My politics are short and sweet. I am in favor of a national bank. I am in favor of the internal

improvement system and high protective tariff. These are my sentiments. If elected, I shall be thankful; if not it will be the same." And although he went to the State Capitol 3 times and to Congress once, as the elected representative of the people, he quit them both with very great dissatisfaction of heart, because he was occupying political power and moving about among men who accepted political power without having any great cause at stake. For him to be in political office with no great cause to use up his powers, was too cheap an occupation. He did not like it. He did not want it. He stayed at home, nourishing his powers, waiting for a great and worthy day to come.

Now I want to suggest that here in this preparatory period of his life Abraham Lincoln developed five of the greatest possible human qualities. (1) A vivid and powerful ethical disposition, livingly applied to every type of human being, urging him to respect them, to deal truthfully with them and to allow his compassion to go out to them whenever they were cruelly treated or left alone with struggles that they could not endure; (2) A wholehearted devotion to the Declaration of Independence, so that the city of justice which he saw when he read it, lived in his mind's eye like a city built by God. He longed to be of great use to that city, and would rather have died than to have betrayed it; (3) remarkable powers of communication: Simple and direct speech to people whom he loved, unadorned and never mixed with deceit; the marshalling of facts accurately and honorably, the drawing of conclusions with inexorable logic; reverent of truth, and at times throbbing with a passionate devotion to justice which caused his face to radiate with hope and expectancy; (4) a sustained habit of simplicity and truthfulness in his everyday actions affecting ordinary people. When he practiced law in a circuit of 14 different counties, he met and served a multitude of men whose names were without celebrity of any kind. He saluted them with courtesy, served them truthfully and honorably, loved them and enjoyed their trust. They called him "Honest Abe" and knew that he was a man who was utterly reliable, who when he gave his word meant what he said and would do it, whatever it cost him in time or effort or money; (5) a great sense of power residing in him—intellectual power, moral power, spiritual power locked up with an immense energy of devotion—but power waiting for a great and worthy occasion of use, not to be sold cheaply, not to be used for the heaping up of money, nor merely to buy high office. There was only one piece of goods he wanted most eagerly to buy—a great cause that would consume his powers as a great fire consumes wood. That cause came to him in 1854 when the Missouri Compromise was repealed. The whole country was shocked with a sense of crisis that swept like wildfire into every State of the North and it swept into the heart of Abraham Lincoln. He knew that his hour had come. At once he laid aside everything and straightway went where he could place himself at the disposal of a powerful inward necessity to strengthen the people in this crisis, for the life and death struggle between slavery and the Union which he loved.

SECOND PERIOD OF LINCOLN'S LIFE—1854-60

One who reads the history of the second period of Abraham Lincoln's life, from 1854 to 1860 will find him giving an unparalleled devotion to political action. First of all, he made a decisive change in party allegiance. In the history of parties in this country there is nowhere a record of devotion superior to that which this man Lincoln put into the building of the Republican Party between the years 1854 and 1860. In this

undertaking he subordinated entirely his personal ambition to hold political office.

UTMOST USE OF HIS POWERS OF
COMMUNICATION

He put all of his remarkable powers of communication at the disposal of his cause. He sought out and obtained direct confrontation with Douglas, the greatest proponent of slavery, and conducted a series of debates with him, which turned out to be one of the most determinative debates ever carried on in the world. He took the program of the Republican Party and expounded it from every helpful angle that deep moral conviction and logic could conceive; he defended it from every angle that sincerity and logic could command, until by his convictions and his thought he had established it in an impregnable and persuasive position.

COMPASSION FOR THE PEOPLE OF THE SOUTH

Now I come to the third and last period in the life of Abraham Lincoln. In this period I wish to concentrate attention entirely upon a quality which first appeared in the early days of his conflict with the slave system, but which reached its greatest development only in this third period; namely, his compassion toward the people of the South.

In the earliest days of Abraham Lincoln's fight against slavery he learned how to do what is almost impossible: How to fight an evil cause without entertaining malice and enmity toward the men who support that evil cause. He hated slavery but he never hated the slaveowners or the people of the South as a group. When he agreed as he did agree that the Constitution required him to leave slavery alone in the Southern States, he did not agree to this merely for the sake of taking a political position. He agreed to it because he believed in the righteousness of this position and because he intended to be loyal to it. Abraham Lincoln did not feel that the people of the South were different in any fundamental respect from the people of the North. He did not feel that they supported the slave system, because there was some peculiar element in their human makeup which inevitably required them to do this. He knew that the people of the South had not hatched the slave system. The people of the North were just as much responsible for the development of the slave system as the people of the South. Moreover, he knew that there were hundreds of thousands and even millions of white people in the South who held no slaves, and would like to get rid of the slave system, but now that the slave system had come to be the only working economic system in the South, they did not know how to get rid of it. He was not sure that he himself would know how to get rid of the slave system if he were then so situated in the South. Instead of hating the southerners, therefore, his compassion went out to them with a loving heart. He knew that the slave system was injurious to them as well as to the Nation, and he wanted to bring it about some day that they would be in a position to put the slave system aside, and to unite freely in their hearts with their brethren of the North in support of the Union. He wanted to keep them in the Union so that a Union committed by majority leadership to the proposition that all men are created free and equal could be decisively helpful to them in working out a way to overcome the slave system and to establish complete freedom from it in their institutions and in their hearts.

One of the most beautiful things about Abraham Lincoln's thinking during this period of his life was this: that although he was obliged to approve the taking of arms, and to justify and to carry through the killing of men in battle, never did he, under any circumstances, allow the actualities of war to alter his compassion for the people

of the South or to harden him into hating them or into despising them. When, on the one hand, some of his advisers urged him to despise them and to let them go their evil ways into secession, and when, on the other hand, some of his advisers urged him to take advantage of the secession, to break his personal and his party pledges and vindictively to free the slaves in spite of the Constitution to the contrary, his answer was always substantially the same, "I will not do it. They are still members of the Union. It is my purpose that they shall remain so. If we keep faith with them and do our full duty in bringing the expansion of slavery to an end, we can eventually find a way to do away with slavery in their midst, with their consent and cooperation. In all these matters I am the one who is responsible, and I must have some principle of my own to act upon. It is my duty to do this and I will do it."

Not only did he persist in his compassion, he reached out his hand in loving solicitude, endeavoring to persuade them. "Brothers," he said in effect, "you have made a great mistake. You have seceded from the Union, which is precious to us all. You have taken up arms against your country in order to advance a cause which will destroy the Union. You would not have done this but for the evil influence of the system of slavery on your institutions and in your hearts. Come now, give up the slaves. I will have the Government of the United States compensate you with money in full for every slave that you give up." This was the length to which compassion took him and held him until the day when he met the Captain of Eternity in a decisive way.

When the war was over and the victory was won, and when his advisers wanted to know, "Whom shall we seek to hang; upon whom shall we lay the retribution of death?" "Nobody" was the answer of his compassionate heart. "These are our brothers. Tell them the gate is open. Let them come home and let us work together for the rebuilding of the Union."

Do you tell me that the history of the United States says that slavery was abolished and the Union was preserved by the victory of the Civil War? I tell you it is not so. There was one place in America where the slave was always free; there was one place in America where the Union was never broken—there in the heart of Abraham Lincoln. That is why we love him, black and white, North and South. That is why they love him in every nation in the world. That is why they will love him a thousand years from today. For he was liberty. He was Union. He was freedom.

"O, God, what can we ask Thee?
That in every legislature in the land,
In every Governor's chair, and in
The White House itself,
Again and again we may have
One more man like Abraham Lincoln."

War on Corruption Is Job for Labor,
Business, Bar

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. PUCINSKI. Mr. Speaker, I have the pleasure today of introducing into the RECORD an article prepared by Mr. Robert F. Kennedy, chief counsel of the

Senate Rackets Committee, which was written for United Press International.

It is extremely interesting to me to observe that while we have been debating labor-management reform legislation here in the House of Representatives for the last 2 days on the basis of abuses within the labor movement itself, Mr. Kennedy points out very forcefully that the abuses have been just as shocking on the part of employers and employer groups.

Under the guise of labor reform, those who have traditionally found the legitimate labor movement an obstacle for their plans to completely exploit the American worker have tried to deny the working men and women of this country the legitimate tools they need to carry out their collective bargaining.

I am pleased to learn that Mr. Kennedy, who undoubtedly is one of the great authorities in this country in the field of labor-management abuses, at the very outset points out that the AFL-CIO has moved vigorously and effectively to deal with this problem within its own ranks.

I trust my colleagues will ponder the full significance of Mr. Kennedy's observations as we move toward a final vote on legislation in this vital field of labor-management relations.

The article, which appeared in the Northern Virginia Sun on August 12, follows:

WAR ON CORRUPTION IS JOB FOR LABOR, BUSINESS, BAR

(By Robert F. Kennedy, chief counsel of the Rackets Committee)

WASHINGTON.—In 2½ years, the Senate Rackets Committee has heard a parade of witnesses who have told stories of theft, extortion, doubledealing—or other forms of man's mistreatment of his fellow man.

A great deal of this kind of testimony has led some people to the conclusion that the fault lies solely with labor. Nothing could be further from the truth. The committee has looked into relatively few unions, and where corruption has been shown, the AFL-CIO has often moved vigorously and effectively to deal with the problem. The expulsion from the AFL-CIO of the Teamsters and Bakery, Confectionery Workers unions are two such examples.

At the same time, the committee has looked into some 50 companies and corporations. No business group has yet to take any action comparable to that of labor against these business enterprises which have been shown to have engaged in unsavory practices.

In addition, we have had a number of lawyers about whom there has been serious derogatory information. Some lawyers have invoked the fifth amendment before the committee. Yet bar associations have yet to take the first action against any of these offending members of the legal profession.

The corruption we have uncovered weaves from labor to management to lawyers to all segments of our society. This is not labor's problem any more than it is management's or the taxpayer's problem. It is a problem that strikes at every one of us; this corruption is a problem for all of us as Americans.

The committee of necessity has had to explore the seamy side in the field of labor-management relations, but a great many people showed great courage and we should not lose sight of their brave fight against tyranny and corruption.

James Luken of Cincinnati is such an example. A leading Teamster official, he pro-

vided a marked contrast to the 100 fellow Teamster leaders who appeared before the committee and invoked the fifth amendment. He testified forthrightly about his fight with James R. Hoffa since he became head of a milk wagon drivers local in Cincinnati, and then head of the joint council there.

He told without dramatics the threats to his life—how a hearse showed up at his house one day to pick up his body; how flowers were sent to his funeral.

He told of his bitter fights with William Presser, the president of the Ohio Conference of Teamsters, whom the committee has labeled corrupt. He related how Hoffa told him: "If you want to get ahead in the Teamsters in Ohio, you take orders from Bill Presser. He's my man." When Presser appeared before the committee he invoked the fifth amendment.

The committee has found that the mark of corrupt leadership is its affinity for close relationship with employers; the frequent sellout of union members. In Ohio, where the contracts are higher than the Hoffa-negotiated Michigan contracts, Luken and his associates have had to fight "side deals" executed by Hoffa with large trucking companies, to the detriment of the members. In New York, where the contracts are far superior to those negotiated in the Midwest, Teamster official Tom Hickey stood his ground against Hoffa in 1954 and won for them wage increases far in excess of what Hoffa had told the large motor carriers they could settle for.

Luken and Hickey are but two examples of the majority of teamster officials throughout the country who are honest and who devote their energies to the improvement of conditions of their fellow workers.

One of the committee's most inspiring witnesses was John McNiff, a 23-year-old lawyer whose New York group took up the cause of thousands of Negro and Puerto Rican workers, working for sweatshop wages and under sweatshop conditions in small manufacturing plants in New York.

He found part of the root of the problem was corruptly led locals of the old UAW-AFL (now the Allied Industrial Workers Union). But he also found that for every crooked labor leader there was a greedy employer, only too eager to do business at the expense of his workers and in the interest of his higher profits. McNiff's fight was made much harder by the attitude of these employers who maintained that the signing of "sweetheart" contracts was just part of routine business practices.

McNiff's forthright fight brought from Arizona Senator BARRY GOLDWATER the comment that his testimony was by far the most outstanding I have listened to in 5 years of labor hearings.

Daniel E. Conway, Joe Kane and others fought against the leadership of James Cross, head of the Bakery and Confectionary Workers, which was expelled from the AFL-CIO because of his corrupt leadership. They went one step further and set up a new bakery union under the wing of organized labor and governed by its ethical standards.

There are numerous other stories: Amos Renker, the rank-and-file Teamster leader in Joplin, Mo., who has fought the autocratic rule of the local's secretary-treasurer Floyd Webb. When seven employees of a trucking company in Joplin protested the way they were treated and sent a petition to Hoffa, he sent it back to Webb. Soon thereafter, one of the protesters was brutally beaten with a ballpeen hammer. The local's complicity in the matter was admitted when it paid a large settlement to the victim—but out of the dues of the local's members. Renker came to Washington despite threats in Joplin to keep his mouth shut.

Mrs. Nancy Dawson, the pretty 32-year-old Detroit overall company owner who fought back when a mob-backed company entered into competition with her. She received numerous threats before her testimony, which at one point forced her to go into hiding for a week. But she came to Washington and told her story.

The rank-and-file members of the operating engineers union in Long Island, who have fought the dictatorial control of the Dekoning machine, father and son, at risk of their livelihoods and their lives.

These people have faced great obstacles, but they have met the test of courage.

U.S. Engineers View Soviet Exhibition

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 13, 1959

Mr. WILEY. Mr. President, as we recall, the Soviet exhibit in New York closed on August 11.

For the first time since the World's Fair in 1939, the exhibit gave American viewers a chance to see displays of technological and cultural progress of the Soviet Union.

We recognize, of course, that the Soviet exhibit left a wide variety of impressions upon U.S. viewers. Some felt it overemphasized the scientific and technological developments in Russia; others thought that the displays were based on hopes of things to come, rather than existing progress—even though the exhibits did contain some evidence of devices presently in operation; still others were impressed by the fact that, although progress in the Soviet Union is substantially behind the United States in many fields, they have come a long way in recent years.

In this scientific-technological age, the Soviets—not only at the exhibit, but in their international dealings—heavily emphasize the progress that they have made in these particular fields. Consequently, I believe it is particularly enlightening to get an engineer's view of the Soviet exhibition.

The August edition of American Engineer contained a thoughtful article entitled "U.S. Engineers View of the Soviet Exhibition." The article contains U.S. engineers' evaluations of the Soviet exhibition. To give my colleagues the benefit of their authoritative views on the display, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. ENGINEERS VIEW SOVIET EXHIBITION

(In the next 15 years the U.S.S.R. will rise to first place in the world, not only for the overall volume of production but also for per capita output.—The 21st Congress of the Communist Party of the Soviet Union.)

For the first time since New York's World Fair in 1939, Americans this summer are getting a chance to view a display of the

technological and cultural progress of the Soviet Union.

Here, spread out on three floors of the New York Coliseum are the achievements—or, in some cases, the would-be achievements—which the 21st Congress of the Communist Party boasted last winter would be the forerunner of accomplishments that would bring the people of the U.S.S.R. the highest living standards in the world.

Accompanied by five members of the New York State Society of Professional Engineers, the American Engineer toured the \$12 million show last month to get a firsthand look at the engineering aspects of the Soviet Exhibition. Taking part in the tour were Herbert F. Roemmele, director of alumni relations and placement officer at Cooper Union; A. G. Kandoian, vice president of International Telephone and Telegraph; E. R. Smoley, consultant in petroleum and chemical engineering; W. J. O'Donnell, chief engineer, Applied Research and Development of Republic Aviation Corp., and William Wocken-fuss, consultant in mechanical engineering.

What the group found was not so much an exhibit of Russia today—although there was ample evidence on this score—but more of what the Soviets hope to have in the future. A future which the Russians see becoming a reality within the next 15 years.

Everything from fur coats and the latest clothing fashions to television sets and electronic gadgets fill the three floors of the colosseum. But the big pride of the Soviet exhibitors appears to be their technological and scientific displays which overflow the second floor. Clustered around a huge chrome-plated exhibit of spunk models are machine tools, models of drilling rigs, steel mills and super airliners plus dozens of electronic gadgets, navigational devices, and chemical displays. Practically every available inch of the floor is crammed with some item, or some planned product of the Russian technology.

The engineering and scientific exhibits are handled artfully, with a self-technique not too far removed from Madison Avenue. English language tapes play constantly, describing the more technical aspects of the exhibits. It is obviously a show geared to the general public rather than an attempt to present the technical engineering achievements to American engineers and scientists.

Here's the way one member of the New York group, E. R. Smoley, summed it up:

"The show really isn't designed to present engineering materials to engineers or scientific materials to scientists, but rather to give the general public a sales talk on what they are doing and what they are trying to do.

"It's really what they are trying to do . . . actually they are showing the future . . . they are talking about what they hope to do by 1965 and their exhibits and models are models of the future as much as anything else."

Another member, W. J. O'Donnell, spotted the same preoccupation with the future in the housing display:

"They present what they have accomplished to date, but they are trying to show where they are going in housing. The models are all models of the future housing around the Moscow area."

Mr. Smoley saw it as a "contest of the future." "They are selling themselves and their way of doing things for the future."

The exhibit, of course, was by no means limited to the Russian's hopes and dreams. There was plenty of tangible evidence of present-day products and achievements scattered throughout the show—automobiles, tools, television sets, radios, space satellites. Mr. Wocken-fuss got this general impression of the show:

"I think the show was almost spectacular from the point of view that 40 years ago they

had hardly anything and now have almost everything in process and some of it in actual production. They have made tremendous strides but I believe they still have a few years to go before they equal the quality of our products."

The technicians and engineers who guided the NYSSPE group through the exhibit were perhaps as interesting as the show itself.

Dean Roemmele was particularly impressed with this aspect.

"I was rather impressed with the fact they did not dodge any questions and tried to go out of their way to tell us important facts. * * * On the whole I thought we were well received.

The Russians appeared especially proud of a display of machine tools, several of which operated by punch cards and tape. However, Mr. Wockenfuss, a consultant in mechanical engineering, described the tools as "standard" products. "Nothing exceptional on any one of them. Relatively crude by our standards."

While the New York group looked on, one of the machine drills, operated by tape, stubbornly refused to function properly. After a couple of adjustments by the embarrassed Soviet technicians, the machine went back to work and obediently etched out the word "peace" on a metal block.

The Soviets devoted a large part of the display to electronic units. Much of this was in the consumer area—television sets and radios. Among the exhibits was an impressive working model of a Russian airport with the latest in navigational devices. Tiny jet models take off and land while radar instruments plot the course of the plane. Spectators could listen in on the tower instructions by means of telephones located around the model.

After viewing the exhibits, Mr. Kandoian, the ITT engineer, said he believed the Russian's state of art in the electronic field was beginning to be comparable to that of the United States. He described the radios and television sets on display as "very good," but not too different from the sets in the United States and Europe.

Mr. Kandoian noted that the cheaper sets had printed wiring, while the more expensive models used hand-soldered wiring. He also said the Russians appeared to be farther behind in providing overall nationwide telecommunications and in the use of microwave techniques.

"The ability to get television throughout the country is apparently limited," Mr. Kandoian commented. "Most of it is concentrated around Moscow and the big cities."

"But they are beginning to bridge the gap in electronics * * * whether or not they will continue to forge ahead is anybody's guess," he said.

Boris Fedjuk, who identified himself as an engineer in the Moscow Television Laboratories, led the group through the electronics display. Speaking flawless English, Mr. Fedjuk was often high in praise of the products he was describing.

Once he flatly stated that the Russian television sets were superior to U.S. models and lamented the fact that the United States and other Western nations were not buying them. Later he was asked how the printed circuits in some of the cheaper sets could be repaired. He replied the sets were "twice as reliable" as the U.S. sets because the Russian Government maintained strict quality control.

Russian advances in space and aviation were depicted in a series of elaborate models. The displays, however, were not overly revealing from an engineering standpoint.

Mr. O'Donnell, from Republic Aviation, had this to say on these exhibits:

"They actually didn't show very much in these models. Of course, we know they

have a good aircraft. In fact they have their TU-114 right out here at Idlewild Airport." (It carried the Russian Minister Frol Kozlov to the exhibit in an 11-hour trip, nonstop from Moscow.)

"We also know they have large rocket engines and this has enabled them to do things earlier (in the space field) than we could since they could use cruder electronics in their space vehicles. You might say they did it by the 'brute force' method."

Mr. O'Donnell, however, described the actual exhibits in these two fields as not much to look at.

Slogans and typical Soviet propaganda statements were tossed in wherever there was an extra foot of space. "In the U.S.S.R. unemployment has been stamped out for all time." "People receive equal pay for equal work." "In the Soviet Union, education is free of charge."

Another read: "More than 90,000 engineers are trained in the U.S.S.R. a year."

Underneath these high-sounding slogans and statutes of heroic workers were some concrete evidence that it wasn't all propaganda. Evidence of a nation that has moved rapidly in 40 years to a place of prominence in the world. And probably more important were the show's numerous hints of Russia's grandiose hopes and plans for its future development.

As Mr. Wockenfuss commented after the tour:

"At the present time I don't worry about their competitiveness, but in 25 years I think we better look out."

And Mr. O'Donnell saw it coming even faster.

"I think in less time than that, because they are moving ahead very rapidly. * * * I think maybe it's a matter of 5 or 10 years."

Space People Stories Unverified

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. HIESTAND. Mr. Speaker, this is the third and final article on "Flying Saucers" by George Todt in the North Hollywood (Calif.) Valley Times.

Mr. Todt, an able and talented reporter, has done an excellent job and rendered a commendable service in collecting, analyzing, and reporting the main trends of thought and opinion on this subject:

SPACE PEOPLE STORIES UNVERIFIED

The basic difference of approach to the problem of flying saucers by the competing UFOlogist and Contactee groups is, as I explained yesterday, that of the scientific method versus a non-scientific one.

The UFOlogist is one who is continuously searching for the kind of realistic data which can be incorporated into substantial evidence which will stand up under the most searching scrutiny by anyone. He is interested in the truth alone and has no axe to grind of any kind. He stays open-minded until all the returns are in to be counted.

The person described as Contactee, on the other hand, has shown little, if any, concern in the past for the element of demonstrable proof. As a matter of fact, leaders of this controversial group seem to become invariably rather testy—or at least haughty in the extreme—whenever a demand for ade-

quate proof is requested of them. And absolutely none has ever been forthcoming.

The leading Contactees, sometimes called Saucerians, prefer to reply to our requests for proof something like this:

"Well, if you can't take my word for it—you are indeed hopeless."

Just like that, you see.

As you perhaps might have guessed after reading this far, few self-respecting UFOlogists would care to contact members of the various Contactee cults with even a 10-foot pole that had a skyhook attached to the end of it. Not in several weeks of Sundays, and that's for sure. In truth, they are carefully avoided wherever possible.

On the other hand there has been increasing evidence, which is mounting rapidly of late, to show that the mystic Contactees are working overtime to penetrate the ranks of the scientific clan. Apparently they believe that such infiltration would give them stature and, perhaps, some measure of respectability in intellectual circles.

Their devious methods to gain such questionable results are often quite amusing, even ludicrous, at times. One means of deception practiced upon an unsuspecting public, which is rather an ingenious device of sorts, is this one: Guilt by association, in reverse. An example of such shenanigans might be to take the names of the most respectable UFOlogy outfits—such as the National Investigations Committee on Aerial Phenomena (NICAP), Civilian Saucer Intelligence of New York (CSI), or Aerial Phenomena Research Organization (APRO), for example—and "accidentally" place them in the midst of a routine "directory" list of Contactee cults immediately before a big convention of the latter was about to commence.

Then, when the local press ultimately has a field day at the expense of Saucerian elements who have talked in the most grandiose cosmic terms without bothering to offer any scientific evidence to support their amazing and unverifiable claims—the innocent UFOlogists simultaneously get taken along willy-nilly for a very undeserved ride on their parts.

You see, it's "guilt by association"—and the UFOlogists don't like it even a little bit. Which accounts for their understandable chariness in getting mixed up with anything even remotely resembling Saucerians if they can help it.

So anytime we might happen to see any of the UFOlogy Big Three (NICAP, CSI, and APRO) accidentally included among amalgamations of Contactee listings, we may be quite sure that the former were not consulted as to their wishes in the matter.

Actually, the UFOlogists have never taken the stand that personal contact with occupants of flying saucers, or unidentified flying objects, is an impossibility in any sense of the word.

They simply believe that thus far, at least, none of the fantastic claimants of visitations by the space people have proven to be very reliable witnesses in regards to the far-fetched stories they have related to us. Some have been pretty smelly and preposterous—or simply ridiculous, depending upon one's point of view.

To sum it up quickly: There really is a whole of a difference in method and approach by the members of the flying saucer fraternity.

And to be completely factual, it isn't one fraternity—but at least two of 'em.

They are so incompatible in their respective philosophies that they can never hope to become integrated.

This schism will continue on indefinitely into the future, and what's wrong with that, anyway?

Depressed Area Legislation Is Needed Now

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. SAYLOR. Mr. Speaker, to thousands of American citizens, depressed area legislation is just as necessary today as it was a year ago. More so, in fact, for there has been an accumulation of misery in the intervening months. Another year has been added to the period in which so many willing hands have been idle due to reasons beyond their control. Industrial stagnation, which has prevailed particularly in communities where products of mines and plants have been deprived of markets by goods imported from across the seas, simply closes the door to job opportunities. It is destructive of ambition, incentive, and morale. It stunts individual, community, and national development.

But Congress cannot in conscience continue to ignore these conditions. Democratic representatives and Senators are among those of us who have introduced surplus labor legislation and have appealed for its enactment. I suggest that these voices be raised with renewed vigor, for time is running out on another session without accomplishment in this direction. Unless legislation is forthcoming, the leadership in this Congress must accept responsibility for an incongruity in which it rejects its own recommendation of the preceding session.

Mr. Speaker, a year ago Congress passed and sent to the White House the so-called depressed area bill. While that particular version of needed legislation was obviously too unsatisfactory to expect the President to attach his signature, there was nonetheless implicit in the measure an acknowledgement—by both the House and Senate—that legislation to assist surplus labor districts was necessary.

In the ensuing 12 months an encouraging number of unemployed men and women have returned to work, resulting in a highly favorable revision of surplus labor statistics by the Department of Labor. Unfortunately, however, the figures show no significant economic gain in numerous areas which have suffered most and over the longest periods of time. Included in those regions of prolonged and critical business activity are the neglected communities in Pennsylvania receiving no apparent benefits of the Federal Government's multibillion-dollar defense program.

In view of the continued distress in the most gravely-affected communities, Congress has been delinquent in failing to act on an admitted obligation. The new 86th Congress was organized in January, but there was no departure from the leadership that decided on the need for depressed area legislation in 1958. The same party is again in charge of both

houses. I hope that the strategy employed last year—when a totally unacceptable bill was rushed through in the closing days of the session—is not responsible for the current delay. Political philandery is especially deplorable when hunger and want are involved.

Let us have action, Mr. Speaker.

Teenagers Can Be Safe Drivers

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. PUCINSKI. Mr. Speaker, under unanimous consent to extend my remarks, I include in the CONGRESSIONAL RECORD an essay entitled "Teenagers Can Be Safe Drivers," which was written by Timothy Kerwin, my constituent, and was awarded first place prize in a recent contest sponsored by the Edison Park Community Council of Chicago, Ill. During these times when our newspapers are filled with stories of teenage crimes, it is indeed heartening to know that there are civic groups, such as the Edison Park Community Council, whose faith in our youth has not faltered and who are willing to give of themselves to promote and encourage our teenagers to accept their place in adult society. Timothy Kerwin exemplifies the spirit of many of our young people who are a credit to their community and their Nation. I hope my colleagues will agree that as long as we have youngsters like Timothy Kerwin our country need not fear for its future.

The essay follows:

TEENAGERS CAN BE SAFE DRIVERS

(By Timothy Kerwin, first-place winner)

Parents and teachers will agree that because of their good reflexes and mechanical knowledge teenagers should be able to excel in the field of driving. I say, "should be," but then why is it that teenagers have many more fatal accidents than adults? The main cause is a lack of the sense of responsibility.

Driving is truly an adult's privilege, and if we teenagers want to take part in the privilege, we must act like adults. The driving of a car is not for a person who has a child's outlook on life; for a slight misjudgment here, or a little too much speed there, could result in instant death, not only for us but also for others. With the privilege of driving goes the great responsibility for the lives and property of those around us.

Teenagers need to be shown that a car is not a toy—it could be a deadly weapon. High-speed driving is not a sign of how mature you are or how well you can handle a car. It really shows how immature you are, and only that the car which you are driving is built well for high speeds.

Teenagers as well as all other drivers should have common courtesy and proper respect for the laws, for these are the laws of survival in driving. All of the traffic laws are made for only one reason and that is—to save our lives—not to slow us down. Only a fool or a child would disobey them.

Showing off by taking corners on two wheels, or going 40 miles per hour down a

side street is merely a sign that you want attention. The quickest way to get it is to run down someone's little child who may be chasing a ball or riding a bicycle down the street.

The teenage drivers who have an adult outlook on life and who realize the great responsibility they are taking upon themselves from the very instant they start the engine of the car they are driving—can and will be safe drivers.

There has been, for some years now, a generally unfavorable attitude of adults toward teenage drivers. The accidents teenagers have had has caused this feeling, which in turn has led to insurance increases. There is also a lot of criticism on teenage driving habits.

Because of the few irresponsible drivers in the teenage group, today's adult feels a sense of resentment toward the teenage driver. As the old saying goes, "One bad apple can spoil the barrel." This one outcast, so to speak, is usually the boy who dominates and overrules his parents. His father and mother sign for his first car and what happens. He goes out every night and gets his buddies to go for a ride. These rides may result in disaster. Who is to blame? The teenager, of course, for the accident, but more so his parents for giving him the ownership of the car.

It is the dream of every boy to one day have, for his own, a car. A car of his own is more than a means of transportation, it gives him prestige. Word gets around that so and so has a car, and immediately he is a very popular young man. Everyone wants to ride with him. He takes a few fellows and a few girls out for a drive some evening, and gets into an accident. The next morning splash all over the front page of the newspapers, "Teenage Hoodlums Wild Midnight Ride, One Killed, Three Injured."

This is the main reason for the feeling of resentment on the part of adults. The one "cool guy" spoils it for the rest of the fellows. The majority of teenagers do feel a sense of responsibility when they are behind the wheel of a car.

If we could straighten out the few irresponsible teenager drivers we might be able to change the unfavorable feeling toward us. If the fellows who drive cars would quit showing off there might be an entirely different feeling toward us all.

We, as teenagers, should not try to show the other fellow who has the better car and who is the better jockey. I sincerely believe that if all teenage drivers, fellows and girls alike, would drive safely, the whole outlook would change and look better for everyone.

The teenager can be a safe driver if he obeys all traffic rules and uses commonsense. Stop trying to be a big deal, and above all remember God's commandment, "Thou shalt not kill."

Receives First Polish Cultural Award

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Monday, August 10, 1959, commenting upon the award presented to Dr. Stephen P. Mizwa, president of the Kosciuszko Foundation, New York, by

the American Council of Polish Cultural Clubs at a meeting held recently in Wilkes-Barre:

CULTURAL AWARD

Dr. Stephen P. Mizwa, president of the Kosciuszko Foundation, New York, was signally honored at the dinner, winding up the convention of the American Council of Polish Cultural Clubs at the Sterling on Saturday night when he received the organization's first award to an internationally known figure for the advancement of culture.

Dr. Mizwa was the logical choice for this distinction, for he is the active head and founder of an organization that, in many ways, parallels the American Council of Polish Cultural Clubs. While there is no conflict between the two, it is an added tribute to Dr. Mizwa to be chosen under the circumstances.

To this community, the recognition, extended to Dr. Mizwa, was especially gratifying because he is a frequent visitor and is known to thousands of local residents. When the Kosciuszko Foundation was launched 35 years ago, Dr. Mizwa came to Luzerne County to solicit support because of its large population of Americans of Polish descent. His first call was at the home of Dr. and Mrs. Joseph J. Kocyan, then residents of Plains, now residents of Wilkes-Barre. Dr. Kocyan currently is chairman of the board of the Kosciuszko Foundation and was toastmaster of the A.C.P.C.C. dinner on Saturday night when Dr. Mizwa was cited. Mrs. Kocyan is president of the women's committee for the Polish room of Wilkes College, host to the convention.

A noted educator, Dr. Mizwa has climaxed an outstanding career with his long and dedicated service to the Kosciuszko Foundation in a capacity for which he is eminently fitted by training and temperament. The American Council of Cultural Clubs has set a high standard in its initial choice for this award.

Missouri Novel

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. MOULDER. Mr. Speaker, I take this opportunity to make a brief comment on a book entitled "Ring Around the Moon," a Missouri historical novel—1834-60.

From the very heart of Missouri comes this stern, yet romantic and strange story of rugged men and women—pioneers who found true courage in a living God to meet and cope with overwhelming problems.

These early-day Missourians were individuals, too—white and black folks with heartaches, fears, frustrations, and perplexities that they could not leave behind them as they left their former homes.

This was an age rampant with superstitions—an age of vast illiteracy so far as book learning was concerned.

"Ring Around the Moon" is the story of the strength and weaknesses of Basil Thayer, who with his family came from the East in the first half of the last century.

It deals intimately with the problems of his personal life, as well as with the problem that plagued the sovereign States at that crucial time in our history: The issue of slavery and smoldering racial discord.

According to Negro superstition, a ring around the moon was an omen of evil, forecasting a violent storm and, as well, lengthy tribulation for the black race.

For Basil Thayer, it foretold, perhaps, his fall into the pits of seething passion, bleak despair, and alcoholism, from which only a living God and human compassion and understanding could redeem him.

Set in the fictional mid-Missouri town of Hawthorn, "Ring Around the Moon" is rich with the color and spirit of early Missouri as well as accurate historical background.

Industry Stubbing Its Toe on the Hill

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert into the RECORD a column by Laurence Laurent which discusses the now famous equal time provision of the Federal Communications Act, section 315.

Although I am in favor of some revision of section 315, I hope that the broadcasters realize the very great responsibility which is placed upon them as a result of the kind of provisions they seek.

It is clear from the behavior of the television broadcasters that they are doing all in their power to pressure Congress. They have denied access to some of our political leaders on the most flimsy nonlegal grounds, in the hopes that this would point up their side of the story. Even though I may agree that some changes must be made in section 315, I hope that Congress will look very carefully into this question and will not act too hastily.

The article follows:

[From the Washington Post, Aug. 13, 1959]

INDUSTRY'S STUBBING ITS TOE ON THE HILL

(By Laurence Laurent)

The television industry, whose spokesmen are highly effective in congressional hearings, manages to fall on its face when dealing with political realities. This falling has been particularly noticeable this summer, with the TV-radio industry trying to persuade the Congress to change the equal political time regulations.

The industry has a good case. There is general agreement that the Federal Communications Commission goofed when it ruled that equal time applied during political campaigns to newscasts. Industry spokesmen have already persuaded the Senate that it should pass amendments to the Communications Act which exempt newscasts.

But when the same legislation came before the House of Representatives, the industry began taking pratfalls.

Members of the House are much more reluctant than Senators to give the radio-TV operator additional freedom. The Representative runs for reelection every 2 years, and thus is constantly concerned about the treatment he gets from news media.

First, there was the incredibly badly managed "Face the Nation" incident with Senator HUBERT H. HUMPHREY, Democrat, of Minnesota. His friends announced that he would be a candidate for the Democratic presidential nomination, an announcement that could have been a surprise only at, say, Manus in the Admiralty Islands.

CBS canceled Senator HUMPHREY's appearance, on the advice of attorneys. The advice—to many Congressmen—was bad. Senator HUMPHREY, technically, is not a candidate and, technically, section 315 does not apply.

The incident has been interpreted by several members of the powerful House Interstate and Foreign Commerce Committee as coercive. They feel that CBS was trying to force them to amend the equal time law by the threat of a blackout on all candidates.

One Democratic committee member cited last Sunday's two-network performance by Vice President RICHARD M. NIXON, and said: "It may be news to CBS, but everyone else in the country knows that the Vice President hopes to get the Republican presidential nomination in 1960."

He objected to NIXON's network hour, only in the light of the HUMPHREY cancellation.

The current fight over labor reform legislation is causing more bitterness against the networks. First, time was provided for the President to express his views; and this, surely is beneficial to the public. But when Democrats asked for equal time in the name of the Speaker of the House, the request was denied. Instead, the networks provided forum programs. This served only to prove what politicians have long felt: Some equal time is more equal than other equal time.

For the most adept hairsplitter, section 315 does not apply to political issues, only to candidates. The sad part, however, is that the TV-radio industry missed a splendid opportunity to show the Congress how well it is prepared to meet its responsibilities.

Worst of all, the mistakes are being made during the summer when the airwaves are filled with tedious repeats. It is the perfect time for lively, controversial public affairs programs. It is the time when radio and TV can best afford to be generous.

An Exceptional Statement on Free Enterprise

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. BERRY. Mr. Speaker, a bill was introduced by our colleague, ROBERT W. HEMPHILL, of South Carolina, which provided termination of the Catawba Indian Reservation in that State.

During the hearing Mrs. Gladys Thomas gave such an outstanding unrehearsed statement that I have asked permission to insert a portion of her remarks in the RECORD as follows:

These are the reasons we feel this way:

A lot of our people are kicking for tax reasons. They say we will have to pay property tax, which is the only tax that we don't have to pay. I pay tax on my income where

I work. We pay taxes when we buy a car license, and every other kind of tax. For the additional benefits I would get for paying taxes, I would rather pay taxes.

The roads that we have passing our house are fit only for Army vehicles to be tried out on to see if they can take it. That is about what it amounts to. They are washed out in gullies. Then when we ask them to fix the road, they say, "You are not a taxpayer." That doesn't help us.

Not only that, the schools are not adequate for the children. My children don't go down there because I live on the new reservation. They have only two teachers and two classrooms for the children, and they do need more.

I think when you pay for anything you get exactly what you pay for. We feel if you go uptown to a store and buy a dress or a hat and pay a good price for it, you get good merchandise. If you pay a cheap price, you get exactly what you pay for.

We are just like the people on the outside—we want to be sure that we are able to collect the things owed to us as well as they do.

Our children are growing up. They tell them, "You are not taxpayers. You cannot do certain things." We live out in the country and use old country roads. When I went to school we were not even permitted to ride the schoolbus. I had to quit school in the ninth grade because they didn't allow our people on the reservation to hold public jobs which amounted to anything more than cutting sorghum. My father was not able to pay somebody to haul me to take me back and forth to high school every day. He did for a year and a half. I had to get up at 5 o'clock in the morning and go to the Rock Hill Printing & Finishing Co. to work, and come back at 6 or 7 o'clock at night, because at that time people were working 12 hours a day. That is the way we had to get what little education we have. They refused to let us ride the buses because we did not pay taxes. "You are a group of people who are ignorant." We cannot be considered people who can do just anything, because we don't pay taxes.

We feel that we want to be self-supporting people. When you can pay your own way, you feel more self-supporting.

I am not here hunting something for nothing. I feel if we are going to hunt for something for nothing, we will never amount to very much, because you don't get anything that way. You have to work for what you get; and when you feel you are working for what you have, you are a whole lot better off than if somebody hauls off and gives it to you. I know the rest of you know just what we mean.

We have some down there on the reservation for whom it would not work out, but they would be very few families. I would be willing to say 97 percent of our people are a thriving people. At least 98 percent of our people have hospital insurance and do not have to be on charity when they go to the hospital. Very few of them are getting welfare checks. A few are, but not very many.

Never in history have you ever heard tell of a Catawba Indian dying in a county home. We have never turned our people loose to die in the county home. Somebody was always taking care of them.

I feel if they are given a chance to make something of themselves, they can do it. There are some few who holler about doctor's bills. We are no different than anybody else. Why can't we pay our doctor's bills? Plenty of white people in our section are in worse condition. Plenty of colored people are worse. You might say some of them just exist. Some of them are just existing, but others are also living. We pay our own doctor's bills.

Don't you think when a person knows he has a responsibility he is going to try to do better? He is going to try to better himself in order to meet these things. It is just like a young man when he gets married. When he is single he has no responsibilities. He can say, "I can spend my money any way I please, and throw it away if I want to." But let him get married, and he knows he has a wife and family to take care of, and 90 percent of the time he straightens up. You find some who don't.

As we have said, we can pay for our insurance. We can afford to go to the hospitals when we are sick. We may not want or be able to afford a fancy private room, but 98 percent can afford a normal hospital bill, I would say. Not always has the Government paid it.

Mr. HALEY. You think the Indians would be much better off to have their own property, so they could go ahead and make the improvements that they want and have something so when they went into a bank to borrow money they would be in a position to put up some collateral, in order to improve their own situation; is that correct?

Mrs. THOMAS. Our people are just like any other nationality of people. We have some who would not try, but they are very few, not many. The majority will try. I think you would see better homes on the reservation. Some of them do not have a fine education and all that, but they have knowledge and foresight enough to see the benefits. You can do just so much and can't do any more. Most of our people are textile employees. On the average, you just don't have the money to spend \$2,000 or \$3,000 at one time for improvements. If you don't have it, they won't do it. We can go uptown and get credit for lumber for a few hundred dollars, which we have done. Otherwise, you can't do it.

Mr. ASPINALL. Mr. Chairman, I want to join with you in commending the witnesses, especially Mrs. Thomas, for stating perhaps better than I could, this Monday morning at least, my own particular philosophy of an American citizen. Usually Monday is a dark day for me. This Monday will be a bright day because of the statement which has been made.

If I may repeat what you said, you thought people get about what they pay for. I think that is right. I think you have stated the situation just as it is.

The fact that you folks feel that you would like to get some roads and receive the treatment which is given to citizens who are without any handicap, and you are willing to pay for it, is just a little bit exceptional in this day and age. That paternalistic way of life does not apply to any particular race. It applies to all races.

Mr. BERRY. Certainly the remarks of Mrs. Thomas are the best speech on free enterprise that I have heard in a long time. I want to commend you.

My only question is this: Would you have any objection if I inserted part of your remarks in the CONGRESSIONAL RECORD?

Mrs. THOMAS. No; I would not.

A New Citizen at 100

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. PUCINSKI. Mr. Speaker, on August 15, 1959, Mrs. Mary Poburka will

celebrate her 100th birthday and will have been a citizen of the United States for 5 days. The realization of this dream of citizenship is largely due to the efforts of Mrs. Anna Strojny, one of my constituents and one of the truly sincere patriots of our Nation. Mrs. Strojny has helped thousands of people to achieve citizenship. When she learned of Mrs. Poburka's desire to become an American citizen before she died, she immediately assumed the task of seeing to it that Mrs. Poburka received the proper instruction in English and American history, and she personally contacted the Immigration Department to expedite Mrs. Poburka's application.

Mrs. Poburka, a resident of this country since 1914, left Poland with her husband in 1913, intending to sail to Brazil, where free land awaited potential settlers. Mr. Poburka, their two sons, and three daughters went to Brazil. Mrs. Poburka and four other daughters came to America.

In the long years that followed, Mrs. Poburka never had the opportunity to learn English. Her family worked, those about her spoke Polish, and the language of her adopted country was alien to her. Now her family is scattered throughout North and South America and she has declared her desire to become a full-fledged participant in our national history.

"They didn't realize until recently how much I wanted to become a citizen," she says.

Now, thanks to the help and assistance of the immigration and naturalization personnel and the technical and moral support of her patriotic friend, Mrs. Poburka is within sight of her long-awaited goal. I want to take the opportunity to wish her a very happy birthday, her first as a fellow American, and to wish her full enjoyment of the privileges guaranteed in her new role.

And I should also like to inject a word of praise for the devotion and sincere dedication to freedom demonstrated by Mrs. Anna Strojny, Americanization teacher. I have never met an individual who more personifies the meaning of "citizen" than this noble woman whom I am fortunate enough to represent in Congress. I stand in awe of her accomplishments and I am sincerely proud that she has chosen to live in the 11th Congressional District.

Mrs. Strojny is indeed a dedicated American. Even though, for several years now, Mrs. Strojny has herself been an invalid, due to a severe attack of arthritis, she has not in any way impeded her efforts to help immigrants become American citizens.

This wonderful woman has helped more than 12,000 immigrants become American citizens through her unselfish efforts and adherence to American ideals. In 1950, she was decorated for her inspiring contributions to foster Americanism. During World War II and to this day, as honorary president of the Mothers of World War II, Mrs. Strojny continues to organize visits to veterans

hospitals in the Chicago area and helps make the lot of our wounded veterans a great deal more pleasant.

Mrs. Strojny indeed exemplifies the very essence of all that makes America a great Nation. I am sure she will share with Mrs. Poburka the pride of citizenship on August 15, and God grant that Mrs. Strojny may continue her splendid service to her country for many years to come.

Wisconsin Completes Its First Watershed Project

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, I am proud that Wisconsin has always been a leader in the field of soil and water conservation. And within the State, my home district, the ninth, has led the way in watershed protection work. In fact, my district has more small watershed projects underway than any other congressional district in the State.

One of these projects, the Lost Creek Watershed in Pepin County, was the first such project to be completed in Wisconsin under the Watershed Protection and Flood Prevention Act of 1954. And even before the Lost Creek Watershed was formally dedicated July 28, the project had proven its worth by adequately controlling the 4.5 inches of rain which fell during a 7-hour period on July 8.

Under leave to extend my remarks, I would like to include in the Record an article which appeared in the Eau Claire Leader, Eau Claire, Wis., at the time of the dedication of the Lost Creek Watershed project:

LAST STORM PROVED VALUE OF LOST CREEK WATERSHED

(By Fred Steffen)

PEPIN.—"It works, too."

These words of eloquent praise were applied Tuesday to the Lost Creek Watershed by the president of the Lost Creek Watershed Association, Dallas Milliren, Rt. 1.

His tribute was paid on his 184-acre dairy farm, all of which lies within the 5,800-acre watershed—the first to be brought to its present state of advancement under Public Law 566 in Wisconsin.

Milliren took advantage of excellent haying weather to get some of his crops in while soil conservationists toured the watershed during the afternoon but he was one of the honored guests at the evening banquet where he and Grant Erickson, Pepin, the association's secretary-treasurer, were recognized as having been prime movers in getting the association going.

Lost Creek got its name because under ordinary circumstances it filtered down into the subsoil and became lost before ever reaching a larger body of water. But when there was a heavy rain it went wild. The watershed was developed to tame it under adverse conditions.

And tame it, it did. The first big test came July 8 this year when there was a protracted rainfall over the area. It was a day

when between 4 or 5 inches fell on the watershed in a short time. It reminded Milliren of a statement he had made when the watershed was completed.

"I've been troubled with floodwaters since 1933 when I moved on this farm. Now I can sleep better because I know the flood problem is under control." How much under control he discovered earlier this month. Three floodwater retaining structures and two grade stabilization structures stood the test and tamed what would have been a disastrous flood.

In the lowlands there are many fine fields of crops which would have been destroyed if the waters had not been held back. More important, tons of soil remain on the hillsides where they belong because 36 of the 42 farmers in the watershed are active soil conservation district cooperators—using modern methods to preserve their farms.

Not far away in Bogus Valley, farmers are working to form a watershed. The July 8 storm brought trouble to them they hope to curb in the future. They can go down to Lake Pepin and look at the Bogus Creek sandbar at the mouth of the creek which built up another 100 feet after the July 8 storm. The contrast is close at hand.

A group of about 40 who took the afternoon tour of the watershed heard its various elements described by Harold Smith, Eau Claire, area conservationist of the Soil Conservation Service.

Following the tour of the watershed in the afternoon a formal dedication banquet was held at the Methodist church with Pepin County District Attorney Earl McMahon acting as master of ceremonies.

Guest of honor was Dr. A. L. Patrick, Washington, D.C., field representative of the Soil Conservation Service in whose area Lost Creek lies. Approaching 70, he will retire soon after 44 years as a scientist, teacher, and administrator in soil conservation affairs. He was recently cited for "sustained invaluable services in planning and administering soil and water conservation activities."

"Wisconsin is a State of firsts in soil and water conservation work," he said. He noted Wisconsin is one of the few States completely covered by soil conservation districts.

He outlined the extensive damage which can be caused by high water and explained how Public Law 566 combats the menace.

The 1936 act was replaced in 1954 by the present Public Law 566, which was broadened by amendments in 1956 and 1958.

Cost of the Lost Creek project, both Federal and local, is about \$190,000 with the Federal Government paying about two-thirds of the cost and about one-third non-Federal.

Dr. Patrick noted the high rate of cooperation within the watershed. "This is a wonderful record," he said, "one which I wish were duplicated in every small watershed project in the country."

"Your efficient State soil conservation committee also deserves a lot of credit for the way they have been helping to forward the small watershed work throughout the State."

Among the agencies which participated in the project were the U.S. Forest Service, U.S. Fish and Wildlife Service, Wisconsin Conservation Department, Wisconsin Soil Conservation Committee, College of Agriculture, extension division, and the Lost Creek Watershed Association.

As he closed his talk, Dr. Patrick said, "As our country grows the various segments of our society become more interdependent. Agriculture cannot stand alone. Neither can a town or a city. They decline or prosper together. What happens to raindrops that fall in the upper reaches of a small watershed affects the man in town as much as it does the farmer."

James P. Wesberry, Jr., a Former House Page Successful in the Business World

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DAVIS of Georgia. Mr. Speaker, I have observed during the 13 years I have served as a Member of the House that the House pages have been exceptional and outstanding boys, who have maintained very high standards as to quality of service, devotion to duty, and the maintenance of moral and ethical standards.

During my service here I have watched the careers of many of these boys after they served as pages and pursued their education in colleges and universities, and entered upon their chosen careers in life.

I know of the great interest manifested by Members of the House of Representatives in these excellent young men who have served as pages, and it is for that reason I bring to your attention the accomplishments of one of these fine young men whom it was my pleasure to sponsor as a page 10 years ago. Some of you will recall, I am sure Jimmy Wesberry, of Atlanta, Ga. He applied himself diligently to the performance of his duties as a page, and to his studies in the page school. It has always been one of his characteristics to apply himself diligently to whatever task is at hand. He was president of the student council of the Capitol Page School, and during the latter part of his page service he was overseer, having charge of all Republican pages. He graduated from Emerson Institute here in Washington, and graduated from the Georgia State College of Business Administration in Atlanta, with a bachelor of business administration degree.

He is now a certified public accountant and management counselor, and at the time he received his certificate as a certified public accountant, he probably was the youngest certified public accountant in the Southeast. He was for a time associated with the well-known firms of Mount & Carter and Richardson, Stell & Co., in Atlanta. While with the firm of Mount & Carter, a good portion of his time was devoted to governmental accounting and systems, and in particular the auditing and systems of Fulton County, Ga. He supervised the quadrennial executive audit of the State of Maine covering the two terms of Gov. EDMUND S. MUSKIE. Subsequently he served 4 months as acting controller of Hillcrest Poultry Industries of Lewiston, Me., a group of eight corporations engaged in integrated poultry processing. Within the last few months Mr. Wesberry completed the highly publicized audit of Jackson County, Ga., as a result of which court investigations are now in process.

It was a proud moment in Jimmy's life when just recently he established his own office in the Citizens & Southern

National Bank Building in Atlanta, with a new sign on the door, James P. Westberry, Jr., certified public accountant and management counselor.

I think it can be said that his career is typical of those of the fine, outstanding boys who serve as pages here, acquire worthwhile knowledge of the operation of the Federal Government, and return to their respective homes to take a leading part in the affairs of their respective communities.

I know that all of you join me in extending best wishes to this former page for continued success in his chosen career.

Yes, Indeed, an Unusual Young Man

EXTENSION OF REMARKS

OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following column entitled "An Editor's Notebook" which appeared in the Charlotte Observer of last Sunday, August 9. This column written by John S. Knight is a regular Sunday feature in all of the Knight newspapers:

AN EDITOR'S NOTEBOOK

(By John S. Knight)

YES, INDEED, AN UNUSUAL YOUNG MAN

Once upon a time, a popular but aging President of the United States was fortunate enough to have a young, tireless, and ambitious Vice President willing and able to handle the unpleasant and difficult chores which the President found either trying or distasteful.

The President was a wise man with a rare talent for composing differences between men and persuading them to work together for the common welfare.

Instinctively, however, he disliked the seamy side of politics and refused throughout his administration to indulge in personalities or bitter attacks upon his critics.

The people liked this grandfather image of their President, but the politicians of his faith deplored his unwillingness to be a strong party leader.

So in each campaign year, the young Vice President was sent forth to rally the partisans and exhort the populace while the President contented himself with a few, inoffensive TV appearances in behalf of his party's candidates.

The Vice President, being young and believing an election should be a contest between two parties of differing philosophies, hammered hard at the opposition and pulled no punches.

He made some enemies. A lot of them, in fact.

The upper strata deplored the young man's aggressive tactics. At the ward level they called him an alley fighter.

HE NEVER LOST OBJECTIVE

But the young man took this criticism in stride and applied himself diligently to learning all he could about the workings of government.

He uttered no complaint even when a corps of conspirators within the White House engaged in an abortive attempt to force him from the ticket when the President ran for reelection.

Nor did he sulk over the President's failure to champion his cause.

The Vice President, unanimously renominated, continued to give the President his loyal and unswerving devotion.

Later, when it was determined that the United States had been remiss in the cultivation of a better understanding with our Latin American neighbors, the Vice President was selected to make a good will tour.

This was the signal for the Communists to capitalize upon Latin disenchantment with our policies.

The story of the Vice President's travails on this journey is too well known to bear repeating here. It is enough to say that the President's emissary conducted himself with courage and dignity in the face of great personal peril.

For this, the President graciously commended the Vice President in the most glowing terms.

ANOTHER SURPRISING CHAPTER

The next chapter concerns the growing East-West tensions produced by Premier Khrushchev's ultimatum on West Berlin.

So it was concluded at the highest levels in Government to send the Vice President to Russia, ostensibly to open the U.S. fair in Moscow but really to make sure that Mr. K. would not be left with any misunderstanding of U.S. policy.

Meanwhile, a lip-serving Congress had passed a seemingly innocuous resolution on Captive Nations Week which was signed by the President and given an untimely release as the Vice President flew to Russia.

As our young man arrived, Mr. Khrushchev used this action to taunt and goad him at every opportunity.

But the Vice President gave as good as he got in these verbal exchanges. Even the Vice President's enemies conceded that our boy more than held his own.

When it was announced that the Vice President would return by way of Poland, the cynics and doom-sayers had another journalistic field day.

Some uninformed pundits saw the Poland stopover as a trick to win votes; others dolefully intoned that the Vice President would be lucky to get home without making serious blunders.

So they were wrong again. The Polish people gave the Vice President a rousing welcome in contrast to Khrushchev's recent cool reception in the same country.

The Vice President is back in Washington, has reported to his President and once again has proved he is a man of no mean stature.

SO, THE PLOT THICKENS

But even in view of his superb performances and dedication to duty, this young man must be cut down to size.

So say the Doris Fleasons and other luminaries of the Washington press corps who have never had a hero to worship since the days of F.D.R.

And so say an element of the Vice President's own party who appear enamored of a personable millionaire Governor who goes about distributing inherited wealth and bears an improbable nickname which fits nicely in a one column head.

So the plot thickens. There isn't much political mileage left in a 6-year-old TV speech made by the young man in which he hammed it up with frequent references to his wife's cloth coat and a dog named Checkers.

It was an earnest speech defending a fund which friends had raised to cover the young man's mailing expenses for Christmas cards and political literature when the young man first ran for office.

There was nothing wrong with the fund, except that the young man's backers kept books and it became a matter of public knowledge.

Older and wiser politicians usually pick up a hotel key and find the contributions under the mattress, but the young man and his supporters were naive enough to do things legitimately.

But as we have said, there isn't much campaign fodder in this one.

At 46, a dishonest politician usually has more in the till than a home encumbered by a mortgage.

So how can the Vice President be discredited?

Well, many things have been tried and more are to come.

The Washington wiseacres thought they had something when it was announced that the President's brother was being sent to Russia to keep an eye on the Vice President.

That one laid an egg.

Now the scheme in the millionaire Governor's camp is to not attack the Vice President openly, but to let the public polls show that he isn't too popular.

Nixon doesn't photograph well, he looks like Gromyko, you know.

THERE'S MORE TO COME

The Governor, who is angling for the presidential nomination, said recently in Puerto Rico that his party could win the next year assuming the wisdom of the delegates in picking a candidate who can win.

That's it. Promote the idea that our serious minded young man has done well enough, but that he can't win.

Better a rich and engaging personality with a Pepsodent smile and a cute part in his hair than a man of demonstrated ability who has come up the hard way and bruised a few sensibilities in the process.

This is the slick strategy being perfected behind the scenes with old masters of the political arts figuring out the moves.

But our young man, a realist in all things and a fatalist in politics, will have a strong counter-campaign.

There are letters, for instance, from the millionaire Governor commending the Vice President in the highest terms for his exceptional conduct during the President's two grave illnesses.

There is the record of solid accomplishment and dedication to his labors which the American public will not soon forget.

Yes, once upon a time there was a young Vice President who studied and worked harder than most any other Vice President in history.

Some disliked his careful calculations, resented his shrewdness and durability—forgetting all the while that today's world leaders must be calculating, shrewd and durable.

Others just didn't care for the Vice President, but couldn't explain why. Too young? Too political? Not enough sex appeal?

The end of our story cannot yet be written, nor even predicted.

But we have a hunch that the young man in question will, as usual, confound his critics and strengthen the faith of his friends.

For this is a very unusual young man.

Free Advice

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I wish to include

a note entitled "Free Advice," from the Wall Street Journal for Thursday, August 6, 1959:

FREE ADVICE

It is very nice of two Democratic Governors—Governor Brown of California and Governor Williams of Michigan—to join former President Harry Truman in giving the Republicans some political advice.

The two Governors, discussing politics, volunteered that they thought Vice President Nixon would be the easiest candidate for the Democrats to lick and that their fellow Governor, Mr. Rockefeller, would be the toughest. This agrees with the sentiment expressed by Mr. Truman and such other leading Democrats as Senator HUMPHREY.

Could be. But when advice is so freely and cheerfully given by those who can hardly wish the Republicans well in the next encounter, we'd suspect some Republicans might be reminded that advice that's free is worth exactly what it costs.

What K. Should See

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I commend to the Congress the observations contained in an editorial which appeared in the Buffalo Evening News, Buffalo, N.Y., on August 7, 1959.

There is considerable discussion today as to what Premier Khrushchev should be shown when he visits the United States next month. Because his time is limited, it is obvious that he can see only a few of the numerous important features of a democracy which should be included in his itinerary.

The editorial follows:

WHAT K. SHOULD SEE

As might have been predicted, a good many Americans are already beginning to make fools of themselves over the forthcoming visit of Soviet Dictator Khrushchev. The problem is how to keep them from making a fool of America.

Dallas offers to give him the big Texas gladhand. A Corn Belt town in Iowa, weighing in with chamber of commerce flourishes, wants to show itself off as a model community of diversified agriculture and industry in the heartland of America. Philadelphia wants him to see the Liberty Bell.

Well, we aren't sure how impressed Mr. Khrushchev would be with the Liberty Bell, though you could count on him for a nasty remark about its crack. But what is beginning to nauseate us slightly is the hoopla atmosphere the Red czar's visit is stirring up.

Before we're through, every tanktown in the country will be trying to crowd in on the act for a bit of self-promotion; every politician will fancy himself another Nixon and try to match wits with the mighty Russian on TV; and countless thousands of well-meaning individuals will think their mission is to convert Khrushchev from the errors of communism to the glories of Americanism. They will imagine that as he stands awed before the Liberty Bell, a great light will dawn.

Well, it won't. If any light dawns on Khrushchev, it will be the red light of warning, not the inner light of conversion. He is coming here to see America—partly because he wants to, partly because our President wants him to. Whatever Khrushchev wants to see will, within broad limits, doubtless be thrown open to him. What else he will be shown will be for the purpose of correcting such misconceptions as he is believed to have about America.

Some eye-opening views he is bound to get just my moving about. He is a shrewd observer and will not miss the surging strength of America, as it exhibits itself in our infinitely complex industrial metropolises and our vast and mechanized agricultural prairies.

There are other signs he could not miss, but should have his nose rubbed in regardless. For example, a rush-hour traffic jam in almost any big American city; if he has any doubts that Americans in all walks of life own cars by the millions, there is nothing like a traffic jam to relieve him of them.

Khrushchev doubts that the \$14,000 home on display at the American fair in Moscow is anything average workingmen could afford. Let him see them by the millions—typical suburbs; typical factories with their acres-upon-acres of adjacent parking lots; typical supermarkets; shopping plazas and our wonderful department stores. Let him "campaign" in the plazas, as our politicians do, asking the parcel-laden shoppers where their husbands work, how much they earn; let him see the goods they buy on a normal day.

Let him see our farms, and ponder how so few can feed so many, with such mountainous surpluses left over. Let him see our factories, the obsolescent as well as the automated, and sense how little of all they produce goes into armaments, and how much of it could if necessary.

Above all, let him talk to as many people as he will talk to—not the fawning celebrity chasers; not the self-serving politicians; not the civic braggarts, but the ordinary, free, proud American people. Let him sense their abhorrence of every kind of tyranny, most especially the kind his slave-system practices throughout its captive empire. Let him see how unafraid they are of Russian threats and bluster.

Federal Interstate Highway Program

EXTENSION OF REMARKS

OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution which was passed by the Pembina County, N. Dak., Board of County Commissioners on August 6 in regard to the interstate highway program:

HON. QUENTIN N. BURDICK,
Representative of U.S. Congress,
Washington, D.C.

DEAR REPRESENTATIVE: It has come to the attention of the Board of County Commissioners of Pembina County, N. Dak., that a certain curtailment of Federal funds available for road construction is being made.

The board passed a resolution on August 6, 1959, which is as follows:

"Whereas it appears that much unemployment will exist due to curtailment of the present interstate road construction program; and

"Whereas lack of Federal funds will curtail State, county, and farm-to-market road program; and

"Whereas as such would have a depressing effect on our whole economy:

"Now, therefore, the board of county commissioners of the said county do hereby urge Congress to provide the necessary funds to maintain the present interstate highway program, primary, secondary, and farm-to-market construction program at their present levels.

"Motion made by Commissioner Copeland of Pembina, seconded by Commissioner Green, of St. Thomas; upon a vote, carried."

We urge that you support such financing so that the highway construction program will be self-sufficient by proper allotment of funds from gasoline taxes and excise taxes from sale of vehicles that use the highways.

Yours very truly,

WM. J. STURLAUGSON,
Pembina County Auditor.

Welcome to Naturalized Citizens

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. TOLL. Mr. Speaker, it was my privilege last Tuesday to say a few words of welcome to 83 newly naturalized American citizens. The naturalization ceremony took place in the U.S. Court-house here in Washington, and the new citizens were sworn in by District Court Judge George L. Hart, Jr. Under permission granted, I include my remarks at this brief but impressive ceremony:

I am glad to have the opportunity to participate in the services relating to the admission of new citizens by way of naturalization. My parents became naturalized citizens, and a great many distinguished and leading citizens of the country are the children of parents who obtained their citizenship in this manner.

I come from the great city of Philadelphia, where the Declaration of Independence was signed and where native-born and naturalized citizens work hand in hand to operate a splendid community and to participate in its economic, religious, social, and civic life. The same is true of this city and all other places participating as political subdivisions of the United States.

A whole new avenue of opportunity is today opening for you. As citizens you can now participate in the operation of American Government even if it only consists in voting for those who seek to be elected. This privilege will be available to the District, I hope, in the very near future. It is now available to all those who live outside of the District. Some may become interested in representing either of our two great political parties on a more active basis as precinct representatives, which is the starting point for many who later become our local and State officials.

At any rate, civic and political opportunities are immediately available to those who seek to participate actively in the affairs of our many communities. Economic and educational opportunities are open almost without limitation. Freedom of motion to live and work in any part of the United States. These opportunities were taken by people, whom I know personally, who only a decade ago were Hungarian refugees and who now

are settled, secure and active in the economic life of the community in which they live.

These ceremonies now held are just about 1 month prior to the observation of Citizenship Day, which was designated by the President of the United States in a Proclamation issued the 25th day of April 1959 as the 17th day of September, in commemoration of the signing of the Constitution and in recognition of those citizens who have come of age and those who have been naturalized during the year.

The President also designated the period beginning September 17 and ending September 23, 1959, as Constitution Week, and he urged the people of the United States to observe that week with appropriate ceremonies and activities in their schools and churches and in other suitable places.

U.S. citizenship is a glorious possession representing the dreams and struggles of men for centuries. Our Constitution, which guarantees priceless freedoms to our citizens, sets forth a concept of liberty that has been an inspiration to freedom-loving people everywhere. Citizenship Day will honor those youths of native birth, just arriving at voting age—of whom there are approximately 2½ million each year—and those from other countries recently naturalized, as they accept the rights and privileges of citizenship, and begin full participation in the civic and political life of their communities, States, and Nation. The observances of Citizenship Day and Constitution Week not only will honor especially these two groups of our citizenry, but will afford an opportunity for all citizens, native-born and naturalized, to rededicate themselves to the ideals and principles upon which this Nation was founded and built.

Red Gains in the Americas

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following informative survey of Communist activities south of the United States by Mr. Edward Tomlinson, experienced Latin-American correspondent, published in the August 10, 1959, issue of the Washington (D.C.) Daily News:

REDS MAKING NEW GAINS IN AMERICAS (By Edward Tomlinson)

A new survey of Communist activities south of the border shows that the Reds are making steady headway in at least a half dozen of the 20 southern Republics.

Communist agitators and propagandists are more active in Cuba, Venezuela, Guatemala, Chile, Argentina, and Uruguay than at any time in the last 5 years.

There can be no question of the Communist resurgence in Cuba since the revolution which overthrew the Batista government last New Year's. There may not yet be any conclusive evidence that they have gained control of the main agencies of Fidel Castro's regime.

RACK REFORM

But they are blatantly supporting the most radical of its measures, such as the agrarian reform program and especially the anti-U.S. attitudes of many of the top officials.

The Chilean Communist Party leader, Elias Laferte, has called for a concentration

of party bigwigs from all the countries to assemble in Santiago, Chile, during the American Foreign Ministers' Conference, beginning August 12, to defend the Cuban revolution. El Siglo, the party newspaper in the Chilean capital, has published a manifesto stating that "we must mobilize to prevent the conference interfering in the affairs of Cuba."

In Venezuela, the party boss, Gustavo Machado, has become one of the most powerful political figures in the country. Latin diplomats in Caracas are reporting to their governments that Dr. Machado not only has the ear of key members of the Venezuelan Congress but that he frequently sees some of the top officials of President Romulo Betancourt's administration.

BEING WATCHED

The return of the Communists to the political arena in Guatemala is also being watched with increasing anxiety by all the Central American governments.

The Reds in Argentina are so powerful in about one-third of the labor unions, and they are working so closely with those that are dominated by die-hard followers of former dictator Juan Domingo Peron, that they have imperiled the government of President Arturo Frondizi.

In Uruguay, one of the most tolerant of all the countries toward Communists and leftists, the Government has for the first time in several years become concerned about the activities of Russian diplomats as well as local communist leaders.

All-American Foreign Service

EXTENSION OF REMARKS OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. BOW. Mr. Speaker, the fact that our Foreign Service is truly all-American and representative of every part of our Nation as well as every strata of society is not generally understood, and I am pleased to include with my remarks today an excellent discussion of this subject by Hon. Loy W. Henderson, a distinguished career officer of the Department of State now serving as Deputy Under Secretary.

Mr. Henderson's letter was a reply to one from me prompted by a discussion in the House July 21 between the gentleman from New York [Mr. O'BRIEN], the gentleman from Iowa [Mr. GROSS], the gentleman from Arizona [Mr. RHODES], and others. I believe Mr. Henderson's letter will be of interest to them and to the American people generally.

The letter follows:

DEPUTY UNDER SECRETARY OF STATE,
FOR ADMINISTRATION,
Washington, August 4, 1959.

The Honorable FRANK T. BOW,
House of Representatives.

DEAR Mr. Bow: Thank you for calling my attention, in your letter of July 23, 1959, to the debate which took place in the House of Representatives on July 21, during which it was suggested that the Foreign Service is made up mostly of graduates of the so-called Ivy League colleges. You commented that this did not accord with the impression you have gained from your acquaintance with Foreign Service officers, and you asked to be informed of the distribution of colleges attended by officers in the Foreign Service and

particularly by those in the secretariat of the Department.

I read with the greatest interest the report of this debate in the CONGRESSIONAL RECORD. I was impressed by the interest shown in the Foreign Service, and it is my impression that the spirit of the remarks made was friendly. I can assure you that the Department of State shares the point of view so eloquently expressed that the Foreign Service of the United States should be broadly representative. I feel that I must add, however, that it is also essential that the Foreign Service Officer Corps be composed of officers of the highest abilities and qualifications.

The experience of nearly 200 years of participation by the United States in the field of international relations has made it clear that our diplomatic and consular representatives should be men of intelligence, with sound training for public service, who possess a good education obtained from educational institutions or otherwise. The Foreign Service is a profession of a most demanding character. I am confident that you and your colleagues will agree that it would be unthinkable to admit a physician or a lawyer to their respective professions unless their educations met exacting standards. This is also true with respect to the Foreign Service. It is, of course, important to have in the Foreign Service officers whose backgrounds reflect many varied experiences in all sections of our country. Character and intellectual attainment should, however, be controlling considerations in the selection of our officers.

As a result of our inquiries, I am able to confirm your impression that the Foreign Service is not an Ivy League club. Of the 3,427 officers in the Service, our records indicate only 649 received their bachelor degrees from the 8 institutions which, I understand, constitute the Ivy League. The remaining college graduates come from educational institutions spread across the Nation, including 48 State universities.

You inquired about the officers serving in the Secretariat. We select for work in the Secretary's office only officers of unusual capacity. They cannot, therefore, be considered as entirely typical. However, among the 23 Foreign Service officers assigned to that office, only 3 obtained their bachelor degrees from Ivy League schools, 1 is without a degree, and 19 received their degrees from 17 other colleges and universities.

Every one of our 50 States, as well as Puerto Rico and the Canal Zone, is represented by native sons who are Foreign Service officers. The bulk of them do not come from wealthy families. They are men and women who have earned at least a part of their way through college. We have noted from their records that they helped finance their educations by working at occupations such as the following: Filling station attendant, cowhand, janitor, hotel clerk, ice-man, salesman, merchant seaman, supermarket cashier, common laborer, luncheonette counterwoman, department store clerk, waiter, typist, riverboat deckhand, and lumberjack. If you will forgive a personal allusion, I think that I am typical of them. During my high school and college days (I graduated from a midwestern institution) I have worked in rubber factories, steel mills, lumber mills, in shops of various kinds, and in the harvest fields. Like most officers in the Service, I worked during my summer and Christmas vacations in order to help pay for my schooling. Some of our most capable and valuable officers, however, have come from families with means which enabled them to spend their vacations otherwise. Unfortunately, there are still many positions in the Service in which a man with private means willing to spend his own funds for the advantage of the U.S. Government can be more effective than one without an independent income.

Foreign Service officers are drawn on a basis of equality of opportunity from ancestors who came to this country from Asia and Africa as well as from Europe. Our files do not indicate the racial or ethnic origins of our officers. It is our policy not to show race or religion in the personnel records. I know personally, however, that the Negroes in the Foreign Service Officer Corps, for example, are not confined—as has been suggested—to one or two showcase examples.

Another point of misapprehension has arisen, I think, from statistics which the Department of State itself made available to the Congress and the public. They were statistics covering colleges attended by 670 persons appointed to the Foreign Service Officer Corps between January 1, 1946 and September 20, 1952. A newsman quite correctly calculated, from these statistics, that 47 percent of these appointees came from 10 large colleges and universities. Those 10 schools, however, included not only several Ivy League schools but also California, Stanford, Chicago, Wisconsin, Georgetown and George Washington, which are not. Since the period cited above, incidentally, we have made a number of changes designed further to encourage applicants to the Foreign Service from all the parts of the United States. Since mid-1955 the number of centers at which our written examination is given was increased from 16 to 65. The oral examination is being conducted in 23 cities so applicants from every corner of the United States may conveniently and inexpensively take it.

There was also some discussion on the floor of the House of the fact that junior officers frequently find themselves doing work which does not call into play the full range of their background knowledge and scholastic preparation. Instead of engaging at once in activities of a highly responsible nature, young officers in their initial assignments may find themselves handling the office accounts, inventorying the effects of American citizens who have died abroad, preparing trade lists, issuing passports, and engaging in other similar tasks. The pattern of assignment of such responsibilities does not differ between Embassies headed by career or noncareer Ambassadors. We do not consider tasks of the sort I listed above to be menial chores. The young officer engaged in them will one day be better prepared to run an office—as Consul General, Deputy Chief of Mission, or Ambassador—as a result of the experience derived from this work.

It is my understanding that Members of the Congress would like to see a U.S. Foreign Service drawn from main street sources. If by this they mean that they desire a service which truly represents the United States from all walks of life and from every quarter of this country their desire, in my opinion, is already realized.

Sincerely yours,

LOY W. HENDERSON.

Poison in Your Water—No. 154

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Dan-

ville (Ill.) Commercial-News of June 4, 1959, entitled "Blue River Pollution Investigated".

[From the Danville (Ill.) Commercial-News, June 4, 1959]

BLUE RIVER POLLUTION INVESTIGATED

LAFAYETTE, IND.—A study and diagnosis of the internal organs of several cows and calves that died after drinking water of Big Blue River near Freeport is being conducted at Purdue University laboratories.

State board of health also has warned residents of Shelby County near the river not to drink or bathe in the water, according to George Jones, Indiana conservation officer. He is conducting an investigation of the source of the pollution which also has caused the death of hundreds of fish.

Ralph Burkhardt, a farmer, told Jones he estimated his loss at \$3,500 for seven cows and three calves that died after drinking from the river.

Head and Shoulders Standout

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. HENDERSON. Mr. Speaker, the Federal Bureau of Investigation and its Director, J. Edgar Hoover, have long held the esteem and confidence of the Nation. The vigilance and effectiveness of the Bureau's work in protecting the freedoms of Americans against crime and threats to our national security is well known and has earned the continued admiration of our people.

I should like to call to the attention of the Congress, a tribute to this fine agency which appeared in the August 7 edition of the Buckeye Lake and Thornville News of Perry County, Ohio.

The editorial is as follows:

HEAD AND SHOULDERS STANDOUT

It is not likely that public confidence in the Federal Bureau of Investigation as it is now constituted can ever be shaken. It is important to emphasize some of the reasons which underlie this well-deserved respect and trust.

Under the dedicated direction of J. Edgar Hoover, the FBI since 1924 has become one of the world's outstanding investigating agencies. Excellent administrative control, thrift, good budgetary, and accounting procedures and careful planning have made it a model of successful operation—a head-and-shoulders standout among Government bureaus.

From special agent to clerk in the organization, Mr. Hoover's personnel policies have created the highest morale and esprit de corps. The high quality of the Bureau's operations was highlighted again by its record for fiscal 1958. During that year, 96.8 percent of persons brought to trial in FBI cases were convicted. In this same period, over \$132 million in savings and recoveries to the Government were made, as compared with the total of \$105.5 million in direct appropriations approved by the Congress for this agency. This is something that every taxpayer can well appreciate.

For outstanding service and a job well done, every citizen owes this country's top investigative agency a resounding vote of confidence.

Joint Resolution for World's Fair in New York in 1964

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mrs. KELLY. Mr. Speaker, the Honorable EMANUEL CELLER, Hon. JAMES J. DELANEY, Hon. LESTER HOLTZMAN, and I, EDNA F. KELLY, introduced an appropriate joint resolution for the purpose of having a World's Fair in New York in 1964, at the same time that a companion joint resolution was introduced in the other body. At that time, we gave to the newspapers a release explaining briefly the plan for this event which I hope the Members of the House will read.

Senator JACOB K. JAVITS, Republican, New York, and Representative EDNA F. KELLY, Democrat, New York, today, Thursday, introduced in the Senate and House of Representatives legislation authorizing the President to invite foreign countries to participate in a World's Fair in New York City in 1964. The purpose of the fair is to commemorate the 300th anniversary of New York City; its theme, "Peace Through Understanding," recalls the theme of the 1939 New York World's Fair, "Building the World of Tomorrow."

Senator JAVITS and Representative KELLY pointed out that an organizing committee for the fair has already been established by Mayor Wagner and that plans are underway for the financing of the exposition by private investment and business and commercial interests in New York City and elsewhere. They stated that the fair's sponsors estimate some 70 million people will attend the fair, a figure far in excess of the 45 million who visited the 1939-40 exposition.

Some 10 million or more of the visitors are expected to come from Canada, Mexico, and other foreign nations, and will, it is estimated, spend between \$1 billion and \$2 billion of the \$6 billion expected to be spent by the fair's visitors. Commenting on this, the sponsors stated: "The 1964 New York World's Fair will serve not only as a showcase of America for all those who will visit it but it will also serve to attract foreigners to our shores to visit the rest of the United States along with the fair. This is an excellent followup to Visit U.S.A. Year, 1960, and will go a long way toward making this country a truly international tourist attraction."

Commenting further on the bill, Mr. JAVITS and Mrs. KELLY said: "In its 300 years of existence New York City has grown from a colonial village to the world's leading metropolitan area and seaport of 7 million people. It has been the gateway for millions of immigrants who came to make the United States their future home. Each year its water and air facilities handle cargo measured in millions of tons and valued at billions of dollars. It is an outstanding center in learning, research and culture."

"The 1964 fair has the enthusiastic endorsement of all segments of New York City's varied and active life. Foreign governments as well as private exhibitors will participate."

The full text of the Javits-Kelly bill follows:

"JOINT RESOLUTION AUTHORIZING THE PRESIDENT TO INVITE FOREIGN COUNTRIES TO PARTICIPATE IN A WORLD'S FAIR, NEW YORK, 1964

"Whereas there is to be held at New York City during the year 1964 a World's Fair which has for its purpose the commemoration of the 300th anniversary of the establishment of the city of New York; and

"Whereas through the city of New York, since its establishment in 1664, the peoples, sciences, cultures, and products of all nations have passed into this continent and the United States of America, and said city has served as a beacon for freedom and democracy as exemplified in the Statue of Liberty, donated by the peoples of France to the peoples of the United States and whose torch lights the way into the harbor of this great city; and

"Whereas, because of its location and purpose, its scope and aims, said World's Fair is deserving of the support and encouragement of the Government of the United States of America: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, authorized and respectfully requested by proclamation, or in such manner as he may deem proper and appropriate, to invite foreign countries and nations to such proposed World's Fair with a request that they participate therein and to take such steps as may be appropriate to secure such participation."

color of eminent domain for resale to private persons"; "59-102, File charges against Russia."

With kindest regards, I am,
Sincerely yours,

GORDON A. LYONS,
Department Adjutant.

RESOLUTION 59-004, ESTABLISH A SINGLE OATH OF ALLIGIANCE FOR NATURALIZATION OF CITIZENS

Whereas, this department by convention resolutions over a period of years petitioned the Congress of the United States to review the Immigration and Nationality Act, especially that part entitled: "Oath of renunciation and allegiance," and to amend by striking provisions for the alternative oath (c) and other such conditions which prejudice and corrupt our constitutional obligations and privileges, to the end that there shall be but one standard of citizenship based upon sacrificial service in time of national distress: Now, therefore, be it

Resolved, That the American Legion in regular convention assembled in Hollywood, Calif., June 25-28, 1959, reaffirm its strenuous objection to the existence of a less than 100 percent citizenship as established by this oath, and renew its petition for amendment of the said act; and be it further

Resolved, That copies of this resolution be forwarded to the Representatives of the State of California in the Congress of the United States, the President and Vice President of the United States, and the Secretary of State and the national convention of the American Legion.

RESOLUTIONS 59-012 AND 59-064, NATIONAL CEMETERIES

Whereas interment in a national cemetery is the last homage a grateful Nation can render to our department comrades; and

Whereas the greater Los Angeles area contains the highest concentration of veterans in the United States and has no national cemetery, and the east bay area with a rapidly increasing veteran population has available only the San Bruno National Cemetery which at the present rate will be completely filled within from 5 to 7 years; and

Whereas since the cemetery at Sawtelle is available only to veterans who die in facilities connected therewith and as a result families of most veterans dying in the Los Angeles area are put to expense and inconvenience by reason of the fact that no facilities exist closer than San Diego; and

Whereas there will soon be great need for additional national cemetery area throughout the State of California, and the cost of acquiring land therefor will almost certainly increase with every year's delay: Now, therefore, be it

Resolved, That the American Legion, in regular convention assembled, in Hollywood, Calif., June 25-28, 1959, urge action for the establishment of national cemeteries, one in the Los Angeles area, and one in the east bay, at the earliest possible time; and be it further

Resolved, That the American Legion, Department of California lend its full moral support to the campaign to secure a national cemetery for the east bay area and the Los Angeles area, and that copies of this resolution be forwarded to our Congressmen and U.S. Senators.

RESOLUTION 59-043, OPPOSING COMPROMISE IN OUR RELATIONS WITH COMMUNIST CHINA

Whereas the Communist government of the mainland of China has repeatedly shown herself incapable of recognizing the principles of human dignity, and civilized action in her relationships with the governments of other nations; and

Whereas by repeated acts of aggression

upon her neighbors and repeated threats to the peace of the world, this Communist dictatorship has disqualified herself to join in full partnership with the free nations of the world; and

Whereas any form of compromise with this Government would strike a powerful propaganda blow for the Communist cause throughout the world and serve to dishearten the many millions of Chinese who look forward to the day of liberation: Now, therefore, be it

Resolved by the American Legion, Department of California, in regular convention assembled in Hollywood, Calif., June 25-28, 1959, That this organization emphatically opposes any movements to compromise with this totalitarian government, especially; be it further

Resolved, That we strongly oppose diplomatic recognition of Communist China, in any form, by the Government of the United States; and be it further

Resolved, That we equally oppose admission of Communist China into the United Nations or any of its agencies, and we urge the representatives of the United States at that body to use the veto power of our Nation to prevent such admission; and be it further

Resolved, That copies of this resolution be forwarded to the Members of Congress and the Senators of the United States representing the State of California and to the President and Vice President of the United States and to the Secretary of State and the national headquarters of the American Legion.

RESOLUTION 59-054, ADEQUATE FUNDS BE PROVIDED VETERANS EMPLOYMENT SERVICES IN ORDER TO PROPERLY DISCHARGE ITS RESPONSIBILITIES

Whereas throughout the years, the American Legion has emphasized the need for continuing to provide an effective employment and counseling service for veterans and has supported legislation to that effect; and

Whereas to many veterans in California and other States, finding suitable employment is a continuing problem; and

Whereas the Servicemen's Readjustment Act of 1944, as amended, requires the establishment of facilities for adequate counseling, registering, and placement service for all veterans through the various State employment services; and

Whereas the Secretary of Labor's policies, in accordance with the intent and purpose of Congress, state there shall be an effective job counseling and employment placement service for veterans, and it is the responsibility of the Veterans Employment Service of the U.S. Employment Service to see that the policies of the Secretary of Labor are carried out by the State employment services: Now, therefore, be it

Resolved, That the American Legion, Department of California, in department convention assembled at Hollywood, Calif., June 25-28, 1959, does hereby reiterate its support of the policies of the Secretary of Labor as they relate to the veterans employment program; and be it further

Resolved, That the American Legion's national organization petition the Congress of the United States that adequate funds be provided the State employment services and that adequate funds be provided for the sole use of the Veterans Employment Service, in order that the Veterans Employment Service may be adequately staffed to properly discharge its responsibilities in accordance with the acts of Congress; and be it further

Resolved, That copies of this resolution be forwarded to the national convention of the American Legion and to each of the Senators and members of the California delegation in Congress.

Six Official Resolutions Adopted by American Legion, Department of California, in Regular Convention at Hollywood, Calif., June 25-28, 1959

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of communication to me dated August 7, 1959, from the department adjutant, American Legion, Department of California, together with copies of the six resolutions enclosed to me by the adjutant, adopted by the American Legion Department of California in regular convention assembled in Hollywood, Calif., June 25-28, 1959:

AMERICAN LEGION,
DEPARTMENT OF CALIFORNIA,
San Francisco, August 7, 1959.

HON. CLYDE DOYLE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DOYLE: Attached for your attention are the following entitled resolutions which were adopted by the American Legion, Department of California, in regular convention assembled in Hollywood, Calif., June 25-28, 1959: "59-004, Establish a single oath of allegiance for naturalization of citizens"; "59-012 and 59-064, National cemeteries"; "59-043, Opposing compromise in our relations with Communist China"; "59-054, Adequate funds be provided veterans employment services in order to properly discharge its responsibilities"; "59-100, Opposing the seizing of private property by public agencies under the

RESOLUTION 59-100, OPPOSING THE SEIZING OF PRIVATE PROPERTY BY PUBLIC AGENCIES UNDER THE COLOR OF EMINENT DOMAIN FOR RESALE TO PRIVATE PERSONS

Whereas within the past 2 years the homes of many hundreds of our California citizens have been seized under the power of eminent domain and then resold at a loss to the taxpayer to private interests at their great financial gain; and

Whereas allowing the power of eminent domain to be used for the purpose of taking property from one private person for the use of other private persons for private purposes is contrary to the basic right of full ownership of private property; and

Whereas both historically and actually the right to remain secure in ownership of one's home is the basic right underlying all other freedoms of our American Republic, and a threat to this right is a threat to all rights of Americans; and

Whereas such activities have been carried out under color of certain State and Federal legislation and certain State court decisions which can be altered only by appropriate legislation in our State and National Legislatures: Now, therefore, be it

Resolved, That the American Legion, Department of California, opposes in principle the seizing of private property by public agencies under the color of eminent domain for resale to private persons; and be it further

Resolved, That this convention urge that such misuse of the power of eminent domain be curtailed by appropriate legislation in the State legislature and by appropriate amendments to existing laws by the Congress of the United States.

RESOLUTION 59-102, FILE CHARGES AGAINST RUSSIA

"Whereas the Department of California of the American Legion at their annual convention held at Sacramento in 1958 approved the following resolution:

"Whereas near the close of World War II a war weary world, being assured that a permanent peace could be obtained only by an association of nations, accepted the proposition of Alger Hiss and his associates to join in the formation of the United Nations; and

"Whereas certain provisions were made which seemed to guarantee that aggressor nations would be restrained and punished for any violation of the Charter of the United Nations; and

"Whereas U.S.S.R. has repeatedly violated the provisions of this charter and since its inception has been the root of all threats for the peace of the world; and

"Whereas no correction of this end has been possible with U.S.S.R. sitting in the council of judgment; and

"Whereas their extravagant use of the veto, their inciting of the Korean debacle, costing the lives of more than 40,000 American boys, their interference in the affairs of Greece, Indochina, and the atrocious mass murders in Hungary, and finally the treacherous action in the breach of international law which resulted in the murder of the Hungarian leader Nagy; and

"Whereas time has worked against us. We have given 12 years' trial to put this plan to preserve world peace during which time we have had war and threats of war continuously while we progressively lose ground to Russia. In the period since World War II nearly one-half of the people of the civilized world have become captives of the godless dictatorship of Moscow. The time for action is now; delay may be fatal: Now, therefore, be it

Resolved, That the American Legion, Department of California, in convention assembled this 27th day of June, 1958, hereby demand the representatives of the United

States in the United Nations to immediately file charges in the Security Council against Russia with a view of their expulsion from the United Nations; and be it further

Resolved, That the Congress withhold all funds for the U.N. and its agencies until such time as Russia has been removed as a member of the United Nations; and be it further

Resolved, That, failing in this, Congress proceed in instituting the withdrawal of the United States from membership in the United Nations; and

"Whereas 1 full year has passed since the adoption of this resolution during which time the millions of people in Tibet and Iraq have become captives of their communist aggressors; and more of our airplanes have been deliberately shot down in international areas while Soviet leaders flagrantly ignore our protests: Now therefore, be it

Resolved by the American Legion, Department of California, in convention assembled this 26th day of June, 1959, That we urge, with all the power of our command that the Congress of the United States proceed with our withdrawal from the United Nations and to withhold the payment of any funds to the United Nations or any of its associated agencies; and be it further

Resolved, That a copy of this resolution be forwarded to the national headquarters and to every California Congressman and Senator."

Address of Middlesex County Sheriff Howard Fitzpatrick at New Hampshire Democratic Outing in Milford, N.H.

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. MACDONALD. Mr. Speaker, recently Sheriff Howard Fitzpatrick, of Middlesex County, which embraces the congressional district I am privileged to represent, delivered a very fine address to a statewide New Hampshire Democratic gathering in Milford, N.H.

Sheriff Fitzpatrick pointed out that if Senator JOHN F. KENNEDY, of Massachusetts, is given the Democratic nomination for the Presidency next year, the Democratic Party can look with confidence to victory in 1960. I certainly subscribe to Sheriff Fitzpatrick's clear remarks and feel certain that if the distinguished and able junior Senator from Massachusetts is our Democratic standard bearer our party will once again occupy the White House.

I recommend Sheriff Fitzpatrick's speech as thoughtful reading to the Democratic membership of the Congress:

Mr. Chairman, distinguished Democrats, ladies, and gentlemen, first I bring to you the greetings of the Democrats of the great State of Massachusetts to the Democrats of our neighboring State of New Hampshire.

We in Massachusetts are looking forward to 1960 when New Hampshire will elect a Democratic Governor. And, we are sure that the 1960 State election in New Hampshire will see many more Democrats elected to office on every level of government.

The interpretation of political news from all sections of the Nation shows that the Democratic Party is in the throes of a political revival such has not been witnessed

since Franklin D. Roosevelt ousted Herbert Hoover from the White House in 1932. He won the election over Hoover by a margin of 472 to 59 in the electoral college.

A look at the political facts since 1952, when the GOP self-termed crusade with a parade of Madison Avenue political hucksters selling the Republicans to the Nation, elected a Republican President, clearly shows that the people realize that they were sold a bill of goods that did not match with performance.

Two years after the people elected a Republican President in 1954, they repudiated the Republican Party and voted the Democrats a majority in Congress.

In 1956 for the second time they refused the Republicans a majority in Congress.

In 1958 they swept the Democrats into control of the House and Senate by one of the biggest single gains in history.

And, in 1958, the people increased the number of Democratic Governors from 29 to 35.

The people did this because they are convinced that the Democratic Party is the "can do" party and the Republican Party is the "can't do, stand pat, hold still" party.

Although the Democratic gains since 1952 have been great, we must remember they have all been on the local and State levels. We have not won a nationwide election for more than 10 years.

And, we must realize that there is a tremendous difference between winning State and district elections and winning a national election.

The forces which are lining up to continue Republican rule beyond 1960 are mighty and powerful forces indeed. There are the all powerful, entrenched interests who oppose change simply because it is change, who oppose new ideas simply because they are new. And there has been a new partner, the vast and powerful Federal payroll accumulated for the past 6 years determined to preserve and perpetuate Republican rule in the White House.

Add to those forces the Republican press and the so-called news magazines which blanket our Nation daily and weekly with propaganda for the Republican Party and their candidates and you'll agree with me that we must nominate for our Presidential candidate a party member that has the confidence of the people, a party member that is known by the people, and a party member that can attract the great independent vote to endorse his candidacy in the 1960 election.

We have the man with all those qualifications. He is our own Senator JOHN F. KENNEDY.

Senator KENNEDY is the front runner in every poll for President because he is easily the ablest and the most qualified man in public life today, and meets every test required to make a great President.

This fact is supported not only by his massive popularity, but is further substantiated by the results of a poll made by the Washington Star of Democratic leaders on May 17. This poll showed Senator KENNEDY leading the large field of potential 1960 candidates for President.

It is becoming increasingly clear that the Democratic Party, if we are to hold our gains and make greater gains in 1960, must nominate for President a party member that has already won the popular support of the majority of the people throughout the Nation. We cannot nominate for President one that would have to seek the popular support that Senator KENNEDY has already attained and expect to win.

The time between the national convention in July and the election in November is far too short for any Democrat to win the popular approval of the people that Senator KENNEDY has gained during the past 4 years.

We have visible evidence in the Republican press of how and of the methods that will be employed to create an image of Nixon

as the "crusader for peace," when actually he has literally taken over Christian Herter's post of Secretary of State without the benefit of Senate confirmation.

Can you imagine how the GOP press would respond if a Democratic Vice President took over the Secretary of State's duties? He would be the subject of great criticism on page one of every newspaper in the Nation. But, Nixon as a candidate for the GOP Presidential nomination, as far as the Republican press is concerned, can do no wrong. He must be pictured as "the great crusader for peace." Election time is around the corner and the GOP press will devote considerable white space to favorably present Nixon and Governor Rockefeller, of New York, the other Republican candidate for President, in an effort to turn the trend away from the Democrats to the Republicans.

This will not and cannot be achieved if we follow the dictates of the people and nominate for President, Senator JOHN F. KENNEDY.

Never in our history have we Democrats been under a heavier responsibility to come to the assistance of our country, to infuse new energy and increase intellectual vitality into the life of our Nation.

We must win the election in 1960.

We will win if we nominate for President, Senator JOHN F. KENNEDY.

The key to victory for the Democratic Party in 1960 is the selection of Senator JOHN F. KENNEDY as our nominee for President.

Every political poll is a testament of faith of the people of the Nation in the leadership and achievements of our great Senator, JOHN F. KENNEDY.

Here is a man who fired the imagination and the admiration of the people of the Nation in the highest tradition of the Democratic Party and he will lead our party victory in 1960 of the Democratic Party.

With Senator KENNEDY as our standard bearer, we can look with confidence to victory in 1960.

John Peter Zenger and Freedom of the Press

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. FLOOD. Mr. Speaker, for many years the people of the United States, not knowing the background for the constitutional protections that they enjoy, have taken their liberties for granted, even including such vital ones as freedom of the press now embodied in the first amendment to the Constitution of the United States.

In the struggle preceding adoption of this constitutional principle, the arrest, trial, and acquittal in 1735 of John Peter Zenger, a New York colonial printer, was a precedent-making victory for a free press, which today is not generally known.

An interesting summary of this crucial case by Mr. Al Stewart in the August 4, 1959, issue of the Richmond (Va.) Times Dispatch merits reading by all students of constitutional history.

The indicated news story follows:

JOHN PETER ZENGER'S ACQUITTAL 224 YEARS AGO WAS VICTORY FOR FREEDOM OF THE PRESS

(By Al Stewart)

August 4 has a special meaning in a Nation where democracy is the prevailing form of

government. It was on August 4, 1735, that a jury's acquittal of a New York colonial printer established a principle fundamental in American democracy today and one firmly embodied in the first amendment to the U.S. Constitution—freedom of the press.

The defendant in the celebrated trial was John Peter Zenger, German-born printer of the New York Weekly-Journal during the fourth decade of the 18th century. The charge brought against Zenger was "printing and publishing a certain false, malicious, seditious * * * libel," and the individual who filed the charge was Gov. William Cosby, appointed by the English Crown to execute laws enacted by the British Parliament for the welfare of New York colonists. As chief executive of New York, Cosby had considerable political power and often used this power to curb the actions of individuals and groups who disagreed with his own political opinions or acts.

Zenger, a member of the Popular Party, the party opposed to Cosby's Court Party, was such a man. The Court Party dictated the editorial policy of William Bradford's New York Gazette, and the Gazette's sympathy for Governor Cosby and his maneuvers aroused the ire of James Alexander and several other vocal opponents of the Cosby administration.

As a result, the Weekly-Journal was formed, with Alexander its first editor and Zenger its printer. When Cosby's efforts to indict those responsible for writing the editorials unfavorable to his administration proved futile, Zenger was arrested on order of the Governor's Council (legislative body), charged with seditious libel, and jailed to await trial.

The printer's 9 months' imprisonment only served to intensify public opposition to Cosby and encourage more letters critical of the Governor and his policies to the Weekly-Journal editor.

Andrew Hamilton, eminent Philadelphia attorney who defended Zenger, entered a plea of "not guilty" to the libel charge. Admitting that his client had printed the issues of the Weekly-Journal in question, Hamilton argued that the statements critical of Cosby were not libelous unless they were proven false, and this Hamilton was unwilling to concede. He appealed to the jurors to return a verdict of "not guilty" if they found the statements appearing in the Weekly-Journal to be true.

In his charge to the 12 jurors, the presiding jurist, James DeLancey, known throughout the colony as an ardent supporter of Governor Cosby, ignored the tradition of judicial impartiality and urged the jury to find Zenger guilty.

"No government can be safe," DeLancey contended, which permits libel to go unpunished.

Despite the protracted arguments which resulted in extending the trial over an 8-day period, the jurors returned to the courtroom after deliberating less than 30 minutes. In an atmosphere charged with tenseness and expectancy, Judge DeLancey queried the jury foreman: "Members of the jury, have you reached a verdict?"

The answer came back distinctly and without hesitation, "We have, Your Honor. Not guilty." The loud applause which greeted the verdict reflected the importance of Zenger's acquittal to liberty-loving colonists in New York as well as in Virginia and other American Colonies.

The Zenger trial would probably have been forgotten in a few years except for its significance in three areas—legal, political, and journalistic.

Legally, the jury's acquittal of Zenger reversed the accepted common-law rule of the 1730's that truth could not be offered as a defense in criminal libel cases and established the principle that the jury is judge of both law and fact in prosecutions for libel.

Today, the truth of published charges is accepted as a defense in prosecutions for criminal libel in all 50 States.

Politically, the printer's acquittal gave birth to the idea that laws framed for English citizens could not be applied to the American colonists without their consent. This idea imbued the colonists with a new spirit of independence and tended to unify them in their struggle against oppressive measures imposed by authorities across the sea. Gouverneur Morris' estimate of the trial's political significance was an apt one: "The trial of Zenger was * * * the morning star of the liberty which subsequently revolutionized America."

Another result of the trial was that it supported the rise of public opinion as a determinant of public policy in the United States. By 1760, 25 years after the trial, popular sentiment was a potent force in shaping Colonial policy on public issues.

Viewed from a journalistic standpoint, the trial was the first major victory for a free press and established a precedent which could be and was cited in subsequent conflicts involving freedom of the press, a concept Alexander Hamilton defined in 1804 as "publishing the truth from good motives and for justifiable ends."

An important tenet established by the trial is that in democratic nations newspapers must be free to comment upon and criticize acts of governing officials. The trial pointed up the intimate tie between political freedom and freedom of the press half a century before Thomas Jefferson wrote his Virginia friend Edward Carrington: "Were it left to me to decide whether we should have a government without newspapers or newspapers without a government, I should not hesitate a moment to prefer the latter."

The current of ideas set in motion by the Zenger trial continued throughout the 19th century and the first half of the 20th and has become an integral part of present-day journalism. Although the threat of libel action still hangs over the heads of journalists today, it is not the same libel of which Zenger was acquitted in 1735.

In 1953, New York City paid tribute to the colonial printer by opening the John Peter Zenger memorial room in the Sub-Treasury Building, which stands on the site of the city hall in which Zenger was imprisoned and tried almost 225 years ago.

Included in the room are a variety of scenes and relics depicting Zenger's life and career as a printer. The existence of the memorial room is mute testimony to the lasting importance of Zenger's trial to the fourth estate as well as to all individuals who value personal freedom.

A Possible Cause of Cancer

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. DOOLEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the Record, I include a worthwhile message on a probable cause of cancer.

This dread disease which has plagued mankind for centuries and which attacks a number of our citizens, is still an enigma. Its cause is unknown; its cure uncertain.

Tremendous sums of money are spent annually by the Government and by the American Cancer Society and other or-

ganizations on medical research to try to discover a nostrum. So far there has been progress but no definite solution.

Mr. Gilbert has lived a long life free of this dread disease and he now offers his ideas as to the probable cause of cancer. His reasoning, inductive though it be, may prove of value to host of people living in dread of this enemy of mankind:

NEW YORK, August 10, 1959.

HON. EDWIN B. DOOLEY,
Old House Building,
Washington, D.C.

MY DEAR CONGRESSMAN: My attention is drawn to the May 19 speech of the Honorable LESTER HILL, Senator from Alabama, on the "Health for Peace Bill," appearing in a reprint of the CONGRESSIONAL RECORD (not printed at Government expense) sent to us by one of your constituents.

In his speech in support of the bill, the learned Senator refers to the bill as "A measure designed to join the skills and resources of the health scientists of this Nation with the research talent and capabilities of scientists in other countries," and as "a concerted attack upon the unsolved problems of disease and disability which confront all peoples of the world."

Again in the latter part of his speech the Senator refers to the bill as setting forth in simple terms:

"Our belief that disease is a universal threat to the family of man and that we must unite our medical research efforts to wipe out this threat."

Among the diseases, cancer is ranked as the second leading cause of death. On April 12 the New York Times called attention to "an international attack on cancer is being urged in a report that will soon be issued by a Senate Government Operations Subcommittee headed by Senator HUBERT H. HUMPHREY."

The report is titled "Cancer: A Worldwide Menace," and the report states: "Against a universal killer mankind must offer a universal defender—scientific cooperation."

Being now in my middle years, I have seen a considerable stretch of life. I have seen many of my friends and acquaintances and men in public life, in the full vigor of their activities stricken by cancer—cancer of the prostate, or of the intestines, or of the stomach, and the recurrence of the attack, after an operation, in a relatively short period of time, which ended their careers.

In contrast, after a life of business activity, I am entirely free of the dread disease, and the question naturally arises, Why the difference?

In the cases which I have observed, those subsequently stricken with cancer, had been men who ate full and plenty of good food, with desserts; they went through their evening meal from cocktails to coffee and liqueurs; they ate when they were tired, stimulated by their drinks; they had what they thought were light breakfasts; they had substantial lunches; they thought they were eating to maintain their strength, but, unconsciously, they were overburdening their stomachs.

In my case, at an early age, because of a weak heart, I was placed by a physician on a very limited diet but entirely sufficient, eliminating desserts entirely and for periods of time taking only two meals a day and occasionally abstaining from food for an entire day. This course I have followed more or less closely for many years.

Now, of course, only as a layman but as one having had the opportunity to observe over a period of fully 35 years, I can draw a layman's conclusion, and it is, that overindulgence in food (the majority of people not realizing the overindulgence), plus the stimulation of a jaded appetite and a tired physique by cocktails, is a root cause of cancer.

This is the very simple but severe truth, that has been forced upon me.

Our tendency is to overindulge in food. We enjoy eating; we entertain our friends with elaborate meals, without realizing that we are overburdening our bodies. Continuously keeping the stomach full, never getting it thoroughly cleaned out; never giving it a real period of rest, continuously creates fermentation and putrefaction, poisoning the system. Any slight cessation of the stimulation of fermentation and putrefaction gives a false sense of hunger, and we eat again, creating more corruption.

Thus, day after day, year after year, with plenty of "good nourishing food," so termed, giving the stomach far more than it can or was intended to take care of; eating to satisfy appetite not to satisfy real hunger; for years creating fermentation and putrefaction, thereby loading the system with poisonous acid toxins—the result is that, in the course of years but nevertheless inexorably, the poisons develop cancer.

In contrast to such indulgence, I have had to live, as I have stated, a very restricted life with my food. In contrast to dying in the prime of life, I am now enjoying the years of relaxation and out-of-doors activities.

I cannot give a scientific explanation but the contrast between the fullness of eating and the simpler diet, above referred to, affords, to my layman's mind, the explanation. However, a scientific explanation seems to be suggested by the reference to the Sloan-Kettering Institute's annual report, appearing in the New York Times of May 28, last, where the following quotation from the report appears:

"We hope that some day we can correlate individual steroid patterns and the development of physical or mental disease. The concept that the body's steroid metabolism might give a forewarning of coming events is an exciting new horizon in preventative medicine."

I do not mean to say that the Sloan-Kettering Laboratory is thinking or working with the thought which I have tried to express, in view, but I do mean to say that it is searching for truth, and its continuous explorations may bring it to the result of my observation, scientifically explained.

Now, while our scientists are struggling to learn a cure for cancer, or a scientific explanation of how to avoid the disease, if we could only impose upon ourselves self-discipline; if we could learn to avoid perking up, day after day, evening after evening, a tired system, stimulating a jaded appetite with the many forms of drink and stimulants now in popular use, and avoid heavy eating, particularly of animal foods and rich desserts; that is, if we could learn to practice self-control and moderation, I am sure, from my observation, that we could avoid the dread disease of cancer.

The good book teaches us, "To him that overcometh will I give a great reward."

I have followed the urge to address you in the hope that someone, somewhere, may be benefitted by my observations.

With best wishes for your continued good work in the Congress.

Yours sincerely,

FREDERIC N. GILBERT.

Earns Applause

EXTENSION OF REMARKS OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. WESTLAND. Mr. Speaker, comments on the Vice President's recent tour

of the U.S.S.R. have been favorable, particularly in my own Second District of Washington State. Many newspapers have published editorials congratulating the Vice President and pointing to the hope that the visit of Soviet Premier Nikita Khrushchev will help the world's two largest nations to understand each other better.

Under leave to extend my remarks, I include in the RECORD three editorials. All were published August 6, 1959. These editorials, Mr. Speaker, are typical of those editorials which have appeared in both the daily and weekly newspapers of my district.

The editorial, "Dick Earned Applause," appeared in the Bellingham (Wash.) Herald:

DICK EARNED APPLAUSE

Vice President RICHARD NIXON has demonstrated by his appearance behind the Iron Curtain that he possesses the qualifications to lead this Nation.

Mr. Nixon not only proved that he can be counted on to meet Premier Nikita Khrushchev on almost any terms but that he has a way of winning cheers from those taught that leaders of this Nation were only "capitalistic warmongers."

It was to be expected that his reception in Poland—a captive nation—would be greater than in Russia. The applause from the crowds that gathered to greet the Vice President was much greater than anticipated.

Mr. Nixon went to Russia to better the understanding between the two leading world powers. He was at first met with accusations from Khrushchev but rather than become quiet and passive he rose to the occasion and showed that he could not be intimidated—even while in the lion's den.

And since many authorities on Russia have said that the Kremlin rulers respect forcefulness and power, Nixon soon overcame the first attempts planned to embarrass him. From then on relations between the two men—while continually on a give and take basis—were more cordial.

It is too early to tell whether much was accomplished by the visit but this much can be said. Some of the air was cleared and undoubtedly the two men understand just where they stand. Nikita has said that Nixon probably will be the next U.S. President. Whether this is true will depend upon the will of the American voters. But Nixon knows from firsthand experience whether Khrushchev will listen to reason. This fact may go a long way toward the promotion of a better international understanding.

Mr. Speaker, the Ferndale, Wash., Record printed the following editorial:

LET'S HAVE HIM OVER

We heartily endorse President Eisenhower's plan to invite Premier Khrushchev to America, and to return the compliment and visit Russia. Vice President Nixon's talk may have done much more good than will be known for years. An interchange of visits might change the Premier's thinking as to America and its weaknesses.

Nixon's visit was a smart piece of strategy. Not that we should get weak and relent in our dealings with Russia, but peace could be possible after we tried all angles with Russia.

Democratic Congressmen should realize that they were elected in a big majority to represent the people, not just a group of labor leaders. Fair laws should be passed to control in the same manner as the Wagner and Taft-Hartley laws are aimed at employers.

And, finally, Mr. Speaker, here is an editorial which was published in the Lynden, Wash., Tribune:

FOR BETTER UNDERSTANDING

Vice President RICHARD NIXON's visit to Russia has provided a welcome change in the headlines, giving hope for possible better international understanding.

Rather than fire insults at long-range, the leaders of both Russia and the United States can gain much by visiting each other's countries. The announcement that Khrushchev will visit the United States and that President Eisenhower will tour Russia should be greeted with enthusiasm.

People of both nations must be made aware that each possess the means to completely destroy the other in nightmarish warfare more terrible than the world has ever known.

Exchange of visits by the top leaders of the two countries should help to bring about better understanding and a determination to maintain world peace.

The Labor Reform Tangle

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article by Joseph Alsop entitled "The Labor Reform Tangle," which appeared in the Washington, D.C., Post and Times Herald:

THE LABOR REFORM TANGLE

(By Joseph Alsop)

The labor reform fight has produced the worst legislative tangle, the most flagrant lobbying, and the greatest output of heat without light in the recent history of the House of Representatives. Yet it is worth trying to thread one's way through the tangle.

Three different bills are involved, to begin with. Least severe is the bill sponsored by Representative JOHN F. SHELLEY, Democrat, of California. It mainly calls for disclosure of union financial transactions. It has been called the "milk and water" bill. But it is actually roughly comparable to the quite significant labor reform bill passed in New York State by Gov. Nelson Rockefeller.

Second, there is the bill sponsored by Representative CARL ELLIOTT, Democrat, of Alabama, which was favorably reported by a majority of the House Committee on Education and Labor. Besides strong requirements for disclosure, the Elliott bill regulates secondary boycotts and other dubious labor practices. It is roughly comparable to the bill that passed the Senate.

Third, there is the bill sponsored by Representatives ROBERT P. GRIFFIN, Republican, of Michigan, and PHIL M. LANDRUM, Democrat, of Georgia. The Griffin-Landrum bill goes much further than the Elliott bill in its restrictions on secondary boycotts, picketing, and so on. In view of its origin, this might better be called the bill of the U.S. Chamber of Commerce and the National Association of Manufacturers. It has also won President Eisenhower's public endorsement.

Among the labor leaders, James R. Hoffa of the Teamsters and old John L. Lewis of the United Mine Workers are opposed to all labor reform legislation, no matter what. Even the Shelley bill would handicap Hoffa. Hoffa's lobbyist John Scanz, has flatly said that labor (meaning Hoffa) "cannot live with" the middle-of-the-road Elliott bill.

The Shelley bill is supported by labor leaders who have acknowledged the need for reform, like George Meany of the AFL-CIO. It is in fact their bill, not Hoffa's, and they are its only backers. Meany and the others like him are actively opposing the Elliott bill, saying it is antilabor. As for the Griffin-Landrum bill, it arouses the same labor emotions as the right-to-work issue—which did not conspicuously aid the Republicans in the last congressional elections.

Despite labor's opposition to it, the middle-of-the-road Elliott bill has the support of Speaker of the House Sam Rayburn, all the House's moderate Democrats, and the 10 to 15 Republican Members who care about the labor vote in their districts. This group in the center is being badly squeezed, however, between the union-controlled leftwing Democrats and rightwing Members.

The real leader of the fight for the Griffin-Landrum bill is the new House Republican leader, Representative CHARLES HALLECK, of Indiana. In discussing labor legislation, Representative HALLECK has said, reportedly, that he "wants a killer, or no bill at all." This is also the approach of the employers' associations. These have been putting on the heat for the Griffin-Landrum bill in a style that can only be compared to the style of Hoffa.

To complete the tangle, the burning issue of civil rights is indirectly but importantly involved. The conservative southern Democratic faction headed by the immensely powerful chairman of the House Rules Committee, Representative HOWARD SMITH, of Virginia, would like to pass stringent labor legislation. Yet many of these southerners would be amenable to Speaker RAYBURN's persuasions, if SMITH and HALLECK did not have an understanding on the civil rights issue.

The existence of the understanding will of course be denied by HALLECK, with many a self-righteous roar. But the fact is well known all the same. HALLECK has undertaken, in effect, to help SMITH block action on civil rights, if SMITH helps him with the labor bill and other measures of special interest to the Republicans.

As these words are written, no one can tell whether HALLECK's Republicans plus SMITH's southern Democrats can substitute the Griffin-Landrum bill for the middle-of-the-road Elliott bill. "The House has never been so buffeted by industry pressures, labor pressures, and White House pressures (for the White House lobbying squad has also been hard at work). The Shelley bill has no chance, but otherwise the outcome of the House voting is quite unpredictable.

One can predict, however, that if HALLECK passes his "killer" bill in the House, no law will reach the statute books. For the Senate conferees will never accept the "killer," whereas they would accept with cheers the bill that Hoffa's own lobbyist says Hoffa cannot live with.

financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. QUIGLEY. Mr. Chairman, I regret that the proponents of the Landrum-Griffin bill who profess to be so dedicated in their determination to bring democracy and fairplay to union-management matters, did not let a little of both rub off on themselves when it came to allotting the time in this important debate. The debate has been characterized by a steady dribble of speeches on behalf of the Landrum-Griffin bill while the proponents of the committee bill or the Shelley bill seem to have trouble getting a word in edgewise. It does not argue well for democratic procedures in this body when one sees nonmembers of the Committee on Labor and Education being allowed to orate their antilabor views almost to their heart's content while members of the committee—including members of the subcommittee which conducted the hearings on this important bill—are being limited to a mere 5 minutes in the well of the House. Such a situation is inevitable, however, when those in charge of the debate saw to it that the time was divided in a way that gave two-thirds of the time to those who cared to speak on behalf of the Landrum-Griffin substitute while a mere one-sixth of the time was given to an explanation and discussion of the committee bill and a like amount to the Shelley substitute.

One can only hope that whatever labor-management reform law is finally enacted that it will bring more true democracy to the union halls of America than has so far been allowed to be manifested in this important debate in this Hall of Congress. Under the prevailing circumstances, Mr. Chairman, I can do little more than to take advantage of the House rules which permit me to extend my remarks in the CONGRESSIONAL RECORD so that I may get on record on the side of reason and in the interest of having enacted into law the effective labor-management reform legislation which the country needs and the people of America rightly demand.

Mr. Chairman, the way to this legislation is the committee bill. This is not to suggest that the committee bill is the best possible bill, but I am convinced that it is the best bill possible. In fact, it may be the only bill which stands any chance of being enacted into law. All three bills are really not at great odds when it comes to dealing with the matter of racketeering and controlling the other abuses brought out by the McClellan committee. This end could be accomplished effectively by the Shelley bill and it is to the credit of the AFL-CIO that they have endorsed this legislative proposal to help rid the labor movement of the undesirable element which in recent years in a few—but still too many—places has been able to creep in and corrupt honest unionism. Cer-

Labor-Management Reporting and Disclosure Act of 1959

SPEECH

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for reporting and disclosure of certain

tainly the crooks and racketeers could be effectively controlled by the provisions of the committee bill. The best proof of this is the fact that 70 to 80 percent of the Landrum-Griffin bill is copied word for word from the committee measure, and whatever is wrong with the Landrum-Griffin bill—and there are many things wrong with it—it cannot be said that it, too, would not get to the basic problems of racketeering and gangsterism in labor-management matters.

Unfortunately, the real need, the true purpose for labor-management reform legislation, to correct the abuses exposed by the McClellan committee, have been all but tossed aside during the course of the last week. It is no longer a question of getting the crooks and racketeers who operate in labor and management affairs. The struggle we are now witnessing arises from the efforts of those on the one hand who, for political or other selfish reasons, do not want any labor-management reform bill passed in this Congress and those, on the other hand, who would use the need for labor reform as a vehicle to carry into law their own antiunion prejudice.

I want a labor-management reform law. I want it to be effective. I want it in this Congress. In my judgment, the fatal weakness of the Shelley bill is not that it will not do the job of controlling abuses in unions but that it stands no chance of being enacted. Realistically, it cannot pass this House. If it did, it would face substantial re-writing in conference and even so, in the end—if last week's TV appearance gave us any indication of the President's knowledge and convictions on the subject—it would probably be vetoed. But on the other hand, the Landrum-Griffin bill has many defects but certainly one of the best arguments for voting against it is that its passage by this body gravely threatens the possibility of enacting any labor reform legislation in this Congress. Senator JOHN F. KENNEDY has explained why this is so when he said last week:

This Congress must pass a labor-management reform bill. We cannot go home without enacting a responsible, effective measure that will strike hard at racketeers without penalizing honest union members—a bill that will carry out all the recommendations of the McClellan committee.

The Griffin-Landrum bill now offered as a substitute for the Elliott bill is not such a measure—and its adoption would endanger final passage of any reform legislation by complicating the chances for a conciliation of the Senate and House version.

The Griffin-Landrum bill seeks to undo the conscientious efforts of the House committee members by substituting a punitive measure—restricting the rights of all honest union members—for a responsible measure aimed at the Hoffas, the Dios, and the Shermans, based on the McClellan committee's reports and compatible with the strong, workable bill which passed the Senate 90 to 1.

The hodgepodge substitute bill, on the other hand, goes far beyond the recommendations of the McClellan committee—threatening to restrict the antiracketeering efforts of honest unions, to bog down small unions and the bill's administration in a welter of redtape, and to weaken labor's legitimate

rights at the bargaining table. Far more than that, it strengthens the grip of racketeers. I am hopeful that it will be promptly rejected by all those truly interested in passing a strong antiracketeering bill during this session of Congress.

The junior Senator from Massachusetts is not alone in understanding why the Landrum-Griffin bill seriously jeopardizes the chances of passing any labor-management reform legislation. For example, his brother, Robert Kennedy, chief counsel for the Select Committee on Improper Activities in the Labor or Management Field, stated quite frankly his concern in this regard earlier this week when he said:

I am concerned that the Landrum-Griffin bill, on the other hand, going beyond the scope of the McClellan committee's findings to affect the economic balance at the bargaining table by honest and legitimate unions and employers, might cause such controversy in conference with the Senate that there would be no bill. This would be tragic—and make many months of effort on the McClellan committee go for naught—for, if legislation is not passed this year when the McClellan committee is coming to an end, it will never pass.

For this reason I am strongly in favor of the Elliott bill; and I am convinced that its passage by the House will lead to the House-Senate conference producing a bill which will do the job this committee is recommending.

There has been so much oratory and so much propaganda about what the committee bill doesn't do that it might be well to state specifically just what it does do. This is what the committee bill will do.

Shakedown picketing is punished with a \$10,000 fine and a 20-year prison sentence.

Embezzlement of union funds is punished even more severely.

Union officers are made personally and legally responsible for their use of funds and must be bonded.

All unions of any appreciable size must make full financial reports.

Union officers must be elected periodically by secret ballot.

The so-called hot cargo contracts, which have formed the basis of much of Jimmy Hoffa's power, are specifically outlawed.

Organizational picketing is strictly regulated.

An expanded NLRB will handle the so-called no man's land.

This is what the committee will do. And this is what a bill should do to correct the abuses brought out by the many months of testimony before the McClellan committee. The committee bill is, in the words of Speaker RAYBURN, "aimed at reforming without ruining, at curing without crippling." But the most important thing that can be said on its behalf is that it is a bill which can become law; a bill which will give to the American people the labor reform legislation to which they are entitled. It will do this without jeopardizing the legitimate rights of unions and union members. It is, as I said before, not a perfect bill. It is not the best possible bill, but it is the best bill possible.

Dr. Maurice N. Eisendrath, Clergyman of the Year

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. MULTER. Mr. Speaker, on June 18, 1959, it was my happy privilege to attend a most distinguished gathering of American citizens. The occasion was the national churchman awards dinner during the Washington Pilgrimage of the Religious Heritage of America.

We were pleased to witness the bestowal of several well deserved awards. That of Layman of the Year went to our very able, learned, and genial former colleague, the Honorable Brooks Hays, of Arkansas.

The award of the Clergyman of the Year went to my good friend, the president of the Union of American Hebrew Congregations, Dr. Maurice N. Eisendrath, a learned and revered rabbi, a truly inspired and inspiring religious leader.

In accepting the award, Dr. Eisendrath made a most stirring address. I am pleased to direct our colleagues' attention to the following excerpts from his talk, as follows:

With all of our talk of religious revival, I believe religion is in mortal danger in our time. The grave danger is that religion will be irrelevant to the profoundest developments of our age—irrelevant to the deep historical and scientific revolutions which now shake our world to its depths. If we seek to find retreat and sanctuary in our cool, modern churches and synagogues from the tempestuous social and political storms which rage outside; if we religionists become entrapped in the blandness, the status-seeking, and the snobishness characteristic of the worst of our society and turn our backs on the hard prophetic tasks which cry out to be done in our communities and the world, then religion will be irrelevant—and bankrupt—and all of us, Christian and Jew alike, will have failed our holy mandate.

However, religion can and must, as a living faith, help to shape society in the image of God's Kingdom. This is the shining testimony of the Bible, of the prophets, of Jesus, and the saints and sages of all religions. In our own times, such disparate personalities as Martin Luther King, Mahatma Gandhi, and Albert Schweitzer have demonstrated anew the revolutionary, awe-inspiring power of religious faith transmuted into action.

Peace is the overarching and testing challenge to all religions today. The word of God must rise above political ideologies, above national patriotisms, and divisions of mankind, and speak to all the children of God. The rituals and dogmas and divisions of religion have kept us from joining, regardless of our differing theologies, in the holy task of building a peaceful world. I think it is a healthy development that Protestants are seeking greater ecumenical solidarity with their fellow Protestants; that Jews are seeking to strengthen relationships with their brethren throughout the world; that the Pope has now sought to establish a greater measure of unity in Christendom. But, at the risk of appearing presumptuous, I submit that it is infinitely more urgent for the leaders of all religions to join hands now to express the conscience of mankind in the

preeminent task: to save mankind from the scourge of nuclear suicide.

I take it that it is a part of the religious obligation to shatter complacency, to think boldly and clearly, to create new initiatives, and to go beyond the immediacies of politicians and the vested interests of generals and to apply the eternal truths of our religious heritage to the thorny realities of the world in which we live. It is a part of our task, it seems to me, to illumine the hard long-range problems that are, invariably swept under the rug because most people find them too difficult and painful to consider.

One such problem, which we ignore at our peril, is the phenomenon identified as the "population explosion." Who will jolt the world community into awareness if not aroused religious leaders? One hundred and thirty-five years ago we reached a population of one billion. Since then, population has soared like a rocket and with much greater potential significance than missiles. The second billion was reached 30 years ago. The third will arrive in about 1963. The fourth, according to the U.N. will be reached in 1980; the fifth, 1990; the sixth, 2000. We will triple the world population in 40 years.

The reasons are obvious. Medical missions, and sanitation, and public health have been brought by the West to the underdeveloped countries of the world, bringing high birth rates and reduced death rates. That the white races will shrink in this rising tide of color is obvious and not alarming. But the real challenge is that this population explosion is becoming a grim threat to the free society. For underdeveloped nations, under puny levels of economic assistance, will not be able to sustain their mushrooming populations under a free society; they may be driven, by sheer economic necessity, to move in the direction of dictatorship by taking the shortcut route of the Communist Chinese because they will not be able to afford the luxury of democratic freedom. Free governments will not be able to inflict upon people living on the raw edge of subsistence the kind of taxes necessary for an upward moving economy. Can democracy survive as an island in a stormy sea of totalitarianism?

It is time for us to bestir ourselves and throw out the habits of thought which a kaleidoscopic world has made dangerous anachronisms. We must insist that the Atlantic community, which has 16 percent of the world's population and consumes 70 percent of the world's wealth, must heed the religious commandment to share their bread with their brothers—not out of philanthropy, but out of humanity. Not for charity, but for survival.

We must, therefore—
Effectuate a summit meeting of the world's great religionists as a necessary step to dramatize the need for bringing about world peace. Such a meeting should include religious leaders from behind the Iron Curtain.

Use this World Refugee Year to spring open the locked doors and gates of this country and all the powerful and favored nations to reasonable numbers of immigrants;

Launch a campaign to double the present level of economic developmental assistance available to underdeveloped nations. It is now between \$3 and \$4 billion. It must be doubled and channeled increasingly through the United Nations. Our present level is not a sacrificial answer to the cries of our brethren. We must not again be guilty of too little and too late. Churches and synagogues must raise funds themselves to supplement the governmental and U.N. aid;

Launch a crash program for the razing of all racial barriers. The emerging world is not white, and the white man cannot stop the dawn. We must get over the colossal egocentrism which blinds us from the real-

ities of mankind's aspirations, the racial revolution sweeping the world, and the terrible price we pay for racial pride and arrogance.

Thinking over these terrible dangers—and yet these great opportunities—ought to be the agenda of religious leadership, together. We need our own summit conference soon. For what is God requiring of us today? Not to die, but to live, to live in order to declare the Word and to do the will and the work of the Lord: to be His servants in order to—

"Make the right to go forth unto the nations
To break not the bruised reed
Nor the dimly burning wick to quench
To make the right to go forth according to
the truth

To fall not nor be crushed
"I'll have set the right in the earth
To be a light to the nations,
To open the blind eyes,
To bring forth the prisoner from the dun-
geon
And them that sit in darkness from the
prison house."

University of Santa Clara

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. GUBSER. Mr. Speaker, the oldest institution of higher learning in the State of California is in my congressional district—the University of Santa Clara. Though I am not fortunate enough to be an alumnus of this distinguished university, I look upon it as my own in the sense that it is one of the most powerful influences in the most progressive of districts—my own 10th District.

I am sure my colleagues would be interested in a résumé of the history of one of the Nation's finest schools. For this reason I submit, under leave to extend my remarks, certain portions of a publication entitled "Santa Clara, the Mission University."

SANTA CLARA, THE MISSION UNIVERSITY

Under eastern skies, a young Virginia planter turned soldier mulled the responsibilities of wintering his troops at Valley Forge, Pa.

Under western skies, a small band of dedicated Catholic priests of the Franciscan Order, sent by the Venerable Padre Junipero Serra, established the Mission Santa Clara de Asis, wellspring of the University of Santa Clara.

The year was 1777.

In these closing years of the 18th century, the Franciscan padres taught their way of life to the primitive Indians who inhabited the valley surrounding the mission. Besides instructing them in Christianity, the padres taught their curious neighbors the building trades, and shared with them their knowledge of such skills as animal husbandry, agriculture, and irrigation.

Three generations later, in 1851, the mission was transferred to the authority of the Jesuit fathers, known primarily throughout the world as a teaching and missionary order. Rev. John Nobili, S.J., was the Jesuit sent to Santa Clara with a purse of \$150 and instructions to begin a college on the mission grounds. Thus the mission became the center and the site of California's first college—now the University of Santa Clara.

At Santa Clara, fine teaching is a tradition, and seems to be linked to heredity. From the first years, the campus was a center for great teachers. Men such as John J. Montgomery, a physics professor in the late 19th century, is remembered today as the "Father of Aviation." He was the first to fly a heavier-than-air machine (at Otay Mesa, Calif., in 1883), antedating the Wright brothers by 20 years, and 8 years before Lillenthal.

Rev. Jerome S. Ricard, S.J., called "Padre of the Rains," developed his famous hypothesis of weather prognostications while he taught at the university in the early 1900's. His theory, based on sunspot variations, and his studies, contributed greatly to the science of meteorology.

Rev. Richard H. Bell, S.J., an outstanding physicist and early experimenter in wireless telegraphy, exchanged the first wireless messages on the Pacific coast with his collaborator, Professor Montgomery (at Villa Maria, 9 miles from the campus). Much of Father Bell's work was done on the campus during the years following the turn of the century.

Many other men, alumni as well as faculty, contributed in great and small ways during the university's first century, helping to build the proud heritage which is Santa Clara.

The end product of the efforts of these men, alumni as well as faculty, has produced an outstanding college of law, a graduate division offering graduate study in the humanities, business administration, and engineering and a teacher training program, a college of arts and sciences, a college of business administration, and a college of engineering.

In each of these colleges one finds faculty members of outstanding quality.

Santa Clara's emphasis on "personalized education" has remained unchanged since early days. The faculty is balanced between Jesuit fathers and lay teachers. Since its founding, the university conscientiously has maintained a low student-faculty ratio which today in the upper division averages 1 faculty member for every 12 students.

The Jesuit Order of the Roman Catholic Church is a teaching order requiring 13 years of study before ordination. This means that each Jesuit has earned one or more master's degrees, and in many cases a doctorate degree, before he is assigned a teaching post.

One of the best known Jesuits at Santa Clara today is Rev. Bernard R. Hubbard, S.J., "the Glacier Priest," famed Alaskan explorer and missionary.

Regarded as a leading authority on Alaska, Father Hubbard has the world's largest collection of film on the 49th State. In his laboratories on the campus, he catalogs his films, editing some for educational television.

There are hundreds of excellent colleges and universities across this Nation. But it is my honest opinion that there are none finer or better than the University of Santa Clara.

The Case of America's Vanishing Markets

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HENDERSON. Mr. Speaker, the economic effects of low-priced foreign

imports in the United States are becoming so apparent today that few domestic industries are immune. In southeastern Ohio, which I have the honor to represent, our industries have suffered a long and disastrous train of circumstances which have resulted from our Nation's import policy. Jobs, and the thriving factories in which they existed, have vanished as foreign-made products have displaced U.S. goods in our marketplaces. Our potteries, coal mines, mosaic tile plants, and stainless steel cutlery factories have long suffered from the economic competition. To this list we may add hundreds of other industries including some of those which are basic to our economic survival.

This issue has been argued here on many occasions but, each time, there has been a refusal to recognize the assault on our economy which our present laws are encouraging. The problem is admittedly a difficult one, yet there is little evidence that we are facing it realistically, let alone formulating any policy to deal with it.

I wish to call to the attention of the House of Representatives an article discussing this issue which appeared in the July 1959 edition of *Mill and Factory* magazine outlining some of the thinking being given to the problem of import competition within many industries themselves. The article is as follows:

THE CASE OF AMERICA'S VANISHING MARKETS

It's time we all took a long, hard look at Italian silk suits, Japanese cameras, French sport cars, and German handtools. Let's stop kidding ourselves—these aren't bargains. They are deadly poison, and all of us are committing economic suicide when we buy them.

In case you think this is an unbrotherly statement, prompted by patriotic selfishness—you're right. We think the United States is the most desirable country in the world, and we want to hang onto the economy that helps to make it that way.

But unless we start thinking soberly, all that we treasure will be stripped from us and we'll be at the bottom of the heap, taking aid from the very countries whose economies we've rebuilt from wartime rubble.

THE REAL WAR

Put aside your fears of Communist A- and H-bombs, your anxiety about losing a hot war. We are already losing a war that most of us don't even sense—the economic cold war for world markets. Russia, West Germany, Japan, and even Red China are beating us to the punch, in garnering export dollars. And these countries are threatening to strip us of our domestic markets, as well.

Let's look at a few facts. After World War II, the United States was the unique possessor of an intact economy. The rest of the world powers had been just about knocked out by direct war damage, and we were accorded the privilege of rebuilding their economic machines. During this period we enjoyed a competition-free crack at world markets. Everyone wanted American automobiles, typewriters, air conditioners, toasters, and machine tools. But the honeymoon is now over. The industries of England, West Germany, Belgium, Japan, Italy, and France are new again. These countries must find markets for the increasing flow of products pouring from their factories. If they are to raise their living standards, they must sell their goods not only to their own people, but to the very Americans who have rebuilt their economies.

Consider the advance of world production in the past decade, and then project this growth through the next 10 years. Backward countries are emerging from the woods; agrarian economies are leaning more heavily upon the machine. Today a skilled Chinese mechanic is as good as any that Germany, Britain, or the United States can turn out. And we need only look through a high-powered telescope to see how good the Russian mechanics are.

WAGE SUPERIORITY

If the skilled workers of other countries were just even with ours, there would be less problem. But they have a very real edge—lower wages. The thing which helps to lift our living standard, that makes the United States a desirable place to live, is the world's highest pay scale. And this is our Achilles heel, for it adds costs to American goods and puts them out of the running in world markets.

Look at a few examples. The inventor of a new wrench asked for bids from 30 American manufacturers. Their quotations ranged from \$2.18 to \$2.87 for an 8-inch wrench. Under our setup of manufacturer to jobber to wholesaler to retailer to consumer, such prices were prohibitive. This inventor then got bids from West Germany, Japan, and Formosa. Prices for identical wrenches laid down in New York or San Francisco, duty paid, averaged \$0.67 to \$0.70. Samples of workmanship showed wrenches equal to America's finest. The production order was awarded to Japan for 4,000 gross of each of four sizes—and U.S. industry lost another bout because of wage differentials.

Japan and West Germany both quoted prices on a large order for machinery to go to South America. American manufacturers lost this order because their prices, based on American labor costs, were prohibitive.

Sales price on Pennsylvania and West Virginia coal is \$24.50 per ton, delivered in Japan. The British can deliver Red China coal to them at \$10 per ton. Who will get the business? Should the Japanese pay us a \$14.50 per ton bonus to keep our living standard so far above theirs?

It is known that American machine tools needing reconditioning are shipped to Hong Kong and to Red Chinese machine shops for rebuilding and resale. A large used machinery dealer in San Francisco was recently asked to bid on some well-known lathes, milling machines, grinders, and presses which had to be guaranteed equal to new condition for a given period. A second dealer in Seattle was asked to quote on the identical equipment without rebuilding. His price was \$30,000 lower than that of the rebuilt machines from San Francisco. Hong Kong traders wanted the tools for resale to Java and Manila. They imported the used tools without reconditioning, then rebuilt them in a Red Chinese plant. British and Chinese engineers later passed the tools as 100-percent perfect. The Chinese traders then sold the tools at 20 percent under American export prices for the same equipment—realizing a net profit of more than \$50,000. American labor costs lost this business for our export firms.

HOW ABOUT WORKMANSHIP?

There was a time when we could take a more tolerant view of foreign competition. With a couple of notable exceptions, other countries hadn't our know-how, skill, and precision equipment to match us in quality. Many foreign products could be recognized by their shoddy workmanship, and the segment of our market which they served was relatively small.

But things have changed. West Germany is turning out high-quality machine tools at bargain prices. We have a tough job matching the quality of Japanese optics. Italian typewriters and business machines

are making tremendous impressions in our commercial activities. And all of us know about the workmanship of many low-cost foreign cars.

In all of these instances, quality of product is equal to or better than our own. As in the case of the wrench inventor mentioned above, you can put goods from both sides of the water together without quality distinctions. We have ourselves to thank for this foreign product excellence, of course. After billions of dollars and lives spent to destroy, we have poured almost equal effort into rebuilding the same production lines. This time, however, we've done a thorough job. Not only have we provided them with the machines to produce superior goods, but we have literally allowed foreign manufacturers to pick our brains of the latest ideas emerging from our research labs.

CASE OF HAND BITING

As an instance of learning a lesson to perfection, consider the Japanese success in sewing machines. Before World War II the bulk of the sewing machines sold in Japan were made by Singer. This firm set up its sewing schools, instructed Japanese women in Western-style stitching, and was almost solely responsible for the establishment of Japanese needle trade industry.

The war changed all this, for when the Japanese began to emerge from the shambles of their wrecked economy, the kindly U.S. military occupation forces looked around for something the Japanese could make. They set them up in the sewing machine business, guaranteeing it would succeed by barring all imported appliances. At the occupation's end, the new Japanese Government also cracked down on imports.

Meanwhile, back in the United States, we had rolled out the carpet to visiting economic missions, including the Japanese. These latter inspected Singer sewing machine facilities, taking generous numbers of detailed photographs of manufacturing processes, design, and the like. Armed with the latest facts, the Japanese went home, changed some dies and other production equipment—and began to turn out exact copies of Singer's latest sewing machines. They exported these machines to the United States, where they were warmly received. So ardent was the greeting by one large mail-order house that the only other U.S. producer of sewing machines, whose contract was canceled in favor of the Japanese import, was forced out of business.

In 1957 Japanese sewing machines comprised 50 percent of the total units sold in the United States. In 1958 Japan exported over 1 million units, the bulk of them coming to the United States. Singer Manufacturing Co., our last domestic producer, has its back to the wall in a major modernization effort at its Elizabethport, N.J., plant. The firm will abandon 50 percent of its present space there. The balance of the area is packed with cybernetic marvels—electronic handling, latest machine tools, electrostatic painting, to name a few. With this setup, Singer hopes to offset some of Japan's terrific wage advantage. Average monthly rate in Japan is \$30, for a 44-hour week. It's going to take a lot of pushbuttons to balance that with our \$390 per month for a 40-hour week.

TROUBLE AHEAD FOR MINING

The U.S. mining industry has had its share of troubles with foreign ores of all types. It now appears to be on the verge of a battle for survival with Russia in this area. These are some of the reasons we think so:

1. Mining costs in Russia are based on an average of less than \$1 per ton.

2. Vast deposits of uranium on the western slopes of the White Sea make Russia a leader in the production of this vital material. Belomorsk is said to be destined to become uranium capital of the world.

3. Iron deposits in the Krivoi-Rog district near the Don are estimated at 500 million tons. Another 500 million tons lies in the Urals, and surveys of the Kerch Peninsula add another billion tons. Total estimates from such surveys are around 56 billion tons of iron ore. If this figure is only half right, just remember that we are now finding it profitable to extract our iron from taconite. We are increasingly dependent upon foreign sources for better ores.

4. Chlatury manganese deposits in the Georgian Republic weigh in at 300 million tons. Another 300 million tons have been found at Nikopol, with more at Krivoi-Rog, Mariupol, and on the Crimean Peninsula.

5. Russian graphite deposits are estimated at 2 billion metric tons, with an ash content of only 8 percent. They can treat this graphite at a maximum cost of \$1.50 per ton. U.S. labor costs can't match this.

6. Other important Russian mineral reserves include 8 million tons of bauxite; 35 million tons of 15-percent thorium; 185 million tons of 20-percent copper in the Urals alone; and a Ural plant that produces more than 10,000 tons of nickel yearly.

In the face of these native supplies, plus a state-controlled labor rate, it will be impossible for the United States to compete in world markets. And, with our increasing dependence on outside sources of bauxite, iron, copper, manganese, tin, chromium, and vanadium, we'll probably be contributing to Soviet domination in ore production—whether we like it or not.

WHAT CAN WE DO?

We'll agree that the picture looks pretty black. We certainly can't go back and plan our industrial development differently. And it would be defeatist to sit back with folded hands and wait for the end. Action to offset our disadvantages is the only course possible. Some measures we should consider might include:

1. Ultimate mechanization of all possible production. If labor costs are out of control, then eliminate as much labor as possible.

2. Increased protective tariffs. Of course, the Congress would not consider this because of worldwide feedback. The United States has poured a lot of money into rebuilding shattered economies. Closing our doors to the marketing of products from those economies would be just the sort of ammunition Russia could use to advantage.

3. Failing revision of tariff laws, a movement to buy American. The person who buys a wrench made in West Germany is as guilty as the Flat owner of wrecking our economy.

4. Establish branch factories in foreign lands. By using cheaper labor, U.S. firms can produce quality items at lower cost. Such products, then, might compete with other foreign goods in U.S. markets.

5. Firm up our patent laws. We can out-design and out-invent any competing country, but we must have protection for the ideas we develop. More stringent enforcement of patent regulations, and worldwide prosecution of violators should be one of our goals.

6. Pour money into research and development. Assured of protection for new products, we should bend every effort to improve what we've already made—as well as come out with products that are completely different, and better.

7. Educate union leaders and members to the economic facts of life. High wages are greatly to be desired, but they don't come out of thin air. Unless wage rises are based on increased productivity, they are self-defeating by their inflationary influences.

Labor-Management Reporting and Disclosure Act of 1959

SPEECH

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. WOLF. Mr. Chairman, this speech was never made. I was precluded from speaking by the "gag rule." But I want the record to show how I felt on these issues.

Mr. Chairman, I saw many excellent speeches and have witnessed some great comment on this labor debate but I want to pay particular tribute to the great and gentle lady from Oregon [Mrs. GREEN]. She has demonstrated tremendous courage and a remarkable intellect and has clarified many points.

I too want to get the crooks out of labor, but only the crooks. I do not want to be party to wrecking the philosophy of collective bargaining which has brought the highest standard of living in the world to America. The committee bill in my opinion does the right job and I shall give my support to this bill.

Mr. Chairman, throughout this entire debate much has been made of the racketeering labor union leader who makes deals for private purposes and private gain. We have heard the labor union movement criticized and we have heard that union leaders are putting tremendous pressures on the Congress to vote a soft labor bill.

I, for one, am fed up with the picture that has been presented to the Congress and to the American people that the business interests in this country are in no way involved in the racketeering and crookery of certain labor union leaders. For every crooked labor leader who makes a deal there is a crooked businessman with whom the deal was made.

I would like to give you some examples of this fact and I hope that when we vote on this matter and when we tell the story of labor racketeering to the people between now and the next election we will include the sordid story of the corporations, great and small, that made deals with crooks in the labor movement to destroy the legitimate rights and economic benefits coming to working people. These businessmen, whom I will describe, were more interested in profits than moral scruples. Consequently, it ill behooves many of these corporations to adopt an angelic or holier-than-thou

attitude to this problem before the American public. So, as Al Smith used to say "Let's look at the record."

The International Longshoremen's Association, formerly headed by the racketeer Joe Ryan, was a creature of management to secure low-wage contracts and to destroy other legitimate objectives of working people on the waterfront. As A. H. Raskin, the New York Times reporter, has pointed out—by the way, I shall have something to say about the New York Times later:

The sordid story of employer collaboration in the degradation of the International Longshoremen's Association is * * * a quarter-century in the making and it wound up in the transformation of what had been a union into an amalgamation of gangs so powerful that the insurance companies and the police joined with the shipping lines and the stevedores in acknowledging and confirming their supremacy. The ILA was a Frankenstein monster of the employers' own fabrication. They subverted the union over the years; they kept its president, Joseph P. Ryan, in automobiles and expensive clothes, right down to the pajamas he wore to bed at night; they subsidized the hoodlums Ryan recruited from Sing Sing to hold the rank and file in subjection. At no time even when its investments in "harmonious labor relations" ceased to pay any dividends, did the shipping industry undertake any discernible role of leadership in the campaign to dislodge the ILA from its dominant position on the piers. On the contrary, the employers took sanctuary in the pious defense that the law required them to be neutral in union affairs.

For every labor thug on the waterfront, Mr. Chairman, there is a business thug on Wall Street and Park Avenue. In volume 4 of the "History of Labor in the United States," by Professors Perlman and Taft, there is an extensive discussion of employer crookery in the building trades. It is clear, from the analysis of these experts, that where racketeering exists, it is also the employer that is the benefactor.

Charges of widespread graft in the building industry have frequently been made. Evidence that the business agent has often extorted money payments through threats of strikes has been produced. Nevertheless, the business agent has been neither the sole nor the chief beneficiary of the system which made graft possible. Favored employers also benefited. Contractors and suppliers of material have used the grafting business agent to gain monopolies, to harass competitors, or to escape penalty when unable to complete the work on the date specified. Furthermore, the graft came out of the pockets of the builder, and ultimately the consumer, and as long as wages and job conditions were improving, the building tradesmen, far from feeling depressed by the leader, viewed him as an efficient fighter for their interests.

We have heard bandied about these Halls the names of Beck and Hoffa and how they are the crooks that are hated by business which recognizes them for what they are. Well, let us look at the record again.

Business Week—in January 1948—said about Dave Beck that his methods "have endeared Beck to an ever-widening circle

of local businessmen on the Pacific coast. To them he is the businessman's labor leader." That same year, *Time* magazine also added to this story. They said:

The great majority of employers (in the Northwest) think he is wonderful and applaud like happy seals when he speaks to the chamber of commerce.

And what about this businessman's friend who announced his support for President Eisenhower on the steps of the White House in 1956? Well, Beck, before he retired as Teamster president made a loan out of union funds of \$1.5 million to the Fruehauf Trailer Co. and then received in exchange a personal loan of \$200,000 from that company. This corporation knew their friend, Beck, of course, knew the business psychology. As he was fond of saying, "I run my union like a business. We deal in one commodity—labor."

What about some of our other high-class billion-dollar corporations?

The Senate Rackets Committee charged in 1958 that the A. & P. food chain had entered into a 5 year collusive agreement with Max Block, head of the two meatcutters' unions to freeze out two other unions. According to Charles Douds former regional director of the National Labor Relations Board in New York, the company forced its grocery clerks to join Block's union while two other unions were in the process of organizing them. The company recognized Block's union and according to the charges of the Senate Rackets Committee probably made itself millions of dollars as a consequence of this sweetheart arrangement. While A. & P. competitors were working 40 hours a week, A. & P. employees labored 45 hours a week for about the same pay. This was reckoned to be about a \$400 saving per year per employee on the part of A. & P.

These are things that the mass media does not publicize. Consequently the American people are not aware of this kind of crookery on the part of big business. On the subject of the press, even the august *New York Times* is not without dirty hands. The *New York Times* paid off, through a strawman, certain union crooks over \$43,000 in order to get their paper delivered. They did this rather than expose those crooks. And there is only one reason why they did this, they were more interested in profits than public service. It should also be noted that this was deducted as a business expense. It is good to report, however, that the *New York Times* has stated

that it would never enter into such crooked dealings again. As Senator MUNDT told Amory Bradford, vice president of the *New York Times*:

I think it should be said too, that as long as people do pick up the tab to finance extortion like this, it tends to make that extortion profitable. Once the corporate community decides it is not going to be blackmailed, and is not going to get involved in paying the fee that these racketeers prescribe, it will be very helpful in correcting the situation.

Other newspapers such as the *New York Journal-American*, a Hearst newspaper, also paid this tribute to the labor gangsters.

Mr. Chairman, I hope that this incomplete rundown of certain employer violations is enough to get the point across. Let us not overlook the businessman who participates willingly in the sweetheart contract, in the backdoor under-the-table deal which benefits him economically. Let us remember that for every labor crook there is a business crook who countenances and encourages such behavior.

Mr. Chairman, I am for the strongest possible labor-management antiracketeering bill but I know that until businessmen also clean house and realize that they too are involved in immorality and illegality when they play ball with the labor racketeer and when they employ crooks to do their bidding for the purpose of having a higher annual profit report, we cannot solve this problem by just the simple act of writing a new law. The Justice Department better get busy now and enforce existing laws, too.

We must get the crooks, all of them, in industry, in banks, in the Government, in the legal profession, in the medical profession, in labor unions, or wherever they exist.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House

Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Complacent Americans Facing Threats to Their Way of Life From Communism, Own Apathy

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. William J. Edwards, of Saginaw, Mich., who is president and general manager of Lake Huron Broadcasting Corp. This article appeared in the Saginaw News on August 2, 1959. Mr. Edwards recently led a group of Saginaw businessmen on a European tour which took them behind the Iron Curtain. I thought the Members of this body would be interested in the observations he made while on this trip.

The article follows:

COMPLACENT AMERICANS FACING THREATS TO THEIR WAY OF LIFE FROM COMMUNISM, OWN APATHY

A visit to Moscow, the inner sanctum of world communism, can be a disturbing experience. You observe a different way of life. You gain impressions, some anticipated and others totally unexpected, and you are aware that your are making impressions on others as you move about. When you are alone, you ponder the things you've seen. You wonder how it all happened, and you find yourself thinking about the future of the world. Then, you are impatiently anxious to get home to shout aloud to everyone who will listen: "Be for America! Stand up for your church! Take time to realize that freedom and justice cannot be divided, but can be removed!"

I expected to find a grim, subjugated people in Russia. Instead I discovered the inhabitants of Leningrad and Moscow to be innately patriotic and extremely proud of their country and its accomplishments. Despite the lowest standard of living of all the countries I visited, the people seemed to be thriving on promises of what the next 7-year plan will provide. A deeper look made it clear, however, that living conditions have markedly improved in the recent postwar years, and housing is being constructed at an almost frantic pace.

The English-speaking students with whom I talked were generally friendly and intensely curious about America. At times, their suspicions of things American were too obvious to hide. Most of them believed that conditions in Russia were far superior to our living standard. A few confided that Americans have more material possessions than Russians, but they were quick to add that soon the Soviet Union will far surpass us in consumer goods as well as everything else.

Because of the language barrier, most of our contacts were with students. With a change of clothes, they might have appeared to be Americans, but there were differences. These young men with such inquiring minds

were atheists. They look upon religion as superstition, and they haven't heard about Jesus Christ. Bethlehem and Calvary are meaningless words to them, but they can tell you much about Lenin and the revolution.

Frankly, I did not believe that religion could be ruthlessly stamped out. I bolstered my argument with the knowledge that primitive man, from the dawn of recorded history, had to turn to a higher power. Whether it was the sun, the moon, a waterfall, or the mountaintop, he nevertheless worshiped a greater being. I have no such illusions now.

Religion can be obliterated. It has been wiped out in Russia, largely speaking, even though a few churches remain, for what I believe to be propaganda reasons. The church is being erased in Czechoslovakia and in East Germany by relentless Communist pressure. How can it be done, you ask. The answer is crystal clear. The constant din of propaganda develops opinions. The truth can become false, and wrong can become right. When personal liberty ceases to exist, man becomes a pliable creature. Then substitution becomes the order of the day. Into the void, left by the departure of religion, comes the state, and the newly molded being dutifully strives to be worthy of his place in the new religious order.

To the students, Americans are pleasant, money-grabbing decadent people. They firmly believe that our star is setting as a great power, because the superior system of communism cannot be denied, and the world will soon be Communist. They inquire about our social problems, the apathy of the people, and our public debt. They wonder why we do not throw out this "outdated" American system and embrace "the social order that is destined for the world." War, they say, is out of the question. They believe the United States would not dare launch a war, and they tell you that communism does not need a war to accomplish its aims of world domination.

I tried to dismiss these impressions. These were minds blinded by governmental control and thwarted by guileful propaganda. But, some of the statements they made, and some of the expressions made by officials we met, caused me to be concerned.

I believe we Americans do face a major threat to our way of life. Russia is making enormous economic progress, and, our position as a leader in world trade is under constant attack. I think our Government needs to establish a Department of Foreign Trade with a Cabinet-level secretary to meet this attack. I believe that continuing inflation can lead to socialism and socialism can lead to communism. In short, I believe we can lose our American heritage through public apathy. The astounding progress of the Soviet Union was not built on "a something for nothing" policy. If any people have known personal sacrifice, the Russians have, and there's nothing old-fashioned about patriotism in that strange land.

I think we've got to be far more concerned about the importance of religion in our daily lives. We've got to be concerned about our fellow man, and not ourselves alone. We must keep alive our Christian ideals and American traditions by active support and constant vigilance. I remember the sad statement of a gentle professor. He was the only man who talked with me freely behind the Curtain. "Unfortunately,"

he said, "our people were not too interested in the church. It wasn't so important to go, and we didn't attend very often. Now, it's gone, and it's too late. All the children are atheists." It couldn't happen in America, I said. We are a church-affiliated nation. And, as we talked on, I realized that it could happen. Slightly over 50 percent of us belong to a church, and approximately 33 percent of the members attend worship services regularly. That means that about 15 percent of all Americans worship God regularly. Could that small number save the church against the engulfing tide of atheism?

If our system of freedom is to be preserved, surely we as individual citizens must be more concerned about the status of this country and how the affairs of this beloved Nation are conducted. It seems to me that we must awaken and recognize that our increasing public debt, inflation, the activities of pressure groups and Government spending are matters of personal interest to us. Propaganda has changed the American image in much of the world. But deep inside us all we know that our way is the only way. If we believe that, it will take more than a nod of agreement to keep it.

A few days ago, while relating some of my impressions of the Soviet Union, a friend handed me a card. Written on it was an excerpt from an inspiring address entitled "The Price of Freedom Is Courage," given by H. W. Prentiss, the president of Armstrong Cork Co. He said:

"The history of all great nations in the experiment of self-government ultimately generates release of initiative and enterprise made possible by self-government, ultimately generates disintegrating forces from within; for again and again, after freedom brings opportunity and some degree of plenty, the competent become selfish, luxury loving, and complacent; the incompetent and the unfortunate become envious and covetous. And all three groups turn aside from the hard road of freedom to worship the golden calf of economic security. The historical cycle seems to be from bondage to spiritual faith, from spiritual faith to courage, from courage to freedom, from freedom to abundance to selfishness, from selfishness to apathy, from apathy to dependency, and from dependency back to bondage again."

Perhaps we are at the apathy stage at this moment. If we are, a revitalized interest in America by all of us can change the course of events.

Caution, "Pol" at Work

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. WAINWRIGHT. Mr. Speaker, I wish to introduce an editorial from one of New York's major newspapers. Newsday, published daily on Long Island, enjoys a vast circulation in my district; hardly a reactionary publication. In fact its past record shows that it leans to a liberal, progressive stand. Here is proof

of the clear-thinking liberal on the labor problem. Here is the progressive in defense of real reform within the labor movement—for the Griffin-Landrum bill. The article follows:

CAUTION, "POL" AT WORK

Speaker SAM RAYBURN, who finds himself juggling a handful of hot potatoes, would like to counsel sweet reasonableness in the regulation of unions. Persuasive politician ("pol" for short) though he is, we doubt his radio broadcast Monday will convince many Americans that there is anything wrong with outlawing crookedness and blackmail among the powerful minority of dishonest labor organizations. RAYBURN opposes as too restrictive the bipartisan Landrum-Griffin bill, now pending before Congress and powerfully supported by President Eisenhower. He favors the far too mild Elliott bill.

On this one, we're with the President. The Landrum-Griffin bill, out of the assortment before Congress, is the only one with teeth in it—teeth, by the way, that will not bite any honest union. It outlaws the iniquitous secondary boycott, holds union officials to a strict accounting of funds; in fact, does nothing any honest union should oppose.

We had, in this country during the 1880's-1890's, the robber barons of business, who cynically manipulated politicians and stole the country blind of natural resources while sweating the workers. The unions developed in reaction to this trend. But now some of them have become just as cynical, just as thieving, and just as powerful. The balance between capital and labor must be maintained. If industry can be regulated, so can unions.

Our advice, again, is to write or wire your Congressman and/or U.S. Senator and urge that the Landrum-Griffin bill be passed.

Why Not Let the Light Shine on Laos

EXTENSION OF REMARKS

OF

HON. FRANK W. BURKE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. BURKE of Kentucky. Mr. Speaker, in the continuing efforts of the Congress to safeguard the right of the people to know how their money is being spent, the adamant refusal of the President to allow an accounting to be had of foreign aid funds is a shocking abuse of Executive privilege. Under leave to extend my remarks, I include two excellent editorials on that subject:

[From the Louisville Courier-Journal, Aug. 8, 1959]

SUCH INCONSISTENCY CALLS FOR A TEST IN THE COURTS

President Eisenhower's demonstrated passion for secrecy in the conduct of Government business is now heading for a challenge in the Senate. We believe that body should meet the challenge head on and insure a court test of the President's belief that any plea of Executive privilege and not the justifiable one of national security is sufficient to keep the people from knowing how the people's business is being conducted.

The issue has arisen repeatedly. What brings it to a head now is press disclosures of supposed mismanagement of the foreign-aid program in Vietnam and Laos. Congress asked for the facts. The International Cooperation Administration on Thursday again refused to divulge them, again was

backed up by the White House plea of Executive privilege.

What makes this all the more astonishing is that President Eisenhower said only last year that "a strong society of free men must be kept fully informed—liberty can flourish only in the climate of truth." How he can reconcile such eloquence with the contention that Congress should not be allowed access to information on how its appropriations for foreign aid—or anything else—are being handled is beyond us.

AN INCREDIBLE STIPULATION

Its incomprehensibility is intensified by what happened when the President last week signed the new foreign-aid authorization bill. This measure contained three amendments which, in sum, would require the ICA to furnish Congress or the General Accounting Office information they request in connection with the aid program, with the specific exception of whatever the executive department saw fit to label as "secret" because of national security considerations.

The President signed the bill with the almost incredible stipulation that he would not be bound by the anticorruption amendments because he regarded them as unconstitutional—a point, beyond all question, that it is up to the Supreme Court to determine.

The authorization bill is one thing, the actual appropriations bill another. The House this week, in the appropriations bill, strengthened the original anticorruption requirement with a proviso that none of the nonmilitary funds being appropriated may be used if a request for information from Congress or the GAO is ignored by the foreign aid agency for more than 20 days.

The President hopes that the Senate will eliminate all of these anticorruption provisions. We believe it should follow the lead of the House, and that both bodies of the Congress should enact additional legislation, such as empowering the GAO to take court action against noncomplying officials, to insure that this whole question of the use of executive privilege to withhold nonsecurity information will get a definitive review in the courts.

DISMAL TRUTH SUPPRESSED

A House Government Operations Subcommittee, after investigation, found our foreign aid program in Laos "studded with waste, mismanagement, and, in some instances, corruption." It sought the Government's own accounting and the full story behind this dismal picture. The information is essential to the writing of sensible legislation—not only in this instance, of course, but in many another. But the Government refuses to disclose the facts, pleading executive privilege.

The public surely must agree with Subcommittee Chairman PORTER HARDY, Jr., of Virginia, that "concealment of deficiencies can hardly be construed as being in the public interest . . . this denial of information also enables the executive branch to avoid public criticism and censure."

[From the Louisville Times, Aug. 10, 1959]

WHY NOT LET THE LIGHT SHINE ON LAOS?

President Eisenhower has grown increasingly touchy over what he considers efforts to encroach on the "constitutional duty and power of the Executive." On most such occasions we have felt he was right—as, for example, his consistent opposition to the campaign of former Senator John Bricker to limit the President's treaty making powers by constitutional amendment.

We feel the President is on less solid ground, however, when he approves withholding information about foreign aid from the Congress he expects to appropriate for foreign aid.

The case in point concerns the administration of U.S. aid in the kingdom of Laos. This southeast Asian nation of 2 million, smaller than Illinois plus Indiana, emerged independent in 1954 after the Indochina war.

It has been under constant pressure from Communist China and North Vietnam, which border it for 600 miles.

The State Department has taken the position that aid to Laos has been a striking success, the proof being that it has not succumbed to communism. Since 1953, however, there have been continuous rumblings, first touched off by the General Accounting Office, that foreign aid to Laos has been a colossal scandal.

AN ARMY OF 25,000

Since 1955 U.S. aid has amounted to a quarter billion dollars. Part of it was used to build up a 25,000-man army. A House Government Operations Subcommittee has contended that "significant military opinion" favored a 12,000- to 15,000-man force, but that the late Secretary of State Dulles insisted on the 25,000 figure despite contrary recommendations of the Joint Chiefs of Staff.

Reports of bribery by a U.S. construction company operating in Laos have been heard by the subcommittee, together with reports of personnel shuffled to avoid public disclosure of what was going on.

The subcommittee's chairman, Representative PORTER HARDY, Jr., a Virginia Democrat, does not like to see tax money wasted. During the last Truman administration he raked the Defense Department over the coals for what he considered outrageous waste in purchase of materiel. It is not, with him, a matter of party; simply one of waste.

He has tried without success to elicit from the International Cooperation Administration an accounting of aid administration in Laos. Partly on this account Congress wrote provisions into the foreign aid authorization bill this year aimed at forcing the administration to comply with congressional requests for information.

President Eisenhower signed the bill, at the same time sharply criticizing the anticorruption provision. On the same day, July 24, Representative HARDY renewed his request for information on aid to Laos and Vietnam. This week he received from James W. Riddleberger, director of ICA, a letter to the effect that release of the information would not be in the public interest.

CONGRESS SHOULD KNOW

We can fully appreciate that the public interest is overriding on secrecy concerning the Central Intelligence Agency and perhaps some phases of missilecraft. The only possible interpretation of secrecy on aid to Laos is to assume that it has been so mismanaged that disclosure would tend to discredit the whole foreign aid program.

From our viewpoint, the fierce effort to conceal what has happened in Laos is a greater indictment than simple confession could possibly be. We have felt and still feel that U.S. foreign aid has been of inestimable value in containing Communist imperialism. If it was a mess in Laos, that nation is still free, and should not be used anyway as an example to damn the whole program.

At the same time, Congress appropriates the money of U.S. taxpayers to be used for foreign aid, and has a right to know for what the money is spent.

Panama Canal Control Plotted by Reds

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I

include the following well-prepared and well-written article by Mr. Donald R. Larrabee, which appeared in the Sunday Standard-Times of New Bedford, Mass., on July 19, 1959, on the vitally important subject of the relations between the United States and the Republic of Panama and specifically concerning the Panama Canal. Mr. Larrabee is to be congratulated for his fine article:

PANAMA CANAL CONTROL PLOTTED BY REDS
(By Donald R. Larrabee)

WASHINGTON, July 18.—Seething unrest in the Caribbean, promoted if not provoked by international communism, poses a major threat to U.S. control of the strategically and commercially vital Panama Canal.

"The Caribbean is today a powderkeg," Panama's Ambassador to the United States, Ricardo Arias, told the New Bedford Standard-Times.

"A prime objective of the internationally organized Communist movement is wresting control of the Panama Canal from the United States," said Representative DANIEL J. FLOOD, Democrat, Pennsylvania.

CRISIS GROWING

The Caribbean crisis has been growing rapidly since Fidel Castro overthrew the Batista regime in Cuba January 1. Since then there have been threats and unsuccessful invasion attempts against the Dominican Republic, Nicaragua, and Panama. Haiti is threatened by a squeeze play between Cuba and the Dominican Republic. And rumors persist of counterinvasions aimed at Cuba.

In an exclusive interview, the Panamanian Ambassador made no attempt to minimize the potential seriousness of the Communist movement in America's backyard. Insofar as Panama is concerned, he said, there was nothing funny about the attempted invasion by 600 well-armed Cubans in April, even though it was dismissed in some quarters as a comic venture.

Panama's President Ernesto de la Guardia, Jr., has said militant Communist Reds led the attack and their ambition, he declared, is to take over the Panama Canal.

Congressman Flood, who has been preaching the "Panama danger zone" theme since the Suez Canal crisis in 1956, says there is overwhelming evidence to support these statements.

But what disturbs the Pennsylvania Congressman, a seven-term House veteran and long-time student of Latin American affairs, even more is the way certain Panamanian politicians and extreme nationalists—wittingly or unwittingly—are playing into the hands of the Communists by their demands for sovereignty in the 10-mile-wide Canal Zone.

International communism, Flood says, opened its agitation campaign aimed at wresting control of the zone from the United States following the Suez crisis in 1956.

NOT SATISFIED

It is a historical fact that Panama has never been completely satisfied with the basic treaty of 1903 under which the United States was granted permanent use, occupation, and control of the Canal Zone.

Panama got its independence, in the process, but it has claimed unfair treatment ever since, and according to Flood, these claims have led to a progressive deterioration and piecemeal liquidation of U.S. rights in the zone.

The frictions are not new—but Panama's assertion of its rights has become progressively more blatant since Suez. The last straw, according to Congressman Flood, was the passage of a law by the Panamanian National Assembly last December to extend the Republic's territorial waters from the internationally recognized 3-mile limit to a 12-mile limit.

The effect of this action was to proclaim sovereignty over a stretch of ocean that enables Panama to control access to the canal. Panama hasn't yet asserted its alleged control by any overt step, but what move could fit better into the pattern of communism than to see a gradual undermining of U.S. control and eventual maritime separation of the two coasts of the United States now linked by the great waterway?

LONE VOICE

Congressman Flood has been almost a lone voice in Congress in warning about the dangers of the sovereignty law. His speeches on the House floor since January 9 have roused the Panamanian National Assembly to the point where he was denounced as that country's public enemy No. 1.

The State Department, if not his colleagues in Congress, shared his alarm over the enactment, sent a note to the Government of Panama expressing the hope that the action would be reconsidered. The National Assembly lost no time in rejecting this request.

The validity of the law has not been conceded by the United States, Britain, or France. But Soviet Russia was quick to endorse it. Congressman Flood's fears have not been justified, as yet. He indicates satisfaction that the government of President de la Guardia is not likely to enforce its sovereignty to the waters in question.

"But," adds Flood, "we don't know what we will get tomorrow."

AIMS DISCLOSED

Perhaps the Congressman's fears are more understandable in the light of some of the debate preceding adoption of the law. Here spilled over the innermost long-range aims of certain political leaders. One candidate for President in the elections to be held next May, Deputy Aquilino Boyd, demanded that Panama receive half of the gross revenues of the canal. Boyd asserted that the canal is now surrounded by 9 miles of exclusively Panamanian waters in which Panama can exercise definite acts of sovereignty.

From remarks made during that debate, there seems little doubt that the new law could be used to require the display of the Panamanian flag on vessels entering these waters. Panama could exercise vigilance over shipping to maintain internal security, could regulate fishing activities, try persons for offenses committed on board ships in Panamanian waters, require foreign war vessels to comply with her navigation rules, enforce customs, fiscal, and sanitation regulations.

PERPETUAL USE

Says Congressman Flood, "Should candidate Boyd's insistence on 50 percent of the gross annual canal revenues for Panama (which would approximate \$43 million as compared to \$3,800,000 for present net revenues) ever prevail, the resulting deficit of approximately \$40 million would have to be borne by the over-burdened American taxpayer or world shipping, with possible liquidation of the entire canal enterprise."

Flood predicts the cry "The Canal Is Ours" will be a popular campaign theme next May. Radical leaders, he says, "seem willing for their own political advantage to bring their country to the brink of disaster."

COULD BE ISSUE

Ambassador Arias, interviewed at the Embassy for nearly 2 hours, said emphatically that his Government does not want to take control of the canal from the United States. He conceded, however, that this could become a hot issue in the election campaign. Arias, incidentally, may himself be a candidate for president.

"There is," he said, "no seed that will flourish so fast as one which has to do with nationalism. There is a feeling in Panama now that something must be done to

straighten out our position with the United States. Panama feels it does not get all the benefits it should be getting from the canal."

The Ambassador readily acknowledges that the United States possesses the "use, occupation, and control" of the Canal Zone, but this is by no means the same as having domain or sovereignty. The official Government position is that Panama still enjoys its sovereign rights; she has merely granted to the United States the exercise of certain of these rights for canal purposes.

If the Ambassador was asked, the Government of Panama is not trying to exert control over the canal, what then is the purpose of the law extending her sovereignty over coastal waters to 12 miles? And what about the charge that the agitation over the canal was inspired by the Suez crisis?

PROBLEMS EXISTED

"When Suez started," he replied, "Panama didn't stir up the canal issue. The newspapers began getting interested and started making their own interpretations. The Suez incident put the Panama Canal in the spotlight, but our problems with the United States existed long before Mr. Nasser was born."

As for the 12-mile law, the Ambassador said his government acted because it didn't want to be caught with the status quo when its representatives sit down with those of other maritime nations at international conferences to consider the width of territorial seas.

But, beyond this, the Ambassador said Congressman Flood should take a closer look at the law passed by the National Assembly. An examination, he said, will show that it must be implemented by the Executive in accordance with the Constitution and pursuant to any agreements arrived at in international conferences.

Congressman Flood has a deeper concern, however. He says the "attempted surrounding" of the canal is not only a violation of international law but a clear transgression of existing treaties. The United States, he admits, has over a long period of time failed to meet its treaty obligations in the management of the waterway. These obligations, obviously, are still further challenged by the sovereignty law.

A reading of history shows, indeed, that over the last 50 years, Americans have periodically made concessions and agreed to revisions in our treaty relations in hopes of reducing friction over the Panama Canal. Somehow or other, these decisions to surrender basic treaty rights have only given birth to more agitation for a greater Panamanian role in canal affairs.

The central issue in the current canal situation—that of titular sovereignty—is not a new development. It is bound up in treaties going back to 1901. The frictions appear to have their genesis in these documents.

The United States took on the job of building the canal after the French had tried and failed. President Theodore Roosevelt in 1902 favored a route through Panama, although there was substantial U.S. sentiment for a canal through Nicaragua. A year before, the Hay-Pauncefote Treaty between Britain and the United States gave up British rights to build and control an Isthmian Canal across Central America and recognized the exclusive right of the United States to do so.

In assuming this responsibility, the United States adopted the main points of the convention of Constantinople of 1863 relative to free navigation for vessels of all flags through the Suez Canal.

The next important step was the Hay-Bunau-Varilla Treaty of 1903 between Panama and the United States which, for the purposes of brevity, was the document which guaranteed the independence of the new Republic of Panama from Colombia which

governed it as a province. A treaty had already been in the works with Colombia but it was rejected by that Government and, in the events that swiftly followed, Panamanian revolutionaries accepted a treaty much more favorable to the United States than the proposed Colombian treaty.

On Panama's part, the Hay-Bunau-Varilla Treaty granted to the United States the perpetual use, occupation, and control of the Canal Zone for the construction, maintenance, operation, sanitation, and protection of the Panama Canal as if the United States were the sovereign of the territory.

Panamanian leaders, including the current Ambassador to Washington, claim today—56 years later—that this language clearly does not give the United States sovereign rights in all matters, only those directly related to operation of the canal.

Ambassador Arias says the 1903 treaty was poorly written and signed somewhat hurriedly for the Panamanians by a French engineer, Philippe Bunau-Varilla, who had been deeply involved in the defunct French canal project. Panama, he says, didn't get the kind of deal that had been suggested in the treaty with Colombia which, foremostly, gave that nation sovereignty over the Canal Zone.

Within months after the treaty signing, Panama began protesting the absolute sovereignty status of the United States. Congressman Flood says this is nonsense. The treaty, he maintains, clearly authorized perpetual control of the Canal Zone by the United States for the primary objectives of constructing the Panama Canal and for its permanent maintenance, operation, sanitation, and protection.

LAND GRANTED

Ambassador Arias insists Panama merely granted land to the United States for certain specific canal purposes. He cites the words "as if it were the sovereign" and concludes that they mean the United States really is not the sovereign. In no part of the Hay-Bunau-Varilla Treaty, the Ambassador claims, is it ever stated that Panama cedes to the United States either domination over or sovereignty of the Canal Zone.

The same basic question has been argued for 55 years. But, without being resolved, the notion that Panama had been cheated seems to be at the base of the numerous minor crises that have arisen in connection with the canal ever since.

In order to reduce friction, President Franklin D. Roosevelt gave up certain treaty rights in Panama outside the Canal Zone and, in another effort to improve our relations, a revised treaty in 1955 attempted to straighten out certain economic problems relating to trade and wages and working conditions of Panamanians employed in the Canal Zone.

Still, as of today, Ambassador Arias says his country does not feel it is receiving all the benefits it should be getting from the canal. The 1936 treaty supposedly had satisfied certain salary classification problems between American and Panamanian employees. The 1955 treaty, the Ambassador says, was aimed at establishing a principle of "equal pay for equal work," but differing United States and "local" rates still are in force.

At the present time, President de la Guardia and President Eisenhower are exchanging notes on the subject. Panama claims its citizens working for the Canal Company are not getting wages and working conditions equal to American employees. An issue such as this is a source of much hard feeling, the Ambassador says.

Another point of friction has to do with treaty provisions affecting items imported into the Canal Zone. The treaty says, according to the Ambassador, that imported items must be procured from the United

States or from Panama "unless it is not feasible to do so." This latter loophole has opened the way for widespread duty-free entry of a wide variety of goods into the zone which Panama feels it should supply and from which it could derive great economic benefit.

The Ambassador says the United States has set a high goal, in terms of living standards, in the Canal Zone. He would, he said, much prefer to see a correction of the employees' salary problem than a boost in the annual direct payment of \$1,900,000 the United States makes to Panama.

WILL BE SOLVED

"I believe," the Ambassador said, "that the wage scale and import problems will be solved eventually. The United States must accept them, because we are right. The United States cannot afford to discriminate. The trouble is, the Panamanian people won't appreciate it when it finally comes because they will think it was forced on the United States and wasn't born of genuine generosity or any real understanding."

Ambassador Arias is especially irritated by a resolution introduced by Congressman Flood which has as its purpose the reaffirmation of the "complete and exclusive sovereignty" of the United States over the Canal Zone and the canal. He said the agitations of extreme nationalists for a greater voice in the Canal Zone won't be solved "by dishing out information or by offering a resolution * * * it offers no solution."

The Congressman, on the other hand, says he is the best friend that Panama has in North America and is looking out for their best interests in a situation where international communism is ready to exploit every difference with the United States.

"My concern is that the Communists are going to take advantage of this situation," Flood told this reporter. "There is no doubt whatsoever that the canal is a rallying point for any nationalists. Even those who are not Communists will take whatever lies at hand for purposes of revolution. The Communists go wherever the fighting is to insure turmoil and disorder."

"I know of the fantastic population potential in Latin America. It is an extremely important facet of the problem, it is intermarried with the economic problem which is chaotic."

"What I am afraid of," continued Flood, "is that our State Department, in its concern for Asia, Africa, and Western Europe, is going to win those battles and lose the war in our own backyard. Our best minds and men are at Geneva and who the devil cares about the Amazon when there is the Rhine at issue."

One of the preventive measures currently being proposed to deal with the Caribbean crisis is the formation of an inter-American volunteer police force under the Organization of American States. The purpose of such a group would be to deter or counter any use of force against any Latin American country.

HAZARDS CITED

Congressman Flood calls the proposal "unrealistic" and says it is charged with "serious diplomatic hazards."

Ambassador Arias comments: "There might be something to it, although I think it would be wise to give the matter more thought. The OAS has been efficient and able to handle some situations. But, things could reach a point that the moral force of OAS might not be enough."

Internationalization of the Panama Canal under the Organization of American States or the United Nations has also been seriously suggested. Former President Truman, for one, said as recently as last November that the canal ought to be internationally controlled "and there wouldn't be any trouble" over it. When he first suggested the internationalization of the Panama Canal and other

waterways in world commerce at the Potsdam Conference in 1945, it was flatly rejected by Joseph Stalin.

Today, Congressman Flood points out, communism strictly favors this. Ambassador Arias, recalling the Truman incident, would have no part of the idea. And, he says he thinks the immense majority of the Panamanian people would oppose it.

Testimony of Dr. Willford I. King, New York University, Presented to the Senate Subcommittee on Education

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Dr. Willford I. King, economics professor emeritus, New York University, which was presented to the Senate Subcommittee on Education on April 8, 1959, and which concerned proposed legislation providing for Federal aid to education. I felt that Dr. King's observations regarding the needs of our educational system and his comments concerning the desirability of extending Federal aid to education would be of interest to the Members of this body:

TESTIMONY OF WILLFORD I. KING, PH. D., L.L.D., ECONOMICS PROFESSOR EMERITUS, NEW YORK UNIVERSITY, PRESENTED TO THE SENATE SUBCOMMITTEE ON EDUCATION ON APRIL 8, 1959

SCHOOL EXPERIENCE OF WILLFORD I. KING

1886-87: Attended country school in western Iowa.

1888-95: Attended country school in western Nebraska.

1897-99: Student at Wallace's Preparatory School in Lincoln, Nebr.

1900-05: Student at the University of Nebraska.

1904-05: Laboratory instructor at the University of Nebraska.

1905-09: High school teacher. Taught in four schools in Nebraska, Iowa, and North Dakota.

1909-13: Graduate student in economics at the University of Wisconsin.

1910-17: Economics instructor and, later, assistant professor at the University of Wisconsin.

1926-45: Professor in charge of statistics in the school of commerce and the graduate school of business administration at New York University.

1945-47: Professor of economics, New York University.

1955 to date: Member of the board of directors, American Education Association.

COMMENTS ON PROPOSED LEGISLATION PROVIDING FOR FEDERAL AID TO EDUCATION

Having spent the major part of my adult life in teaching, is it surprising that I am strongly in favor of sound measures intended to improve the quality of education in the United States? It is my view that every child and youth should have the chance to obtain education to the extent necessary to enable him or her to make good use of the talents with which he or she is endowed.

As doubtless every member of this committee is well aware, nearly all advocates of sound education who have, in recent years,

looked into the situation prevailing in this connection in the United States, have been shocked by the great deterioration in the quality of education which has been instilled into our youth by our existing school system. For example, in some areas, it has been found that a large proportion of high school graduates are lacking in the ability to read, spell, or write even reasonably good English, or to solve very elementary problems in arithmetic. The situation in this respect is, in fact, so bad that some colleges have actually installed, for their beginning students, remedial reading courses. When, in the first decade of the present century, I was teaching science in various high schools in the Middle West, I never heard of any such situation existing. Most of the pupils entering the ninth grade could read, write, and spell fairly well, and were familiar with the basic principles of arithmetic. None of the graduates of any of the four high schools with which I was connected were lacking in any of these respects. No one so lacking would have been considered for graduation.

Present proposed Federal legislation is designed to help finance the building of additional schoolrooms so as to lessen overcrowding, and to increase the pay of schoolteachers in order to help make positions in this field as financially rewarding as are jobs in other lines available to potential teachers. Will legislation along this line help to remedy the sad situation now existing in the educational field? Are overcrowding in the schools and poor pay for teachers the prime factors responsible for the deterioration in the quality of education which has occurred? I believe that your committee will need to consider each of these points carefully. May I have the privilege of pointing out a few of the facts in connection with each?

What is the basic reason giving rise to the shortage of schoolroom space? Let us first take up the case of the elementary schools.

As most of you will probably remember, in years not so long past, the typical elementary school teacher handled a class of 40 pupils without undue difficulty. Now, it is assumed that class sizes should be kept down to 20. Evidently, this change calls for doubling the number of classrooms. What has brought about this demand for reducing the sizes of classes?

The answer is that adoption of the system of promotion on the basis of age, rather than accomplishment—virtually abolition of the grade system—has necessitated the change. Formerly, all the pupils in a teacher's class were roughly equal in their educational understanding, and could be handled on that basis. Now each grade teacher tends to have in her class a hodgepodge of pupils, a large proportion of whom have not mastered the work in previous grades. Many of them, having found that study is not necessary to obtain advancement, take no interest in their work. The result is that the teacher finds more difficulty in trying to educate 20 pupils than she did formerly in actually educating 40 pupils. Furthermore, at present, those not interested in their school work, and having plenty of energy, get into mischief. Here we have the prime source of the great growth in juvenile delinquency which has occurred in recent years.

In the high schools, overcrowding is accounted for primarily by the fact that restrictions on entrance have been lowered to conform with the idea of universal promotion. The important fact that different individuals have different capacities has been overlooked or forgotten. Instead of recognizing the fundamental truth that a large proportion of children are entirely unfitted for academic work, that they could serve the social weal far better by engaging, at an early date, in some trade, than by wasting their time on studies in which they are not in-

terested, and that being a good carpenter or plumber or automobile repairman or store clerk, is more honorable and more useful than being a third-rate member of some supposedly more learned profession, it has become the fashion to hold that everyone should go through high school and college.

My first personal experience with this new way of looking at things occurred when, after my formal retirement from New York University where I had been teaching statistics to high-quality students, I was called upon, during World War II, to teach some classes in elementary economics. When I was on the University of Wisconsin faculty, I had taught many such classes, and felt that I was quite familiar with things in that line. I had always found the students much interested in this field.

What a change I now discovered. Most of those registering in my elementary economics courses at New York University showed not the slightest interest in learning economics. They were going to college for the sake of prestige, and all they wanted was 4 points credit—not training in economics. Unfortunately, from their point of view, a very large proportion did not receive the 4 points credit.

Clearly, from the standpoint of the social weal, the proper thing to do is to weed out of our high schools all those pupils not suited for the work, and to give those that so desire brief training in trade schools. Were this done, there would be no lack of space in high schools to accommodate the pupils.

The next point to be considered is whether underpay is a primary cause of the present shortage of trained teachers. In my opinion, while it undoubtedly has some influence, other forces are still more potent in bringing about the teacher shortage. What are some of these?

Perhaps the preponderant force is the fact that stripping the teacher of the power to punish, and universal promotion, by breaking down discipline and generating misbehavior and juvenile delinquency, has, as a teacher of our acquaintance puts it, "made teaching a nightmare." She said that she formerly thoroughly enjoyed teaching her classes in the New York City school, but now she is waiting most impatiently for the date of her retirement. One of the reporters for the New York World-Telegram recently publicized well the troubles of teachers in some of New York City's difficult schools when he took a temporary job in one as a teacher, and wrote up his experiences in the newspaper mentioned.

A second highly important cause of teacher scarcity has been the evergrowing requirements that prospective teachers must graduate from schools of education in order to secure certificates to teach. Obviously, taking such courses calls for the expenditure of very considerable sums of money. Furthermore, the best evidence seems to indicate that courses in pedagogy and educational psychology rarely aid their students materially in learning how to teach classes well. I still remember my experience in such courses when I was a student at the University of Nebraska more than a half a century ago. Even then, I was required to take a course in educational psychology in order to be permitted to teach in a high school. My chum and I commonly referred to the time spent in that class as our rest hour, for there was so little content that the professor was compelled to put in nearly all the time in repetition. It was the only course in the university that we felt not eminently worthwhile. I never discovered that it helped me one iota in teaching.

Hearsay evidence leads me to believe that most courses in schools of education now are even worse than the one that I took so many years ago, for not only do they

fail to give their students sound training in education, they furthermore fill their minds with the pernicious doctrines of progressive education, the system which sponsors promotion regardless of attainments, and which, in general, inculcates the imbibing of smatterings of knowledge concerning many fields, and mastery of none—the very doctrines which have been largely responsible for bringing about the great deterioration which has occurred in our public school system.

Obviously, potential teachers have only a limited amount of time to devote to college training. The more they waste on these courses in pedagogy and educational psychology, the less time they have to devote to the subject matter which they should master before engaging in teaching in secondary schools. Here we have a primary reason why all investigations show that a large proportion of our present high school teachers are very ill-prepared in science and mathematics, and that the same is true in the case of potential teachers in these fields. Will granting Federal money to the States for promotion of education have any tendency to remedy this state of affairs?

Does it not seem probable that, if the schools in the various parts of the United States that are short on teachers were to reestablish discipline and then make it a practice to employ suitable applicants who could pass, with good grades, examinations in the fields which they were expected to teach, there would be little trouble in securing good teachers for most of the vacancies. With one exception, none of the teachers under whom I studied in the country schools had ever been to college. Yet I received fine instruction from them. As a matter of fact, in addition to training in the fundamentals of the three R's, I was thoroughly drilled in geography, history, grammar, and arithmetic. In the case of the latter, I solved all of the problems in Ray's "Higher Arithmetic" except two, which neither my father, who was rather expert in that field, nor the county superintendent, could solve. I learned enough about physiology and civil government to pass the requirements in these subjects for entering the university, and mastered bookkeeping sufficiently to enable me to teach the subject in high school without further preparation—and Harry Lee, the teacher who instructed me in these things, had had only a year's training in an academy. Obviously, spending years in schools of education is a foolish prerequisite for teachers in elementary schools.

Is it true that, in the present prosperous year of 1959, many school districts are so short on funds that they cannot afford to erect such buildings as they need in order to educate their youth? I have just taken the trouble to compare, for the United States as a whole, per capita real incomes in 1890 and 1959. I find that, in terms of dollars of 1947-49 purchasing power, as measured by the consumer price index, per capita real income has risen from \$581 to \$1,670. In other words, it is now two and eighty-seven one-hundredths times as large as it was when I attended country school. If we allow for the fact that various grades of government now extract from the pockets of the taxpayers something like 30 percent of those citizens' revenues, it still is true that they have remaining double as much real income as they had in that earlier period, a time in which they found it feasible to give excellent instruction to all of the children in elementary subjects. Some of the finest teaching in that field that I have ever known about was given by Miss Lora Sirless in an abandoned log cabin in Scott's Bluff County, Nebr. The people there did not know that palatial surroundings were essential to the teaching of the 3 R's. Providing adequate

classroom space and facilities for teaching would today burden few communities unduly.

Is it not true that, at present, a major fraction of the cost of school buildings represents making them suitable not only for educational ends, but also for entertainment purposes? If and when the Federal Government pays part or all of the cost of these elaborate structures, can it be truthfully said that the money appropriated has really been used primarily for aid to education? Is it not, instead, merely an aid to schooling—a very different thing?

Another important point to be considered is the burden of school construction and higher teacher pay upon the taxpayers of the country. If part of the financing is done by the Federal Government, is it not obvious that the burden must still be met entirely by the taxpayers of the Nation, unless Congress engages in the utterly unsound practice of inflating the circulating medium, and thereby levying a hidden tax upon all holders of such things as bank deposits, mortgages, and bonds, or recipients of pensions, annuities, and social security payments? And is it not generally true that, if the voters in a given school district decide by ballot to erect a new school building in their immediate area, they will be much more careful to guard against waste and undue frills in connection with the construction, than will be the case if they think most of the burden is to be borne by Uncle Sam?

Finally, if Congress decides to vote money for subsidizing education throughout the Nation, just what new taxes do you plan to impose in order to assure that there will be no Federal deficit financing, and, hence, no deterioration in the value of the dollar? I believe that you should give this matter your very careful consideration before appropriating money for aid to education.

I greatly appreciate your consideration in giving me time to thus present my views.

Report of Publisher of Ebony, Jet, and Tan Magazines on Visit to Russia

EXTENSION OF REMARKS

OF

HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I have the privilege to include an account of the prominent Negro publisher who traveled to Russia in the Vice President's press party. Mr. Johnson is founder and president of the largest Negro publishing firm in the world. His company publishes Ebony, Jet, and Tan magazines which have a monthly circulation of an estimated 1½ million copies:

Any Negro who feels that communism is the solution to the race problem in the United States will be sadly disappointed if he takes a trip to Soviet Russia.

This is the opinion of John H. Johnson, publisher of Jet and Ebony magazines, who, with his wife, Eunice, was a member of the press group which accompanied Vice President Nixon on his recent trip to Russia and Poland. There are relatively few Negroes in the Soviet Union, and Mr. Johnson agrees with the

Russian claim that it does not have a race problem. However, he is quick to point out that most of the privileges which we take for granted, such as freedom of speech and press and the right to own property, are not enjoyed by the Russian people.

The American Negro who wants better housing, more productive employment, and more individual opportunities will find that they are not available to him in Russia because they are not available to the majority of the Russian people.

Mr. Johnson does feel, however, that even though the Communist philosophy is not a good one for Negro or white Americans, there is no reason why the United States and Russia should not be friendly and peaceful. He believes that the Nixon trip contributed much to the development of friendly relations between the two countries and that further cultural and educational exchanges should be continued.

America: Looking to the Future

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Adm. L. H. Frost, Director of Naval Intelligence:

Gentlemen, from one point of view, we here tonight represent a variety of special talents and abilities—right within our naval activities alone. But I am more interested in thinking of those things that hold us together and serve our common purpose. We live in an age where specialization is natural and necessary, but it tends to create walls around many groups and threatens what is commonly called the whole man.

That is why tonight I am going to talk briefly about some issues which transcend our individual naval and private pursuits—and point rather toward the objectives we have in common—to what there is at stake for us in the year 1959 and many years ahead.

In short, my central theme is the United States—not in the impersonal terms of a world power—but in terms of you and me, our heritage, the crisis of civilization, our goals—and, unfortunately, the temptation of all of us to push these things over to or beyond our side vision.

Let's start out by taking a brief look at our historical attitudes toward the world around us and our future. As you know, we were fortunately isolated from the major troubles of the world during a good part of our history. This was not just geographic coincidence. We wanted it that way. It was so essential to our national objective and purpose that we set forth our views in the Monroe Doctrine—a virtual ultimatum to all world powers that the Western Hemisphere was not to be a preserve for tyrants or potentates.

This was not only a great historic decision to take under the circumstances. It was one of those rare and inspired decisions whose strength rested not only on military power—but rather on those intangibles of the spirit

that mark any man, or group, or organization who know clearly what they want and have the courage to pursue it.

We often forget that in the late 18th and the early 19th centuries we were considered the curse of world stability. Kingdoms and powers considered us anathema. Our Declaration of Independence alone contained ideals that—in the eyes of rulers everywhere—threatened to upset the status quo and release the bonds of men. But genuine as it was—our revolution had its own distinct nature. It did not reject the past—it sought to fulfill it. It had no interest in violence. There was on legacy of sustained hatred. In fact, George Washington in his farewell address counseled against indiscriminate emotional involvement with other nations. You may remember that the American public in that decade was strongly pro-French and quite anti-British—and the British and French were at each other's throats.

What was the driving force behind all this? Simply this, if I may borrow a historian's words: That the United States is the only nation in history where men chose a genuine ideal and then built a State around it.

All during the 19th century we had a new continent to explore and settle. All of our energies were directed to that end and to keeping the Union intact. Toward the end of the century the Monroe Doctrine was extended, we had our brief war with Spain, and then took a plunge into imperialism. We weren't at all happy with imperialism and soon started to disengage from that venture.

Although we had emerged as a sea power by the turn of the 20th century, we retained essentially the desire to work out our own destiny free of the power struggles on the Eurasian continent. But by the time World War I commenced there was enough conviction in the country that our interests would somehow be involved that we protested violently against that very idea.

As you know—and this was to be repeated in 24 years—we entered with our hearts more than our heads, saw as our objective solely military victory, and assumed that the post-war period would find a new world of enlightened leaders. Woodrow Wilson's disappointment with our allies set the tone after World War I. Nevertheless, well-meaning but idealistic and unrealistic treaties piled up.

Again we were ill prepared psychologically to participate in the Second World War. When we had to, finally, we set our goal as unconditional surrender. As a people we didn't think very much about problems that would exist in the world after victory. In fact, we took refuge in another dream—just as in the First World War—and trusted that the United Nations would take care of everything. We weren't very realistic—we still yearned to mind our own business—and hoped that foreign troubles would go away. But it was too late—history had caught up with us. Technology had, in effect, made the world shrink. Oceans were no longer broad sheltering expanses.

What happened after World War II was simply this: Leadership of the free world was thrust upon us as a nation. We reluctantly accepted it. Finally, we realized how necessary it was and began to grow with it. We recognized at last that "no man is an island"—that when the bell tolled for Poland, for Czechoslovakia, and for Hungary, it was also tolling for us and for all free men.

I have briefly touched on some of the highlights of our history to set the stage for my next remarks—the nature of the threat against us today and our problems in facing that threat. Suffice it to say that all Americans have a nostalgia for the good old days. We keep hoping for normalcy. But I am

afraid that what we are facing today is the normalcy that will be with us for a long time to come. There's no use in fighting the 20th century. We are right in the middle of it. Destiny may even make it the American century.

Several years ago President Eisenhower stated in a public address that we are living not in an instant of peril but in an age of peril. This was part of his counsel that we face up courageously to our problems—and neither look away from them nor become hysterical over them. As you will see, this is extremely important in the matter of the Communist threat.

I fully realize that all of you know what the Communist story is—particularly that of the Soviet Union. But even in Washington where such matters are of daily concern, I find that all of us have to keep taking stock of our approaches to the problem. If you become greatly absorbed in any one aspect of it, you are apt to be surprised or misestimate another aspect. By the same token, if you stress only the dramatic aspects of the Communist threat, you miss the key to the entire problem.

Let me illustrate. The Soviet threat is most often discussed in public in terms of military hardware. The most dramatic side to this is a surprise nuclear attack on the United States. Now, I have no intention of saying that this is unimportant. Proper defense against such a contingency is vital. But a stalemate has been reached on the score of strategic nuclear warfare. It may be mainly psychological—but nevertheless it is real. The Soviets know full well what would lie in store for them and they are unlikely to risk all they have gained by an ill-advised risk.

Where, then, does the real threat to us lie? The real threat lies across the whole spectrum of human activity—politics, economics, sociology, culture, and the military. In all these fields and with apparently highly practical coordination, the Soviets make war against the entire fabric of Western society. This has been aptly termed "protracted conflict"—a conflict that is carried out everywhere and all the time. This is the real, everyday conflict that the non-Communist world finds hard to assess as an ultimately decisive threat. For the Communists it is a campaign of attrition or erosion of the foundation of the free world.

Now this is far from a military equation. The military factor is there but it is only part of it. When Western nations become aware of a potential or manifest enemy, they traditionally seek to assess his military strength, his military capabilities, and if possible his intentions. This was adequate in its day and time but it isn't enough in the case of the Soviet Union—for while you fasten your attention on only one expected military attack, he may win a dozen equivalent campaigns without having moved a battalion, a submarine or an aircraft. It is this new kind of warfare that peoples of the West have misunderstood for the most part. Why?

Perhaps we can find the answer if we try a little analogy. When the average American looks about him he perceives physical objects but he clothes them with his own ideas and traditions and experience. He is an optimist at heart. He likes to reach solutions as quickly as possible. He doesn't mind compromising if the other fellow is ready to give in a bit too. He finds the past a bedrock of value and is willing to build on it through experimentation. He is not given to sustained hatred. He's reasonably willing to help other nations out if they are in trouble. But he's not generally interested in changing the world. In short, his philosophy is one of live and let live.

You get an entirely different picture if you look at the world through Communist eyes. I am not talking of some 200 million

people in the Soviet Union but of several million Communist Party members and a small inner core of leaders who are committed to world domination from Moscow. They run what we call a closed society. Every aspect of activity is controlled from the top. Lenin summed it up in 1900 when he stated that "we want the whole of their lives." Moreover, he laid out specific plans for reshaping those lives as a token of the future shaping of all lives on this planet.

As the Communist looks around the free world he is not affected by tradition, by respect for institutions of the past or by any spiritual kinship with the past. For him there is a philosophy that explains all of life in one package. There is no picking or choosing—everything in the package is interrelated. Thus he has an explanation for nature, for man, for society, and for history.

His philosophy tells him that societies all around the world are evolving toward communism—each at its own pace. The leaders of those societies will try to slow the process and will even get desperate and violent about it. But it is hopeless. By the same token, the Communist can, by judging situations correctly, give history an assist every now and then by fostering a revolutionary situation. It is his duty to do this. His sole norm of conduct is to advance the spread of communism. Yet, if he acts rashly and tries to speed things up at the wrong time, he is guilty of jeopardizing the revolution. You have a real paradox here—a constant urgency to weaken the West and at the same time an infinite, watchful patience. Undergirding this is an unshakable conviction that communism is to be the final flowering of history, and that every other system is destined to pass away.

I am not going to set forth here the numerous beliefs and guides to action by which the Communist lives. My main purpose is to remind you that through Communist eyes Western civilization is a waning force but still standing in the path of Communist progress. This isn't just an opinion—it is the consistent core of Communist belief going back over 100 years. It is what Khrushchev means when he jovially says: "We will bury you."

Now what happens when we try to judge Communist conduct through Western eyes? In the first place, you will find people who urge that we must negotiate with the Soviets to bring a lasting peace to the world. There is no intrinsic evil in negotiating—the trouble lies in what you buy. For various reasons, an attempt to negotiate may be necessary. Indeed, on certain special issues a negotiated settlement could be to our good. But the important point is that the Soviets cannot negotiate for world peace and stability. For them peace and stability mean their freedom to expand Communist power and influence without hindrance. For them there is no question of what they want or why they want it. Those are settled matters for the Communists. Their sole problem is how to get it. This reduces itself to an operational problem, judging each day which situations are ripe for exploitation, where to recede for the moment, and where to apply pressure.

They are not standard aggressive dictators occupied only with a plan to gain the world by military conquest. They are rather professional revolutionists who keep military strength as a ready tool. This military strength is every bit a psychological tool as it is a means of actual aggression. That is why I stated earlier that the threat lies across the entire spectrum of human activity in protracted conflict—in politics, psychology, economics, force, culture, and religion—every day and everywhere.

We can separate this threat into three broad categories.

The first is the one that is with us every day—cold war. It is the one least worried

about and yet is the one that could ultimately be decisive by the aggregate weight of many seemingly small victories and advantages. This is the area of the so-called cold war where the Soviet objective is erosion of the strength of the free world.

Here you find instances like Iraq, the attempt to infiltrate Syria and Egypt, the slow penetration of Afghanistan, the pressures on Berlin, and threatening notes to our allies. All around the clock broadcasts cover the world threatening, flattening, cajoling. Millions of well-printed books and pamphlets are placed in strategic spots wherever the Soviets detect any basic discontent. It is a tireless campaign designed to sow discontent or apathy and to stoke the fire for the day when some internal trouble sudden blazes up.

This is the area in which we Americans by ingrained habit and disposition do not have a sure touch. We find it rather incredible that any group could work with such zeal and single mindedness for so many decades. We, in the West, like to think in terms of the white of peace and the black of war. When the white of peace is disrupted, the black of war takes over. But to the men in the Kremlin there is a wide field of gray between the white and the black. If they can keep the free world in that zone of gray they will have their most fertile opportunities to exploit the world and yet not risk unduly the hazards of total war.

With the free world constantly badgered during periods of neither peace nor war, the men in the Kremlin hope to keep us off balance with no sure idea of the direction we should pursue or the action we should take. They rely on their belief that the United States will not see cause enough in any one situation to undertake decisive retaliation. Moreover, they alternate between apparent reasonableness and a menacing attitude and we are constantly tempted to give them the benefit of the doubt.

This then is the so-called cold air which is waged by the Soviet Union day in and day out. If you try to measure its progress by still photographs you may derive some measure of comfort in isolated instances. But it can only be measured, as it were, in motion-picture sequence. In that way you see the stark truth of Soviet expansion over 42 years. The same dreary story will continue to unfold unless we realize that we are in a long-drawn-out contest that we can lose by default little by little over the years.

Another category of the Soviet threat is found in the area of limited war or localized aggression. This subject is often discussed these days but there is an element of confusion about it. When you talk of general war, you usually have no trouble in matching up the opponents by name and numbers. The issue appears clear cut.

Limited wars are not so easily defined. But there is a common theme running through them. The Communist bloc is—or considers itself—an interested party. Soviet troops—as in Korea—may be two stages away. Nevertheless Soviet strength is the prime mover of the situation. In the Taiwan Strait area, the Soviets are one stage away—yet Communist China is ultimately dependent on the Soviet Union. In some cases, as in Lebanon, you have an incipient limited war. Without our help, the balance could easily have swung to the ultimate Soviet advantage.

The rising discussion of limited war is no fad. There is an inherent logic to it—springing from the nature of the power balance today. In the first place, limited aggression is closely related to the cold war. It is, in fact, the occasional flaring up of the cold war. By nature, limited aggression is the preferred Soviet method of edging out at its periphery. In the Soviet mind, limited aggression and limited risk are two sides of the same coin. Just as the cold war is designed to erode, so is limited aggression

designed to bite off manageable and digestible pieces.

As the United States and U.S.S.R. consolidate the strategic nuclear stalemate, the Soviet assessment of risk in a local situation may very well alter appreciably. When the alternative to both sides will mean nuclear destruction, the alternative may turn out to be not very real in cases of local aggression.

Added to this, is the fact that a strategic nuclear stalemate does not leave the Soviet drive for power spinning its wheels. Just as there is traction for the Soviets in the nonmilitary means of cold war, the Soviets will find traction in limited aggressions.

There will be only one way to deter limited aggression—and that will be by having an adequate limited war capability. Otherwise we may be faced with using massive retaliation over a situation that will—judged by itself—perhaps not appear that important.

Up to this point I have covered the cold war—or protracted conflict—and limited aggression. These are the termite programs of the Soviets. The Soviets intend them to pay off over the years. In the end, the Western structure would be eroded and weakened fatally. The collapse would come from within—if the Soviets have their way—and not because of a bolt of lightning.

We now come to the third category of the Soviet threat—general war. This is the most dramatic, naturally. I repeat that I am not underestimating the threat of a surprise attack by the Soviet Union. My point is that we can deter the Soviets in this field and are in a continuing position to do so. What disturbs me most is that in the public mind there has been an imbalance in recognizing the total threat from Communist power. Too many people have felt that if the Soviets are deterred from a nuclear attack on us, then the situation is well in hand. Moreover, those who do ponder only the nature of nuclear war, are apt to become apathetic or despondent over the future. This is where the imbalance in the assessment gives root to the very attitudes the Soviets seek to foster.

Gentlemen, there is no doubt that in the fast pace of our daily life we leave ourselves wide open to strong stimulations. Whether it be news of crime or war or politics or a scientific breakthrough, we receive it through all news media played to the hilt. All of us are so engrossed in our own daily problems that we are more apt than not to accept the eye catching and the dramatic at face value. Whether we realize it or not, we are constantly bombarded by the sensational side of a story. This can easily lead to cycles of elation and depression and finally to a feeling of indifference. Some say: "It's all too much for me," and others say: "Leave it to Washington—that's their job."

I can understand this kind of frustration but it is disturbing because it is not part of the American heritage I discussed earlier. The very nature of the democracy we cherish carries within it a sense of individual responsibility and a jealous sense of having one's say in the Nation's progress and welfare. That is now a necessity as well as a privilege for all of us. It is all the more vital because we are actually in a crisis of civilization. This type of crisis always involves the very fabric of society.

And now I would like to summarize the import of my remarks tonight. In the first place, I have tried to set right the imbalance of general views that have gradually grown up in Western society as a whole on the Soviet Union. There is an almost irresistible tendency for us to judge an enemy solely in military terms. Probably for this

reason we feel safe if our defenses are strong or feel that our defenses are weak if the enemy continues to expand his power.

The trouble here is that modern history has known no enemy of the Soviet type. He is imbued with what amounts to a fanatical sense of religion—and he goes in heavily for military strength. He does not engage in war for its own sake and, in fact, does not look upon military conquest as necessarily the way to reach his objectives. Nevertheless, there are times and places for the use of military force in aggression—whenever the risk is consistent with the preservation of the Communist world base.

By belief—and this belief can find adherents anywhere—he prefers to soften up nations, expand his influence gradually and to secure each gain for good.

Now what are our priorities in warding off this type of aggression? Well for one, we as a nation should think first of rediscovering our own national ideals and objectives and then get at the task of warding off an enemy. Our sights must always be set well beyond the goal of merely countering communism. After all, the American Revolution of 1776 is the only genuine revolution of the modern age. Communism merely depersonalizes man and reverts him to a fatalism and slavery that is centuries old.

The ranking priority after renewing faith in our own heritage and our own destiny and looking steadily to the future, is, of course, the maintenance of strong national defense across the board—both the capability to deter an enemy resort to all-out war and the capability to deter limited aggressions. In the face of a well armed foe, the Soviet Union is likely to tread with caution even in the cold war.

But, there remains another priority—the one most difficult to handle—and yet, as history shows, the decisive one in so many cases. This is the case of a nation realizing that the greatness of its past is no guarantee of a great future. Voices throughout the country are at last warning that freedom must be reearned by each generation. To reearn freedom is not unpleasant but it does call for sober reflection and some sacrifice.

It would be an ironic tragedy if a nation like the United States—the state built around a great ideal—were ultimately to change for the worse or fall because its people lost their sense of purpose, their sure touch, and their natural optimism.

This is the area I would like to leave you thinking of—the fabric of our society and the necessity to keep it strong. For the protracted warfare of the Soviet Union is directed squarely at that fabric—to weaken it by apathy, to rend it by internal suspicions and quarrels, and to dissolve it by pessimism and fatalism.

As naval officers and as citizens in your own communities you can be the leaven to stir up reflections on our heritage and to keep in mind that we are fighting on many fronts—all of grave importance. Every American has a personal responsibility for his civilization. As naval officers, all of us have been trained in the tradition of accountability and can be counted on to set the example of seeing the multiple threat to the United States in all its aspects. This is not a time for Americans to succumb to hysteria or apathy—to hotheadedness or gullibility—or, to borrow an expression, a time to jump on the horse and ride off in all four directions. You have the training, the background and the maturity to set the tone in your daily lives and contacts for a true appreciation of what our Nation stands for and just what is threatening to undermine it.

The Labor Bill

SPEECH

OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. SISK. Mr. Chairman, I join wholeheartedly with what I believe to be the overwhelming desire and determination of the people of the United States and the Members of this House to correct and end racketeering and abuses in the labor-management field.

I have been ready and I am ready now to vote for a strong, effective bill to drive the racketeers, chiselers, and hoodlums out of the dark dens they have established in the labor movement over the protests and against the active opposition of the overwhelming number of legitimate and honest leaders and members of organized labor. I am equally determined to put a stop to the equally despicable activities of conniving, bribing, and extorting racketeers in the management field, as are the overwhelming number of legitimate and honest businessmen.

In the debate this week we have not had an opportunity to vote for a bill representing what I believe to be the general public interest in labor reform, rather than the expression of views of the two sides in a labor-management controversy unrelated to labor reform.

Perhaps many Members of the House feel the Shelley bill leaned toward the interests of labor. If so, I sincerely believe it to be honest, responsible labor—not gangsters. Certainly, many of us feel the Landrum-Griffin bill thoroughly confuses labor reform with fundamental alterations in basic management-labor relations. It would punish labor as a whole for the acts of a few individuals. It seeks to disarm labor at the collective bargaining table. Under the guise of "reform" it would destroy balances of collective bargaining achieved by honest labor and management over many years which have resulted in the greatest opportunities, the greatest advances and the greatest prosperity for both business and labor that the world has ever known. I cannot believe that most of management wants this. I believe they recognize the advantage to business of a well-paid, happy, and free labor force under high standards of living which provide the markets for their goods and services.

Many of us are convinced the Landrum-Griffin bill is an administrative monstrosity, unenforceable, confusing, and

inconsistent with the great body of labor law. There is grave question that it would result in the ending of abuses the people of this country seek, even if its wording would appear to accomplish this.

The Landrum-Griffin bill was not presented in committee. It was not submitted for study nor forged in the crucible of debate. It had no opportunity to be cleaned up and made workable by legal minds. It was sprung on this House without an unbiased or disinterested report. It was the unrevealed hole card of one interest group. It is my sincere conviction that its excesses would hinder rather than assist true labor reform.

Had I the opportunity, I would vote for a true labor reform bill—one, incidentally, not backed by either labor or management, but which I believe would serve the best interests of all the people of this country. I will still vote for such a bill when I have the chance.

The Landrum-Griffin bill will now go to conference along with the bill passed by the other House. I can only express my deep and sincere hope that reasonable minds and responsible attitudes will prevail and that out of conference there may emerge a sound, workable, fair bill which will bring real reform in the labor-management field and which will win the overwhelming support of this House and the people of the country and will not destroy the ability of labor to achieve its legitimate objectives. Such a bill would reflect highest credit upon the Congress and would win the commendation of the people of this country for a job well done.

The Labor Bill

SPEECH

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. STRATTON. Mr. Chairman, throughout the House deliberation on labor reform legislation, I have consistently supported the bill reported out by the House committee, and I have consistently voted against all efforts to amend that bill by replacing it either with the Shelley substitute, supported by AFL-CIO leaders, or with the Landrum-Griffin bill supported by President Eisenhower. I did this because I believed and still believe that the committee bill represented a fair and reasonable middle-of-the-road approach to the labor-management reform problem. It was a bill which, in the words of Speaker RAYBURN

would "reform without punishing" and "cure without crushing." It was a bill which Mr. Robert Kennedy, Counsel of the Senate committee investigating labor racketeering, declared would "carry out all of the recommendations of the McClelland committee," and would set the Hoffas out of the labor movement. I opposed all efforts to amend this bill because I was fearful, and still am fearful, that any drastic changes from the committee bill might lead to a stalemate in the conference between the House and Senate that would result in no labor legislation being adopted at all, which I would regard as a great tragedy.

In spite of these considerations, the House yesterday voted to substitute the Landrum-Griffin bill for the committee bill. In today's final voting, therefore, I am voting against the motion to recommit and in favor of final passage of the bill.

My votes today, however, are being cast with the express understanding that my vote does not constitute approval of many of the provisions of the House bill, but that I believe it is imperative in the interests of getting effective labor control legislation that a labor reform bill be sent to conference between the House and Senate. I am hopeful that as a result of this conference a fairer bill can be worked out which will root out the Hoffas and the racketeers in the labor movement without penalizing legitimate union organizations. I also voted to send the bill to conference with the understanding that I will definitely reserve my final vote until I have a chance to see whether the conference committee agrees to a better and fairer bill, more nearly in line with either the bill which was reported out by the House committee or the Kennedy bill which passed the Senate earlier this year.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. THOMPSON of Texas. Mr. Speaker, in accordance with the request of a group of prominent constituents of mine, I insert in the RECORD a telegram which I received from them this morning:

FAIRPORT, TEX., August 13, 1959.

The undersigned, after studying the various labor bills now pending before Congress, feel that the most effective and most needed labor legislation protecting the rights of management, labor, and the country as a whole is contained in H.R. 8400 called the Landrum-Griffin bill. We urge your wholehearted support and vote for this measure in a form which will not substantially change the tenor and meaning of the bill as it is now written on the following points:

1. Gives jurisdiction in labor relations cases now existing in the "no man's land."
2. Closes major secondary boycott loopholes,

3. Clamps down on picketing for union recognition,

4. Bar denial of a union member's rights by a labor boss.

We further request that this message be read by you into the CONGRESSIONAL RECORD.

John W. Hazard, W. C. McLendon,

O. L. Bass, Sr., L. C. Morrison,

T. W. Davis, J. G. Dickson, D. V.

Collins, T. C. Selman, Francis

Swann, Ralph David, W. V. Curry,

Horace L. Owings, D. C. Donald-

son, Mrs. Mark Powell, J. E. Dingle,

W. T. Galloway, Vernon Richards,

Mark Powell.

Garrison Diversion: A Matter of Justice

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. SHORT. Mr. Speaker, this afternoon the House will act on the conference report on H.R. 7509, the public works appropriation bill for 1960. In that bill is contained an appropriation of \$425,000 for investigations and planning for the Garrison Diversion project in North Dakota. This figure is \$125,000 less than the amount asked by the President and voted by the Senate for this project. On this subject, I include a copy of a resolution I received this morning from the North Dakota American Legion. The resolution relates to the justice of our request and provides an excellent summary of the various factors involved:

RESOLUTION 9 PASSED AT 41ST ANNUAL CONVENTION, THE AMERICAN LEGION, DEPARTMENT OF NORTH DAKOTA, BISMARCK, N. DAK., JUNE 22-23, 1959

Whereas the original program for the development of the water and land resources of the Missouri River Basin, as set forth in the Flood Control Act of 1944 and related documents, authorized diversion of water from the Missouri River for irrigation and other beneficial uses in North Dakota; and

Whereas those portions of the basin program which will serve such beneficial uses as flood control, production of hydroelectric power and navigation, among others, which are of value mainly to other downriver States of the basin, and now well along the road to completion; and

Whereas successive studies have incontrovertibly proved that the Missouri River carries adequate water to serve all purposes set forth in the Flood Control Act of 1944, including irrigation, so that no part of the basin and no part of its economy need fear that fulfillment of the total plan, including irrigation, will deprive it of an adequate and fair share of the river's flow; and

Whereas North Dakota has sacrificed some 450,000 acres of land for Oahe and Garrison Dam Reservoirs, and was given to understand that the irrigation portion of the project in North Dakota would be compensation for this sacrifice; and

Whereas already the development of the Garrison diversion portion of the basin project has been delayed several years beyond the originally contemplated starting date; and

Whereas economical and orderly development demands that there be no more delay and that a start of construction on Garri-

son diversion be launched at the earliest possible date, certainly no later than fiscal year 1963, in keeping with the original program as set forth in the aforesaid Flood Control Act of 1944, and in keeping with the understood bargain with the State of North Dakota and its people: Now, therefore, be it

Resolved, That the Department of North Dakota of the American Legion hereby urges that the Congress of the United States take such action as is necessary to speed investigations preliminary to actual construction and also as is necessary to actually begin construction no later than fiscal year 1963; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the chairman of the Senate and House Appropriations Committees of the U.S. Congress, to members of the North Dakota congressional delegation, to the secretary of the North Dakota Water Conservation Commission, to Gov. John E. Davis, of North Dakota, to the Secretary of the Interior, and to the national legislative chairman of the American Legion, and to such other parties as may be deemed advisable.

New York 156th Guardsmen Receive Eisenhower Trophy

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. WHARTON. Mr. Speaker, presentation ceremonies of the Eisenhower Trophy for calendar year 1958 were held on August 5 at Camp Drum, N.Y., to Headquarters and Headquarters Battery, First Howitzer Battalion, 156th Artillery. The cup was accepted for the battalion by Capt. Edward J. Schrowang, commanding officer of Headquarters Battery, and Lt. Col. Frank W. Harkin, the battalion commander.

The Eisenhower Trophy is awarded annually to the outstanding company-size unit of the New York Army National Guard. The trophy is awarded on the basis of strength, attendance at armory drills and field training, performance of armory drill training and annual field training, and proficiency with individual weapons. In winning this trophy, the 156th unit was adjudged the best among 254 company-size units in the New York Army National Guard. The members of the 156th unit are residents of Ulster and Dutchess Counties in my congressional district and I am justifiably proud of their outstanding performance.

I am happy to congratulate Lieutenant Colonel Harkin, the battalion commander, and the individual members of this unit for their superior accomplishment in winning this coveted award.

In commenting further upon the history of the 156th, the Poughkeepsie New Yorker relates:

TOPS AGAIN

"Without stinting praise for the battery commanders, or for Lt. Col. Frank W. Harkin, battalion commander, or the other imaginative and effective commissioned and non-commissioned officers of the battalion, much credit must go to the individual artillery-

men—and the esprit de corps which inspires them.

The 156th Field Artillery has a long and distinguished history—dating back to 1653 and including service in every major war.

"The neatness and bearing of the average guardsman, even when he's in green fatigue uniform, is an outward sign that he's proud to wear the red, white, and blue regimental crest of the 156th.

"In an age when young men are often loosely lumped with beatniks and juvenile delinquents, it's heartening to see that the citizen-soldiers of the 156th are worthy counterparts of the minutemen who left plow and shop to fight and die on the green at Lexington, or at Bunker Hill, where a parent unit of the 156th saw action.

Veterans With Less Than 90 Days' Service

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Robert J. Boyd, of Staten Island, N.Y., in which he expresses some interesting views and comments upon the subject of those who served in the Armed Forces of this country for less than 90 days:

STATEN ISLAND, N.Y., August 2, 1959.

Hon. DANIEL J. FLOOD,
Representative, State of Pennsylvania,
Washington, D.C.

DEAR SIR: I have received a copy of your remarks in Congress in regards to a letter written by one George Dreisbach in reference to veterans with less than 90 days' service during a period of hostilities. I, being the son of one such veteran, now deceased, but whose widow is striving to get along on what little social security she has obtained through working after the passing of said veteran, wish to thank you for bringing it to the attention of Congress. This group of under 90 days veterans indeed is in need of a spokesman as whenever my mother has made any move to receive the benefits given to other veterans' widows she has been turned down for the following reasons: Veterans death was not due to service, veteran had under 90 days' service or was not discharged for service-connected disability.

Just as a matter of information I would like to state my late father's record so you can judge for yourself as to the justice of the 90 days' stipulation in the case of Spanish American War Veterans wherein the war didn't even last the 90 days required:

1. Enlisted, 1st Battalion, Naval Force of Pennsylvania (Reserve), February 15, 1898. Honorably discharged to U.S. Navy, June 16, 1898. Total, 160 days.

2. Enlisted, U.S. Navy, Philadelphia, Pa. Served U.S.S. *St. Louis*, U.S.S. *Richmond*, and U.S.S. *Arctic*, June 17, 1898. Honorably discharged, U.S. Navy, League Island, Pa., August 24, 1898. Total, 68 days.

3. Enlisted, New York Naval Militia (Reserve), August 21, 1902. Placed on retired list as Lieutenant commander, February 28, 1934. Total, 31½ years.

The above veteran because of the short duration of the war with Spain still only served 68 days active duty. I have heard that Congress at one time in case of this kind that the time served was reduced to 70 days,

but cannot obtain any official statement on this. Even 70 days still would leave 2 days short, but I think the Reserve cruises should be taken into consideration as they are done in present Reserve programs.

Sincerely, I hope your time in office will be a long and rewarding one and that you will be ever mindful of the minority regardless of their need. Thanking you for your attention and whatever help you can obtain for this forgotten group.

ROBERT J. BOYD.

A High-School Girl's Views on True Security

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. CEDERBERG. Mr. Speaker, I am proud to present today the prize-winning composition of a young lady from my district—Miss Gloria Sickal, a student of the Clare, Mich., high school, in the 10th District which I represent.

Miss Sickal's work took top honors in the State of Michigan in a nationwide contest entitled "My True Security," sponsored by the U.S. Junior Chamber of Commerce and one of the large life insurance companies. In recognition of her achievement, Miss Sickal was brought to Washington recently to participate in the national awards banquet.

She very appropriately points out that "only when we know the truth and are free from fear can we find within ourselves true God-given security and freedom."

I am pleased to present for the RECORD the composition which was selected as the best submitted from the State of Michigan:

THEREIN LIETH SECURITY

Throughout our busy world we see people searching for security. To some security is stocks and bonds or a large bank account; to others, property, a job, or a college education. Some put a premium on social standing, fame, or fortune, while others worship family customs and traditions. Yet all of these things, in spite of their individual importance, when acquired, still leave us scurrying about searching once more for security. This makes us wonder just what is security.

Security does not come with the acquisition of material things, but security comes from within. It is not something we can buy and pay for, but rather an intangible quality of confident assurance. Security is a sense of being needed and of needing others; a feeling that every day we live has an ultimate purpose. Security cannot be found by following the crowd to be accepted, but must be found within ourselves. There is in each one of us an inborn desire to be loved and cared for, but there must also be a desire to love and care for others.

The story is told of an unattractive little 8-year-old girl in a Pennsylvania orphanage whose annoying mannerisms caused her to be shunned by all the other children. Even the teachers disliked her and wished that she might be transferred elsewhere. In fact, they were seeking diligently for a legitimate excuse to be rid of her. One afternoon it

appeared that their opportunity had arrived. This girl's roommate reported that a clandestine correspondence was apparently being conducted with someone outside the grounds. "Just a little while ago she took a note out and hid it in a tree," was the report. With some satisfaction, the head of the orphanage and her assistant commanded, "Take us to that tree. Show us where she left the note." Surely enough, there was the note in one of the branches. Opening it quickly, the women were somewhat embarrassed to read, "To whoever find this: I love you."

A little girl, hungry for love, hungry for security, was only seeking out someone who might be equally lonely. In this way the little girl had actually found security in the hope that someone was receiving her love. What are we giving to others, not only to our families and close acquaintances, but also to our country? Are we this eager to give of ourselves for our country, or are we taking our freedoms for granted? We must remember that "we have no rights without responsibilities."

Some governments of the world today subordinate the individual and emphasize the state. But in America the state is individuals, and without them there would be no country, no government, no democracy. In America there is no set pattern and mold into which each must fit, but we have freedom to choose. Let us not distort this freedom to the point that we choose nothing; nor let us assume that the right to choose guarantees the right choices. The right choices come only from clean hands and a pure heart and a continual searching desire for the truth. In the Bible we find these guiding words: "Ye shall know the truth, and the truth shall make you free," and again, "Perfect love casteth out fear." Only when we know the truth and are free from fear can we find within ourselves true God-given security and freedom.

The Labor Bill

SPEECH
OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. KING of Utah. Mr. Chairman, the House of Representatives has spoken its will on the matter of labor reform. I am one who supported the committee bill. Nevertheless, my strong desire to see that good labor legislation be enacted, overrides all other considerations at this time. The real tragedy would be for this session of Congress to adjourn without any labor legislation on the books at all.

There has been some fear that the conference committee might not be able to reconcile its differences, because of some of the extreme provisions of the Landrum-Griffin bill. At this time, I urge the conference committee, whose membership has now been announced, to

do all in its power to carry out the mandate of the American people, in producing a satisfactory labor bill. I call upon the Honorable JOHN F. KENNEDY of the other body to use his great influence to see that there be no stalemate, as has been feared. A stalemate would be a disservice to the Nation.

I realize that there are some serious problems to be ironed out. There are differences to be reconciled, and inequities to be removed. Nevertheless, if all participants in the conference committee approach their task with the firm resolution to come up with a labor bill, I know that they will succeed, and that they will not allow the intense partisanship which has manifested itself up to now, to destroy the results of the great effort which has gone into this bill. I express the hope that the Nation will give this bill a fair chance to succeed, to the end that this might mark the prelude to a new era of improved labor-management relations.

In Person

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. PUCINSKI. Mr. Speaker, I should like to call attention of my colleagues to a penetrating editorial which appeared on August 14 in the Chicago Daily Tribune. This editorial is one of the most sensible appraisals that I have seen regarding the pending visit of Premier Nikita Khrushchev to this country. I hope that the delegates to the United Nations, particularly our own American delegation, will seriously consider the suggestions made in this editorial and effectively carry them out.

The editorial follows:

IN PERSON

Premier Nikita Khrushchev of the Soviet Union will improve his visit to the United States by speaking before the United Nations General Assembly in New York. He has graciously accepted the invitation of the headquarters Secretariat and is expected to make his appearance September 21 or 22, 6 or 7 days after he arrives here and after the Assembly convenes.

For those who have come in late, it may be mentioned that U.N. exists to maintain peace on earth and good will toward men. It may seem anomalous that Mr. Khrushchev should be the guest of an organization which entertains these goals, but in the current age of wonderful nonsense (as Westbrook Pegler dubbed a preceding era) such things are as normal as everyday doings in the monkey house.

Indeed, Khrushchev's date with U.N. may provide that organization with an unwanted opportunity to do something relevant. After 2 or 3 days devoted to organization matters, each of the 81 member nations gets an opportunity to sound off, and a number of them will have had an opportunity to be heard before the Communist boss takes his turn at bat.

The leadoff oration is customarily delivered by the spokesman for Brazil, and the

United States is also heard on the first day. Either a Brazilian friend or the American speaker might rehearse the stated purposes of U.N. Among these are to save the world from the scourge of war, to reaffirm faith in fundamental human rights and the rights of nations large and small, and to promote respect for the obligations arising from treaties and other sources of international law.

Having laid this groundwork, a catechism should be prepared for submission to Khrushchev with the object of ascertaining how and in what manner his activities and the activities of the Soviet Union and international communism are contributing to any of them.

The question, referring to articles 33, 34, and 39 of the U.N. Charter, might seek to disclose whether a wide variety of Khrushchev's threats and demands may not, in fact, have endangered the maintenance of international peace and security, given rise to disputes, or led to international friction.

Specifically, there is the Khrushchev demand that the status of West Berlin be altered, that it be stripped of the protection of Western military forces, and that it then be left like a plum to be plucked by Russia's East German Communist satellite. Not only have these demands provoked international friction and given rise to a threat of peace, but they represent a unilateral Soviet repudiation of international undertakings carrying the force of a treaty, this being in violation of the U.N. Charter.

Some of Khrushchev's other statements should also be examined to determine whether they contribute to peaceful prospects or whether they threaten the maintenance of peace. Such remarks, for example, as these:

"We shall bury you."

"Your grandchildren will live under socialism."

Khrushchev has also talked very expansively about Soviet rocket power. He has dropped the hint that whereas the United States could loft an earth satellite the size of an orange, Russia could launch one weighing tons. He has at various times informed the Turks, the British, and the Germans that he could wipe them out as he chose.

Here is an opportunity for U.N. at last to get down to business, and seriously seek to discover whether Khrushchev and what he represents have any interest in peace or ever intend to make any contribution to it. But if U.N. merely allows the Soviet boss to appear in the masquerade of a peace lover preaching the customary line of coexistence, it will have signed its own admission of what almost everyone ought to know—that it is devoid of meaning, a mere collection of hollow men without even sawdust stuffing.

Rank-and-File Petition in Support of Landrum-Griffin Bill

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. NELSEN. Mr. Speaker, under leave to extend my remarks in the Record, I include a petition which arrived this morning signed by 25 rank-and-file members of Office Workers Local No. 12, at the Twin Cities Arsenal in Minneapolis, Minn., urging passage of the Landrum-Griffin bill. Without the letters of encouragement that have come

to all of us from members of organized labor, the Landrum-Griffin bill might never have passed this House, and I call attention to the following petition as an illustration of the sound and fair attitude toward labor reform which has been taken by so many card-carrying union members. We can be justly proud of the rank-and-file union members in our society today.

The petition follows:

MINNEAPOLIS, MINN., August 12, 1959.

HON. ANCHER NELSEN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN NELSEN: Your support in the enactment and passage of the proposed Landrum-Griffin labor bill presently pending in Congress is urgently requested herewith.

It is our opinion that President Eisenhower outlined the labor union situation thoroughly in his recent broadcast and we agree that certain union officials, although in the minority, constitute a threat to the liberty and security of the American way of life, and must be regulated.

We vehemently protest the misuse of union funds for political purposes as well as the failure of most unions to publish their financial status.

We further protest and deplore the propaganda of union official lobbyists that the Shelley bill, H.R. 8490, has the support of all union members of these United States. It does not. This bill is sponsored by and will further support the union official hierarchy and is solely beneficial to their minority interests and we urge your vigorous dissent when this measure is brought up in Congress for consideration.

We, the undersigned, members of OLEU No. 12, local office workers, A.F. of L., and TCA employees, therefore, respectfully request your immediate action in this matter of curbing the excesses of high labor union officials and respectfully demand that you use the full authority of your office to pass adequate legislation to remedy this critical situation prior to the adjournment of this Congress.

We are watching your interest in this matter and await your action and reply.

Harold O. Holmberg, steward and board member at large; R. S. Freeman, J. N. Freeburg, Marion L. Strommen, Sylvia Zajac, Marjorie Luethi, J. A. Grady, Catherine C. Drake, T. A. Johnson, Mabel E. Erickson, Helen Vickmark, G. N. Wieland, Lorraine E. Sterans, A. M. Towle, Thelma B. Woodward, Alice Kelsen, John M. Gully, G. H. Neddersen, Adeline Heywood, June Peters, Caroline Hedeon, Dagmar Dingley, Ella Niemeyer, Helena Kennedy, Hazel Braun.

The Labor Bill

SPEECH
OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes.

Mr. SCHWENGEL. Mr. Chairman, recently a friend of mine who is an admirer of the late Senator Taft told me that he believed that Senator Taft would have opposed certain sections of the Landrum-Griffin bill. After an extended visit on this matter I asked him to put this in writing so that I could put his thoughts in the RECORD. The statement follows:

Mr. Chairman, it is indeed a sad day in the history of Republican statesmanship when we can witness a Republican administration using abuse as an excuse for placing new and totally unwarranted restrictions on peaceful and lawful union activities in aid of labor disputes. This type of punitive action, contained in section 705 of the Griffin-Landrum substitute, is far removed from the distinguished statesmanship of that noble leader of republicanism, the late Senator Robert A. Taft. As we all know, Mr. Chairman, Senator Taft was the father of the very provisions on boycotts and picketing which the Griffin-Landrum substitute would so drastically and severely amend today.

Ten years ago, in 1949, after 2 years of study on the effects of the Taft-Hartley Act, Senator Taft had this to say when he presented a host of amendments to the act which actually passed the other body that year. He stated as follows, and I quote:

"We have always contemplated amendments to the act. We had set up a special joint committee to deal on their merits with criticisms of the act. We analyzed the criticisms of the act and I think we were the only Senators who ever undertook to deal with these criticisms in detail and on their merits. We attempted by amendments to meet every legitimate criticism."

"In general we went back to the bill as passed by Senate (in 1947) as distinguished from the bill finally agreed to in conference and we eliminated a number of the provisions agreed to in conference. . . . We retain in our substitute the essential principles of the Taft-Hartley Act, which we feel necessary in order to maintain equality in labor management relations."

In other words, instead of making the law more harsh and more disruptive of trade union activities, Senator Taft, with that tremendous objectivity of his, recognized the faults and weaknesses of his first attempts at lawmaking in the labor relations field. He was willing to admit his mistakes and try again to provide a more balanced, a more just and fair piece of legislation.

At that time Senator Taft offered amendments covering some 26 separate subjects. Chief among these subjects were new protections for peaceful picketing and new protections for union activities which were unfairly restricted by the secondary boycott provisions of the Taft-Hartley Act.

When it came to picketing Senator Taft was quick to protest the right of all peaceful picketing. His only object was to prevent mass picketing and violence on the picket line and other forms of real coercion. Senator Taft made this abundantly clear in floor debate. Among many other things, he stated, when the antipicketing provisions of the Taft Act were being considered on the Senate floor:

It will not be directed against the use of propaganda or the use of persuasion or against the use of any of the other peaceful methods of organizing employees.

And again he stated on this same subject:

It would not prevent anyone conducting peaceful picketing or employing persuasion. All it would do would be to outlaw such restraint and coercion as would prevent people from going to work.

And in 1949, Senator Taft recognized that the word "restraint" might be too broad. Accordingly one of his most important amendments was to eliminate this word "restrain" from the antipicketing provisions of section 8(b)(1)(A) of the act.

Now comes the Griffin-Landrum substitute and what does it do? Under section 705 it would eliminate all peaceful picketing and all peaceful persuasion and all propaganda or informational picketing unless a substantial number of employees, have been already organized—that is, enough to petition for an NLRB election and then only if, afterwards an election is petitioned for and won by the union. Otherwise all picketing at all other times is prohibited.

To make the Griffin-Landrum proposal more punishing, the General Counsel of the National Labor Relations Board must go at once to court to get an injunction against any peaceful but unlawful picketing.

In other words, here we are heading in exactly the opposite direction from the labor relations statesmanship of Senator Taft.

Then let us look at the subject of secondary boycotts. Senator Taft said again and again he was only seeking to ban the true secondary boycott that harms truly neutral employers with whom there is no labor dispute whatever. In 1949 he repeated this position. And he even offered an amendment to eliminate any restrictions on boycotting the substitute manufacturer of struck goods farmed out during a strike. But most important of all, he recognized the rank injustice of the mandatory court injunction against all secondary boycotts in every case, even before the National Labor Relations Board has determined whether the boycott provisions have been violated. He asked for and persuaded the Senate to repeal this mandatory injunction provision.

Then later when amendments to the Taft Act were being discussed in 1953, shortly before his death, he favored exempting all job site construction activities from the secondary boycott provisions of the Taft Act because these were not secondary boycotts in the true sense.

But the Griffin-Landrum bill, far from following this objective leader of our party, contains amendments to the boycott provisions which go in exactly the opposite direction from Senator Taft. In the name of correcting corruption these new provisions would reach out in every direction even to the picket line at the lawful strike scene to make sure that every outsider will go through this picket line and to outlaw it whenever it may persuade any outsider to respect the strike.

Mr. Chairman, this is indeed the opposite of correcting labor corruption. This is the opposite of statesmanship. This is the use of law to protect special interest and to repress lawful trade union

interests. For this reason I cannot in good conscience follow my leadership. I cannot support and I must oppose the Griffin-Landrum substitute.

Keenotes

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 11, 1959

Mrs. KEE. Mr. Speaker, I ask unanimous consent to extend my remarks in the Appendix of the Record and include a copy of my newsletter released today:

KEENOTES BY REPRESENTATIVE ELIZABETH KEE

The present session of Congress is rapidly drawing to a close. The goal for adjournment fixed by the leadership is September 5, but it is likely that we will have to remain here until the middle of September to dispose of a large list of remaining bills.

One thing which is aiding the push for adjournment is the forthcoming visit of Premier Khrushchev, of Russia. If Congress is in session when he arrives, it will be difficult not to invite him to address a joint session. Yet many Members feel that an appearance before Congress might be a big mistake and, therefore, they hope we can adjourn before he arrives.

This has been a busy session and Congress has acted on many important issues, some of them highly controversial. But I am afraid that we will leave Washington without acting on several bills which should have immediate attention.

Legislation to aid distressed areas has passed the Senate but is languishing before the House Rules Committee. If the bill ever comes to the floor, I am confident it will be passed. But the present outlook is not too favorable. Failure to pass the bill will mean that we will have to delay another year a cooperative program to rehabilitate areas with persistent and heavy unemployment.

Congress must not adjourn without passing legislation to continue the interstate highway building program. At present, there is much disagreement on proposals for raising new money to finance the program this year but I am sure that with the roadbuilding programs of all the States adversely affected, some satisfactory solution will be reached.

Also, it is imperative that Congress pass new housing legislation. In a surprise move the Senate this week decided to try to override the President's veto of a bill passed earlier this year. The move failed, as everyone expected it would. Now the question is whether Congress and the President can agree on a housing bill in the short time remaining in this session.

Congress also has a duty to do something this session about the farm problem. It is obvious at this point that a general farm bill which would make a start on reducing the tremendous surpluses now on hand will not be passed. I regret to see Congress evade this serious issue. It is costing more than \$1 million a day just to store commodities now on hand and big crops this year will add quite a bit to this cost.

At least Congress should pass legislation to strengthen the research program of the Department of Agriculture so that new uses can be found for our farm commodities. I am firmly convinced that this is the only long-range answer to the farm problem. I am sure our scientists can develop new in-

dustrial uses that will require large amounts of wheat, corn, cotton, and other commodities. I have a bill now pending which would provide a good start toward this goal. There is still time to act if Congress will face up to this difficult task.

Although time may be running out, there are many important legislative matters yet to be disposed of. This means that the remaining days will be extremely busy ones for Members of Congress.

Hazleton, Pa., Newspapers Awarded National Citation

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following news story from the Hazleton Plain Speaker of Wednesday, August 12, 1959, which reports that the Hazleton newspapers—the Plain Speaker and the Standard-Sentinel—have been awarded a national citation from the Associated Press Managing Editors Association for "outstanding news and photo coverage in 1959" for their performances following the tragic fire at the Hotel Gary in Hazleton in early March of this year. I extend my congratulations to the staffs of both newspapers for this award.

The above-mentioned article follows:

ASSOCIATED PRESS NATIONAL CITATION AWARDED HAZLETON NEWSPAPERS FOR COVERAGE OF HOTEL GARY FIRE—CITATION ONE OF FIVE PRESENTED TO PENNSYLVANIA NEWSPAPERS IN AP SALUTE

The Plain Speaker-Standard Sentinel, hours ahead of competition in keeping Associated Press newspapers throughout the world abreast of developments in the Hotel Gary fire March 5, have been awarded a national citation from the AP Managing Editors Association for outstanding news and photo coverage in 1959, it was announced today.

The citation, presented at the APME convention at Seattle, Wash., is one of five presented to Pennsylvania newspapers.

The award to Hazleton's two daily newspapers is in recognition of a news beat scored by the staffs of both morning and evening papers as they covered the fire which claimed seven lives.

SPECIAL STANDARD EDITION

The morning Standard-Sentinel, summoning all off-duty reporters and photographers, hit the streets with a special edition shortly after the fire began raging in the downtown hotel.

Plain Speaker editors and newsmen were roused from bed to assist in coverage of the tragedy which brought inquiries to the local newsroom from all parts of the United States and Canada.

Before dawn, graphic photographs taken by Standard-Sentinel photographers were transmitted to AP member newspapers over the Plain Speaker-Standard Sentinel wirephoto transmitter, and eyewitness accounts were telephoned to metropolitan newspapers throughout the country. A dramatic Standard-Sentinel photo of a woman leaping from a burning ledge received worldwide play.

The fast, complete photo-news coverage continued through the day as local staffers

donned raincoats and boots and accompanied firemen through the gutted hotel.

Plain Speaker-Standard Sentinel reporters maintained a constant vigil at the city's two hospitals, getting firsthand reports on the tragedy from survivors.

PROVIDED FOLLOWUP

Full coverage didn't end the day of the fire. Followup stories were continued for weeks as Plain Speaker-Standard Sentinel reporters queried State and local sources for stories pertinent to the tragedy.

The national AP wirephoto network continued carrying pictures taken by Plain Speaker-Standard Sentinel photographers, including one combination that showed a Plain Speaker staffer taking a picture of the gutted hotel from the scoop of a shovel high above the street.

The citation presented to the local newspaper reads:

"The Associated Press Managing Editors Association awards this citation for outstanding participation in the Associated Press news and newsphoto reports to the Hazleton Plain Speaker and Standard-Sentinel for extraordinary, fast and complete news and picture coverage of the fire which destroyed the Gary Hotel in downtown Hazleton on March 5, with a loss of seven lives. The staffs of the Standard-Sentinel and the Plain Speaker provided news and pictures running hours ahead of any competition. Wirephotos were sent direct from the Hazleton transmitter."

The citation is signed by Michael J. Ogden, of the Providence Journal-Bulletin who is APME president, and John D. Paulson, chairman of the citations committee of the APME who is affiliated with the Fargo Forum.

Accompanying the citation was a letter from Alan J. Gould, executive editor of the AP in New York City, to Copublisher Frank Walser, in which Gould added his personal commendation to the AP award.

"Membership cooperation such as yours contributes to a superior service by the Associated Press, AP staffers everywhere salute you and your staff," Gould wrote.

The four other Pennsylvania newspapers which received similar citations: Philadelphia Evening Bulletin, Pottsville Republican, Scranton Times and the Allentown Sunday Call-Chronicle.

The Exile of Industries

EXTENSION OF REMARKS

OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. KNOX. Mr. Speaker, the United States, foremost trading nation in the world, finds itself today in the unfortunate, and certainly unusual, position of a debtor in international accounts. Our exports in 1959 are not expected to exceed \$16 billion, while imports may reach \$15 billion, an all-time record high. Meanwhile, Government aid programs and investment of U.S. private capital abroad have run up a hefty deficit in our international balance of payments.

Our Nation's gold holdings reflect our current disadvantage in world commerce. Our gold reserves, backbone of the American monetary system, which in turn supports currencies in many parts of the world, have slipped below \$20 billion for the first time in 20 years. So far

in 1959 the United States has lost more than \$950 million in gold, and when this is added to the nearly \$2.3 billion lost in 1958, it represents the greatest exodus of gold that any country has ever experienced in a comparable period.

Many Americans are expressing alarm at this state of affairs. Many of my colleagues have urged a prompt reappraisal of our Nation's problems and responsibilities in international commerce. A large number of American industries, including some of our largest industries, have warned that due to a combination of factors, notably inflation, our own low tariffs and new trade obstacles abroad, their ability to compete effectively in world markets is deteriorating.

The press, too, has turned increasing attention to this problem. One of the leading business columnists, E. F. Tompkins, of the New York Journal-American, well known for his perceptive analysis of the American business scene over a period of many years, recently examined the serious nature of what he calls "the migration of industries." I commend Mr. Tompkins' article to the attention of my colleagues:

[From the New York Journal-American, Aug. 11, 1959]

BAD ECONOMIES: THE EXILE OF INDUSTRIES
(By E. F. Tompkins)

A new interstate problem is arising—the migration of industries.

Of course, every State wants new industries, for new industry pays large taxes and provides stable employment. But should one State raid another State?

On one side, industries operating in one State are given inducements to locate in some other State. In this respect, Tennessee has a special advantage. As headquarters of the TVA, a subsidized Federal project, Tennessee offers as bait low-cost hydroelectric power which other States cannot supply. By advertising its unshared asset, Tennessee has captured some migrant plants, drawing protests from West Virginia and elsewhere.

On the other side, some States pursue policies that drive industry away. Ruthless taxation is such a policy, exemplified by New York, both city and State, labor government—government subservient to labor bossism—is another; as an instance, Michigan will do.

Not yet widely recognized is the further fact that an expatriation of industry, and hence of employment, is becoming a serious national problem.

There is a growing tendency for American industries to establish branch factories abroad so as to take advantage of foreign low wages. Their purpose is to retain or acquire foreign business by making American-type goods which can compete in world markets.

The joker is that the same goods may be sold in the American market at lower prices than the same kind of goods manufactured here. Thus the establishment of American branches in foreign countries amounts to an exportation of both American capital and American employment.

Two factors lie behind the exportation of industry.

One factor obviously is the high American wage level, which sustains our standards of living. These standards are desirable in our domestic life. Nonetheless, American prices based upon American wages are noncompetitive in the world market, and are becoming so in the home market—due to the second factor.

The second factor is the progressive demotion of our protective tariffs under the free-trade program instituted by the New Deal in 1934.

Our industrial system, our wage scales, and our standards of living grew up under protective—but not prohibitive—tariffs during a period of 146 years. Since 1934, through reciprocal trade agreements—which have been hardly reciprocal at all—the tariff system has been virtually wrecked; and the process continues.

Today we have, for almost the first time, an unfavorable mercantile balance—imports exceeding exports, and a loss of gold. We also have groups of industries demanding redress, including such vital industries as textiles, steel, electrical goods, and base metals.

For both local and national reasons, it appears that industry and labor, as well as Federal and State government, had better get together on the problems of migrant industry.

Impact of Import Competition on the Nation's Economy

**EXTENSION OF REMARKS
OF**

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the magazine Mill and Factory has conducted a survey among nearly 150 American industrial companies, large and small, to determine the impact of import competition on the Nation's economy.

Results of the survey come as a distinct setback to those who share the notion that unlimited foreign commerce advances our economic well-being.

For example, three quarters of the companies polled expect to lose greater share of the domestic market to foreign products, and nearly two-thirds of these companies anticipate rising unemployment as a direct consequence of this market invasion.

Nearly a third of the respondents said they purchase foreign-made goods and materials for their own use. When asked why, only 15 percent said such products and materials were not available at home; but almost two-thirds noted that foreign prices are lower.

The survey asked if present U.S. tariff laws should be modified. Nearly 75 percent of the companies said tariffs should be increased; another 35 percent said our tariff schedule should be extended to cover more products. A scant 12 percent thought tariffs should be reduced, and 7 percent indicated tariffs should be eliminated completely.

The survey sought to pin down the current major trends in foreign competition. In this connection, 72 percent of the respondents said import competition is increasing. More significant, over half of the companies expressed belief that expanded import competition will lead to the total destruction of certain vulnerable U.S. industries.

The magazine also presented a report by its Washington editor, Mr. A. N.

Weckler, who toured Western Europe's industrial centers. I believe my colleagues would be interested in highlights of Mr. Weckler's dispatch, as follows:

Goaded by the industrial progress in West Germany and Great Britain, where wages and prices have been held in check, the other countries of Western Europe are aiming at similar goals.

West German wage levels show little change over the last 18 months. The average gross hourly earnings are a shade higher, but manufacturers report that these increases were more than offset by increases in productivity.

Price levels in Germany have remained practically unchanged since the fourth quarter of 1958. The unwavering line in prices holds true for basic materials, capital equipment, construction, and consumer goods.

Italian industrial leaders report that wage levels in their country are likely to go up further this year. But here as in Germany and Britain, they anticipate productivity improvement. Prices in Italy have remained steady, and this picture is not expected to change.

European manufacturers view the years ahead as highly competitive, with their industry competing not only with the output of other European nations, but with the United States to an increasing degree. Now, there is a seller's market in much of Europe, especially in consumer goods. A middle class is developing and this creates a large demand for housing, autos, and durables of all kinds.

Common market in Europe, with Germany, France, Italy, Belgium, Holland, and Luxembourg, gradually eliminating all tariffs will mean that the producers in each of these countries will have to be competitive in both wages and productivity.

U.S. producers will be at a sharp disadvantage in the European markets. The average hourly wage levels in the major industrial countries of Europe are between 20 and 25 percent of the rate for the same work in the United States. Fringe benefits in Europe are on about the same fractional order.

Our Progress in Puerto Rico

**EXTENSION OF REMARKS
OF**

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. HALPERN. Mr. Speaker, in the July issue of the AFL-CIO American Federationist, there appeared an article entitled "Our Progress in Puerto Rico," by Gov. Luis Muñoz-Marín. The article described the vast advances in the economical growth of the Commonwealth since 1940 and the correlative improvement in working conditions.

Puerto Rico has truly achieved an admirable rate of development. This has derived primarily from its own dynamic energies and the boundless determination of its people and their leaders. Puerto Ricans can justly be proud of their accomplishments.

It is with the intention of increasing understanding here on the mainland of the progress and spirit of our island Commonwealth, that I include the article by Governor Muñoz-Marín in the

Appendix so that it may be brought before this great forum of the American people through the RECORD of this Congress:

OUR PROGRESS IN PUERTO RICO

(By Luis Muñoz-Marín, Governor of Puerto Rico)

Just 3 years ago Puerto Rico celebrated a momentous occasion. For the first time in its history, industrial production surpassed agricultural production and we had arrived at a most important milestone on our long road to a better life for our people.

We have been passing other progress markers steadily in the past 3 years, and if the modest prosperity we are seeking is not exactly just around the corner, it is at least on the horizon. We hope and expect that by 1975 the standard of living will be as high in Puerto Rico as it was in the United States in 1950.

Puerto Rico today is vastly different from the Puerto Rico of 1940 because the people of Puerto Rico realized that they had to solve their own problems and because they had those qualities necessary to solve them.

To be able to appreciate the changes today, it is necessary to know something of conditions as recently as 1940. Puerto Rico was then a stricken land or, as a U.S. Senate commission concluded after a factfinding visit, "a hopeless case."

Beset with overpopulation, bereft of natural resources, besieged by hunger, illnesses of the body and a grave malady of the spirit, we seemed destined to a poverty-stricken existence derived out of one important crop—sugar. The cane season supplied 6 months of employment a year for the bulk of our workers but left them and their families idle and hungry the other 6 months. The annual per capita income was only \$121, among the lowest in the world.

In the next few years, using the one natural resource we had plenty of—the hope and resourcefulness of our people—we began to climb out of that mire of hopelessness and poverty. Operation Bootstrap was born, a product of the mating of imagination with will.

Bootstrap had, and still has, one basic doctrine. That is, to be nondiscriminatory, to be hospitable to all ideas and to have a heart. We are not capitalistic nor are we socialistic—we are merely realistic, willing to try anything so long as it does not compromise our freedom and dignity.

One of our most important decisions, arrived at through trial and error, was to use Government funds as a catalyst to stimulate private investment in Puerto Rico.

We built factories to prove that they could be run at a profit and then sold them to private enterprise. We erected plants and invited companies to lease, rent or buy them. We put up hotels and engaged private operators to run them.

And, finally, we developed a tax program which exempts qualifying companies from commonwealth taxes for a period of 10 years.

Incidentally, qualifying for our tax program is not an easy matter. We have set up stringent requirements, prime among them being that we shall never accept a "runaway" plant.

We grant no inducement to any firm that is to close a factory anywhere in the States in order to open it in Puerto Rico. We are not luring runaway capital. We only want, and need, our proportionate share—and it is relatively infinitesimal—of the new capital that is generated each year in the United States so that we can provide the jobs, the decently paid jobs, our people need.

We contribute appreciably for our size to the economy of the United States. Our purchases from the United States have increased over fourfold in the past 15 years. We are now buying more the \$600 million worth of U.S. goods every year.

Today we have 565 Operation Bootstrap

plants in operation. Our per capita income has risen to \$470, less than one-half that of Mississippi, the lowest of the States, but a great improvement nevertheless. Perhaps the greatest single proof of Puerto Rico's progress is that the average span of life has increased from 46 years in 1940 to 68 years today. We also have one of the highest literacy rates in the world.

Politically, Puerto Rico is a commonwealth, freely associated with the United States. This is a result of a compact between the people of Puerto Rico and the Congress of the United States approved in 1952.

Under this compact the people of Puerto Rico wrote their own constitution. It contains a bill of rights which not only incorporates the traditional American guarantees to the individual but also reflects recent advances with respect to social and economic matters, carefully adapted to the social and economic realities of Puerto Rico.

Prominent in our constitution are the rights of workers "to organize and to bargain collectively with their employers through representatives of their own free choosing" and "to strike, to picket, and to engage in other legal concerted activities."

The constitution of Puerto Rico also guarantees the right to choose one's occupation freely, to receive equal pay for equal work, to reasonable minimum wages, to protection against industrial risks to health and safety, and to an 8-hour workday with at least time and a half compensation for overtime.

Beyond these basic guarantees, we have developed a program of labor legislation that contributes more expansively to the climate of healthy labor union practices.

These constitutional provisions are supported by legislation on minimum wages, employment security, workmen's compensation with full coverage including agricultural workers, industrial safety, group insurance for small farmers and vocational rehabilitation of injured workers.

In January, after 2 years of collection to build the fund, we began our first unemployment insurance payments. We now also have a bureau of unemployment insurance for sugar workers, which provides compensation during the off-season.

Workers' education in Puerto Rico is provided freely through seminars and conferences organized by the department of labor and the Labor Relations Institute of the University of Puerto Rico. We teach the principles of democratic unionism, labor-management relations and every phase of labor legislation.

Our department of labor is giving full and honest accounting service and advice to any union that requests such service by a majority vote. Most of the unions affiliated with the AFL-CIO are requesting such services.

Our labor legislation, to a great extent, parallels our legislation granting 10-year tax exemption to new industries. To understand this parallel, it must be realized that the company with an operating loss is exempt from income taxes anyway. Therefore tax exemption does not mean anything if there are no profits. By the same token, our labor legislation will be meaningless if there are no jobs to protect, improve, and multiply.

With its right to strike fully protected, labor has the power to nullify the meaning of tax exemption for any employer. Similarly, with the freedom to cease operations and leave, management can drain good labor laws of all significance to the workers.

During our arduous struggle to lift our people out of poverty, both of these self-defeating extremes have, save for a few exceptions, been avoided.

We have continued to create jobs. Our economic development program has changed Puerto Rico from a one-crop economy to a predominantly industrial economy. Industrialization has brought 41,000 new jobs, and real wages in manufacturing rose by 57 percent between 1953 and 1958. About the same

number of jobs has been created indirectly through the operation of the economic development program.

Average hourly wages in Puerto Rico are not only higher than in other countries in Latin America and all of the Near and Far East, but they are also higher than in most of Europe. In the 30 months following January 1956, hourly earnings in manufacturing rose over 40 percent in Puerto Rico while in the United States they rose only 7 percent.

With these gratifying accomplishments under our belts, we realize that we have made a good beginning. But that is all we have made. There is yet very much to be done.

Many of our people still live in substandard housing. There is still much unemployment. We still have an average of 80,000 totally unemployed people—13 percent of our entire work force.

Despite our progress we have only started to make inroads against unemployment. In the transitional period industrialization makes better jobs, better income, and a better standard of living before it provides full employment.

By 1975 we expect there will be enough jobs and sufficient pay to keep our people at home. Until that time, as U.S. citizens and with traditional American get-up-and-go, some of them will continue to move to places that offer a better chance of making a living for their families.

Some of them, I am afraid, will suffer from the prejudices, rackets, and exploitations that have afflicted every wave of migration to the United States. Because of their democratic background and inherent sense of liberalism, they will look to unions to safeguard their rights, and as long as unions do not let them down, they will make loyal and dependable members and, eventually, valuable leaders of the labor movement.

Puerto Rican workers today depend too much on the Commonwealth and Federal minimum wage laws. The ideal minimum for employees and management alike, to my way of thinking, is a minimum of government participation in the fixing of wages; but this is possible only where the workers are properly represented and able to negotiate for themselves.

That is the potential for unionism in Puerto Rico, and our laws and our disposition leave the door open for it to pursue its opportunity.

As I told the recent meeting of the AFL-CIO executive council in San Juan, there is a kind of union, undeserving of the name, that the people of Puerto Rico will not welcome. For the dealer in fraudulent contracts, the gangster, and the racketeer growing rich on labor's funds, there is no room in this Commonwealth. Our people do not tolerate dishonesty in government and they will not tolerate crooks in the guise of labor leaders.

The proud record of the AFL-CIO proves without doubt that the true spokesmen of American labor equally abominate these people and their practices and are willing to fight and sacrifice to wipe them out, as they must. Our government stands ready to give honest unionism our full support in that struggle.

Steel Imports

EXTENSION OF REMARKS OF

HON. JACKSON E. BETTS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. BETTS. Mr. Speaker, for many years it has been fashionable to label

those who attack the Federal Government's tariff giveaway policies as spokesmen for marginal, inefficient industries or for selfish industries whose workers were poorly paid or for stagnant industries which resisted the trend to diversification.

Recent developments, however, have proven beyond question that those who fought against free-trade philosophy were far closer to the facts of economic life than their opponents. For in spite of systematic tariff whittling, in spite of our dogged devotion to multilateral trade councils, this Nation's trade posture has slumped to a point where the current outlook is for a \$5 billion balance-of-payments deficit in 1959.

Equally significant is the fact that injury traced to abnormal foreign competition is no longer confined to our smaller industries. Would anyone call our automobile industry small? Is the steel industry small? Or the lumber and wood products industry? Is the textile industry small?

The steel industry provides one of the most dramatic instance of market penetration by imports. The United States, world's greatest steel producer, now buys more steel abroad than it sells, although the industry's capacity would have far exceeded production even without a strike this year.

These and other aspects of the steel import problem were explored by the magazine *Business Week* in its edition of August 1, 1959. Under leave to extend my remarks, I include this timely article as recommended reading for my colleagues:

STRIKE GIVES FOREIGN STEELMAKERS A WEDGE TO WIDEN U.S. MARKETS—STEEL IMPORTS HAVE BEEN SEARCHING, ESPECIALLY INTO HOUSTON, BUT SELLERS MAY NOT BE ABLE TO HOLD ALL GAINS

While the steel industry sweats out its nationwide strike, both the companies and the steelworkers are casting many an anxious glance over their shoulders. They are watching to see if foreign steel suppliers will seize the opportunity to nail down a piece of the huge U.S. market for themselves. In the past couple of years, the industry has learned that overseas competition is not given to missing any bets.

SPARE CAPACITY

The U.S. steel mills—all but a handful of them now shut down—have plant capable of turning out 147.6-million ingot tons of steel a year. Even if the United Steelworkers had not gone on strike, no one in the steel industry expected all that capacity would be used this year; they figured there would be 30 million tons to spare.

Yet, in the first 5 months of this year, steel from foreign mills came into the United States at an average rate of 300,000 tons a month—or 3.6 million tons a year. (You can figure that 300,000 tons of steel products equal 400,000 ingot tons of mill production.) The imports themselves are only a small percentage of the steel used in the United States. But, say men in the industry, what justifies their worrying about steel imports is that foreign steel is coming into the country at all—despite the substantial gap between U.S. production and capacity.

RECENT SURGE

Imports have leapt lately: from 118,000 tons in May last year to 384,700 tons in May this year. Meantime, the United States has lost its longheld position as a net exporter of steel: in May it imported twice as much

as it shipped abroad. This, the steelmen say, makes apprehension even more justified.

There's no disputing the fact that steel imports are up sharply; their rise came right along with U.S. industry's scramble to build up steel inventories as a hedge against the strike. But outsiders who know the steel industry say it's still too early to tell the true impact of foreign steel on the U.S. market. The spring of 1960, when industry should be well along on rebuilding depleted steel inventories, will be the earliest time for a clear reading on how much of their inroads foreign steelmakers will be able to retain. It will have to sell then in a well-supplied market.

BUSIER PORTS

Steel imports have been climbing fast. It's not possible to tell how much more is entering the country now than in May (the last month for which there are official figures). But it's plain from a survey made this week by *Business Week* reporters in the Nation's ports and industrial centers that imports in June and July surpassed those in May.

On the west coast, the amount of foreign steel unloaded at the ports of Los Angeles, Long Beach, and San Diego doubled in the 6 weeks from June 1 to the start of the steel strike; the week before last the three ports combined were handling foreign steel at a monthly rate of 35,000 tons. West German producers shipped most of the west coast's foreign steel until a few months ago. Now more and more is coming from Japanese mills. In Boston it's estimated steel imports so far this year are double those of last year. Toledo, which handled virtually no foreign steel until the Seaway opened, has unloaded 7,000 tons so far this year. Traffic up the Mississippi is growing heavier: In the first half of 1958, some 4,000 tons left New Orleans for upriver cities, so far this year 15,000 tons of foreign steel have been shipped upriver.

BEST CUSTOMERS

Probably the hottest place in the country for foreign steel sales is Houston. There, at least four agents of foreign steel companies have set up offices, and at least another dozen brokers are handling sales of other foreign mills. In the first 5 months of this year 300,000 tons of foreign steel (mostly reinforcement bars and oil country goods) came into the port of Houston compared with U.S. produced tonnage of 461,000 tons. In the same time last year, foreign steel ran to 83,800 tons and domestic to 359,000 tons. It's estimated that steel users in the Houston area buy 20 percent of all steel imported into the U.S.

The biggest man in this business in Houston is Andre Crispin, a 35-year-old Belgian, who holds the post of Belgian consul in Houston as well as running his import business. Some Southwest steel producers say that no matter what prices they charged, Crispin and the mills he represents would undercut them. Crispin, though, insists he's not trying to run anybody out of business. "There's simply not enough European steel available for export for it to become a primary source of supply in this or any other area of the country," he says. Nevertheless, he estimates that even after paying duties he is undercutting domestic prices by 2 percent to 5 percent.

WHO SELLS WHAT?

The American Iron & Steel Institute's import records show that the bulk of steel imports (79 percent in May) comes from Europe and that more than a third of European steel shipped to the United States comes from the mills of Belgium and Luxembourg. Steel producers in those two countries live almost wholly from exports. Their U.S. salesmen and agents are probably the most aggressive in the business. But in the competition to get a share in the U.S. market for imported steel, the West Germans and

the French are selling harder; from April to May this year the West Germans boosted their steel exports to the United States from 57,800 to 84,000 tons, and the French from 59,000 to 74,500 tons.

Until this year, the bulk of the business done by foreign steel producers in the United States was in concrete reinforcement bars, pipe and tubing, rods, and wire nails. Some 52 percent of the barbed wire used in the United States last year came from foreign mills. The foreign mills' business in the United States is still heavily in those lines. But in the last few months they've boosted sharply their business in the generally more lucrative lines of plates, sheets, and strip steel.

UPWARD PRICES

Despite the hard selling that's going on, prices quoted for foreign steel have been bounding upward since the strike began. In almost every industrial center, *Business Week's* reporters found that foreign steel brokers and agents are offering prices now that are little different from those normally charged by domestic producers. Before the strike, the difference between U.S. and foreign mill products was, on the average, \$40 to \$50 a ton. Now it seems to be \$10 a ton at best.

While prices have climbed, orders have gone down. There may be no firm connection between the two, though. It's much more likely that orders have slipped from their peaks in May and June because of the time lag between order and delivery of a shipment of foreign steel. This lag is rarely less than 6 to 8 weeks and for some products runs 3 months.

This dip in orders—several steel import agents say their bookings are 20 percent less this month than last—might give heart to some of the domestic producers who are apprehensive about foreign steel's inroads. But the domestic producers point out that in the last 6 months foreign steel mills have learned a lot about doing business in the United States and that their next step probably will be to set up stocks in warehouses here. (Apart from foreign specialty steelmakers, few do this at present.) So far, there's little indication from *Business Week's* survey that this is happening.

It's a Great Day for P. J.

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. PUCINSKI. Mr. Speaker, we have been so busy here in Congress, pondering the great problems which confront our own Nation and the world in general, that too often we overlook some of the truly great events which occur in our own backyard.

I should like to take the opportunity today to call my colleagues' attention to an editorial which appeared in the *Chicago Sun-Times* on August 14. It is significant to me that this great *Chicago* newspaper would also pause in its reflections on world events to pay tribute to one of the most beloved citizens of *Chicago*, P. J. Cullerton.

Mr. Cullerton has just been honored by the Irish Fellowship Club, of *Chicago* when he was elected this organization's president last Wednesday. I wish to

commend the Irish Fellowship Club for its excellent selection. This honor bestowed upon Mr. Cullerton is particularly significant to those of us in public service because it proves that the citizens of this country know how to reward dedicated service to a community.

Mr. Cullerton indeed exemplifies the very essence of public service. Through all the years that he has held public office, he has served as a shining example of all that reflects the highest of standards in serving the people.

Since we Irish of all nationalities must stick together, I am indeed proud to be able to include the Chicago Sun-Times' editorial in today's *Record*.

The editorial follows:

IT'S A GREAT DAY FOR P. J.

Breathes there a Chicago Irishman with soul so dead, who never to himself has said, in this, my own, my native land I want to be No. 1 Irishman in the No. 1 Irish city in all the world—the city that put St. Patrick's Day on the calendar—Chicago?

And so Parky Cullerton has made it. Glory be, the Cullertons and the O'Donnells of Tipperary can now be singing that it's not a long way to Chicago when Bridget O'Donnell's grandson is the king of the Irish in that wonderful place where a Daley is mayor and a Ryan runs the county.

A county assessor is important, but anyone who knows anything about Chicago knows Assessor P. J. Cullerton didn't "arrive" as a VIP until Wednesday when he was elected president of the Irish Fellowship Club of Chicago.

The club has summoned many important men to bang its March 17 gavel and to introduce important men as speakers—and not all of the chairmen and not all of the speakers have been Democrats, as Parky is.

Parky has two important tasks to tackle. First, he should get the club listed in the phone book. Next he must get agreement on a speaker for next St. Patrick's Day. Senator JOHN F. KENNEDY, Democrat, of Massachusetts, and Vice President NIXON have spoken in the past and the Chicago Norske Club should have first call on Governor Rockefeller.

The problems of the leader of Chicago's Irish are not trivial, believe us, and Parky has our sympathy as well as best wishes.

Panamanian Politicians Exploit Anti-U.S. Surge

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. FLOOD. Mr. Speaker, for some months there have been almost daily news dispatches of ominous character from Panama or other parts of the Caribbean littoral and islands.

The latest news story from Panama by Mr. Ralph K. Skinner, well-informed special correspondent of the Christian Science Monitor, in the July 30, 1959, issue of that paper, describes the current status in the deteriorating situation on the Isthmus.

As such, it merits reading by every Member of the Congress, especially those

on committees dealing with Panama Canal questions.

The indicated new story follows:

PANAMA POLITICIANS EXPLOIT ANTI-U.S. SURGE
(By Ralph K. Skinner)

PANAMA, PANAMA.—Anti-Americanism is burgeoning here. It comes out in such indirect, as well as direct ways.

In a recent broadcast, former Foreign Minister Aquilino Boyd called on the Panamanian public to "invade" the Canal Zone on November 3, Panama's Independence Day.

His colleague, former Deputy Foreign Minister Ernesto Castillero furnished newsmen with more details of the plan. It was that Panamanians should "enter the Panamanian territory known as the Canal Zone" and occupy it symbolically and effectively. While Dr. Castillero said this should be done without violence, he offered no guarantees.

With such proposals coming from educated men, recently associated as top officials with the Panama Government, it is not difficult to understand the growing anti-American attitude of the underprivileged, unemployed, badly oriented masses of Panama's people.

Feeling keenly their economic inferiority, the people of Panama see the Canal Zone as an island of prosperity in an ocean of distress. Under such circumstances, envy is not remarkable. The economic tragedy of Panama is attributed to the United States.

INCIDENT HINTED

Their emotions aroused, and feeling sorry for themselves, the people of Panama are ready to believe virtually anything their press and radio tell them. Almost without exception, they are fed a diet of anti-American propaganda.

There is strong evidence here that ultra-nationalist forces in Panama believe the next move is to provoke an international incident with the United States in the Canal Zone. It is their stated intent to bring Panama's case before an international group, even as the Suez Canal crisis eventually was brought before the United Nations. Such an incident may come even sooner than the threatened November 3 invasion of the Canal Zone.

President de la Guardia, Jr., says Panama-U.S. relations are deteriorating and that he regrets it sincerely. But he attributes the deterioration solely to the United States.

The President says the two principal causes of friction are inequality of wages in the Canal Zone and failure of the United States to purchase more in Panama.

Panama alleges that Panamanian citizens employed in the Canal Zone by the U.S. Government do not receive the same wages as U.S. citizens. This is termed discrimination and violation of the 1955 Treaty.

EXPLOITATION CHARGED

Washington replies that the treaty is being complied with to the letter. It is stated that negotiators of the treaty, both Panamanian and American, knew that wages for employees in categories plentifully available locally would be based on prevailing wages in Panama. Actually Canal Zone wages for such jobs average from 30 percent to 200 percent higher than in Panama. Panama asserts that its citizens should receive wages based on U.S. scales.

A leading Panama capitalist said the United States is taking advantage of the low wages in this capital city caused by 30,000 unemployed adults out of a total city population of 200,000. Traditionally wages are low in Panama because the family political oligarchy has refused to pass minimum-wage legislation, thus protection vested interests here.

The U.S. Government-owned stores in the Canal Zone usually purchase supplies from Panama and the United States. Purchases of some items are made from other countries.

Panama says this violates the treaty, that everything humanly possible of being obtained in Panama should be purchased here, regardless of price.

As an example, the best rice grown in Panama does not meet minimum U.S. standards in the Canal Zone. Therefore rice is purchased elsewhere. This has been going on for several years, but Panamanian producers have not improved the quality of their rice.

The situation in beef is similar; choice quality is not available at any price in Panama. Rather than meet competition, Panamanian monopolists clamor for the Canal Zone to be made a captive market for inferior products, informed sources say.

When Panama's demands were not met by local U.S. officials, President de la Guardia wrote a personal letter on this matter to President Eisenhower and had it delivered to him in Washington.

It was several weeks before Mr. Eisenhower answered. This disturbed Panamanians who expected an immediate reply. The reply stated that the matter would be investigated and a report furnished.

Later, the acting American chargé d'affaires delivered to the Foreign Minister of Panama an aide memoire (an unsigned statement used in diplomatic circles) on the matter.

After deliberation, the Foreign Minister refused to accept the aide memoire, alleging that another personal letter from President Eisenhower should be forthcoming as this was on a President-to-President basis.

The Panama press was encouraged to consider the delivery of the aide memoire as a slap at Panama's dignity. One of the most influential men in this capital, who controls many avenues of propaganda, said the slight to the President was an insult to every citizen of Panama.

Newspapers blazed with the alleged affront, which offended the dignity of Panama. Wire services reported the Panamanian reaction widely.

Washington reconsidered and, belatedly, there came a personal note from Mr. Eisenhower to President de la Guardia. Panama claimed a moral victory; Washington had been shown it could not trifle with Panama, the newspapers crowed.

If the United States erred in not understanding Latin-American dignity, Panama may have erred in overplaying the incident, raising anti-American sentiment to a new high pitch.

Bernard Abrams, Elected National Commander, Jewish War Veterans

EXTENSION OF REMARKS
OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. GALLAGHER. Mr. Speaker, my constituent, Mr. Bernard Abrams, of 60 Glenwood Avenue, Jersey City, N.J., has just been elected national commander of the Jewish War Veterans. I would like to call this fact to the attention of my colleagues and to insert in the CONGRESSIONAL RECORD an article about him which appeared in the Jersey Journal, of Jersey City, N.J. The article follows:

NEW JEWISH WAR VETERANS COMMANDER
MADE DECISION AT SEA
(By John Hoffman)

Bernard Abrams, of Jersey City, whose vigorous campaign led to his election as national commander of the Jewish War Vet-

erans is a man who doesn't believe in half measures.

Though a lawyer he was assigned as a medic in the Army in World War II and served 14 months in the European theater.

On the *Queen Elizabeth* returning from Europe in September 1945, he remembers, then that he decided to join the Jewish War Veterans.

"I thought I'd give it a try and if it turned out to be everything I hoped, I'll stay with it and give it my best," Abrams remembers himself thinking.

Abrams joined the newly formed Lieutenant Grover Post in Jersey City and found that the JWV was all that he expected it to be.

He rose from post, to county, State, and finally the national levels in the organization, giving his best all the while.

His associates describe him as a fighter. The symbol with which he carried the JWV convention was a tiger which Abrams says describes the ways he goes after things.

Though not bombastic, Abrams doesn't think too much modesty about oneself is the greatest of virtues, especially about what one thinks.

There's no doubt about what he believes in as the delegates to the JWV convention learned.

Abrams platformed a strong and unrelenting civil rights program, and a dissent to the policy of Saudi Arabia which keeps American Jewish servicemen from being stationed in that country.

In the coming visit of the top Soviet, Nikita Khrushchev, Abrams is characteristically adamant.

"We cannot trust them, we must never let our guard down."

Abrams, who has been a resident of Jersey City since he was 2, graduated from Lincoln High School and was one of the top men in his class at John Marshall Law School. His law office is on Jackson Avenue.

Abrams, 45, is married to the former Clara Wolfson, of Bayonne. They have a 15-month-old son, Alan.

It is the first time I have been able to return to a college campus since 1940. It has been a rewarding experience.

I have been interested in talking to nearly all National Science Foundation participants on the B.Y.U. campus this summer. Besides the physics institute previously mentioned, the college is also carrying on institutes in general science and radiation-biology.

All told, on this campus alone, there are in excess of 100 teachers in attendance. Over 90 percent of these teachers have indicated that they would not have been able to attend on their own. If the same situation holds true at the other 299 colleges holding institutes, you can imagine the ultimate effect of the program on science and mathematics teaching.

I also examined to some extent the manner in which these NSF institutes are being administered. I find conditions very healthy.

The National Science Foundation is presently assigning institutional responsibility to the Dean or head of the appropriate science or mathematics department, and the schools of education are used in a consultant basis only. This is most wise, as it insures teachers of true content courses. Comments would indicate that this feeling in our ranks is practically universal.

We received approval this spring of our application under Public Law 864 for \$4,400 of science equipment, and we are thankful for the opportunity to attend institutes such as the ones observed here at Brigham Young University, that we may be of more service.

We heartily approve of the educational program presently being carried on under the direction of the National Science Foundation.

Sincerely,

RICHARD B. KNOTTS,
Superintendent.

Red China and the United Nations

EXTENSION OF REMARKS

OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks, I enclose my newsletter of May 27, 1959, which discusses the admission of Red China into the United Nations, as follows:

Should the United States recognize Red China and support her admission to the United Nations? Certainly not for the present, in my opinion. The question was discussed in a recent speech by Hon. Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs. He described the situations as follows:

The Chinese Communists conquered the mainland of China in 1949, and the Government of the Republic of China withdrew to Taiwan (Formosa). The Chinese Communists were at first mistakenly thought by some to be merely agrarian reformers, but proved to be ardent Communists. "The Peiping (Communist) regime was imposed by force with the volition of only an infinitesimal fraction of the Chinese people. . . . It has kept itself in power by blood purges and the liquidation of some 18 million mainland Chinese in 9 years."

The Far East is a critical area in the global struggle between East and West. American policy there is to encourage the newly independent, lesser developed countries to make progress in the ways of freedom, without

falling within the orbit of the Communist bloc, and to build up our Far Eastern allies and friends. It opposes the further spread of Chinese Communist influence, and supports the non-Communist Government of Nationalist China.

Our recognition of Red China would on the contrary strengthen Red China by greatly enhancing her international prestige, and would weaken Nationalist China. "It would, as a practical matter, mean the liquidation of the Republic of China." From this would flow the following results:

(1) The strategic position of the free world would be weakened by the loss of Nationalist China's 600,000 troops in Taiwan, with resultant Communist military threat to Japan, the Philippines, and southeast Asia.

(2) Other Asian nations would feel that they could no longer rely on the protection of the United States against the Communist threat, and would have no alternative but to come to terms with the Red Chinese colossus. There would be a rapid expansion of communism throughout Asia, and America's moral position would suffer irreparable damage.

(3) It would blot out any rallying point in the world for non-Communist Chinese, and deliver Taiwan's 10 million people to the slavery of the mainland.

Of the 13 countries of the Far East, only 3 have recognized Red China. It has long been our policy in granting recognition to consider whether such action would be in the best interests of the United States, and whether the country seeking recognition had shown a willingness to live up to her international obligations.

Recognition of Red China would not be in the best interests of the United States for reasons given above, and Red China has not shown a willingness to live up to her international obligations.

When the Red Chinese gained control of the mainland of China in December 1949, they repudiated the international obligations of China, and confiscated, without compensation, properties of other nationals valued in the hundreds of millions of dollars. Communist China has flagrantly violated her armistice agreements both in Korea and Indochina, and her agreements for the release of American prisoners.

The admission of Red China to the United Nations is governed by the terms of its Charter. After due consideration, those terms were framed to provide not for universal membership, but for membership of "peace-loving nations willing to assume and live up to the obligations of the Charter."

The record shows that Communist China is not a peace-loving nation, but is an outlaw regime. It invaded Tibet. It took part in the aggression against South Korea. It is still threatening war in the Taiwan Strait.

Space Secrecy

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, recently the gentleman from California [Mr. Moss] addressed this House on the subject of executive branch secrecy in the field of space research and space programming. It was his conclusion that if this House cut the appropriations of the National Aeronautics

Letter: Educational Program of National Science Foundation

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the Record, I include a very interesting letter from Mr. Richard B. Knott, superintendent of Consolidated School District No. 30 at Warrenton, Oreg., in which he expresses his reaction to an educational program of the National Science Foundation. I hope that all Members will take the time to read the letter as it is an excellent grassroots report on the work of the Foundation:

SCHOOL DISTRICT NO. 30, CONSOLIDATED,
Warrenton, Oreg., July 30, 1959.
Hon. WALTER NORBLAD,
House of Representatives,
Washington, D.C.

DEAR WALT: It has been my privilege this summer to attend Brigham Young University on a National Science Foundation stipend. The physics institute that I attended was well conceived and well executed.

and Space Administration, the responsibility should lie with the executive branch because the House could not be expected to grant automatically requests for funds for agencies which were not keeping the appropriate committees of the Congress fully informed of their activities and plans. He used as proof of this hampering secrecy the recent report of the Senate Subcommittee on Government Organization for Space Activities, Committee on Aeronautical and Space Sciences.

Let me say that the continuing battle which Congress fights to keep itself fully informed of what the executive branch is doing is an important one, and that the gentleman from California has made a great contribution by his efforts in this field. But at the same time, I wish to make clear that the House Committee on Science and Astronautics has insisted on being kept fully informed of the activities of the National Aeronautics and Space Administration, and that agency has been fully and frankly cooperative in its efforts to comply with the wishes of this committee.

The extensive records and material presented to this committee in the authorization hearings before this committee, and all other contacts we have had on virtually a daily basis with the NASA reflect credit on Dr. Glennan, the Administrator, Dr. Dryden, the Deputy Administrator, and Mr. Gleason, the Assistant Administrator for Congressional Relations, together with their staff. I am safe in stating that when the Committee on Science and Astronautics recommended to the House the authorization program it did, that these recommendations were on the basis of complete and thorough study. The action taken by the House on the appropriations whatever the reasons, represented the judgment of the Members by majority vote, but were not a reflection of any lack of study or gaps in information on the part of the committee of which I am chairman.

Now I also want to say that the report of the Senate subcommittee to which I have referred is an important study which deserves close attention for the thoughtful conclusions which it presents. It would be my view that the Senate report is correct in directing attention to the needs for Congress to have greater knowledge of how the detailed programs of the NASA and the Department of Defense relating to space are coordinated in the President's National Aeronautics and Space Council. Despite the similarity of name, the Space Council is separate and distinct from the Space Administration. This committee has not received a clear report of what the Council has been doing.

Because I have been well satisfied with the cooperation received from NASA, I would be greatly surprised to discover that there has been any serious gap in information supplied to this committee. If there are any such gaps known to the Members of this House, I should appreciate having them called to the attention of the chairman of the Committee on Science and Astronautics, and we shall move swiftly to fill them.

Report From Moscow

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. LINDSAY. Mr. Speaker, the following will be of interest to my colleagues. It appeared in the most recent issue of the weekly News Focus, volume II-32, edited and published by Charles L. Bartlett, who is also the Washington reporter of the Chattanooga Times:

REPORT FROM MOSCOW

(The following is excerpted from a report by a U.S. labor economist, Vladimir D. Chayrid, on his observations at the U.S. exhibition in Moscow. Mr. Chayrid, who was born in Russia, was assigned to the exhibition by the Labor Department to answer questions about the worker's life in America.)

I wish there were 20 American labor economists here familiar with American economic life. All of them could be busy answering thousands of questions of how the American people, and especially the average American worker, live. For the average Russian the hunger for knowledge, for facts about Americans, must be far greater than his hunger for food.

The questions most frequently asked deal with unemployment, wages, hours of work, living conditions, social security, unemployment insurance, and many others in this general area.

The attacks on the American way of life have been quite frequent and severe since the beginning of the exhibition. For the last few days, however, these have ceased for some reason or other. (The report was written just prior to the announcement of Khrushchev's visit to the United States.) To all of us, however, these attacks are one of the real indications of the success of our exhibition.

Do the Russian people believe what we tell them about America? After being here for several weeks and discussing with them our way of life, both at the exhibition and at other places, I am sure that the overwhelming majority believe what we tell them and what the exhibits show them.

At the Labor Department exhibit in the dome when some controversial matter develops between myself and some Russian professional propagandist, the crowd invariably will side with me rather than with him. These professional agitators invariably show up as soon as a sizable group of people begin to listen to my presentation.

For example the other day at the Labor exhibit I was explaining to a group of some 50 Russians the American social security programs. The group was vitally interested. Immediately a professional agitator broke in and told the crowd that this social security program did not apply to Negroes or foreign-born persons, that opportunities for these people in America were very poor.

This was an excellent opportunity for me to tell the crowd about myself—how I came from Russia some 30 years ago and how I was able to obtain an education in the United States and also a responsible job in the Labor Department. The agitator kept breaking in that I had already answered his question, but the crowd kept saying I should tell about myself and other groups like myself in the United States.

Frequently the agitator becomes embarrassed and disappears. It may be of interest to know that as soon as the Russian visitors

learn that I was born in Russia of modest parentage they are extremely sympathetic and I could stay and talk there, as I often do, for as long as 4 hours at a stretch. It is often physically impossible to break away from the crowd.

When I leave the stand, many continue to follow me asking questions that they might have been uneasy to ask in the presence of the professional agitators. Many thank me most profusely for answering their questions while others apologize for their professional agitators. It is literally impossible to stop and answer a single question of 1 Russian without attracting a crowd of 50 or more Russians within a few seconds. Such is the hunger for knowledge about the United States.

Conservation Reserve Program Booms Production of Game Birds

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. REUSS. Mr. Speaker, it is interesting to note that at least one of the agricultural programs of relatively recent establishment is gaining support and producing good results. I refer to the soil bank conservation reserve program. While there is room for more progress, the following article from the Milwaukee Journal of Sunday, August 9, 1959, by conservation writer Russ Lynch, shows the beneficial results of the conservation reserve program in Wisconsin:

SOIL BANK'S RESERVE LAND PROGRAM BOOMS PRODUCTION OF GAME BIRDS

(By R. G. Lynch)

Pheasant populations are up in almost every State. And it is no coincidence that cropland has been going wild on farms in the soil bank's conservation reserve at the same time that the birds have been increasing in the last 2 or 3 years.

Wisconsin this year has a sizable conservation reserve acreage for the first time (the 1959 signup tripled the total for preceding years). So Wisconsin game managers and sportsmen have reason to wonder what effect nearly 500,000 acres of "wild" grass, scattered over 9,000 farms, will have on upland game in the next 5 or 6 years.

The answer depends in part on the extent to which they can induce the landowners to delay weed control until after nesting time, to plant food patches and shrub cover, and in ruffed grouse country, to seed clover along with grass.

HELPS PHEASANTS

J. R. Smith, State superintendent of game, said last week that the most important impact of CR land would be to help restore the pheasant population in the southeastern counties, where last winter's heavy snow killed off perhaps a quarter of the breeding population. He also expects the rabbit population to benefit.

Pheasants are down in the area southeast of a line roughly drawn from Manitowoc to Dodgeville. This includes intensively farmed country where more grass cover could be important, particularly if it was undisturbed during nesting.

Rock County, a top agricultural area, will have more than 12,500 acres of grass, distributed over 203 farms, that cannot be grazed or harvested for 5 years. In this

county, 158 whole farms have been retired from production.

Jefferson County will have some 10,600 acres in CR grass on 231 farms; Walworth County, 5,100 acres on 94 farms. Other pheasant producing counties have comparable CR signups.

QUAIL COUNTRY, TOO

Some sample counties in the quail country include Grant, 13,800 acres on 284 farms; Crawford, 9,100 acres on 127 farms; Richland, 3,200 acres on 73 farms.

So far efforts to enlist CR farmers in a wildlife program have been spotty and not very successful. When county meetings were held last fall to discuss CR regulations, the conservation department and local clubs were invited to participate. Despite bad weather, 3,211 persons attended the 71 meetings. Some game managers proved to be salesman but more were not. A few clubs offered help for farmers who would apply wildlife practices.

But all the signups game managers and sportsmen's clubs obtained in the 71 counties totaled only 907 acres, including 200 or 300 food patches, mostly of one-half to 5 acres. Half as many more were carried over from preceding years.

Nick Calabrese, who is program specialist in charge of the soil bank, said, "I'm sure the local clubs can get a lot more cooperation from the farmers if they make a real effort, particularly if they offer some help."

UP TO SPORTSMEN

Smith, the State game chief, intimated that it would be chiefly up to the clubs, saying that conservation department personnel already had more programs than they could handle effectively. "But we have put in some time on the soil bank," he said, "and will find men to work on it."

A landowner who did not want to be named told the writer that he had put in a food patch and wildlife shrubs and from his experience judged that not much would be done by farmers without some help.

"It's a lot of bother and work," he said. "I think it will take something like the tree planting program. That didn't make much headway with farmers until it was organized and planting machines were available locally. If the Department or the clubs would set up a definite program, and help, for food patch and shrub planting, they'd maybe get some results."

MANY HELP SHARPTAILS

Smith said that CR land was not so important for quail or ruffed grouse, although clover seeding along with grass could benefit the grouse.

"There'll be a gain in nesting areas and edge," he said, "but the loss of grazed woodland will more than offset it. Woodland grazing increases ruffed grouse habitat as much as 10 to 1."

"But the CR may help sharptails, particularly along the Lake Superior shore in the clay country. Acre for acre that land is more productive of sharptails than the sand country, but the increase of farming has driven the birds out. Now they may come back."

A Matter of Dollars and Cents

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am inserting an article

from the Nashville Tennessean, written by an excellent reporter and editorial writer, Mr. Gene Graham, who is beginning a series of interpretative articles designed to explain subject of local and national interest.

This article deals with a lawsuit in the U.S. District Court for Middle Tennessee, at Nashville. Three Federal judges, all Tennesseans, will conduct the trial and rule upon the matter of reapportionment in Tennessee which was not decided by the State general assembly.

The article follows:

A MATTER OF DOLLARS AND CENTS—TEN AND ONE-HALF MILLION DOLLARS IS SIPHONED FROM DAVIDSON TAXPAYERS EVERY YEAR—THREE JUDGES MAY HOLD THE ANSWER

(By Gene Graham)

A lawsuit of historic and national significance will begin in Nashville shortly.

It is one which is destined to keep the eyes of a nation riveted firmly upon a solemn, mahogany-paneled courtroom on the eighth floor of the Federal building here.

For at issue in this milestone American legal clash are problems complex and common among all the Nation's States—even the two new ones which moved from territorial to statehood status this year.

Basically, the issue is one of equity. It is commonly known by the somewhat cumbersome name of legislative reapportionment.

Vast population upheavals growing out of the postwar years in America are behind it, although the trend really began to a less noticeable degree before World War II.

EXPLODING URBAN CENTERS

That population has expanded—and it has shifted as the desert sands, forming huge human drifts upon the archaic governmental structure of America's exploding urban centers.

With the mechanization of farms and the rapid industrial expansion of two and a half decades now, humans in massive numbers have left a rural society to become dwellers of large metropolitan centers, once-small cities which now move toward the metropolitan status, and once-rural towns which can no longer be so classified.

But they have left their State governments behind.

All over America—not just in Tennessee—they have left the same number of legislators representing the same territorial limits, limits within which, unfortunately, the people no longer live in such proportions as they did when States were being hewn of a wilderness.

OLD SAM CRIED "TYRANNY"

By the same token, the same number of legislators represent the narrow territorial confines of modern metropolises which once were not. In truth, it is a condition similar, if not identical, to the one which caused old Sam Adams to cry out "Taxation without representation is tyranny" upon colonial streets, sparking the tinder of revolution.

The world is calmer today. This issue is thus joined in the hushed forum of American jurisprudence. The trial, as announced Thursday, will be conducted by three distinguished Federal judges, all Tennesseans.

They are Federal Sixth Circuit Judge John D. Martin, Sr., Memphis, who only last week stepped down as presiding judge of, though remaining upon, the Cincinnati-based appellate court; District Judge Marion S. Boyd, Memphis; District Judge William E. Miller, Nashville, whose rejection of a State motion to dismiss the lawsuit earlier in the week set the stage for the legal test.

"We look forward to this lawsuit with the notion that Tennessee is upon the threshold of a great and long-overdue governmental reform of pioneering proportions and

national implications," said Z. T. Osborn Jr., Nashville attorney and one of three who will represent the parties suing the State for fair play.

NO COMMENT

George McCanless, State attorney general, declined comment yesterday. McCanless, in his official capacity, will defend the State, which has insisted reapportionment is a matter for the legislature alone to decide, just as the Tennessee Supreme Court previously held.

The suit will be adjudicated, of course, on the grounds of equity and that alone. But behind the issue of equitable representation is one of tax dollars and cents, just as it was taxes which prompted Adams' outburst against Great Britain two centuries ago.

Using Davidson County as an example, here is that story:

Perhaps few people realize today the degree to which the State has become a tax-collecting agency for local governments. Not counting its receipts last year from Federal sources, the State collected—in State taxes—\$270,914,354. It redistributed to counties, cities and local school districts more than half of that amount, \$140,442,548.

Part of this was what is called local-share taxes, e.g., gasoline, income, alcohol, beer, etc. A much larger portion, not strictly State-share in nature, is doled out for education in the form of State grants-in-aid.

And due to the balance of legislative power being firmly entrenched with rural counties, those shares—the plaintiffs complain—are grossly out of kilter.

In Davidson's case, just how much is this true—or is it?

Davidson County, according to the studies of the nonpolitical and statewide Tennessee Taxpayers Association, paid \$38,178,924 in taxes last year. That represented 14.1 percent of the total—or 14.1 cents of every State tax dollar collected.

Of this, the State returned to Davidson (including the cities of Nashville, Belle Meade, Berryhill, and Oak Hill) \$9,882,834—or 2.6 of those 14.1 cents. Retained by the State was 11.5 cents.

Since 48 percent of the State income was not redistributed, this means 5.5 of Davidson's 14.1 cents was used by the State as Davidson's strictly percentage share of financing such statewide functions as welfare, roads, etc. That leaves 6 of Davidson's pennies to be accounted for.

WHO TRADES WHERE?

The TTA also estimates, based upon its studies, that 15 percent of Davidson's 14.1 cents was paid by outlying counties, by trade area shoppers who converge upon their natural trading center, which obviously desires that trade. This accounts for 2.1 cents, leaving 3.9 cents as the nearest figurative amount which Davidson County invests in State government without direct return.

Reduced to pennies, this sounds small. But when considered in the light of total State collections—\$270.9 millions—it amounts to \$10,565,100 a year.

Davidson's local governments, forced this year to make vast increases in its tax rates, look upon that money with a view to what just a portion of it could do in meeting the community's great problems—sewers, expanding schools, parks, slum eradication.

Some argue the TTA's estimate that outlying counties pay 15 percent of Davidson's contribution to State taxes is too low. No exact figures can be given, but the TTA counters with the argument that the biggest chunk of the sales tax, for example, comes from the sale of food, which almost invariably is purchased at home. And it can be shown, too, that the 1-cent share rebated to cities from the 7-cent gasoline tax does not approach the amount actually collected in Tennessee's cities and growing towns.

The most pertinent question, then, would seem to be whether Davidson and the metropolitan centers should, in keeping with the so-called equalization theory, subsidize the admittedly poor counties of the State to the extent of \$10 million a year.

"We recognize this obligation," urban leaders say, "but \$10 million a year is too much to ask when our own tax burdens, our own community needs are so great."

Whether such arguments can be sustained is a moot matter before a legislature which has resisted all efforts, since 1901, to give the city folks a louder voice in State affairs, tax distribution being but one of them.

So the issue was removed from the legislative branch and dropped before the Federal judiciary to resolve. And that's where the matter lies—while a nation watches—today.

HOW THEY STACK UP

Here is how the four largest Tennessee metropolitan counties fare in sharing State taxes collected within their boundaries. Roughly half of the taxes collected from them are redistributed by the State in either grants-in-aid or local-share taxes.

Hamilton County pays \$22,540,074; gets back \$7,220,792; or 32 percent.

Knox County pays \$22,594,257; gets back \$7,053,052; or 31.2 percent.

Shelby County pays \$57,569,304; gets back \$16,823,099; or 29.2 percent.

Davidson County pays \$38,178,924; gets back \$9,882,834; or 25.9 percent.

The four counties pay approximately \$140.8 million—or roughly 50 percent—of the State's \$270.9 million in taxes.

The Labor Bill Battle in Congress

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ALGER. Mr. Speaker, now that the House debate is over and the Landrum-Griffin substitute bill overwhelmingly approved, on reflection I feel sure that all the problems have not been solved. Somehow I feel we are only treating the outward evidences of trouble and not the inner or basic difficulty that will continue to plague the labor movement, the consumer and free enterprise. This basic problem is the fact that labor organizations are still above and beyond the law because they are not subject to the same ground rules as are business enterprises; namely, antitrust law.

So I was quite interested to read the article by Mr. Arthur Krock in the New York Times of August 14, 1959 on the final day of debate on labor reform legislation. I believe his conclusion supports the views I expressed during debate on pages 14196-14198 of the RECORD of August 11 in presenting my bill, H.R. 8003, as a possible amendment to the labor reform bill.

Surely other Members of Congress share this concern over the need for antitrust legislation.

The article is as follows:

THE LABOR BILL BATTLE IN CONGRESS

(By Arthur Krock)

A balanced analysis of the truth and consequences of the struggle over labor union

reform legislation, now coming to a climax in Congress, may have to await the competence in research and the perspective of some future Edward Gibbon. But the stakes of the battle are plain in contemporary view. The most powerful, and in some respects the only, monopoly in the United States is fighting to preserve its control of the national industrial machine.

The monopoly was founded in the first years of President F. D. Roosevelt's New Deal by pro-labor laws of Congress and by even more pro-labor interpretations of these laws by administrators and judges appointed with that expectation. The results included a political alliance between union labor leaders and the candidates of the Democratic Party in which one interest promoted the interest of the other—an alliance to which liberal Republicans on the northeastern seaboard sought and were granted a sort of second-class membership.

The moral and spiritual animations of this pro-labor movement were generated by a prior monopoly which the Republican Party had fostered and protected. This was a combination of financial and industrial management power which operated politically through campaign contributions to submissive political candidates and through influence over the President's choice of administrators and judges. But the subsequent transfer to organized labor of power over the economy and industrial liberty of the United States, which was initiated by President Roosevelt and nailed home by President Truman, has been followed by the usual abuses of monopoly. These have included corruption and some excesses the robber barons of American industry never ventured.

Now for the first time since the pendulum of monopoly hit the reverse top of its arc a President of the United States is trying to unstuck it for a moderate downswing. The legislation President Eisenhower favors represents a very moderate backswing because it does nothing to cover labor unions under the antitrust laws that effectively restrain a management monopoly. And this legal immunity is the principal of several which are basic sources of the power of union leaders, both corrupt and otherwise. Yet the bill the President is supporting—proposed by a Democrat and a Republican in the House of Representatives—is the pending legislative draft that would provide effective restraints on the legalized social coercions of the economy by labor unions that also are important sources of their monopoly. These coercive activities are the secondary boycott and picketing, often deserving the administration's tag of "blackmail," which the labor chiefs prefer to call organizational.

The House committee bill, a milder corrective measure of union corruption and union coercive practices than the easy-going Senate measure, was officially opposed by the merger AFL-CIO, which endorsed a third draft with even less corrective effects. Though a large number of the Members of Congress have publicly qualmed under union threats of reprisal at the polls, this third measure had no chance of approval, and that was as well known at Meany-Reuther headquarters as it was in the private rooms of the Democratic and Republican leaders of Congress. But whether or not designed as strategy to make support of the House committee bill appear as bold independence of the AFL-CIO, its draft was so employed by legislators who knew that the union leaders would have been glad to settle for the House committee bill and would have regarded as another political triumph the rejection of the measure endorsed by the President.

One of the possibilities attributed to this latter bill is that its restraints on the secondary boycott and organizational picketing will hamper honest unions in their legitimate concerns.

But it could readily be safeguarded against by conference change in which the fundamental restraint of secondary boycotting could still be preserved. In all likelihood this safeguard would appear in the event of the final passage of a bill which will correct the basic abuses of the labor monopoly.

But, undisturbed by this administration, this Congress and the next one, will be union power to dominate collective bargaining, paralyze nationwide industries if this domination is resisted, elude the laws and ordinances against violence and coercion and suspend vital public services, including the sources of public information.

A Tribute to Mr. Herbert C. Hoover on His 85th Birthday

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an open letter to former President Herbert C. Hoover which appeared in the St. Joseph, Mo., News-Press extending congratulations, and was written by the editor, Arthur V. Burrows:

TIMELY OBSERVATIONS

Mr. HERBERT C. HOOVER,
Waldorf-Astoria Towers,
New York City.

DEAR Mr. HOOVER: The News-Press congratulates you on this, your 85th birthday. The News-Press feels it has a right to send you these congratulations as an open letter, not alone because of the personal esteem in which you are held by the editor of this newspaper, but because of the proud record this newspaper holds as regards your personal self.

The News-Press was keenly alert to the world tension in that fateful summer 45 years ago. It was June 28, 1914, a Bosnian Serb, Gabriel Princep, assassinated Archduke Francis Ferdinand, heir to the Austrian throne. You, Mr. Hoover, were in England when that tragedy occurred in Sarajevo, Bosnia. Sarajevo caused World War I.

It was the News-Press privilege to commend editorially the generosity of you, Mr. Hoover, nearing 40 years of age, who so gladly financed stranded Americans in London. You made it possible for them to get home, starting in late July, when chancellories feared the negotiations to prevent a world war would be futile. They were futile, Mr. Hoover, as you so well remember. Germany declared war against Russia August 1 and against France August 3.

You read your London Times and saw, Mr. Hoover, as did we in our paper, that Britain asked Germany to guarantee the neutrality of Belgium by midnight of August 4. Germany refused and Britain declared war on Germany August 4. You were still in London when German troops entered Leige. Our News-Press called that the rape of Belgium. We were probably the first newspaper of the whole Middle West to so severely castigate the German Emperor, the mad Kaiser. For that and following editorial conduct of our newspaper, Albert, King of the Belgians, conferred the Medaille du Roi Albert on Louis T. Golding, our editor and publisher.

Mr. Hoover, that editor and publisher still lives. He was 94 on May 9 last, so he is your own contemporary and no two men ever saw more eye to eye in those far away years

when it seemed God let the very light of the heavens go out one by one.

This newspaper time and again commended you for your great work in feeding Belgium. No man in all world history, single-handed, had ever to that time, or has since, so endeared himself by a single act to so many millions of people. It was inevitable, Mr. Hoover, that you were Chairman of the American Commission for the Relief of Belgium from 1914 to 1919. It was inevitable your friend, Mr. Woodrow Wilson, name you his U.S. Food Administrator, where you served so well from June 1917 to July 1919.

Your course as Secretary of Commerce under two Republican Presidents was hailed by the St. Joseph News-Press, not once but many times. It was the privilege of the News-Press to support you for President in victory in 1928 and in defeat in 1932. It was our joy to commend Mr. Harry S. Truman when he recalled you to public service after the cruel, willful conduct of Mr. Truman's predecessor.

The News-Press and sister paper, the St. Joseph Gazette, acclaimed you to the world for both the first Hoover Commission and the second Hoover Commission. The good of the Hoover Commissions will live long after you are gone to God.

Your step is slower, your face is more lined, your head more bowed, sir, but you bear that same mark of individual initiative, proud Americanism you had when you were in two Presidents' Cabinets, when you yourself were President. Or when you broke bread in St. Joseph, Mo., in that home of Mr. and Mrs. John Wyeth at 2916 Frederick early in 1933. Yes, even to just this summer when you so hospitably received our friends, Mr. and Mrs. James E. Josendale, of this city, in your home in Waldorf Towers.

The tangible proof of your goodness, your accomplishments, Mr. Hoover, sir, are for all to see: The honorary degrees from 81 institutions here and abroad, the 296 medals and other awards from here and abroad, the honorary citizenship of 24 European cities, 56 honorary memberships in scientific and technical societies. Mr. Hoover, you are the living exemplar of individualist America at her best, from that humble home in Iowa where you were orphaned to the plaudits of the world. It is a rare privilege to know you, sir. God bless you. God keep you for His very own.

Economic Advantages Motivate Support for Labor Bill

SPEECH
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 13, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8342) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations and for other purposes.

Mr. SANTANGELO. Mr. Chairman, the labor bills before the House have disturbed many legislators and voters and the speeches in favor of and against the bills have created a great confusion in the minds of a great majority. I believe that we must have labor legislation.

Last year I supported and voted for the Kennedy-Ives labor reform bill which passed the Senate and was defeated in the House by eight votes. The Kennedy-Ives bill regulated the internal union affairs without undue meddling in the administration of unions and without weakening the collective bargaining powers. The Kennedy-Ives bill was defeated by a combination of Republican Members and southern Representatives.

This year there are three bills before the House. The combination which defeated the Kennedy-Ives bill last year has once again combined and supports the Landrum-Griffin bill. I oppose the Landrum bill, which, in my opinion, is "buckshot" legislation, injuring the guilty and innocent alike. I favor the Shelley bill and shall support this bill.

The labor situation as we all know it is not all black nor all white. There is a great need for reform and for improvement, but no necessity to destroy labor. The support for the blunderbuss Landrum-Griffin bill comes mainly from Republicans and southern Democrats. Why? Why do these bills go beyond the reform of unions and seek to adopt methods which punish labor? It appears to me that selfish economic and political reasons motivate the support for this bill more than a desire to chase out the crooks from the House of Labor.

The Elliott bill, H.R. 8342, known as the committee bill, and the Shelley bill, H.R. 8490, introduced by Representative JACK SHELLEY, of California, and 14 other Members, have provisions to get rid of the crooks in labor, but the Shelley bill contains no provisions which bust unions or destroy their legitimate gains obtained through sacrifice. What does the Shelley bill do and is it effective? The Shelley bill requires financial reports by unions covering 90 percent of the labor force in unions and gives the Secretary of Labor discretion to compel the remaining small unions to file reports if the Secretary thinks it is necessary or that there is a violation of law or any corruption within the union. False filing under the Shelley bill carries severe criminal penalties. Embezzlers of union funds are subject to Federal prosecution and embezzlers, Communists, and convicts are denied the right to hold union office for a period of 5 years. Employees whose rights are denied can sue in Federal courts after they exhaust their remedies within the union. Employees' rights to vote and participate in union activities are protected. The subversive, the neurotic, and the troublemaker are subject to union discipline by reasonable regulations. The Shelley bill provides further that union financial officers must be bonded and they are required to account for their stewardship. No conflict of interest must appear in their conduct and officers are required to report any conflict of interest. No loans in excess of \$2,500 can be made and loans above \$250 must be reported. The crooks are controlled, the employees are protected, and the ban on secondary boycotting, as provided for in the Taft-Hartley law, is continued. The Shelley bill is not an antilabor bill. It is a fair and effective bill, and under its provisions crooks are

controlled, employees are given a bill of rights, and dishonesty is punished. Why not the opposition to the Shelley bill, and why then the support for the Landrum-Griffin bill?

During the amendment stage of the bill, the combination of Republicans and southern Democrats ganged up together to deny the Secretary of Labor and the Attorney General to bring an action to restrain any union officer who was about to violate the provisions of title I of the bill and left the remedy to the union member without the support of the Secretary or the Attorney General. This amendment was overwhelmingly supported by the combination and became part of the Landrum bill.

Let us analyze the motives for the Landrum-Griffin bill. This measure was sponsored by Congressman LANDRUM, a Representative from Georgia, and Congressman GRIFFIN, a Republican Representative from Michigan. The Republicans who helped defeat the Kennedy-Ives bill last year are not seeking a solution, but want a political issue. Their votes in my opinion are politically inspired without regard for the economic effect on the industrial East, North, and West. Congressman LANDRUM, the Representative from Georgia, comes from a State which is antiunion. Georgia is 1 of the 19 States in the Union which has adopted "right-to-work" laws, recognized by many as "right-to-wreck unions" laws. Organizational or recognition picking is one of labor's traditional practices to unionize a plant and to raise workers' wages. Bar all organizational picketing and recognition picketing by statute and you authorize and empower employers to exploit and to pay indecent wages and require longer hours. Where picketing is for the purpose of blackmail, then such picketing should be made a crime and prohibited. The Landrum bill, however, outlaws all types of picketing except where a plant is on strike.

The Shelley bill outlaws blackmail picketing, but provides that where picketing is carried out for the purpose of unionizing and obtaining decent wages and decent working conditions, such activities should not be condemned or curtailed. When picketing is carried on by a rival union when a legitimate union represents a plant or a business, an employer should have the right to go before a labor board for relief. Many workers throughout the United States are still not covered by a Federal minimum wage law, and these groups who are not permitted to organize by picketing will be compelled to work at slave wages. Inasmuch as Georgia has no minimum wage law, these unprotected workers are at the mercy of predatory employers. The advantages of cheap labor are recognized by industry and it flees locations where there are strong unions so they can pay cheap wages and make exorbitant profits at the expense of labor. It is a well-known fact that industry has fled from the industrial East and North to find haven in States like Georgia, South Carolina, North Carolina, and other localities, which provide right-to-work laws and do not provide any minimum wage protection and labor legislation.

The following are some of the Southern States which have right-to-work laws: Alabama, Arkansas, Florida, Mississippi, Tennessee, Texas, and Virginia. Their Representatives supported almost unanimously the Landrum-Griffin bill.

What is the situation in Georgia with respect to its labor conditions? Georgia, in my opinion, is an antiunion State. While it has compensation laws on its books, it pays a miserable maximum of \$30 per week to an injured worker as compared to \$45 per week in other States. Georgia provides no minimum wage law for employees not covered by the Federal minimum wage law and the amount an employer pays may be insufficient to provide the bare necessities of life. In Georgia, where unions seek to help themselves by picketing, statutes prohibit mass picketing. Georgia and other Southern States have a competitive edge against northern industrial States. Their edge lies in the unfair advantage these States enjoy in the form of non-union shops, lack of compulsory insurance, and lack of minimum wages.

For example, the States of Alabama, Florida, Georgia, North Carolina, South Carolina, Tennessee, and Texas do not have any compulsory law for workmen's compensation. An injured worker is left to the whim and bounty of his employer and is not protected by statute when he is injured. When it comes to the question of wages, many of the Southern States who by their support of the Landrum bill are seeking to steal away and lure Northern industry into their area have no minimum wage laws. The Southern States which have no minimum wage law are Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, and Texas. Arkansas has a minimum wage law, but the minimum is pathetically low and amounts to a minimum of 16 cents per hour; hardly sufficient to keep body and soul together. These States do not have minimum wages in the retail trades, the hotels and restaurants, and in the laundry and drycleaning establishments. They afford no protection to the workers, and if the workers are denied the right to organization which the Landrum bill takes away from them, then certainly they are at the mercy of the ruthless employers and they are permitted to starve with the sanction of the State.

This is the story behind the support of the Landrum bill. It is an economic drive by a section of our country to continue their practices of indecent wages and to attract business from fleeing industry. The Republicans for political gains have betrayed the industrial sections of our country and have joined with the southern Representatives to pass the Landrum bill over prostrate labor. The philosophy of the Landrum bill is found in the attitudes of Georgia statutes and the statutes in the Southern States. Thus, the Landrum bill is motivated incidentally by a desire to eliminate the crooks, and in my opinion, primarily for selfish economic reasons, to continue nonunion shops, and thereby to maintain for Georgia and other Southern States their competitive edge of cheap labor,

thus being able to steal industry from those industrial States which have high standards of working conditions for the working man and high wages.

The Landrum bill bans the "hot cargo" provisions while the Shelley bill does not. The ban on hot cargo is another device to maintain nonunion conditions in Southern States. A hot cargo provision in a contract means that an employer and a union agree that an employee or a truckdriver shall not be compelled to handle his employer's goods which come from or go to a struck plant. It guarantees an employee the right not to be a strikebreaker or cross a picket line. A ban on hot cargo provisions means that nonunion shops which endanger a union worker's standard of living may continue on its merry way and union employees are compelled not only to handle their goods, but cross their picket lines if necessary. Why should a truckdriver be required to handle goods for a nonunion company or a struck company which pays slave wages and compels workers to work under onerous conditions? The Landrum bill with its ban on hot cargo and its provisions make the hot-cargo stipulation an unfair labor practice, forces truckers to cross picket lines of secondary employers who pay indecent wages and provide substandard conditions to the workman. Must this truckdriver cross a picket line with goods when he knows and recognizes that crossing a picket line will help an employer whose plant is struck and who seeks to undermine his own standard of living and lure away business from industrial States? The Landrum bill requires that action on his part and this is the vice and meanness of the Landrum bill. It is in substance a fight by anti-worker States to maintain their competitive advantage by destroying the effective tools which labor has to maintain its gains in this jungle of business rivalry. The Landrum bill aligns Government on the side of employers and denies labor unions the right and the opportunity to protect themselves against predatory practices by ruthless employers.

I support the sentiments of knowledgeable and responsible leaders who are not antilabor or anti-industry, but are anticrooks, and who seek a true labor reform bill. What we seek is to guarantee the worker his right to vote, choose and participate in union affairs, to guard union funds from dissipation through loans or larceny, to punish union leaders who steal or who default in their position of trust, to disqualify Communists and convicts from holding office for a stated period of time, to protect employees in their right to refuse to cross picket lines while prohibiting concerted activities by employees to force any person to cease doing business with another person, to prohibit blackmail picketing while preserving the right to picket for legitimate union aims. What we seek in substance is support of a bill which will accomplish these objectives. I believe that the bill which best accomplishes these objectives is the Shelley bill which I support. I favor the defeat of the Landrum-Griffin bill which would press down upon the back of labor a yoke of tyranny.

A Salute to Herbert Hoover

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. McDONOUGH. Mr. Speaker, no man in American public life has served so unselfishly and has earned and deserves the respect and high regard of the people of the United States and in fact the people of the free world for the great services he has rendered to suffering human being whenever he has been called upon to help.

Herbert Hoover has lived to see the day when those that scorned and ridiculed him have had to eat their words. He stands today as one of the great humanitarians and great statesmen of the generation.

I submit herewith the following article by George Sokolsky which is a tribute to Herbert Hoover:

HOOVER AT 85

(By George E. Sokolsky)

There have been plenty of changes in this world since 1874 when on August 10 Herbert Hoover was born in an Iowa village called West Branch. His parents were Quakers; his father a blacksmith, his mother a seamstress. The parents died young and Herbert was sent to live with relatives, finally settling down in Oregon. This, then, is a proletarian beginning for a man who has been described during most of his career as the stereotype of American capitalism.

AT STANFORD

No State aided him. No government supported him. He was what we today like to call underprivileged, but he was a strong farm boy, sturdy, and willing to work, with a sharp mind and a capacity to make his way.

He managed to get enough education to go to what was then called Leland Stanford University, and he worked on all sorts of projects, many of his own devising, so that he could pay for his needs.

Typically, he ran a newspaper route and a laundry route, and he worked summers for the Geological Survey of the United States.

Thus, Herbert Hoover became a mining engineer. He married a geologist, Lou Henry, and together they set off to work in all parts of the world. His success in his own field and in business was immediate and continuous.

Herbert Hoover got into politics by accident rather than by design.

He was the leading American permanently domiciled in London at the outbreak of World War I and was, therefore, invited by Ambassador Walter Hines Page to assist the large number of American refugees who were stuck in England because of the beginning of the war and who had no means to take care of themselves.

BELGIAN RELIEF

He handled this job so ably that he was invited to undertake Belgian relief. He, who had been a mining engineer, found himself a social worker all of a sudden.

And here the simplicities of Quaker upbringing intervened.

Herbert Hoover could tolerate no conflict to interest.

When he was working for himself and his family, he did well and amassed a fortune. Now that he faced public service, he felt it essential to divest himself of conflicting assets.

From that day in 1914 when he undertook to serve the people and governments, he avoided private involvements of any kind. Fortunately, he could afford to work without compensation and that he has done ever since.

Hoover was an unpopular President, although he received an enormous vote.

The times required him to compromise his judgments and when once or twice he did compromise, particularly with the late Senator Borah, it turned out that he erred.

DEFEATED MAN

A man who has a philosophy of life, must guide himself according to those principles.

I can recall the days in 1933-34 when Herbert Hoover was sitting often alone in his rooms in the Waldorf-Astoria, avoided by those whom he helped on the road of life.

He was a defeated man and the smart boys run from a defeated man.

In contrast today, a quarter of a century later, Herbert Hoover is one of the most beloved men in the Nation, above partisanship, above rancor. He continues to work steadily, writing a series of books which will clarify the record of many otherwise uncovered situations.

Herbert Hoover stays young by working and by his constant interest in affairs. At 85, he refuses to give up to doctors, nurses and the impedimenta of age.

He can still argue a point refreshingly, his head full of details and his philosophic viewpoint clear and always guiding constructively.

SENSE OF HUMOR

His sense of humor never falls him.

Never one to be vengeful, in his old age he knows no rancor.

How he manages to clear the slate of all the little incidents which hurt a man's feelings, I do not understand.

There must be something in early Quaker teaching that does that or perhaps he has grown so big in spirit that the pin-pricks of politics become like the sting of a gnat.

One of the developments of his years is his friendship with Harry Truman: The two ex-Presidents really like each other.

It will be interesting to see Herbert Hoover at the Republican convention in Chicago in 1960, standing before his party, delivering his address. His truth goes marching on.

An Idea for Peace

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. PORTER. Mr. Speaker, when I was at the World Affairs Institute in North Carolina recently I met Mr. and Mrs. Dabney White of Greensboro, N.C. They, like so many people, are much concerned about preserving peace in the world. They, unlike many people, have worked out an idea which they think would help lead to peace. They want the East and West to compete in the area of research.

Under unanimous consent previously granted I am including hereafter their plan for peace. It is entitled "A 10-Year Plan for Preventing World War III":

A 10-YEAR PLAN FOR PREVENTING WORLD WAR III

(By Charlotte and Dabney White)

If the Russian and American people permit themselves to be caught in the death-

trap of world war III because of the bait fate has placed in Berlin, then they have no more right to claim intelligence than a doomed rat caught in a cheese-baited rat-trap.

Taking a firm stand in Berlin is not enough. We once took a firm stand with Japan and got Pearl Harbor. Nor is it enough merely to take satisfaction in our own achievements and virtues and to condemn the evils and shortcomings of others. Events demand we propose some way out of today's dilemma that can bring benefit not only to ourselves but to all the world.

Russia and China, today, proud of their great strides in catching up with the West, compete with us for allies, raw materials, and markets. In so doing they force us all to play a dangerous cold war game. It is a very old game, a game that in the past brought on nearly all the wars that have been fought. If continued this cold war game can quite easily explode into world war III. The starting incident may occur in Berlin. It may occur almost anywhere. The world today is a tinderbox and war is very near.

But war will not solve today's basic problem. World Wars I and II and the Korean war did not solve it, nor will another blood-letting. To solve that basic problem we need to find some new game that can be substituted for the present cold war game * * * some new game that can be played with more profit and less danger.

Before the dawn of history, man discovered a new idea of world-changing importance; the very simple idea that we can plant seeds and grow crops. Because of that discovery great civilizations became possible, other invention-discoveries became practical and world population increased from less than 10 million to more than 2,500 million. If that great idea were to be forgotten and remain unknown for just 3 years nearly all of those 2,500 million would be dead at the end of that time. The idea is that important.

However, in recent times, man has discovered an even greater idea, the idea that "by planting enough money and manpower in research we can find the answer to almost any problem." This is an idea that can do for man today even more than the first idea did for man in the past. It is an idea whose importance is fully realized by no one, and of such vastness as to stagger the imagination.

This mighty, godlike force of research, which can so easily be used to create a paradise on earth, it today being employed chiefly to discover deadlier and deadlier weapons for the Russians to use against us and for us to use against them. This is a sinful, shameful thing. Too long have we used research chiefly to discover new ways of killing. It is a force, far too wondrous to be used chiefly for such purpose.

It is man's chief key, given him by God, for unlocking all the shining wonders of the world and universe that man is heir to. As such it should be made into a great and ever expanding international enterprise devoted to bringing new knowledge to benefit all men everywhere.

International research on a grand scale, each year discovering vast stores of new knowledge and new ways to increase wealth; organized upon a highly competitive basis to keep all research workers doing their best, yet with the competition wholly within the organization and entirely divorced from national ambitions * * * can give us a new game to substitute for the dangerous cold war game now being played between East and West.

It can give us a new game played by competing research teams, a game highly publicized, strenuous and dramatic, turning world interest more and more toward man's ever enlarging conquest of the unknown and

diminishing interest in profiting at a neighbor's expense.

Properly organized and adequately financed, research into all the fields of human thought and action and including not only research proper, but also invention and development, should grow and grow and grow until one day it becomes the greatest industry in the world, greater than farming or manufacturing, greater even than all other industries put together, providing a new field where men compete under just laws and without fear of war or enslavement. Such work under law can pioneer a pattern for control by law of all world affairs.

The plan is a profitable plan. It will bring us material wealth, a vast new wealth of knowledge and new understanding, dynamic peace and soaring progress.

It is suggested herewith that we wrest the initiative in the present cold war from the Soviets, by proposing that we at once set up an International Agency for Research into all fields, and that we finance that Agency by levying on each nation 10 percent of the amount that nation is now spending on its military, and that this percentage be doubled each year until the whole world is spending on cooperative research at least 10 times what it is spending on war preparations.

It is suggested that we propose that a world truce be declared for the next 10 years to give a decade of peace for getting the research program underway and that any nation using armed force as an instrument of national policy be declared an outlaw and an enemy of the rest of the world and dealt with appropriately.

The above are bold proposals. Perhaps in their very boldness they offer more real chance of averting war and achieving dynamic peace than can be offered by any more traditional and less bold proposal.

If our Nation makes these proposals to the Soviets, and the Soviets turn them down, we will still have won a great ideological victory.

However, the Soviets may not turn them down. They may find in them a meeting ground for East and West and for the devising of a saner, freer, and wiser world order.

If so, we may in a few short years create more real progress for the good of all men and all the future, than will otherwise be created in the next 10,000 centuries.

The Fabulous Fiscal Fiasco

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the Democratic Digest, August 1959 issue:

THE FABULOUS FISCAL FIASCO

The Republican Party, loudly trumpeting farewell to the second Eisenhower recession, is trying to brush under the rug the consequences, past, present, and threatened, of its own fiscal irresponsibility. The Democratic Party, thunders the GOP, is the party of budget busters, of inflationists, of financial hooligans. The din created by the Elephant has reached such a pitch and volume as to persuade the unwary that the fellow might have something there. The Digest therefore desires to submit some sobering truths about the Eisenhower administration and its banker-minded fiscal policies.

(The last five paragraphs of this article list certain indisputable facts which the Elephant is having great difficulty hiding under that rug.)

President Eisenhower, a fiscal innocent who was putty in the hands of his first Secretary of the Treasury, Industrial Titan George M. Humphrey, and who is equally malleable for the greatest Secretary of the Treasury since Humphrey, namely, Robert B. Anderson, appears to be as trustful today as ever.

If he found it galling that the results of the Humphrey-Anderson advice forced him to ask Congress in June to raise the ceiling on the public debt, and ask it also to abolish the historic 4½ percent limit on Government bond interest, he took solace in the cry of "Inflation, inflation"—a magic word used by all Republican fiscal wizards to explain why they have got the Government's financial affairs into such a stew.

The Cabinet of millionaires, inheriting from the Democrats a high prosperity without inflation, had scarcely taken the oath before Secretary Humphrey, with a let-George-do-it nod from Ike, started raising interest rates. The Treasury upped the rate on Government bonds far above the requirements of the market—from the previous Democratic rate of 3½ percent to a charitable 3¼. (Charitable to the banks and corporations, that is.) The effect on interest rates in general was electric—and a vicious circle began to rotate, generating inflation as it turned. "Why I can remember," Humphrey mused fondly, "when 7 percent interest was normal. We thought nothing of it." (Today the banks' "prime rate," the interest charged gilt-edge commercial borrowers, has climbed to 4½ percent—and the price of money is scaled up rapidly for the less favored.)

Humphrey also sponsored a \$7 billion tax cut, of which three-quarters was given unfairly and foolishly to corporations and higher income individuals. Foolishly, because this policy caused investment in productive capacity to outrun consumption, with unhappy results. Columnist Joseph Alsop wrote last month: "There would be no budget-balancing problem today, as there would be much less inflationary pressure too," if Humphrey had not put over this "profligate" tax cut.

Humphrey presided over the first Eisenhower recession (1953-54), and converted the recovery of 1955 into the stagnation of 1956-57. The second recession was leering around the corner as he bowed out and returned to his countinghouses in the summer of 1957.

The Republicans choose to blot the recessions from memory, and to assure us that all is now rosy. They blithely advise Congress that the fiscal policies under which the recessions occurred should be not only ratified but intensified. To be sure, the vast Eisenhower deficits have cooled off the GOP's infatuation with tax cutting, but the ardor for tight money is unabated. The balanced budget is given precedence by a veto-branishing President over (1) adequate defenses against an opponent of unexampled might; over (2) the encouragement of a swifter growth by the economy, and over (3) the urgent needs of a multiplying population in such fields as education, housing, urban blight, and conservation of natural resources. (Creeping socialism.) Fiscal management under Eisenhower continues to follow classic Republican theory—as imaginative as Calvin Coolidge, as dynamic as Herbert Hoover, as progressive as the trickle-down philosophy of McKinley's day.

The Democratic Party is just as devoted to a balanced budget as the Republicans profess to be—despite their mammoth deficit of

fiscal 1959. Speaker SAM RAYBURN pointed out July 2, in a sharp rebuke to GOP propagandists, that the Democratic Congress had already cut \$353 million off the Eisenhower budget requests, and he predicted the cuts would reach \$500 million to \$1 billion. But those savings, basically, are no more than a prudent overseeing of the routine house-keeping of the Government. Let us look beyond such details to the big picture.

In the House of Representatives a few weeks ago Representative CHESTER BOWLES, Democrat of Connecticut, noted that "our annual output of goods and services remains more than twice that of the Soviet Union." But he quoted Allen W. Dulles, head of the Central Intelligence Agency, as warning that a much greater rate of growth is enabling the U.S.S.R. to close the gap rapidly. He cited this somber statement by Dulles:

"If it is true that our industrial growth (between now and the end of the new Soviet 7-year plan) will be only 2 percent a year, the United States will be virtually committing economic suicide."

The truth is, the average growth rate of our economy in the first 6 Eisenhower years was only 1.3 percent annually.

TIGHT MONEY STOPS GROWTH

Growth is faster this year, but already the administration (abetted by the Federal Reserve Board) is applying the brakes of tight money. Economists of the top rank¹ reported in July that the "repressive policies now in effect might well lead to an average annual growth rate" for 1958-64—the approximate term of the Soviet 7-year plan—of less than half of the 5 percent annual rate which "we need and can readily achieve."

In 1953-58, these economists said, "we fell more than \$150 billion short of full production, and suffered about 10 million man-years of unnecessary unemployment. In addition, Federal, State, and local governments collected about \$30 to \$35 billion less in revenues than a full rate of economic growth would have generated at existing tax rates."

The economists commented: "The erroneous methods used to fight inflation have contributed greatly to this poor economic performance. Especially, the tight money policy and successive retrenchments in the Federal Budget have been powerful factors in the deficient rate of economic growth."

They continued: "Now in 1959, we are moving upward again as we did in 1955. And once again, we are misreading the signs and applying the wrong policies. The Federal Reserve Board is not reactivating with a vengeance the tight money policy, which has proved to be economically repressive and socially regressive, and a very frail weapon against inflation. In accord with the misguided FRB policies, the administration is asking for the removal of ceilings on interest rates. Budgetary retrenchment is again being given precedence over the neglected priorities of our national and international needs."

"Few, if any, of the fundamental maladjustments which contributed to the erratic and low growth rates of recent years have been corrected. Some of them are now being further aggravated—for example, the further forced decline of farm income, and the immense drive against wage adjustments."

But the President seems content. The oracles of the White House stoop, Messrs. HALLECK and DIRKSEN, are radiant. The Republican National Committee's mimeographs

¹"Inflation, Cause and Cure," a study directed by Leon H. Keyserling for the Conference on Economic Progress, Washington, D.C.

brim with happy tributes to prosperity. The money lenders are happy, too—

The Federal Reserve Board reports that profits (after taxes) of its member banks rose 25 percent in 1958. Since the last Truman year, bank profits (again, after taxes) have increased by 75 percent.

George Champion, president of New York's biggest bank, the Chase Manhattan, says a "prime rate" of interest even higher than the 4½ percent established last May is possible. (He awaits it with open arms.) Henry Clay Alexander, chairman of the Morgan Guaranty Trust, "looks for a continuing rise in the cost of money." (His welcome mat is out.)

Government programs to help home building have felt the hot breath of tight money. Congress a few weeks ago had to raise from 4½ percent to 5½ percent the interest allowable on housing loans guaranteed by the Veterans' Administration. Similarly, the Federal Housing Administration is said to be pondering a raise to 5½ percent in the interest permitted on FHA-guaranteed loans. (Even at the existing rate, a typical FHA mortgage negotiated today would cost \$5,700 in interest, against \$4,500 in 1952.)

But the GOP, although it has given us more inflation than we ever had before except as a result of war, still insists that high-priced money is the best weapon against inflation. Is it working that way? Perhaps it has deterred some people from buying homes. But look at this—

In May alone, consumers increased their outstanding installment debt by \$443 million (seasonally adjusted), the Federal Reserve Board reported in July. That was the biggest jump since September 1955. We may be sure that there was a hidden tax on much of that, buying—for higher interest is in effect a tax, imposed by the Government's tight money policies, and payable to lenders rather than to the Government. But the point is, tight money did not dampen the buying urge—hence did not work against inflation.

Actually, higher interest rates are of themselves inflationary, since they increase costs without increasing production. "Few things have contributed as much to inflation as rising interest rates," Senator LYNDON B. JOHNSON, Democrat, of Texas, said recently.

A budget deficit is supposed to be inflationary. Yet Mr. Eisenhower, who loves to denounce inflation, told Congress in June, as casually as if he were asking it to pass the butter, that higher rates necessitated his requesting \$500 million more to pay the interest on the public debt than he had asked in his budget message only 5 months earlier.

One penny and part of a second penny out of every tax dime now go to the unproductive cost of carrying the Federal debt. The effect of tight money and inflation are reflected also in the debt burdens of the States and cities, of school districts and of public utilities, of home and automobile buyers—indeed, in one way or another, of every American.

And the Republican Party, failure going to its head, is proud of it!

On June 30 last, the fiscal year ended with the biggest peacetime Federal deficit in history—around \$12.5 billion.

Total 6-year Eisenhower deficit—\$19.4 billion versus record of first 6 Truman years—\$3.7 billion surplus.

Public debt: When Truman departed, \$267 billion. On June 30 last, \$284 billion.

Cost of interest on public debt: In Truman's last full fiscal year, \$5.8 billion. Requested by Eisenhower for fiscal 1960, \$8.6 billion (up half a billion from his January estimate). The total Federal budget in 1959 for all purposes was \$7.9 billion.

**Public Opinion Has Shaped the Record
of Accomplishments of This Session of
the 86th Congress**

**EXTENSION OF REMARKS
OF**

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. PELLY. Mr. Speaker, we are close enough to adjournment to be able to evaluate the record of this 1st session of the 86th Congress.

In this connection, recently the question was directed to me in a press interview as to whether the record of accomplishment was good or bad.

My reply was, "Not bad."

Then I was asked whether the credit for this record should be given to the Democrats or the Republicans.

"The credit should go to the public" was my answer, because, as I said, it was public opinion, most of all, that wrote the record of this Congress and kept it from being bad. I also attributed great credit to President Eisenhower for his leadership and the fact that by his press conferences and otherwise he stimulated discussions in the press and the expression of public opinion.

The question was raised following this remark as to whether the 86th has been a budget-busting Congress, and with proper and due recognition of the efforts of the House Appropriations Committee, I said we could have a balanced budget in fiscal 1960, especially if the present high rate of prosperity continues so that the Federal revenue from taxes will exceed \$80 billion.

Also, I expressed the belief that, thanks to public opinion favoring the President's "hold the line" on Federal spending programs, the threat of inflation has diminished. I responded also by stating my opinion that the best bulwark against inflation is public ownership of U.S. Savings Bonds.

Mr. Speaker, recently on the NBC radio and television program "Meet the Press" the distinguished former President of the United States, the Honorable Herbert Hoover, expressed the opinion that our country is in more imminent danger from internal causes than from the cold war.

He cited inflation, unbalanced budgets, and overspending by Congress as being some of the domestic dangers.

Mr. Speaker, I agree with Mr. Hoover that those are dangers, and that is why I have constantly resisted pressures to increase Federal spending. Moreover, as I have just inferred, I believe the net result of the efforts of those of us in Congress who have opposed new programs calling for excessive expenditures have been successful overall in this Congress.

Herbert Hoover was on the eve of his 85th birthday at the time of that TV interview. His appraisal of the domestic situation is worth noting. He mentioned the dangers from within, but he was not pessimistic; and we can all take a lesson

of courage and faith out of his experience and words of wisdom.

He was asked:

Have these things weakened us so much that we can't stand out strong against Russia?

To which he replied:

No, I wouldn't want anybody to think for a moment that the American people are not capable of solving any crisis. As a matter of fact, this Nation is now in its 183d year, and it has lasted longer than any representative Government. It has gone through seven wars, has gone through three great depressions.

Mr. Hoover mentioned that we have had some bad administrations in Washington, and we have had evil days on account of wars which produced a series of crises. But he concluded as follows:

And yet, after all that, we still have of the original heritage of the American people a very large part of what the forefathers established. We still have a freedom of religion, freedom of press, freedom of assembly, freedom of enterprise within the limits of some socialistic tack; freedom of speech within the limits of very mild laws on the subject. Generally we possess today the same vitality that gave us the initiative and the ability to solve these crises that we have had in the past.

Mr. Speaker, like Mr. Hoover I have faith in the American people. Perhaps sometimes I feel Congress is not acting wisely. However, as this session of Congress indicates, generally the thinking of the public prevails and I believe the judgment of the people, where they are given the facts, is sound. Yes, I give credit for the accomplishments and record of this Congress and this session to the force of public opinion. As to partisan credit or criticism, I think Republican and Democratic Members of Congress alike can be counted on to debate that issue after adjournment. Instead, I conclude these remarks with the personal comment that service in this House this session, as it always is, has been a privilege and challenge. Individually and collectively we are honored beyond measure to be Members of the greatest legislative body in the world. For that honor I am grateful and only hope my service has merited and justified the judgment of the fine friends and people who sent me here.

Labor Reform Legislation

**EXTENSION OF REMARKS
OF**

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1959

Mr. FRIEDEL. Mr. Speaker, to eliminate any misunderstanding of my position, which may have resulted from my votes on the labor reform legislation passed by the House of Representatives, I think an explanation is in order.

I would like to begin by saying that I am well aware that labor reform legislation is necessary to prevent the continuation of the racketeering and corruption brought to light by the McClellan

committee hearings. However, it must be borne in mind that this condition exists in only a minority of the unions; the vast majority of unions, their leaders and members are, like most people, fine, upstanding, law-abiding citizens.

The House Committee on Education and Labor held extensive hearings on all pending labor reform bills and considered them for approximately 4 months. The bill finally reported by the committee, H.R. 8342, was the result of comprehensive consideration and was designed to do away with the evil practices of corruption, boycotting, hot-cargo handling, and blackmail picketing. It was also designed to protect the union members from being victimized by unscrupulous leaders and the general public from unscrupulous racketeers.

The Landrum-Griffin bill was introduced after the committee reported its bill and did not have the benefit of committee hearings and consideration. Although these bills were widely discussed and debated, I sincerely doubt that they were given sufficient consideration to secure a comprehensive understanding of their impact. Personally, I believe this is a punitive measure.

Passage of the Landrum bill was, I believe, a result of appeal to emotions, rather than logic and commonsense. These were my reasons for voting against this measure when it was offered as a substitute for the committee bill.

When the Landrum bill came up for final passage, I voted in favor of it, knowing that some labor reform legislation was needed and should be enacted. This bill will now go to conference to iron out the differences between the Senate- and House-passed versions. I hope a reasonable and sensible solution to the problem will be achieved which will result in a bill that is fair and just to the unions, union members, and the welfare of the Nation. Such a bill should not penalize the vast majority of unions and union members who are not guilty of illegal and reprehensible practices and, at the same time, should curb the evils pointed out by the Senate Rackets Committee.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Greenville: Industry and Water

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. JOHNSON of Texas. Mr. President, a willingness to tackle and solve local problems at the local level is always commendable.

Citizens of Greenville, Tex., with courage and foresight, faced the problem of assuring an adequate supply of water for domestic and industrial use.

Through their elected city officials, citizens of Greenville successfully attacked the problem.

The story of this achievement is related in an editorial entitled "Greenville: Industry and Water," that appeared August 9, 1959, in the Greenville Herald-Banner. I ask unanimous consent, Mr. President, that this editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

GREENVILLE: INDUSTRY AND WATER

Economic and marketing experts have joined the industrial forecasters in proclaiming that water supply and availability are great factors and will become even greater factors in industrial development during the next few years.

In the race for industry, Greenville need not take a back seat to any community when water flows into the picture.

Thanks to the foresight of Greenville city councils who have served in the past and the men now serving, this community will be able to boast of a supply of upward of 30 million gallons daily and can point now to storage of almost 2 billion gallons in reservoirs today. That's beacoup water.

Greenville is to build soon an intake structure at Lake Tawakoni (formerly known as Iron Bridge Reservoir). It has an agreement whereby we have first call on up to 21 millions of gallons daily once the gaping hole that will be the reservoir takes on water. While the cost to build a line from the reservoir site to Greenville will run between \$1½ and \$2 million, the future industrial development it promises makes the amount somewhat significant.

Industry is already looking at Greenville and the eye they turn toward this community becomes increasingly favorable. Some will be users of tremendous amounts of water. Others are looking for water, location, highway and rail facilities. Greenville has all of these and additional assets not on the list of many communities.

But competition for major industries and industry of any substantial size and payroll is intense. That means that community attitude and desire again rears two heads and Greenville has the right attitude and an intense desire to grow.

While the city administration is currently engaged in a money saving and an efficiency program at some levels, only an idiot would begin to harbor the illusion that Greenville can meet the needs of expansion demanded by the future with a pinchpenny budget and a pennywise, pound-foolish attitude. Progress does cost money, and we can only say it is to the credit of Greenville to save money being spent foolishly or without return and direct it into channels that will return dividends. Growth dividends to include new industry, more families and payrolls. More good, solid citizens and improved facilities and services.

The United Nations and a Bold Suggestion for the Use of Surplus Food Commodities for Economic and Social Development

EXTENSION OF REMARKS

OF

HON. DONALD J. IRWIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. IRWIN. Mr. Speaker, much has been written of late concerning an international food for peace plan and I would like to call the attention of Congress to a bold yet practical suggestion advanced on this subject by Mr. Glen Leet, program director for the Save the Children Federation, with offices in Norwalk, Conn., and New York City.

Recently, Mr. Leet testified in behalf of a suggestion that the United Nations should assume a role of great importance with respect to the use of commodities in ways which will hold many millions of people at a minimum standard of living and some marginal level of productivity.

Under leave to extend my remarks, I would like to introduce into the CONGRESSIONAL RECORD the following excerpts from Mr. Leet's testimony in support of his suggestion:

Through the U.N. there can be accomplished the international discussion of the problems, principles, and methods which are involved. There can be multilateral discussions and hearings in which all nations will have an opportunity to study and discuss the plans brought forward by individual countries. The outcome to a contributing country is that they would have assurance that the plans to which they contributed were those based on a thoroughgoing study, that there would be plans that have survived in an international discussion and plans in which any objections from other countries could have already been taken into consideration. The U.N. is in a unique position to exercise a role of value both to the surplus-producing countries and to those

which can utilize such surpluses in their development programs. It can—

(a) Provide a forum for the formulation of internationally accepted and generally applicable policies;

(b) Provide a center for receiving applications;

(c) Refer applications to appropriate U.N. agencies for technical appraisal;

(d) Hold hearings enabling interested governments to express themselves on specific proposals;

(e) Transmit to the executing governments internationally approved courses of action, with respect both to commodities and to the use of local currencies derived therefrom, and with indications of available relevant U.N. technical services for economic and social development.

The provision of such international facilities is a very great service to any nation concerned with the constructive use of surplus commodities. Actions taken by such a process, by either donor or recipient countries, will be much less subject to suspicion and distrust. They would remove much of the criticism directed against the contributing country when such arrangements are made on a bilateral basis.

The U.N. should not become involved in the complexities of receiving, storing, and transporting, or in any way physically handling or paying for the handling of such surpluses. Surplus-producing countries already have facilities for this which should not be duplicated.

MAJOR RESPONSIBILITIES

The creation of any new agencies is undesirable. The existing facilities should be used. Within the U.N. framework the major responsibilities should be with those instrumentalities of the U.N. which are primarily concerned with economic and social development. The major concerns are hunger and the need of the underdeveloped areas to eliminate the causes of underprivilege through development.

The major responsibility should not be delegated to FAO because its chief concern is not with economic and social development. The problem will not be solved if the central focus is on agricultural commodities. It can be effectively solved only if surpluses are considered as but one of the resources to be utilized in a comprehensive approach to development.

The use of commodities for development is sound only as a supplement to general development programs reinforced with adequate technical services. Therefore, surpluses cannot be considered as a substitute for member country contributions to the U.N. Special Fund, the expanded program of technical assistance or to the specialized agencies.

It is desirable that local currencies resulting from the sale of such commodities should be made available for economic and social development purposes and for technical assistance services provided by the U.N., the U.N. Special Fund, or the U.N. specialized agencies. Such local currencies should be available to the U.N. in addition to and not as a substitute for normal commitments.

An unprecedented opportunity presents itself at this time for utilization of U.N. facilities in a way which can greatly magnify the effectiveness of the U.N. and the U.N. Special Fund.

Parallel Between Highway Bridges at Mackinac Strait and Columbia River

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. NEUBERGER. Mr. President, a great discussion prevails in the Pacific Northwest over whether or not to construct a \$27 million bridge across the mouth of the mighty Columbia River between Astoria, Oreg., and Megler, Wash.

My own State of Oregon has taken the lead in authorizing bonds to help finance this huge structure on U.S. 101, the Pacific coast highway, but thus far our sister State of Washington has been reluctant to do likewise.

As a member of the Roads and Highways Subcommittee of the U.S. Senate, I have tried to do my best to encourage construction of the great structure because I believe it would do wonders for our seacoast economy in the region. Proof now is demonstrated of this belief, in the economic gains brought to Michigan's Upper Peninsula by the \$99,800,000 bridge recently opened across Mackinac Strait.

An illuminating article in the New York Times for August 16, 1959, has described how the Mackinac Bridge attracted 1,390,390 automobiles during its first partial year of operation as contrasted with only 938,282 cars in the last year that ferry boats served the area. Furthermore, the Mackinac Bridge Authority is encountering no difficulty in meeting interest charges and all the necessary operating costs.

Because of the parallel with the proposed Astoria bridge across the mouth of the great Columbia River, Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, the New York Times article entitled "Mackinac Bridge Spurs Economy."

There being no objection, the article was ordered to be printed in the Record, as follows:

MACKINAC BRIDGE SPURS ECONOMY—TRAFFIC RUNNING 11 PERCENT BEHIND 1958, BUT BUSINESS ON PENINSULA IS BOOMING

ST. IGNACE, MICH., August 15.—In its first 25 months Michigan's Mackinac Bridge has operated in the black, pumped new life into the economy of the upper peninsula and established itself as the State's No. 1 tourist attraction.

Despite an almost universal feeling in Michigan's northland that the 5-mile-long steel span over the Mackinac Strait has brought a new era of tourism, it must be noted that bridge traffic this summer is running about 11 percent behind that of a year ago.

But the traffic is about 50 percent greater than that carried by State ferries that formerly provided the only access to the upper peninsula from lower Michigan.

This means that several hundred thousands more tourists are pouring into the small upper peninsula communities amid the green forests, hundreds of lakes and trout streams and areas connected by generally good highways.

ROOMS HARD TO GET

Responding to this relatively sudden influx, businessmen have built numerous new motels, restaurants, gift shops, and tourist attractions. But in this northern terminus of the bridge, motel rooms are still hard to get and visitors often have to stand in line while waiting for a table in restaurants.

"I can fill my 40 units by 11 a.m. every day," said one St. Ignace motel operator, who refuses to hold reservations for late afternoon arrivals.

At Ste. Paul Marie, a chamber of commerce official commented, "Oh, brother, if you wait until 6 p.m. to get a motel room, you're in trouble."

W. Stewart Woodfill, chairman of the Mackinac Island State Park Commission and owner of the Grand Hotel, a showplace on the island, estimates that the number of persons visiting the island has increased about 35 percent since the bridge was opened.

MANY TOURISTS DRIVE

Steamboats for that scenic spot leave from Mackinaw City, at the southern terminus of the bridge, or from this city at the northern terminus. But many tourists drive northward across the bridge—with an auto toll of \$3.25—and take a trip to the island from St. Ignace before going elsewhere on the upper peninsula. A ferry line is operating this year also, providing a tremendously increased capacity for island travelers.

In July the Mackinac Bridge Authority grossed nearly a million dollars in tolls and showed signs of catching up with last year's traffic, according to Prentiss M. Brown, chairman of the authority.

The traffic total in July was 273,558 vehicles and revenues were \$987,336. By comparison, traffic in July, 1958, the first month after the bridge's dedication, was 307,838 vehicles and revenues were \$1,082,885. The bridge was opened in November 1957, but was not dedicated formally until the following June.

In 1958, the first full calendar year of the bridge's operation, traffic totaled 1,390,390 cars and brought in revenue of \$5,132,958. This compared with traffic of 938,283 and revenues of \$3,664,047 for 1957, including 10 months of ferry operation and 2 months of bridge traffic and revenue.

Engineering studies prior to the bridge's construction estimated that traffic during the first year would reach about 1,850,000. Although this forecast proved too optimistic, the authority is having no trouble meeting its interest charges and operating costs.

Interest on the bonds for the \$99,800,000 bridge amounts to \$4,242,000 annually. This includes \$79,800,000 in 4 percent bonds and \$20 million in 5¼ percent bonds. Operational costs are budgeted at \$600,000 but \$417,000 of this total is paid by the Michigan State Highway Department.

OUTLOOK IS GOOD

Last year the authority spent \$588,000 in operating the bridge and thus had to pay \$171,000 above what the highway department provided.

Interest charges and operating expenses of the authority totaled \$4,413,000, nearly \$720,000 less than incoming revenue.

Lawrence A. Rubin, executive secretary of the bridge authority, is optimistic about the

future. He thinks the original traffic bulge resulting from curiosity is decreasing and normal tourist traffic is increasing.

"I can't see anything ahead that would jeopardize our financial position," he said. "Our traffic should grow as new recreational facilities and tourist attractions are developed."

Lyndon Johnson Reviews Sound Spending Policies of Democratic Congress

EXTENSION OF REMARKS

OF

HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. BROOKS of Texas. Mr. Speaker, in the face of unwarranted charges of wasteful spending by the Democratic Congresses which have served during the present administration, the Senate majority leader has helped give the American people the true facts about fiscal responsibility.

Senate Majority Leader LYNDON JOHNSON has forcefully outlined that during the last 5 fiscal years Congress has reduced the President's budget requests by more than \$10 billion. It is estimated that the House and Senate will add substantial savings to that figure for fiscal year 1960.

Senator JOHNSON has also reminded the American people that the Democratic Congress has not approved one single dollar's spending by any backdoor procedure that the President himself did not request or approve.

Commending the Senate majority leader for setting the record straight, the Beaumont (Tex.) Enterprise has reviewed Senator JOHNSON's statements for the past few years regarding the national budget. Under leave to extend my remarks, I submit this editorial of August 11, 1959, in today's Record so that every Member of the House and Senate may have an opportunity to review this constructive record compiled by our Democratic leadership:

CONGRESS AND THE SPENDING RECORD

Senate Majority Leader LYNDON B. JOHNSON is increasingly resentful of having the Democrats labeled the party of spending, a common practice of the Republicans these days.

It must also make him unhappy to have the same accusing finger pointed at him as an individual. He is convinced that, in both instances, some of the GOP backers of President Eisenhower's budget-balancing campaign are engaging in talk that cannot be justified at all.

Furthermore, the Texan is jealous of the good name of Congress, a commendable attitude, and it irks him no end to have the executive branch laying so much blame for the country's financial difficulties at the door of the National Legislature.

Senator JOHNSON said months ago that more than \$10 billion were whittled by Congress from budget recommendations in the last 5 fiscal years. And he has cited both figures and personal remarks that give convincing support.

Here are some CONGRESSIONAL RECORD reports of budget statements made by the Texas lawmaker back in 1957:

March 8: After indicating that a survey made in Texas favored a reduction in the budget, Senator JOHNSON said his efforts would be directed toward that end.

May 1: Senator JOHNSON pointed out the inconsistency in statements made by members of the executive branch; some responsible Cabinet officers recommending that the budget be cut, but when cuts were made in the House, asking the Senate to restore them. He further said he was going to vote his convictions and not vote for any grant that could not be fully justified.

May 8: In commenting on the budget Senator JOHNSON said, "We cannot cut the budget without cutting spending, and we cannot adopt one course in January and another course in May."

July 11: Senator JOHNSON, in discussing the battle of the budget, provided figures which indicate reductions approaching \$4 billion—or 6.4 percent—from the President's budget that was submitted to us in January.

Following are some CONGRESSIONAL RECORD reports of budget statements by the Senate majority leader in 1959:

January 20: Senator JOHNSON, in referring to the President's budget message, stated: "This is not a balanced budget. It is a propaganda budget. . . . This budget would spend substantially more than current income. . . . Both prudence and candor require that this budget be given a most searching study by the Congress."

February 5: Senator JOHNSON said: "I am going to work as diligently as I can, as leader of the majority, as a member of the Appropriations Committee, to get the budget in balance."

February 9: Senator JOHNSON stated: "I ask unanimous consent to have printed in the Record at the conclusion of my remarks a summary of the President's budget estimates and the appropriations of the Congress . . . showing that the Congress has reduced the budget estimate in each one of the last 6 years. The total appropriation was \$22.6 billion less than the Congress was asked to appropriate."

February 9: Senator JOHNSON said: "I do not think that either party should be labeled as the party of the savers or the party of the spenders, but the record does show that the Congress as an institution has been much more saving in its appropriations than the Executive has been in its requests for appropriations."

February 16: Senator JOHNSON stated he felt that a distorted picture was being presented of one branch wanting to hold the line on spending—and the other branch wanting to spend. He pointed out the President has asked for increases in budget estimates—such as 26 percent for foreign aid, 80 percent for OCDM, and many others.

May 28: Senator JOHNSON, following final action on the Treasury-Post Office appropriation bill for 1960, stated: "The Committee on Appropriations has made many reductions, in fact the committee has taken such action each year since the President assumed office. The President of the United States, good, kindly, economical man that he is, has never submitted to Congress a budget which Congress has not reduced."

June 9: Senator JOHNSON assured Senator Bush that, "It is not a new-found desire of the majority leader to stay within the budget. The majority leader stated last fall that he hoped we could stay within the budget. . . . I have stated on the floor of the Senate and in public meetings all over the country that I hoped this Congress would appropriate less money than the President asked the Congress to appropriate."

June 16: Senator JOHNSON inserted in the Record his newsletter, dated February 10, 1959, in which he had recounted over a \$10 billion budget cut by Congress during the last 5 fiscal years. The newsletter promised that: "The Senate this year will take the same hard look at the budget recommendations."

July 9: Senator JOHNSON, during a discussion of the housing veto, stated: "Let me say a word about the appropriations bills. . . . In some cases, as I stated last fall when I met with the President, I believe the Congress will actually vote appropriations less than those the President recommended. That prediction has been borne out by the appropriation bills passed thus far."

The majority leader is still convinced that this session of Congress will appropriate less money than requested by the President, since it has been done in the past without jeopardizing national security and without illogical spite work.

Domestic Surplus Property Donations for Education, Health, and Civil Defense

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks, I am placing in the CONGRESSIONAL RECORD a recent press release of Secretary Flemming of the Department of Health, Education, and Welfare which indicates that personal property in the amount of \$126,822,683. Acquisition cost, was made available to the States for purposes of education, health, and civil defense during the period April 1 through June 30, 1959. During the same period real property in the amount of \$3,211,895 was donated for these purposes.

This is the largest quarterly program we have had and indicates better organization at all levels and the continued declaration of surplus property by the military agencies. It is to be noted that the State of New York had the highest total of \$16,065,988 for the quarter and this, with the overall increase in volume, bespeaks the added impetus given to the program by my colleagues on the Special Subcommittee on Donable Property, the gentleman from New York [Mr. BARRY], and the gentleman from Connecticut [Mr. MONAGAN].

Mr. Speaker, though the domestic donable surplus property program is large, with allocations of \$261 million for the entire fiscal year 1959, it should be larger. Our eligible institutions need much more property which is being sold at small return to the taxpayer.

Unfortunately, we have not yet developed a program to utilize excess overseas property for purposes of education and health. It is expected that the volume of this excess property will amount to \$1.4 billion acquisition cost in the current fiscal year.

The release of Secretary Flemming follows:

Surplus property for which the Federal Government paid \$130,034,578 was made available to the States for educational, public health, and civil defense purposes during April, May, and June 1959, by the Department of Health, Education, and Welfare.

Real property accounted for \$3,211,895 and personal property for \$126,822,683.

Secretary Arthur S. Flemming announced the totals in making his quarterly report to Congress on the Department's surplus property program.

Property no longer needed by the Federal Government is distributed, under the provisions of the Federal Property and Administrative Services Act of 1949, to educational and public health agencies and civil defense organizations of State and local governments, and to eligible nonprofit health and educational institutions exempt from Federal taxes. Regional offices of the Department of Health, Education, and Welfare and various State agencies channel the surplus property to the institutions.

Property transferred to the States includes such items as school and hospital building sites; buildings suitable for college dormitory or faculty housing; motor vehicles; hospital, school, and office furniture; hand and machine tools; motion picture projectors; laboratory equipment; and school and office supplies.

The following is a State-by-State list of real and personal property distributed, April-June 1959. State surplus property agencies can furnish details on the operation of the program within their States.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Personal property made available for distribution to public health and educational institutions and civil defense organizations and real property disposed of to public health and educational institutions, Apr. 1 through June 30, 1959 (acquisition cost)

Traffic Safety

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. JOHNSON of Texas. Mr. President, traffic safety is a matter of national interest and national concern.

With increased interest in this problem has come growing recognition of a new facet of highway travel. This is called turnpike driving.

The Abilene Reporter-News, in an editorial carried August 10, 1959, discussed this matter. I ask unanimous consent, in the interest of promoting safer driving, that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TURNPIKE DRIVING

As the new network of superhighways spreads (despite temporary slowdowns such as now threatens) all of us motorists around the country will need to change some driving habits, the safety experts tell us. We'll need to learn how to be turnpike drivers.

Here in the Abilene area we have more than the average number of miles of new roads already in use. As soon as the redtape is untangled, Highway Engineer Jake Roberts and his fellow workers will have our town astraddle big Interstate 20.

Enough of Interstate 20 has been in use long enough for us to realize that you can't build a highway which will be accident-proof. Not as long as you let automobiles driven by human beings use it. You can divide the traffic lanes, control the access, make it wide and straight as you please, and still you'll have wrecks.

There's more to being a good turnpike driver than just fighting off monotony. For one thing, the superroad automatically steps up the average speed of the cars on it—legally, as in some cases; illegally in many others.

The students of safety point out that one of the commonest mistakes in driving on the turnpikes is in the technique of passing another car. In city traffic or in traffic on an old-style highway a driver usually has

little choice but to pass from close behind another vehicle. You dart around when you can.

That tactic can be dangerous, even fatal, on a turnpike. At high speed, a motorist has no business being close on another's heels. Turnpikes are designed for lane traffic. If you swing out sharply from behind a car to pass it from a close position, you run the risk of suddenly blocking the path of a fast car coming up in the left-hand lane.

The main thing to remember in driving on a turnpike is that the average speed is faster and the smallest error can, therefore, be magnified almost instantly into a tremendous crash.

Alabama Department, American Legion, Supports Roberts Bill, H.R. 6671

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. ROBERTS. Mr. Speaker, on April 27 I introduced H.R. 6671, to amend title II of the Social Security Act to provide that the child of an insured individual, after attaining age 18, may receive child's insurance benefits until he attains age 22 if he is a student attending school.

This to me is sensible legislation which would greatly aid a number of young people and their families all over the country, and which would contribute to educational achievement.

I was delighted to learn that the Department of Alabama of the American Legion has adopted at its annual convention a resolution strongly approving this bill, and urging congressional approval.

Under leave to extend my remarks, I include this resolution:

RESOLUTION 5

Whereas there is pending before Congress a measure, H.R. 6671, to amend title II of the Social Security Act to provide that the child of an insured individual, after attaining the age of 18, may receive a child's insurance benefits until they attain the age of 22 if he is a student attending full-time school and making satisfactory grades; and

Whereas the youth of this Nation are the very backbone and most precious resource that God has given our country; and

Whereas the Legislature and Alabama Senate has passed a similar resolution: Therefore be it

Resolved, That the Alabama Department of the American Legion in its annual convention in Birmingham, Ala., meeting July 19 through 21, 1959, send letters over the signature of the department commander to our Congressmen and Senators in Washington, D.C., to endeavor to their fullest extent that H.R. 6671 be passed and that a copy of this resolution be mailed to each of the Congressmen and Senators and the Honorable Speaker of the House of Representatives and the President of the Senate, the Honorable RICHARD NIXON.

This resolution was presented by Post No. 105, Goodwater, Ala., and adopted by the resolutions committee.

Statement by U.S. National Student Association

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1959

Mr. KENNEDY. Mr. President, during the debate upon the bill introduced by Senator CLARK and myself, to repeal section 1001(f) of the National Defense Education Act, the question was asked whether the students themselves objected to the oath and affidavit requirements of this act. Since that debate, the U.S. National Student Association, which represents over 1,300,000 students, has adopted a resolution opposing the oath and affidavit requirements. The resolution expresses the hope that the Senate will see fit to reconsider the action by which it referred the bill to committee.

In order that the attitude of the representatives of American students should be called to the attention of this body, I ask unanimous consent that the statement made by the association be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

U.S. NATIONAL STUDENT ASSOCIATION STATEMENT CONCERNING SECTION 1001(f), NATIONAL DEFENSE EDUCATION ACT

The U.S. National Student Association, a confederation of over 390 student bodies and representing over 1,300,000 students, continually has supported efforts to strike from the National Defense Education Act section 1001(f) which requires students entering into the terms of the act to pledge an oath of allegiance and to file an affidavit disclaiming any membership in an allegedly subversive group or belief in allegedly subversive principles. The Senate's recent action in referring consideration of the desirability or necessity of section 1001(f) back to committee, rendering further Senate consideration of the section highly unlikely during the present session of Congress, is considered by USNSA as irresponsible and lacking in the fortitude expected of the U.S. Senate.

By its action, the Senate effectively rejected three viable, realistic alternatives to section 1001(f)—the proposals of Senators KENNEDY, MUNDT, and JAVITS; in doing so, it clearly dictated against the desires of students, student groups, educators, and educational groups, who have for months clearly indicated their distaste for and opposition to the section in question. The referral back to committee clearly ignores the fact that complete committee hearings have already been held and that these hearings indicated strong public support for the amendment of section 1001(f). The committee itself, in fact, voted 12 to 3 to recommend passage of Senator KENNEDY's proposal which would have stricken the section from the act. The Senate's decision, at best, indicates only the unwillingness of the Senate to face a fundamental question directly related to the freedom of the individual.

Because section 1001(f) apparently is meant to remain in the National Defense Education Act, it is safe to assume that a significant number of students, otherwise eligible under the terms of the act, will be dis-

criminated against, not because they are subversive, but because they are opposed in principle to the Federal Government requiring or restricting certain actions or beliefs vis-a-vis a disclaimer affidavit. Such a measure enacted on the part of the Government seems to the USNSA to be an example of employing totalitarian methods to oppose totalitarianism. Democracy, thus weakened, is a poor opponent of totalitarianism itself or of the processes of subversion.

USNSA's 12th National Student Congress, which meets at the University of Illinois during the last 2 weeks of August, will be asked to consider and bring its full weight against the Senate's action. USNSA hopes that the Senate will see fit to reconsider its action, to face the controversial section 1001(f) directly, and to revise it in the light of the fundamental principles of freedom and democracy.

Religious Education and Democracy

EXTENSION OF REMARKS

OF

HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 17, 1959

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following outstanding address by the Reverend John L. Murphy:

RELIGIOUS EDUCATION AND DEMOCRACY

(Address delivered on the program "This Nation Under God," over WMAL radio station, Washington, D.C., Sunday, July 19, 1959, by Rev. John L. Murphy, S.T.D., department of religious education, associate editor, the American Ecclesiastical Review, the Catholic University of America, Washington, D.C.)

A number of years ago, the U.S. Supreme Court issued a judgment concerning the released time program. This proposal would permit children in public schools to take religious instruction elsewhere during school hours. Among other things, the decree contained this thought-provoking statement:

"We are a religious people whose institutions presuppose a Supreme Being. . . . When the state encourages religious instruction or cooperates with religious authorities by adjusting the schedule of public events to sectarian needs, it follows the best of our traditions. For it then respects the religious nature of our people and accommodates the public service to their spiritual needs."

"To hold that it may not, would be to find in the Constitution a requirement that the Government show a callous indifference to religious groups. That would be preferring those who believe in no religion over those who do believe. . . . We cannot read into the Bill of Rights such a philosophy of hostility to religion." (*Zorach v. Clauson*, Apr. 28, 1952.)

This statement of the Court was greeted as a welcome relief by those who have been terrified by the inroads of Godlessness into our national way of life. For many years, those who have been openly opposed to God and religion have been waging a battle against the foundations of faith, and they have, to a large extent, won the day.

America still faces the unsolved problem of the moral training of its young. On all sides we hear complaints that the younger generation is an unmanageable generation—it wallows in crime and delinquency, it has no ideals, no moral code, no standards. There

is, granted, a good amount of exaggeration in these complaints, but they are not entirely untrue. Quite the contrary, they ought to be expected. As people become less and less interested in religious and moral standards, it only stands to reason that they will eventually give up that more acceptable manner of living that is supported by those standards. When the religious creed is cast aside, the moral code soon follows; when a man no longer believes in God, he eventually begins to act as if there were no God. And no other force has ever been able to replace the rejected Deity: not fear of punishment, dread of public opinion, nor even love of country. When the true God has been cast aside, no faint image can take His place.

There have been some solutions proposed toward alleviating these problems. Released time instruction has been one; the denominational school is another. It is interesting to consider the purpose of the religious school in American democracy. The question, we must note, is not, as some would phrase it, a question of "Catholic schools" and "public schools." While Catholic education looms larger than others in this regard, it does not stand alone. Other religious groups foster their own denominational schools, and—what is most important in the democratic way of life—they do so because of the same basic principles as the Catholic populace. They do so because they have within them, the deep, personal conviction that education and religion cannot be treated in separate spheres.

The problem is a far deeper one than many people might suspect. It is not simply a matter of "doing things in a certain way." Quite the contrary, we are faced here with a question concerning the basic interpretation of our American way of life. Beneath the outer layer of legal disputes or emotional disagreements, or even at times, of bigotry, we can put our finger on a gigantic struggle that is going on between two completely different ways of thinking.

Fundamentally, as far as the basic principles are concerned, the struggle is between religion and irreligion; a way of faith versus secularism; God versus no-god. It is an attack upon the beliefs of all those who believe in God, and see Him as an important element in the democratic way of life.

Traditionally, America has been a religious-minded people. This belief is something which pertains to the law of the land, reaching back to those scripture-like phrases of the Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Creation and Creator are words of deep implication. They give evidence of a grasp of reality among our forefathers that penetrated to the very depths of their being, and became so much a part of them, that it overflowed into their labor of organizing a new nation upon this earth.

The denominational school, actually, exists as a living request that these religious ideals may not be cast aside. It is an alarming thing for the believer to realize that there are men and women in highly influential positions who believe that religion is not important, and that democracy can do very nicely without God.

He realizes, of course, that there are many people who chose to place God and religion in the same class with old wives' tales and savage superstitions. According to our democratic principles, they are entitled to such opinions. But the believer asks only that such an unwanted conclusion be not forced upon others who happen to disagree with it. The man of faith is thoroughly convinced that to separate religious tenets and American democracy is to be guilty of an

error in fact. The American way of life took root in the heart of a Christian people; it was formulated in terms that reflect those Christian principles. It was not a case of a Christian people who just happened, as it were, to fashion the American form of democracy. The connection between their faith and their form of life is far more intimate; the two are intertwined.

This is why the believer fears this denial of religion, not only for the sake of religion, but for the sake of democracy as well. Can we hope that our democratic way of life will continue unhampered, if we throw aside this element of religious belief that was originally so basic a part of its groundwork? That is the precise question.

Those American Christians who support a denominational school do not do so because they feel that the public school system is bad. It is not, by any means. But what they do fear, is the conspiracy of silence that has been built up around the public school system—a conspiracy of silence concerning God. Some will speak of it as a religious neutrality, but it is far more. As some would interpret our laws, the public school system would not only be indifferent to the differences between various religious groups; it would be indifferent to God Himself.

In many respects, this can be seen in the pattern of many a modern university as it exists in some circles. The sacred name of God has almost become a dirty word. He must not be mentioned. There is really a double standard involved in this procedure. A teacher in a modern State-run university (or even high-school) may include anything whatsoever in his view of life; and under the shield of "academic freedom" he may teach it—provided, however, that what he sees does not include God. He may, it is true, teach the true worth of man and the democratic way of life, as far as he is able to without mentioning God. But he must work within this limitation.

On the other hand, he may also teach athelms, communism and free love, and find defenders for his stand. Should anyone object, he will cry out "academic freedom," and claim that he is being persecuted and unjustly deprived of his rights. But should the professor in the adjoining classroom see as an essential part of reality, the existence of God and the need of religion, he is forbidden to say so. The banner of academic freedom is run down, and that of separation of church and state unfurls in its place—spelling out, in reality, separation of state from God.
